CAPTAIN DOWBIGGIN.—Lord PALMERSTON, in answer to a suggestion from Sir De Lacy Evans, put the House in possession of the words of the telegraphic message sent to General Simpson, in reference to Mr. Dowbiggin, by Lord Panmure (the usual). The message was—"I recommend young Dowbiggin to your attention, if he is fit, and you have a vacancy." The second was from General Simpson—"In the trenches last night the Russians made a strong attack to regain the cemetery, but we were prepared, and Captain Dowbiggin and his party behaved admirably."

ST. PANCRAS WORKHOUSE.—MR. BOUVERIE, in answer to Sir J. Pakington, mentioned that the guardians of St. Pancras, elected under the Local Act, were taking measures for improving the state of matters in the workhouse. These measures would undergo his consideration.

THE BAY ISLANDS.—MR. LABOUCHERE, in answer to Mr. M. Gibson, stated that the Bay Islands had been created into a colony by warrant dated March 20, 1852.

LOCAL DUES.—Lord PALMERSTON, in answer to Sir F. Thesiger, mentioned that it was intended to amend Mr. Lowe's motion for a Select Committee to inquire into the question of Local Dues, so as to meet the views of all parties

POLICE (COUNTIES AND BOROUGHS) BILL.

Sir G. GREY, in moving the second reading of the Police (Counties and Boroughs) Bill, availed himself of the opportunity to explain anew its objects, scope, and provisions, with the view of removing the misconception which prevailed on these points, and which threatened a determined opposition, not to certain clauses, but to the whole bill. These explanations were accordingly given, and an array of facts presented, with a view to show the urgent necessity which existed for rendering the police force throughout England more efficient. Several modifications in some of the clauses, intended to meet prominent objections, were also mentioned.

Mr. C. S. FORSTER did not think that the modifications announced by the Home Secretary were such as would justify him in withdrawing his amendment, that the bill be read a second time that day, or six months. Although the boroughs had been excluded, the principle of centralisation would still apply to the counties; and, at a convenient time, that principle might be extended to the boroughs. He could not, however, still object to both counties and boroughs; and hence the necessity for resisting the measure on its principle.

Captain SCOBELL denounced the bill, declaring that it was part and parcel of the plot to do away with the unpaid magistracy, and add patronage to the Minister. He would vote for measures which conferred additional rights upon the people, but he would never consent to diminish or control the rights already existing. The proposed measure might do well enough for Naples, but it would not suit Englishmen.

Mr. H. BERKELEY did not share in the apprehensions entertained by the opponents of the bill as to its probable working. Very little additional power would be placed by the measure in the hands of the Secretary of State, and his government generally would tend to improve the police establishments of the country.

Sir G. PECHELL said the speech of the Home Secretary, elaborate as it was, had failed to remove his objections to the bill. The town of Brighton would be seriously injured by it.

Mr. PACKE could see nothing in the bill (as modified) which justified the opposition of borough members.

Sir J. WALMSLEY asserted that the boroughs had no objection to the most efficient regulations being adopted as regarded the management of the police; but they objected to the appointment of the Secretary of State in such a matter. A case for interference may have been made out as regarded counties, but no case whatever had been made out as regarded boroughs.

Mr. J. G. SMITH admitted that the bill would be improved by the proposed modifications, but thought the better course would be to withdraw the bill and introduce another.

Mr. LENTAIGN suggested, as an improvement, that a minimum number of police should be named, found upon the number of inhabitants in the respective districts.

Mr. W. J. FOX joined in the recommendation to the Home Secretary to withdraw the bill and introduce another. It was admitted on all hands that the police in counties stood in need of improvement and extension. There was no evidence of dissatisfaction as regarded the police of boroughs.

Mr. HENLEY advised the boroughs to keep close by the counties, so that a combined movement may be made against provisions which injuriously affected both. In favour of the Bill he had heard a great deal of opinion; but what he wanted was facts, to show him what would be gained by adopting the measure before he was asked to take that course.

Sir W. HEATHCOTE did not consider the proposed interference was so great as had been represented. It amounted to this—that, in return for certain financial advantages to be derived from the State, the counties and boroughs were to be subjected to a certain amount of Government supervision. The bill ought certainly to be read a second time

Mr J. B. SMITH could not agree to the second reading. The measure was a direct assault upon the principle of self-government, and he deeply regretted that it should have proceeded from his (the Ministerial) side of the House.

Mr. RICE maintained that there was no invasion attempted in the bill of the rights or liberties of the boroughs. Borough members were frightened at a shadow.

Mr. DEEDES opposed the bill. He saw no necessity for any such compulsory measure

Mr MUNTZ advised the Home Secretary to withdraw his "mutilated bill."

Mr. WARNER saw nothing in the bill (as modified) which should rouse the opposition of borough members.

Mr. BARROW, Mr. Cobbett, and Mr. Knight opposed the bill; Mr. Cayley supported the second reading.

Sir G. GREY, in reference to the suggestion that the measure should be withdrawn, stated that he could not take that course. If the House agreed to the second reading, he would introduce the amendments he had mentioned in Committee.

On a division the numbers were—For the second reading, 259; against it, 106: majority for the second reading, 153.

### HOUSE OF LORDS.—TUESDAY.

THE DEFECTIVE MORTARS.

The Earl of DERBY put a question to the Minister of War with respect to a statement made by Mr. Monsell, that mortars had been supplied to the Government by one of the contractors in which a piece of iron had been inserted to conceal a flaw; and he asked the name of the parties who supplied those mortars.

Lord PANMURE was sorry to say that too good grounds existed for the statement of Mr. Monsell. The mortars in question were supplied by Messrs. Grissell, and passed the primary proof, but on ten rounds being fired from them they burst. That led to the discovery of the insertion of a piece of metal screwed into the mortar in such a skilful manner that it covered the flaw; and on examination a similar flaw was found in others of them. It followed as a matter of course that the Government would not enter into any further contract with that firm, but whether they could proceed against them at law was a question which he was not yet able to answer.

The Agricultural Statistics Bill, the Mutiny Bill, the Marine Mutiny Bill, the Consolidated Fund (£26,000,000) Bill, the Drainage Advances Act Amendment Bill, and the Bankruptcy (Scotland) Bill, were read a second time.—The Leases and Sale of Settled Estates Bill was read a third time and passed.—A bill for amending the County Court Act was read a first time.

### HOUSE OF COMMONS. TUESDAY.

At four o'clock there were only thirty-two members present, and the House therefore stood adjourned.

### HOUSE OF COMMONS.—WEDNESDAY.

REFORMATORY SCHOOLS (SCOTLAND) BILL.

On the motion for the second reading of the Reformatory Schools (Scotland) Bill,

Mr. MAGUIRE complained that no provision was made for the instruction of Roman Catholic children in their own faith in the reformatories which the bill was designed to establish. There were 250,000 Catholics in Scotland, who practically found no representation in the Legislature, and whose interests, he contended, were inconsequence neglected.

Mr BOWYER concurred in the views expressed by Mr. Maguire, and insisted that separate instruction on all topics involving religious belief should be provided for the members of every sect.

Mr DRUMMOND retorted upon the Roman Catholics the charge of urging to extreme lengths their attempts at proselytism. He declared, however, that he had no fault in reformatory schools.

Sir G. GREY pointed out that the bill contained provisions for the removal of children from the reformatories to other institutions, which, he submitted, supplied the means of accomplishing everything desired by the advocates of the Roman Catholic Children.

Ultimately the bill was read a second time, and ordered to be committed *pro formâ* on Thursday.

The Bankruptcy (Scotland) Bill was read a second time.

Mr ELLIOTT obtained leave to bring in a bill to provide for the better prevention and punishment of aggravated assaults upon women and children. The bill was afterwards read a first time.

### HOUSE OF LORDS.—THURSDAY.

TORTURE IN INDIA.—The Earl of ALBEMARLE gave notice that on Monday, the 14th of April, it was his intention to present a petition from the inhabitants of the Presidency of Madras, praying for the abolition of the practice of torture in that Presidency, and to move certain resolutions binding the House to take every step calculated to abolish that practice. He also gave notice that he would, early after the Easter recess, ask certain questions of her Majesty's Government relative to the cases of torture said to have been inflicted on subjects of that Presidency for the purpose of raising revenue

THE FALL OF KARS.—The Earl of ELLENBOROUGH, having referred to certain omissions in the correspondence relating to the Fall of Kars which had been laid upon the table, asked whether it was the intention of the Government to supply these omissions before the subject was brought under discussion.—Lord WODEHOUSE replied that it would not be convenient for the Government to revise those papers.—The Earl of ELLENBOROUGH expressed his surprise that the explanation on this subject had not been left to the Secretary for War. He said that it was well known that before the investment of Kars nothing had been done by the Allied Powers for the defence of that place. But he wanted to know what had been done by them after the investment of it at latest. In reply to the Earl of Malmesbury, Lord WODEHOUSE stated that a correspondence had taken place on the part of her Majesty's Government with the Turkish Government with respect to General Williams.

MARRIAGE WITH A DECEASED WIFE'S SISTER.—The Earl of ST. GERMANS brought in a bill to legalise marriage with a deceased wife's sister when contracted in the Registrar's office. It was not his intention to require clergymen to solemnise such a marriage.—The bill was read a first time.

The Mutiny Bill, the Marine Mutiny Bill, the Consolidated Fund (£26,000,000) Bill, and the Drainage Advances Acts Amendment Bill, were read a third time and passed.

EDUCATION.—Earl GRANVILLE, in reply to the Earl of Shaftesbury, said that he did not intend to move the second reading of his bill on the subject of Education until he saw what effect was likely to be produced by Lord J. Russell's resolutions on this subject. He did not make any statement when moving the first reading of his bill, as he proposed to reserve that statement for the second reading. His bill was very simple in its character, avoiding as much as possible the introduction of any restriction. He was clearly of opinion that to carry out a proper system of education, they must rely upon local and self-government. His bill went to enable the town councils and parishes to rate themselves for the purpose of promoting education, and it left to the good sense of the districts themselves to deal with such questions as were likely to cause differences of opinion on the subject.—The Earl of HARDWICKE urged the importance of improving the system of education in the Army and Navy.

### HOUSE OF COMMONS.—THURSDAY.

The LORD-ADVOCATE gave notice, that on the 31st of March he should move for leave to bring in a bill to improve entails in Scotland, and for the extension of education in the burghs of Scotland.

Mr H. BERKELEY gave notice that shortly after Easter he should bring forward the question of the Ballot.

METROPOLITAN LOCAL MANAGEMENT ACT. Viscount CHELSEA asked the Attorney-General whether any answer was given in as his question, that, by the provisions of the Metropolitan Local Management Act, 18 and 19 Vict. c. 120, s. 3, all existing vestries, whether general or otherwise, are superseded, and transferred to the vestries constituted under the said Act?—The ATTORNEY-GENERAL having explained the provisions of the bill, said he believed that further legislation on the matter would be inexpedient.

THE PARIS CONFERENCES.—Mr. BOWYER asked the First Lord of the Treasury whether there was any truth in the report that the attention of the Paris Conference would be directed to the affairs of Italy? Also, whether the Sardinian Government had suggested, or requested that any, and what, matters of Italian politics might engage the attention of the Conferences?—Lord PALMERSTON said he was sorry he could not give the hon gentleman any information upon the subject. One of the first resolutions of the Conferences was, that their proceedings, from day to day, should only be known by their results.—In answer to a question from Mr. Disraeli, Lord PALMERSTON declined to give any information as to what the Conferences were about to do. What the Prussian Minister was about to do he could not say.

THE BALTIC FLEET.

Sir CHARLES NAPIER moved for a Select Committee to inquire into the operations of the British fleet in the Baltic in the years 1854 and 1855. The gallant Admiral adverted to the miserable condition of the Baltic fleet when he took the command of it, and to the expectations raised at home, mainly by the great banquet at the Reform Club. He believed that after that banquet if he had succeeded in taking the Emperor of Russia prisoner people would not have been satisfied if he had not brought St. Petersburg with him. The gallant Admiral, in the course of a very long speech, read copious extracts from a mass of papers which he had beside him. In an elaborate statement he brought under the notice of the House the condition of the fleet at the time he was appointed to the command, and the various efforts he had made to secure the sanction of the Admiralty for placing our naval force at the commencement of the war in a condition to meet the Russian fleet. Sir Charles proceeded to detail the contradictory instructions he received from the Admiralty and to justify the course which he had deemed it wise and expedient to pursue. He rebelled the instructions sent out to him to choose his day at the end of October for the bombardment of Sveaborg; but declared emphatically that he received that peremptory letter during the summer, no consideration would have deterred him from going into the place. The hon. and gallant Admiral repeated his complaints at various stages of his correspondence with the Admiralty, of the disingenuous manner in which the Board had treated him, by attempting to fix upon him the opinion that under no circumstances should the place be attacked. What he had commanded for from the first was this—that it should not be attacked by the fleet without two or three days' previous bombardments by rockets and shells. In this mode of proceeding the French Admiral and other officers of both fleets concurred. He thought the House must see that he had been scandalously treated by the First Lord of the Admiralty. He deeply regretted that Admiral Berkeley should have put his name to one of those letters which he had received—a letter that was most offensive to him and discreditable to the source from which it emanated.

Admiral WALCOTT seconded the motion.

Sir C. WOOD opposed it, without going into details, and deprecated the conduct of Sir C. Napier in reading private despatches.

Sir J. GRAHAM was glad that the motion of the hon. and gallant Admiral was seconded by a brother officer, who came to his rescue, and threw him a row-rope when adrift. It was, however, his own intention to have done so, if no other hon. member did; for he confessed that, after all that had passed, he was glad to meet him on that house. He complained of the use which the gallant Admiral had made of his private correspondence, which he pointed out was unknown to and without his (Sir J. Graham's) knowledge or consent, contrary to every sense of justice. The right hon. Baronet read a number of letters which had passed between himself and Sir Charles Napier at the time the latter left the command of the Baltic Fleet, showing the terms on which that command was given and the manner in which it was accepted by the gallant Admiral. He confessed that he hesitated before asking his colleagues to ratify the appointment of the gallant Admiral as Commander of the Fleet, as he had seen letters published by the gallant Admiral, addressed to several of the First Lords of the Admiralty and other public persons, to the effect that no Admiral ought to go to sea holding an important command in time of war after he was sixty years of age; and, knowing the gallant Admiral to have passed that limit, he was doubtful whether or not it was proper to observe the caution so repeatedly given by the gallant Admiral himself in that respect. The right hon. Baronet continued at great length to defend his conduct as First Lord of the Admiralty

Admiral BERKELEY justified the course which he had taken in respect to Sir C. Napier, and strongly deprecated the statement made by the gallant officer.

After a lengthened discussion Sir C. NAPIER withdrew his motion.

### HOUSE OF LORDS.—FRIDAY.

ROYAL COMMISSION.—The Royal Assent was given by Commission to the following bills, viz.:—The Mutiny Bill, the Marine Mutiny Bill, the Consolidated Fund (£26,000,000) Bill, and the Drainage Advances Acts Amendment Bill.

TICKET-OF-LEAVE SYSTEM.—Viscount DUNGANNON gave notice that he would, on the 2nd of May next, bring before the House certain resolutions, to the effect that the ticket-of-leave system was injurious to society detrimental to the public interests, and should be abolished.

INSPECTORS OF PRISONS REPORT.—The Earl of SHAFTESBURY rose to bring under the consideration of the House the 20th Report of the Inspectors of Prisons. He alluded to the present state of public prisons not only as regarded sanitary, but a moral point of view; and expressed his belief that, unless a remedy were provided, the worst results would ensue. After a brief discussion the subject dropped.

THE LATE LORD TRURO.—The Marquis of LANSDOWNE called their Lordships' attention to a letter which he had received from Lady Truro requesting him to inform the House that it was her Ladyship's desire, in honour of the memory of Lord Truro, and in remembrance of his great legal attainments, to present the law library of the late distinguished nobleman to the House of Lords. The noble Marquis took the opportunity of passing a high eulogium on the character and ability of the late Lord Truro, and moved that the letter of Lady Truro should be referred to the Library Committee.—Lord Lyndhurst, the Lord Chancellor, the Earl of Derby, and Earl Grey, severally paid a tribute of respect to the merits of the late noble and learned Lord, and expressed their acknowledgments to Lady Truro for the valuable gift she had tendered to the House.—The motion was agreed to.

### HOUSE OF COMMONS. FRIDAY.

DISPUTES WITH THE UNITED STATES.—Mr. H. BAILLIE asked the First Lord of the Treasury whether he was able to state when the papers relative to the disputes with the United States would be laid upon the table?—Lord PALMERSTON said shortly after Easter.

THE PEACE CONFERENCES.—Lord PALMERSTON (in answer to Mr. Disraeli) said it was perfectly true, when the Conferences first met, they arranged that strict secrecy should be kept; not that there should be any mystery about proceedings at variance with the interests of the countries they represented, but it was a wise precaution which they were bound to adopt. Prussia was one of those five great Powers that had been in the habit of meeting together in great Congresses and matters, and if upon the recent occasion nothing had been required but to assemble. Conferences to settle questions of general detail, Prussia would no doubt have been invited. In these negotiations Prussia stood in no character which made her a party to the negotiations—the questions that arose being between England, France, and Sardinia on the one hand, and Russia on the other. As Austria had acted the part of a mediator, of course she was invited. It was however, suggested that Prussia should be invited, not to negotiate, but to sanction the treaties; and he knew that an invitation to that effect had been addressed to the Prussian Government.

WAR WITH PERSIA.—Mr. LAYARD asked what ships had gone to the Persian Gulf, and if it were true that two of the largest ships in the East India Company's service had gone. He also asked whether the Persians were filling out an expedition to meet ours, and whether they were increasing their army to threaten an attack upon Herat?—Mr. F. BAINES said that only one small ship had gone.—Mr. GLADSTONE thanked Mr. Layard for bringing forward his motion, and said he thought before going to war the Government should consider whether the war was to come from the nation or not. He would not admit that this country could tax the funds of India for the maintenance of a war which they had not originated.—Mr. V. SMITH said the Government intended to act on that principle, and if war did break out the Government and the East India Company would bear the expenses according to the several interests involved in it.—Sir J. HOGG observed that in all previous wars it was distinctly stated on the commencement what proportion the East India Company should bear.

THE ATTACK ON THE REDAN.—Colonel FRENCH asked whether any inquiry had taken place as to the causes which led to the failure of the attack on the Great Redan at Sebastopol on the 8th September last?—Lord PALMERSTON replied that, instead of considering the attack as a slur on the British arms, he looked upon it as an event which had shed lustre on the arms of the country.

Mr. MUNTZ gave notice that on the 8th of April he would make a resolution affirming the necessity of readjusting the Income-tax, and especially in reference to the incomes of the professional and industrial classes.

Mr SPOONER gave notice that upon an early day he would move a resolution for establishing the usual grant for the Duke of Maynooth.

The motion for the adjournment of the House for the Easter holidays to the 31st of March was agreed to.

The House having gone into a Committee of Supply upon the Army Estimates, on the vote of £26,400 for pensioners for distinguished services,

Mr. LAYARD moved as an amendment that the vote should be reduced by £100 (the sum to be paid to General Airey) until after the report of the Commissioners of Inquiry should be received.

Mr F. PEEL opposed the amendment.

The Committee divided. The numbers were—For Mr. Layard's amendment, 91; against it, 82: majority for the Government, 73. The vote was then agreed to.

Several other votes were considered and agreed to.

THE INQUEST ON MR. SADLER.—At the adjourned inquiry held on Tuesday last at the workhouse, Hanley, into the circumstances attending the death of the late Mr. John Sadler, M.P. for Sligo, the jury retired, and after deliberation of [illegible] minutes returned into court. The Foreman said: The opinion of the jury is, that John Sadler died by his own hand when in a temporary state of mind. That is the unanimous opinion of the jury.—The Coroner: That amounts to a verdict of self murder.—The Foreman: Yes, it does. The Coroner: My own conviction is that, after the most mature deliberation, and the most patient investigation, you could not have come to any other conclusion.—The proceedings then terminated.

The *Madrid Gazette*, as a proof of the excellent manner in which the electric telegraph now works in Spain, says that the speech of the Emperor of the French on opening the Legislative Body was transmitted to Madrid in a few minutes.

## THE COURT.

The Queen and Prince Albert, accompanied by Prince Alfred and the Princess Helena, visited the Botanic Gardens in the Regent's-park on Saturday. During the day her Majesty received the Princess Gouvernaise of Coorg. In the evening the Queen gave a dinner party.

On Monday her Majesty and the Prince Consort, accompanied by the Princess Royal, dined with the Duchess of Cambridge, at her residence in St. James's Palace.

On Tuesday his Serene Highness Prince Victor of Hohenlohe arrived at Buckingham Palace on a visit to her Majesty. In the evening the Queen and the Prince, accompanied by the Princess Helena and Prince Victor, honoured the Olympic Theatre with their presence

Lord Cowpers and Major F. C. Cavendish have relieved Lord Waterpark and Major-General Berkeley Drummond in their duties as the Lord and Groom in Waiting to the Queen.

THE LEVEE.

The Queen held a Levee on Wednesday afternoon, in St. James's Palace. Her Majesty and his Royal Highness Prince Albert arrived from Buckingham Palace soon after two o'clock, escorted by a detachment of Life Guards.

The Duke of Cambridge, prince Victor of Hohenlohe, and Prince Edward of Saxe-Weimar, attended the Levee, and were received by the Vice-Chamberlain.

The Queen and the Prince Consort entered the Throne-room a half-past two o'clock, attended by the Lords in Waiting and Gentlemen of the Royal Household. Her Majesty wore a train of white and gold moiré antique silk, trimmed with gold blonde and red velvet bows. The petticoat was white satin, and was also trimmed with gold blonde and red velvet bows. The head-dress consisted of a coronet of opal and diamonds.

The Foreign Ministers were first introduced, when several presentations took place.

The Court was very numerously attended by the nobility and gentry. The presentations exceeded 400 in number. Among the more noticeable we may instance—

Lord Wensleydale, on his elevation to the Peerage, by the Lord Chancellor
Lord Aveland, on being created a Peer, by Viscount Palmerston
Lord Napier, by Colonel Peel
Lieutenant-General Cannon (Behram Pacha), on his return from Turkey, by Lord Panmure
Sir Fardwith, by Lord Panmure.
Mr. John Towers, Chairman of Metropolitan Board of Works, by Sir G. Grey.
Dr. William Rae, R.N., on receiving the honour of C.B., by Sir C. Wood.

## THE THEATRES, &c.

HAYMARKET.—On Saturday a new comedy, from the fertile pen of Mr. Bayle Bernard, was produced at this theatre. We should add that the piece was also an original and not a translated one. It is entitled (somewhat quizzically) "The Evil Genius." The so called "Evil Genius," is one *Tom Hopstons* (Mr. Buckstone), an honest Derbyshire man, who preserves the honesty and simplicity of his character through all the changes of fortune, and happens to be one of the earliest fruits of one *Bill Cooley Esq.* (Mr Chippendale), who has returned from the East Indies with wealth enough to set up for a gentleman, and who naturally desires to cut his old acquaintance, the still rustic *Tom*. But *Tom* is not to be so easily dropped of, for *Tom* is aware of the juvenile delinquencies of *Mr Bill Cooley*—how that he had been married to a poor girl, and deserted her and their boy, to seek his fortune abroad. That boy is still living—whom *Cooley* seeks, however, to ignore, that he may marry a penniless lady of fashion and blood, without any apparent incumbrance or reference to his early connections. Hence *Tom* appears to him an "evil genius," and, as he is continually crossing his path, he seeks to get rid of him, and for this purpose procures his arrest on account of a debt which he thinks unable to pay. *Tom*, however, does pay it, and then presents on the scene, making himself extremely disagreeable to *Cooley*, and very agreeable to a young lady and her lover, who turns out to be *Cooley's* son. To this young man *Tom* has been a "good genius" for he has performed towards him the duty that his unprincipled parent had neglected, and at last these facts are brought home to *Cooley's* knowledge, and awaken him to contrition. Here it might have been naturally expected that the author would have given us a pathetic scene, and the end of the piece in the mutual embraces of the son and father. This usual stage conclusion is, however, postponed to the evening, when the young man is to be told all, and the action of the piece is brought abruptly to a close. The previous act had, however, terminated with what we have already called, for the sake of distinction, the "incidental situation." *Tom*, in one of his freaks (for he has many), covers himself up with a newspaper, which he pretends to be reading, and is mistaken by *Cooley* for another person; when, on the charge of the latter, he hits his head on the concealed sheet, and is thus recognised by his victim as the drop descends. Such are the peculiar effects of this curious drama. One character played by Mr. Compton deserves especial notice; it is that of an old postman with a thick memory, wherever he pauses to reflect, which is uniformly "forgets," and, whenever anybody accidentally mentions the name or thing he is in want of, exclaims—"Now, I remember!" A delicate portrait this—a perfect gem of art—in every way acceptable of the dramatist's skill, and admirably executed by his representative. Miss Reynolds, too, had rather a dashing part, in *Lady Aurora Ringwood*, which reminded us of Mrs. Nisbett in *Lady Gay Spanker*, and which was played somewhat in her style, though, of course, with much less force. The other characters were slight sketches, which to describe were to misrepresent, as it might imply they were something more than indications, when, in fact, they are the faintest of suggestions. Such as they are, however, they acquire strength by their comic nature; and the comedy, which excited continual laughter during its progress, was rewarded at its conclusion with unanimous and unequivocal applause.

Mr. and Mrs. Howard Paul have just completed a successful engagement in Dublin, having given their comic entertainment, "Patch-Work," over one hundred nights.

## MUSIC.

THE Concert given by Madame Goldschmidt-Lind for the Nightingale Fund took place on Tuesday evening at Exeter Hall. It was a magnificent performance, with a most satisfactory result More than two thousand persons were present; and, as the price of tickets was a guinea to every part of the house, the receipts (making allowance for some complimentary admissions) must have been at least £2000. This would leave a great balance for the fund, even were the expenses of such a concert deducted; but the Committee are not upon authority on which we are entitled to rely, that no such deduction has been made—Jenny Lind, with that nobleness of spirit which has marked her whole career, having disbursed every item of expense out of her own pocket, leaving the receipts to be handed over to the Fund without the abatement of a farthing. Considering the great scale on which this concert was got up—the orchestra namely strong, and embracing the most eminent performers in London, the large and select band of choristers, and the completeness of every arrangement—the sum thus paid by Madame Goldschmidt must, at the very least, have been £800—an amount which she has thus contributed to the Fund over and above the exertion of her incomparable talents.

The concert was of the highest order, both in respect to selection and performance. The music was partly sacred and partly secular, and in both kinds Madame Goldschmidt took a leading share. She first sang Mendelssohn's Hymn for one, chorus, and organ, "Hear my prayer, O God," one of the finest of that great master's sacred works, throwing into it that fervid devout feeling in the expression of which she transcends every other singer. She took the principal soprano part in a sacred cantata composed by her husband, and performed for the first time—a work of very great merit. The words are chiefly taken from the 130th Psalm, and are of a pathetic and imploring character. The music is a series of airs, duets, and choruses, written in a pure style, and containing many passages of melodic expression. The opening air, "From the deep I cry unto Thee," sung by Madame Goldschmidt with intense feeling, made a deep impression; as did a fine duet for a soprano and tenor which she sang with Mr. Swift. Of the choral portion of the work, the greatest effect was produced by a short but very characteristic female voice descriptive of "the lilies of the field, who toil not, neither do they spin." We trust to have another opportunity of hearing a work which was so admirably performed, and which does so much honour to the genius of the composer

In the latter part of the concert Mdme. Goldschmidt's performances were of a light description, calculated to show the extent of her vocal powers and the unrivalled brilliancy of her execution. She sang Rossini's bravura air, "Eppellida verte," from the "Turco in Italia;" Meyerbeer's trio for the voice and two flutes, which she has repeated so often—oftener, we think, than it deserves; and the finale of Weber's "Euryanthe."

Mr. Goldschmidt played two pieces, both well known to the musical world—Beethoven's Choral Fantasia, and Weber's Concert-stück—and maintained his reputation as an accomplished pianist of the best school.

The other pieces performed during the evening were Mozart's Symphony in G minor, an air from Mozart's "Davidde Penitente" (sung by Mr. Swift), Benedict's Overture to "The Tempest," Mendelssohn's part-song, "When the west with evening glows" (admirably sung by the chorus), and the March and Chorus from Beethoven's "Ruins of Athens," which terminated the Concert. The fair giver was received with all the enthusiasm due to her noble character, her incomparable talents, and the magnificent aid given by her to an object which the English public have so much at heart.

On Monday last Mr. Ella concluded the Lectures on Music delivered by him in the course of the last twelve months at the London Institution, Finsbury-circus. These lectures, from the novelty of their design, and the ability with which it has been executed, have been eminently successful. They were especially addressed to amateurs; who, as singers and instrumental performers, have acquired some practical knowledge of music; and his object has been to increase the enjoyment derived from the art by some comprehension of his principles. With this view he has explained, in a popular way, the elements of harmony and composition, illustrating his remarks by performing and analysing passages from the works of the greatest ancient and modern masters. His twelve lectures, delivered since March, 1855, were divided into two series, embracing the following subjects:—First series: 1, Devotional harmony; 2, Secular; 3, Pastoral; 4, Vague, supernatural, and descriptive; 5, Imitative, graphic, and descriptive; 6, Dramatic. Second Series: 1, Melody; 2, Harmony; 3, Counterpoint; 4, 5, and 6, Haydn, Mozart, and Beethoven, their instrumental music analysed. The musical illustrations were given by eminent performers. The instrumental by Mr. Kuhlau on the pianoforte, and the vocal by Miss Ransford, Miss Lascelles, Miss Chambers, Mr. T. Williams, and Mr. Smythson. During the whole course the gratuitous lecture-room was crowded by an attentive and interested audience.

THOUGH no doubt is entertained as to the opening of the Italian Opera this season, yet nothing positive has yet transpired as to its locality. Mr. Gye and Mr Lumley have had more than one meeting on the subject, and it is believed that a negotiation is now pending for transferring the late Covent Garden establishment to her Majesty's Theatre.

HERR ERNST, the great violinist, is just arrived in London for the season. Madame Clara Novello, who has been spending the winter at Nice, is about to return to England.

At the fourth Concert of the Beaumont Institution, to which we made allusion in our last publication, the programme included the celebrated ballads of the "Last Rose of Summer" and the "Bay of Biscay," sung by the great tenor who stands unrivalled among English singers, and who is constantly proving that the Italians are not invariably the best vocalists in the world. To execute to perfection the two songs which we have quoted requires the most varied powers. In the mournful Irish melody Mr. Sims Reeves had an opportunity of displaying the exquisite falsetto voice with which he is gifted; while in the stirring naval song his fine chest voice had full scope, and roused the audience to the highest pitch of enthusiasm. Mr. Frank Mori's pupil, Miss Louisa Vinning, contributed three songs, "Vegila dal Ciel," the Prayer and Barcarolle from the "Etoile du Nord," "I love my little native isle," and "Lo! here the gentle lark." The appearance of the young singer on the platform was the signal for general applause. It would seem as if the Beaumont Institution were conscious of having been the scene of her début, and were determined to show it. The "Vegila dal Ciel" of Miss Vinning was extremely beautiful, and loses none of its merits when compared with Bosio's performance at the Italian Opera last season. "I love my little native isle" was also admirably sung. But the triumph of the evening was the performance of Bishop's magnificent ballad—a triumph which neither the singer nor the audience will be likely to forget. To say that the song was applauded is not sufficient to convey an idea of what actually took place. The audience was compelled, requested, or hinted, in the usual way, but loudly and emphatically insisted on. A singer who on her second appearance can make conquests like these, may, without vanity, look high. Miss Lucy Escott was in excellent voice, as was also Mr. Sims Reeves, who sang the "Qui la voce," from the "Puritani," with great power and expression. The buffo scene from the "Cenerentola" was executed with much spirit by Mr. Farquharson, whose flexible barytone voice is admirably suited for such parts. The concert was conducted by Mr. W. G. Cusins.

HENRY RUSSELL has been singing his popular songs with great success at Bath during the week. On Monday next, the 17th, he commences at the Surrey Theatre, with his entertainment of the "Far West."

HANDEL'S "Messiah" was performed on Thursday week, in the Speech Room of Barrow School, for the benefit of the resident Professor of Music, Mr. Tillyard. The performance was under the patronage of Dr. Vaughan, the principal; the Rev. J. W. Cunningham, the Rector of Harrow, and other clergymen and gentlemen. The following eminent artistes were engaged:—Miss Stabbach, Miss Folby, Mr. Montem Smith, and Mr. Tillyard; trumpet, Mr. Harper; accompanyists, Messrs. Frank Mori and Jolly. Conductor, Mr. Surman. The performance throughout gave entire satisfaction.

## NATIONAL SPORTS.

THE alteration which was determined on by the Doncaster Spring Committee (whose stakes are filling well), to hold their meeting early in April, instead of the middle of March, has caused more work to be a blank one to the sporting-man, and gives them a greater zest for the first great meeting of the year at Northampton. Steeplechasing will also experience a complete lull; and there is nothing even in that line, except one at Louth on Friday. The racing at Warwick was very spirited, and Wells rode his fourth two-year-old winner this season. His horse Apathy, by ANDREADALE, owed his victory entirely to his superior condition; and Coroner's brother, Lambourne, who ran second, would win far less "fit," will hereafter prove a second feather in the cap of Loupercon. Little Davie cut down his horses as he always does here, from end to end; and the Grand Steeplechase was only won, after an exciting race, by a neck, though the children by low weights on the horses, as at Liverpool, tends more than ever to degrade the sport. Neville is for sale, and Pole-star fetched 120 gs at Tatter-all's last Monday, and fell to the owner of Amorous Boy. Bartelle, who seemed at one time as if she was determined to rest on the glories of her sons Van Tromp and Flying Dutchman, and for some four seasons had no foal, has followed up her Orlando colt and her Pompey filly of 1854 55 with a chestnut colt to West Australian. Knight's sale was a very slow affair, as he was "put in" at 1200 gs., and had only two bidders, who went up by fifty pieces bids, until 2000 gs., or 1100 gs. less than Stockwell, was reached, and the rare old chestnut passed out of the "Thellusson Trust" into Mr. Foljambe's hands. He looked lusty, but, as Mr. Foljambe has such a capital chance of getting a private one here with Andango, we should not fancy he will have a trial, before it is finally decided to send him to the stud this year. The season is pretty far advanced, and nearly all the good mares are in the subscription lists elsewhere. The price, considering his immense bone and blood, is at least 500 gs too little, and he should make an invaluable cross with the steady light mares of the present day. His gameness and love of a distance was undeniable, but he rather lacked speed. Inheritress, a very handsome bay mare, is gone to Teddington, and the smart Nelly Bird, who could jump a quicker look has just left, as any animal we ever saw, is at the paddocks of Barton, the sire of Fandango.

There have been some very great runs of late, but the dry weather is beginning to be sadly against the scent, and the foxes are lying out in all directions among the crumbling dusty fallows and the dry beds of hedgerows to such an extent that the best covers are frequently drawn blank, and the "tally ho" is heard in places where a schoolboy would hardly look for a rabbit or a weasel with his terrier Among huntsman changes we may note that Edwards has left Lord Henry Bentinck, and his place has been taken by Simpson, who was with Lord Southampton last season. His Lordship has also engaged the celebrated Jack Morgan as his first whip, and he acts as huntsman on Tuesdays and Fridays, while Simpson takes the other four days

The coursing meetings are all but finished; and, in fact, the Newcastle, Northumberland, and Durham Union on Monday and Tuesday; the Middlestown on Tuesday and Wednesday, and the Nithsdale and Galloway towards the close of the week—one in each of the sister countries—are the only ones on the card for next week.

Among the odd sporting incidents of the month we may especially notice that Judge, with 8 to 1 on him, was actually caught and passed by Protest as they raced to their lairs from the slips in the run-up for the Waterloo Cup. He has always been considered the fastest dog in the kingdom; but there are some who think that Jacobite is faster. A strange struggle has also taken place between a swan and a pike, which will no doubt be preserved by the stuffer's art. A huge pike, it seems, struck at a swan which put its head under water; and when the two were found the pike had swallowed the head and neck of the swan, and there they floated, bound together by a link which proved a deadly one to both assailer and assailed.

WARWICK SPRING MEETING. MONDAY.

Handicap Sweepstakes of 10 sovs.—Sir Rowland Trenchard, 1. Bolton, 2.
Sweepstakes of 5 sovs.—The Roman, 1. Speculator, 2.
Trial Stakes.—Fisherman, 1. Stork, 2
Willoughby Handicap.—Rodo-meli, 1. Fulbeck, 2.
Farmers' Plate.—The Comet, 1. Jenny Jones, 2.

TUESDAY.

Handicap Plate.—Sir Rowland Trenchard, 1. Rudstone, 2.
Two-year-old Stakes.—Apathy, 1. Lambourn, 2.
Great Warwickshire Hand cap.—Little Davie, 1. Fulbeck, 2
Sweepstakes.—Coal Black Rose, 1. Magus, 2.
Debdale Stakes.—Royalty, 1. Beggar Boy, 2.

WEDNESDAY.

Hunters' Stakes.—Twm Shon Catti, 1. Squire of Malton, 2.
Selling Stakes. The Assayer, 1 Speculator, 2
Scurry Handicap.—Little Tom. 1. Twm Shon Catti, 2.
Grand Annual Steeplechase.—Little Charley, 1. Oliham, 2.
Hunt Cup Steeplechase.—British Sailor, 1. Omer Pacha, 2.
Handicap Steeplechase.—Goodlad, 1. Lady-bird, 2.
Handicap Hurdle Race.—Sandboy, 1. Beechnut, 2.

SALISBURY RACES.—THURSDAY.

City Bowl.—Roman, 1. Jane Shore, 2
Tb TC Biennial Stakes.—Arrezal, 1. Tracolor, 3.
Trial Stakes.—Lymington walked over.
Wiltshire Stakes.—Mayboy, 1. Elfrida, 2.

FRIDAY.

TATTERSALL'S. MONDAY.

GREAT WARWICKSHIRE HANDICAP. 4 to 1 agst Veloran (t).
TWO THOUSAND GUINEAS. 7 to 1 agst Fly-by-Night (2 to 1 t); 3 to 1 agst Yellow Jack (100 to 30 t); 10 to 1 agst Pelmoodle (12 to 1 to 1 t).
CHESTER CUP.—30 to 1 agst Warlock (1), 100 to 30 also laid; 1000 to 30 agst Pure as ore (1), 33 to 1 also laid; 100 to 30 agst Stork (1).
DERBY.—7 to 1 agst Wentworth (t to £50); 7 to 1 agst Ellington (offd); 15 to 8 agst Fly-by-Night (1 to £200), 8 to 1 also laid; 300 sovereign Wentworths and Fly-by-Night (1).

THURSDAY

TWO THOUSAND GUINEAS. 20 to 1 agst Prince (t).
CHESTER CUP.—14 to 1 agst Yellow Jack (t).
DERBY.—18 to 1 agst Blid-in-Hand (t).

## THE DESTRUCTION OF COVENT-GARDEN THEATRE.

ON Sunday some thousands of persons flocked to Bow-street for the purpose of viewing the still smoking ruins. At an early hour in the morning the barriers in most of the streets were opened, to allow persons to pass and repass, but in a very brief period the crowd became so dense as to prevent the firemen from passing to and fro to their work. It was therefore again found necessary to stop the public traffic. A number of persons managed to pass down Prince's-place, the entrance to where her Majesty's state-box stood, and got within the walls. Superintendent Durkin, seeing the plaster and brickwork falling, was apprehensive that, unless the ruins were cleared of the populace, a great many persons would be killed. He therefore made known his opinion to the firemen, and the place was forthwith cleared. After that time the only persons allowed to enter were the firemen, who were exposed to great danger by the continuous falling of the bricks and mortar from the leaning parts of the private boxes, and other things left by the firestanding loose in the niches of the upper boxes. So intense was the heat of the conflagration that many of the massive iron girders which were the supporters of the tiers of boxes and are now found to be completely fused, and the metal can be picked up in huge masses weighing upwards of half a hundredweight. The wall under which the Queen stood when she viewed the ruins has fallen to the ground, showing that her Majesty must have run a great risk whilst she remained there. In fact, Mr. Colf, the principal foreman of the fire brigade, stated that if he had been present when her Majesty viewed he should have persuaded her not to venture within the walls, more especially at the place where she entered, which was the most dangerous part of any in the ruins. His Royal Highness the Prince of Wales, upon his inspection of the ruins, having expressed a wish to obtain some of the contents of the theatre, to preserve as a memento of the devastation, Percy, the engineer of the fire brigade, entered the wall of the theatre and picked up some pieces of crystal that had fallen from the great chandelier in a fused state and become mixed with iron. His Royal Highness very politely thanked the engineer, and appeared greatly to value the relic.

The splendid staircase leading to the dress circle finally disappeared on Sunday morning, and its tottering walls, and the extreme end of the pit and the staircases leading to the private boxes were rapidly giving way, and crumbling like so much dust, owing to their calcined condition.

On Monday several hundred gentlemen visited the ruins, amongst the earliest to attend were Lord Ernest Bruce, Colonel Knox, and several other members of Parliament. In Bow-street it was difficult for persons to pass and repass, on account of the immense crowd assembled there; and Hart-street, which leads to the Queen's entrance in Prince's-place, was equally crowded by persons, who appeared to have not the last regard for their safety. Fortunately, no accident occurred, although a few hundred persons also risked their lives by venturing within the theatre, including a great many of the Foot Guards, and they being in full regimentals gave the scene quite a picturesque effect. Several persons should be seen raking amongst the ruins to procure something as a relic. The work of demolition on the northern wall goes on with full vigour, and it is thought that on a few days the whole will be cast down, and then the safety of the opposite houses will be secured.

On Tuesday Mr. Bedford, Coroner for the city of Westminster, assembled a jury at the Pictorial, Covent-garden, for the purpose of inquiring into the cause of the fire.

The Coroner said that the present was a somewhat unusual inquiry, differing from the ordinary inquests attendant on the deaths of individuals. In the present case he had been applied to by the churchwardens of the parish in which the late Royal Italian Opera-house was situate to institute an inquiry into the origin of the disastrous fire which had destroyed that magnificent building, and he had felt it his duty immediately to acquiesce in the application. The parish authorities had assured him he might rely upon their best assistance in carrying out the inquiry, and he was bound to say that Mr Moseley Taylor had taken great pains in getting the evidence relating to the calamity together. It was an inquiry in which the public were very deeply interested for many reasons. In the first place, the destruction of the theatre had occasioned very general sympathy, from the highest to the lowest; and, secondly, the walls of the building were now in such a state that the neighbourhood was jeopardised. If the evidence which should be laid before the jury that day did not satisfy them as to the origin of the fire, he trusted they would spare no pains in endeavouring to obtain further information, in order that a conclusion might be arrived at which should at once be satisfactory to themselves and to the public.

John Gye, a fireman at Covent-garden Theatre, gave an account of his discovery of the fire. On being asked what idea he had formed as to the origin, he said he thought the house had been set on fire, from the peculiarity of the smoke.

William Butler, another fireman attached to the theatre, said he received the first intimation of the fire from the last witness, on the stage, and followed him up to the floor of the carpenter's shop, on which they both crawled on their hands and knees. Witness advanced about three or four yards in this way, and then saw a heap of wood, so much as would fill a large cart, in one body of fire. He was unable to get at it in any way but the origin of the fire.

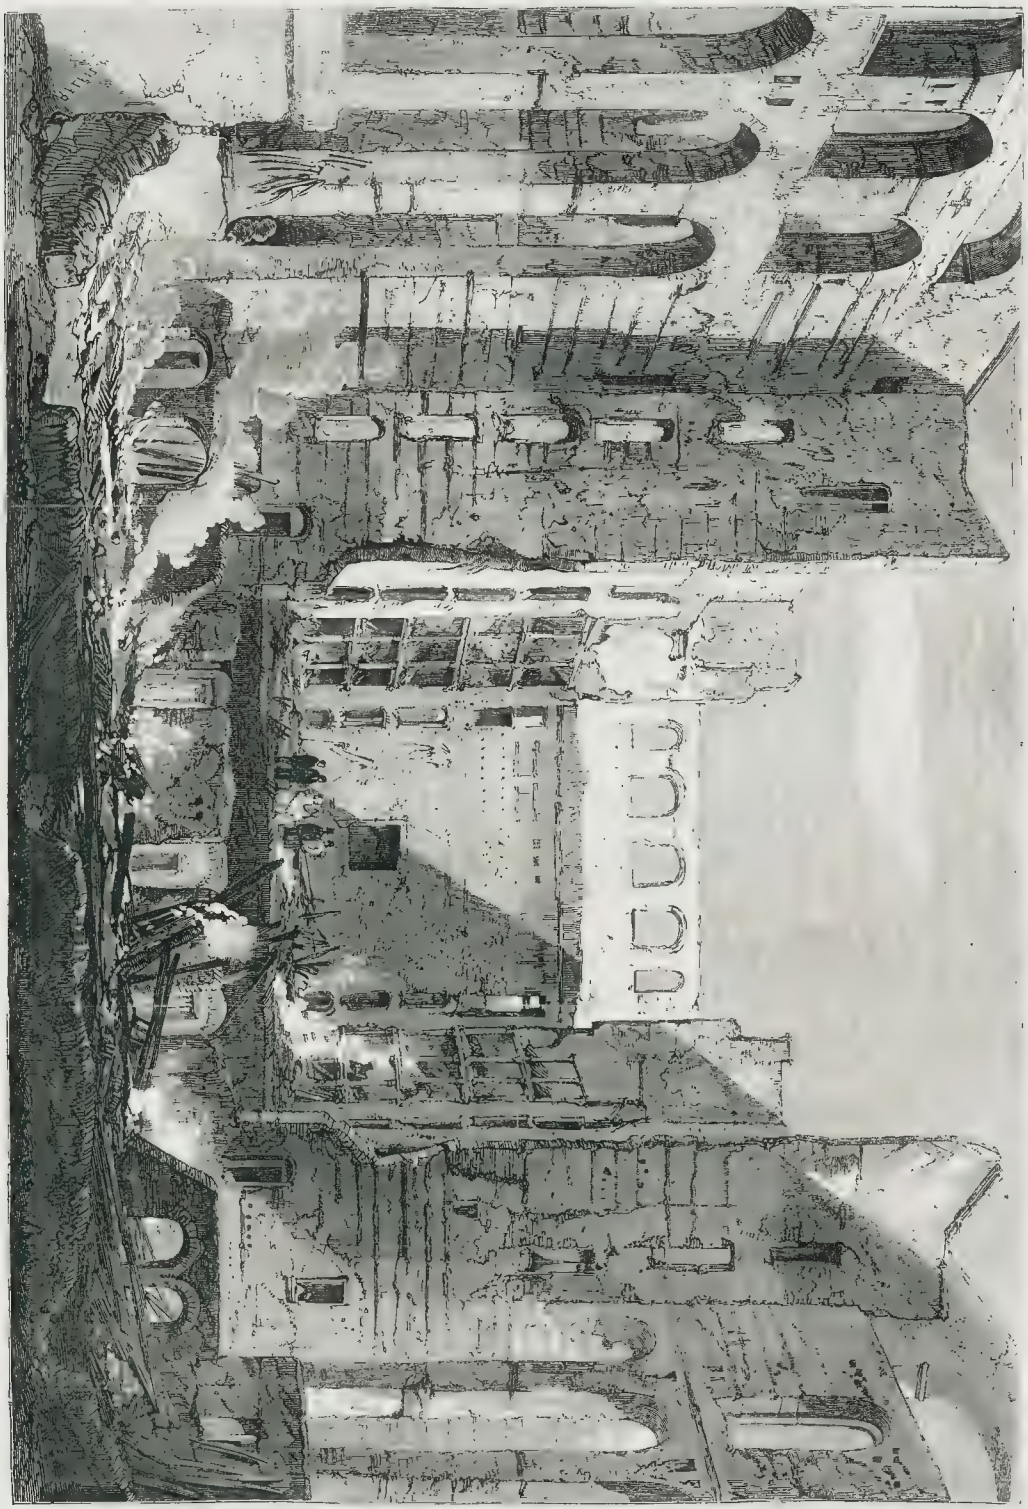
Mr. Braham, jun., another fireman attached to the theatre, corroborated the main features of the testimony deposed to by the two preceding witnesses, whom he had followed to the carpenter's shop. He was unable to form any idea as to the origin of the fire.

Mr. John Palmer, prompter, said he had the entire management of the gas-fittings of the theatre, and had fitted up the carpenter's shop with gas just previously to Christmas last. The whole arrangements for lighting the theatre were under the control of himself or his assistants. It was impossible, he thought, for the fire to have originated by reason of any escape of gas in the carpenter's shop.

Mr. Gregory Sleeman, an architect and carpenter to the theatre during the last thirty years, was next examined. He said he could not account for the fire in any other way than from the escape of gas. He also mentioned a great escape lately, and had begged and prayed and called the attention of the firemen to the fact, and had said that if something was not done to remedy the evil he was almost certain the theatre would be burnt down.

The Illustration upon page 277 was sketched during the visit of her Majesty on Thursday (last week), to her Royal Consort, and the first group of figures we also among the visitors to the ruins in the course of the day, as well as several members of the nobility and aristocracy. Her Majesty and the Princess Royal arrived about four o'clock, attended by Lord Alfred Churchill, the Lady in Waiting, Major-General Bouverie, and Colonel the Hon. Dudley de Ros, as Equerries. The Royal party approached the theatre by way of Bart-street, and alighted in Prince-place, in which her Majesty's private entrance was situated. There they were received by Mr. Gye, the lessee of the building, and were conducted to a position which commanded an advantageous view of the ruins. To reach this point, her Majesty and the Princess Royal had to pass through a portion of a lobby connecting the Royal Courtyard with the private entrance to the pit, and strewed over with a mass of charred ruins, through which they had to pick their steps with no small care. They were conducted through a low doorway in one of the interior walls to a spot near what had been the position of her Majesty's private box, from which they obtained an excellent view of the ruins, and were able to form an adequate conception of the vast area originally covered by the building, and the melancholy scene of desolation and destruction which it presented. After asking Mr Gye a few questions and addressing a graceful expression of her sympathy to him, her Majesty, the Princess Royal, and the Royal suite, left the theatre and returned to Buckingham Palace.

BURNING OF COVENT-GARDEN THEATRE.—(SEE PRECED NG PAGE.)



RUINS OF COVENT-GARDEN THEATRE.—VISIT OF HER MAJESTY AND THE PRINCESS ROYAL.—(SEE PAGE 275.)

## OBITUARY OF EMINENT PERSONS.

### LIEUT.-GENERAL SIR JOHN HUNTER LITTLER, G.C.B.

THIS gallant and able officer, who died at his seat, Bigadon, South Devon, after a short illness, on the 18th ult., was the representative of an ancient Cheshire family. He was the son of Thomas Littler, Esq., and was born in the village of Tarvin, in Cheshire, on the 6th of January, 1783. His mother was Nanwich, and he received his education in the neighbouring village Grammar School of Acton, under the mastership of the Rev. Dr Devonport In 1800 Littler obtained his Cadetship, and immediately left England for India to join his regiment: on his voyage in the *Kent* East Indiaman the vessel was captured by a French privateer, whose crew took possession of the ship, and placed all the passengers of the *Kent* on board a small panance, and with some dates and water, they were left to accomplish the remainder of their voyage to India, which they fortunately did.

In the East, Littler went through the campaigns of 1804-5, with Lord Lake, in Upper India. He subsequently volunteered to the Expedition which sailed for Java in 1811, and there obtained a high reputation for valour, being present at the assault and capture of Batavia and Fort Cornelius. On the restoration of Java to the Dutch, in 1816, he returned to Bengal, where he went on the Staff of the Marquis of Hastings, then Governor-General of India. In 1824 he was made Colonel of the 56th Regiment of Bengal Native Infantry, which command he retained till his death. In 1841 he was promoted to the rank of Major-General. In April, 1843, he was placed over the garrison and district of Agra. In November of the same year he was appointed to lead the army of Gwalior. On the 29th of December following the troops under Major-General Littler brilliantly carried the batteries of Maharajpore and Chounda. For this the Major-General was named a Knight Commander of the "Most Honourable Order of the Bath," and received the thanks of both Houses of Parliament, and was created a K.C.B. During the engagement he was slightly wounded, and had two horses shot under him. In 1845 he for some time held Ferozeshah with 7000 troops against 50,000 Sikhs; and on the 20th of December under pretended communications with the main body of the army under Sir Henry Hardinge, by a movement well conceived and admirably executed. At Ferozeshah he again had two horses shot under him, and his Aide fell by his side. His conduct on that memorable day earned for him the subscript of the "Hero of Ferozeshah." For his services in the whole of this campaign he was again thanked by both Houses of Parliament, and was created G.C.B. In 1845 he was also made Member of the Council of India. In 1847 he was appointed Commander-in-Chief of the troops beyond the Sutlej. In 1849 Sir John Littler became President of the Council of India and Deputy-Governor of Bengal, and was presented by the inhabitants of Calcutta with a service of plate, accompanied by an address. He returned to England in 1851, having been in the East India Company's service for fifty-three years. Sir John Littler's family is one of the oldest in Cheshire. The name is derived from Littlever, in that county, near which place the Littlers originally resided, and who are said in an old chronicler to be "known for the basis of theyre tempes" Robert Littler, Esq., of Tarvin, who died in 1570, was one of the most influential proprietors in Cheshire, and from him Sir J. Littler is directly descended. Sir John married, in 1827, Helen Gympso, only daughter of Col. H. Stewart, whose father claimed the Earldom of Orkney by this lady, who survives him, Sir John has had issue four daughters. Sir John was last week interred in the family vault at Tarvin, near Chester. During the funeral not a single shop was opened, nor a blind raised in the whole town of Tarvin, such was the respect in which he was held in his native place.

### GENERAL GEORGE WRIGHT.

GENERAL GEORGE WRIGHT, Colonel Commandant of the Royal Engineers, died on the 5th inst. at Bath, in the seventy-second year of his age. He entered the army more than sixty years. The gallant General was born in 1776, he obtained the rank of Second Lieutenant in 1756; an active, brave and shrewd man much hard serv. e. He was in the West Indies during the war with France, from 18-0 to 1805, during which period he returned to England on account of ill health from the enemy. He was also in North America, Canada, Nova Scotia, and New Brunswick during the whole of the last war with the United States, under Generals Sir George Prevost and Sir John Sherbrooke; and while with the latter General he filled the office of Deputy Quartermaster-General of the Forces in the provinces of Nova Scotia and New Brunswick. He became a Major-General in 1837. He volunteered his services to Ceylon during the rebellion of the Kandyan provinces; and on his return to his native country he paid an official visit to the Court of Persia. He was made a General, the 20th June, 1854, having been previously appointed a Colonel-Commandant of the Royal Engineers in 1851.

### J. B. CAMPBELL, ESQ.

JOHN BENTON CAMPBELL, Esq., of Lamberton and Mordington, in the county of Berwick, died at Malta, on the 25th of February, in the forty-second year of his age. Mr Campbel represented the borough of Berwick-on-Tweed in the last Parliament upon Conservative principles. His large landed estates in Berwickshire revert to his next brother, Archibald Colin Campbell, late a Major in the 42nd H.ghlanders, who now takes the additional name of Benton The Major has lately returned from the Crimea in ill health, after being present at Alma, Balaclava, and Sebastopol—where he much distinguished himself for his bravery, and for his unceasing kindness and attention to the men under his command.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE favourable prospects of peace continue to exercise considerable influence upon the value of natural S ecks. Although the general business of the week done in Consols this week has not been to say extensive, prices have advanced nearly one per cent, and there has been an unusually heavy "contango," viz.— 8-16 to 5 per cent—a strong proof that bobbers generally are operating upon peace prospects. We have had a settlement in the Consol-market; and there has been a heavy payment—over £2,000,000—on account of the new Loan of £8,500,000, and the funding Exchequer Bills. Nearly two-thirds of the amount were paid into the hands of the contractors prior to Thursday; so that there was no immediate pressure for money on that day.

The Discount-market has been by no means well supplied with money; but some relief has been afforded it by the East India Company having lent some considerable sums, at the current rates of interest. Discount quotations have not varied since our last, short-dated bills being quoted in Lombard-street at 5⅛ to 6⅛ per cent.

It is understood that some remittances have been received from Paris to invest in our funds; and it must be satisfactory to learn that the demand for gold on account of the Bank of France is by no means active. For shipment to India, however, most of the silver in the market has been disposed of—bars, at 60¼d.; dollars, 60¼d. per ounce. There have been very few imports of the precious metals, the principal arrivals being £22,000 from Belgium, and £2000 from the Brazils; but we understand that the next two steamers from New York will bring over £200,000.

National Securities were steady on Monday, as follows: Three per Cent Consols, for Money, 91½ ⅜; Ditto, for Account, 91½ ⅜; New Three per Cents, 91½; Long Annuities, 1860, 3⅜; Consols Bonus, 1860, 1½ prem.; Exchequer Scrip, 1¼ ¼ prem.; Exchequer Bills, 1s. prem. to 1s. dis.; Ditto, Advertised, 2s. dis.; Exchequer Bonds, 98½ ½. On the following day numerous small parcels of stock were purchased for the settlement of the dividends, and generally we firm:—The three per Cent Consols were 91½ up to 91⅝; Ditto, for the Account, 92½ ⅜; New Two-and-a-Half per Cents, 77; Five per Cent Annuities, 115; India Bonds, 2s. to 3s. dis.; Exchequer Bills, 1s. to par; Exchequer Scrip, ¼ prem.; Exchequer Bills, 1s. dis. to par; Exchequer Bonds, 98⅜. On Wednesday prices had an upward tendency, with a firm feeling in the transactions:—The Three per Cents Reduced were done for special transfer at 91⅞; the Three per Cent Consols, for Money, marked 91⅛ up to 92⅛; Ditto, for Time, 92½ ⅜; New Three per Cents, 92⅜; India Bonds, 2s. 3s. dis.; Consols Scrip, 1⅛ prem.; Exchequer Bonds, 98⅜; Exchequer Bills, 1s. dis. to 1s. prem.; Ex.l equer Bonds, 1868, 98⅜; Ditto, 1869, 98⅜. On Thursday prices were again on the advance, with a firm market. The Three per Cent Consols were 92⅛ ⅜ for Money and 92⅜ ½ for Time. The New Scrip was ¾; and Exchequer Scrip, 2 prem.; India Bonds, 3s. dis. A transfer took place in New Three per Cents at 93. The half-yearly meeting of the Bank Proprietary took place, when a dividend of five per cent for the last half year was agreed to. The net profit for the half year was £705,326 8s. 7d.

The transactions in the Foreign House have been tolerably extensive, and prices generally have ruled firm. Portuguese Five per Cents have marked 101¼; Equador New Consolidated, 14; Ditto, Provisional Loan Warrant, 4; Granada Con-and-a-Half per Cents New Active, 21¼; Ditto, for Money, 22; Russian Four-and-a-Half per Cents, 92; Ditto, Small, 92½; Peruvian Four-and-a-Half per Cents, 80 ex div.; Sardinian Five per Cents, 91; Dutch Two-and-a-half per Cents, 64; Dutch Four per Cents, 93¾; Spanish Three per Cents, 43; Ditto, New Deferred, 23¾; Ditto, Passive, 5; Turkish Six per Cents, 96¾; Ditto, for Cent per Cents (guaranteed), 100; Venezuelan Four-and-a-Quarter per Cents, 28¾; Do., One-and-a-Half per Cents, Deferred, 12¾; Belgian Four-and-a-Half per Cents, 93½; Cuba Seven per Cents, 101; Mexican Three per Cents, 19.

Joint-Stock Bank Shares have been in good request, as follows:—Australasia, 87; Bank of Egypt, 7⅞; Ditto, New, 6⅞; City, 63; Colonial, 30; English, Scottish, and Australian Chartered, 16 ex div.; London Chartered of Australia, 16⅛; Ditto, New, 2; London and County, 33½; London Joint-Stock, 29; New South Wales, 23⅞; Oriental, 42; Union of Australia, 71¾; Passive, 5.

There has been a moderate inquiry for Miscellaneous Securities, and prices continue to be well supported:—Australian Royal Mail have been 4¾; Berlin Waterworks, 5⅛; Canada Company's Bonds, 104; Ditto, Government Six per Cents, 108½; Crystal Palace, 2½; Ditto, Preference, 5½; Electric Telegraph, 20½; General Steam Nav gation, 2⅞ ex all; General Screw Steam Shipping Company, 1⅝ ex d v.; Peninsular and Oriental Steam, 68; Scottish Australian Investment, 1⅞; Victoria Docks, 1⅞; Grand Junction Canal, 38; Oxford, 194; Stafford and Worcester, 420; Stourbridge, 290; Hungerford-bridge, 12; Waterloo Bridge, 17 26, Vauxhall, 2⅜

Railway Shares have been in rather flat, yet prices have ruled tolerably firm:—Ed. Zd.i.burgh have had sold 26, Cop.ano, 2⅛, Lancas, 7½, Tai Croft, 4, and United Kingdom 3.

Most Railway Shares have been in steady request, and high prices of yesterday have been fully maintained. Caledonian have been offered at Shrewsbury have been 1-16, Great Dover 1-16 to 3-32, and Great Berkshire, 1-16 to 1. The following are the final closing money prices on Thursday:—

Caledonian, 79¾; Eastern Counties, 8¾; Edinburgh and Glasgow, 90; Caledonian, 79; Eastern Counties, 8¾; Great Northern, 98½; Ditto, A Stock, 139½; Great Western, 62; Lancashire and Yorkshire, 98½; Manchester, Sheffield, and Lincolnshire, 24⅝; Midland, 66¾; North British, 29½; North Eastern—Berwick Extension, 15; Ditto, Leeds, 152; Ditto, York, 83; South Eastern, 61¾.

IRISH RAILWAY SHARES RENEW Midland—Bradford, 70½.

FOREIGN AND COLONIAL Great Western of Brazil, 12; Ditto Four-and-a-Half per Cent, 91½; Ditto, Five per Cent, redeemable at Five per Cent prem., 7⅞; North Eastern of York, 9½

MINING—Australasian, 8⅝; Bolanos, 8⅜; Bombay, Baroda, and Central India, 8½; Dutch Rhenish, 11½; East Indian, 21⅜; Great Luxemburg, Obligations, 8½; Madras, 15⅞; Sambre and Meuse, 9⅜.

*Friday Evening.*

Very little change has taken place in the value of national stocks to-day, in which, however, only a limited business is doing. The Three per Cents for Money have marked 91⅝ ⅜; and for the Account, 92⅛ to 92⅜ ½; Exchequer Bills, 1s. dis. to 1s. prem. Foreign Bonds and Railway Shares support yesterday's quotation s.

## THE MARKETS.

CORN EXCHANGE (Friday).—A very limited supply of English wheat was on sale in to-day's market, and the demand for fine qualities was active. Fine marks had a steady, though to say brisk, demand, and, Monday's quotations were exceeded by 2s. to 4s. per quarter. In other wheat the buyers (which are 600 quarters—was firm, at full quotations. The amount of business done in it, however, was by no means extensive. We had a good demand for barley at very full prices. Malt sold slowly, at the late decline in value. We were well supplied with oats, and the trade for them was heavy, at barely stationary prices. Beans, peas and flour moved off steadily at very full currencies

*Arrivals this Week.* English: wheat, 1693; barley, 1000; malt, 4,00 quarters; flour, 870; oats, 2,00. Foreign: wheat, 1,620 quarters; oats, 11,0 sacks

*English.*—Wheat, Essex and Kent, red, 68s to 72s.; ditto, white, 62s to 75s.; Norfolk and Suffolk, red, 65s to 70s.; ditto, white, 70s.; grinding barley, 32s to 33s.; distilling ditto, 35s. to 35s.; malting ditto, 38s to 40s.; Lincoln and Norfolk malt, 65s to 74s.; brown ditto, 62s to 63s.; Kingston and Ware, 74s to 75s.; Chevalier, 75s to 76s.; Yorkshire and Lincolnshire oats, 23s to 25s.; potato ditto, 23s to 25s.; Youghal and Cork black, 19s to 22s.; ditto, white, 19s to 23s.; tick beans, 32s to 34s.; grey peas, 34s to 35s.; maple, 35s to 36s.; white, 34s to 35s.; boilers, 40s to 42s per quarter; Town-made flour, 51s. to 53s.; Suffolk, 47s to 49s.; Stockton and Yorkshire, 47s to 49s. per 280 lbs. American flour, 31s to 33s. per barrel.

*Seeds.*—There is an active feeling in the demand for most seeds, as well as cakes. Prices generally are supported.

*Linseed, English*, grinding, 64s to 66s; Mediterranean, 0s. to 0s.; hempseed, 51s to 55s. per quarter. Carlson 30s to 31s. per cwt. Brown mustard seed, 10s. to 12s.; white, 9s. to 10s.; fine, 7s. to 8s. per bushel. Rapeseed, English, £13 to £14 per last; foreign, £12 per quarter. Linseed cakes, English, £13 to £13 5s.; ditto, foreign, £12 5s to £13 10s.; rape cakes £6 10s to £6 5s per ton. Canary seed, 52s per quarter; red clover seed, 7cs to 8cs; ditto white 80s. to 100s. per cwt.

*Bread.*—The prices of wheaten bread in the metropolis are from 8½d. to 9½d.; of household ditto, 7½d. to 8d. per four-pound loaf

*Imported Weekly Averages.*—Wheat, 60s. 11d.; barley, 35s. 11d.; oats, 21s. 1d.; rye, 40s. 6d.; beans, 40s. 0d.; peas, 40s. 3d

*The Six Weeks' Averages.*—Wheat, 71s. 7d.; barley, 35s. 8d; oats, 24s. 3d.; rye, 40s.; beans, 47s. 4d.; peas, 40s.

*English Grain Sold Last Week.*—Wheat, 102,891; barley, 31,745; oats, 24,808; rye, 1,; beans, 2162; peas, 1293 quarters

*Flax.*—We continue to have a very dull sale for all kinds of tow, and prices are barely supported. Common second sample 32l. to 33l. per ton.

*Sugar.*—The supplies of raw sugar continue in excess of last year, and the demand for them is rather off. Prices may be quoted 6s. per cwt. lower than last week. The very little in request for refined goods is very inactive, at 47s to 48s. per cwt.

*Coffee.*—The article is still dull in sale, and good ordinary native Ceylon is freely offered at 50s to 51s. per cwt.

*Rice.*—There is a better feeling in the demand for most kinds, at an improvement in value of 6d. per cwt. The supply in warehouse is large

*Spices.*—There has been only a limited demand for this article, at drooping price Pepper is selling at 5¾d to 6¼d 6d.; and for Penang at 6¼d to 6½d. per pound

*Provisions.*—Irish meat still has a ranged hands at 58s 6d. to 59s. per cwt. Most other oils are firm. Tallow is dull, at 50s 6d to 4s 6d; spirits, 33s to 34s. per cwt.

*Spirits.*—Rum is dull, at 2s 1d to 2s 3d per proof hogsheads, at 1s. 10d to 2s. per gallon for East India. Brandy is dull, at 10s 6d to 11s. per gallon. Genevas are very little in request.

*Hay and Straw.*—Meadow hay, £4 0s. to £5 15s.; clover ditto, £5 0s. to £6 10s.; and straw 1s. to £1. 10s. per load.

*Potatoes.*—Since the date of the public sales our market has ruled very firm, and prices have been well supported.

*Hops.*—The supplies continue good, and the trade is heavy, at from 40s to 85s. per cwt. (Friday.)—There is a moderate inquiry for the finest hops, at last week's prices; but other kinds are very dull, at barely former rates. The imports this week amount to six bales from Rotterdam and 284 from Hamburg. Mid and east Kent pockets, £6 10s. to £8 8s.; Weald of Kent, £5 5s to £5 0s.; Sussex, £2 10s. to £4 10s. per cwt

*Coals* (Friday).—Ships at market, 70; at Hull, 0; at Hartlepool, 0; at Sunderland, 0; at Shields, 0; at Newcastle, 0; at Stockton, 0; at Yarmouth, 0; at Ipswich, 0; at Colchester, 0; at Maldon, 0; at Harwich, 0; at Goole, 0; at Selby, 0; at Hull, 0; at Grimsby, 0; at Boston, 0; at Lynn, 0; at Wells, 0; at Blakeney, 0; at Cromer

BOSTON ELECTION.—MEETING IN THE CORN EXCHANGE.

(*Continued from page 278.*)

and I solemnly assert, in the face of this crowded meeting, that nothing shall make me betray your interests (Loud cheers, followed by three distinct rounds).

The Chairman said he did not know whether Mr. Ingram had not laid himself open to a charge of treating; for he had several times given them intellectual treats, by bringing down amongst them a number of the leading *literati* of the metropolis, several of whom yet remained, and among them was the editor of the world-wide famous *Punch*. (Three cheers for *Punch* were then called for and heartily given.

Mr. Mark Lemon returned thanks in a humorous speech.

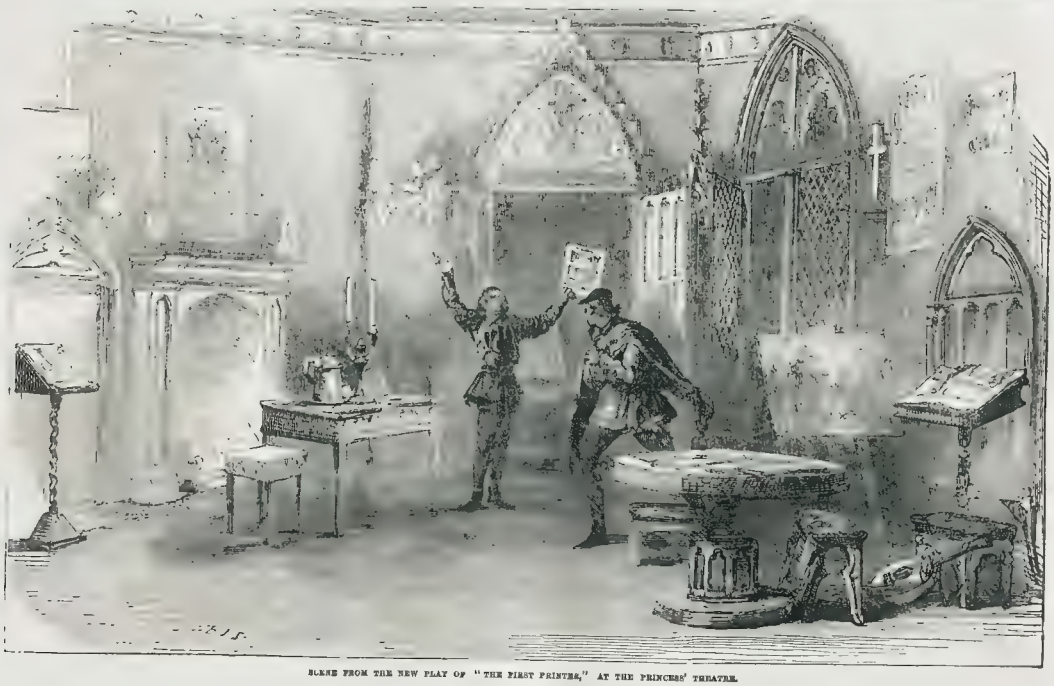
Mr. R. R. R. Moore, who was very cordially received, dilated in eloquent terms upon the glorious termination of the contest. Since the passing of the Reform Bill he had calculated that about £60,000 had been spent in parliamentary contests in the borough. This money, if properly applied, would have made the cut at the mouth of their river (which was so much required to improve the navigation), provided docks, and restored to Boston a portion of that trade for which it had in former times been so eminent (Cheers). It would also have built schools and provided teachers for all the poor lads now running about the streets in a state of deplorable ignorance (Hear, hear). Instead of this the money had been spent in brutalising and debasing the people. He trusted that this election was the commencement of a new era, the precursor of the "good time coming" of which their friend Charles Mackay had so eloquently sung

M. Staniland, Esq., who was most enthusiastically received, said he had predicted a victory, but was not prepared for such a triumphant one as had been obtained. Much of the success was owing to the unwearied exertions of Mr. Ingram's committee, who had been unremitting in their exertions (Cheers).

The Rev. T. W. Mathews, Mr. Burrell (a working man), Mr. T. Small (surgeon), Mr. Grant, Mr. W. W. Tuxford, and other gentlemen addressed the meeting; which terminated at a late hour with three hearty good cheers for Mr. Ingram and the Old Blue cause of liberty, progress, and reform.

Thus terminated the Boston election, which, it will be seen, was conducted throughout with the greatest good feeling and courtesy. With one or two paltry exceptions, which were at once frankly repudiated by Mr. Adams, there were none of those stupid squibs and scurrilous attacks on private character issued which in former times were considered the usual concomitants of contested elections. We trust the Liberals of Boston will take confidence from the result, and at the next general election, which may be expected in a few months, they will, to use the words of Mr. R. Moore, not be satisfied with returning one Liberal and one Tory, but will endeavour to secure the election of "two good men and true" to represent them in the national Legislature.—*Boston and Louth Guardian.*

BOSTON ELECTION.—DECLARATION OF THE POLL.



SCENE FROM THE NEW PLAY OF "THE FIRST PRINTER," AT THE PRINCESS' THEATRE.

## THE "FIRST PRINTER."

WE commented last week on the distinguished literary merits of this successful play, and expressed our approbation of the manner in which it was acted: so that it now only remains for us to describe in greater detail the particular scene which our Artist has chosen for illustration. It is in the second act, and represents the two principal characters—the hero and the evil genius of the piece—*Laurence Costar* (Mr. Charles Kean), and *John of Gutenberg* (Mr. Ryder). *Costar*, in the simplicity and confidence of his soul, has just divulged the secret of his printing-press to his crafty compeer; and the two are making impressions of a revolutionary document which the former has undertaken to copy. It is in this portion of the performance that *Costar* bequeaths the art of printing to mankind, and, prophet-like, foresees the manifold blessings that will result from it. Our Artist has represented Mr. Kean in the act of delivering the impassioned address on fame, which has occasioned so much encomium in the press and in private circles.

## IRON AND GLASS BUILDING IN GLASGOW.

THIS edifice—of striking character, whether as regards novelty of design or

NEW IRON AND GLASS WAREHOUSE AT GLASGOW.

materials is now in course of erection in James-street, Glasgow. This building has a frontage of eighty-seven feet to James-street on the east, and fifty five feet to Ann-street on the south. The two fronts represented are composed entirely of stone and British plate glass.

The front towards Jamaica-street is divided into four, and that towards Ann-street into three, compartments, separated by pilasters, which, with horizontal girders opposite the floor joists, form the principal framing of the two fronts. The interior is supported by pillars placed transversely and longitudinally opposite these pilasters, and tied to one another and to the exterior framing, and also to the gable walls, by cast-iron girders and a recently-patented framed girder constructed so as not to occupy more room than the depth of the flooring and joisting. The floors are composed of timber, the joisting in each alternate floor running east and west, and north and south the whole length and width of the building respectively, and being fixed to the front girders and gable walls. The upper floor is lighted by skylights having a northern exposure, and the gutters between the different compartments of the roof are of cast iron, of sufficient strength to carry the roof spars.

All the divisions, arches, entablatures, dados, great cornice, and all other outside work of fronts are attached to the pilasters and outside girders formerly referred to. The windows are to have wood frames, and every alternate sash is to be hung on centre-pivots at top and bottom, so as to admit of ventilation and facility for cleaning the glass. This entire fabric is constructed over a sunk flat, which is built of stone, and the principal uprights are set on granite blocks.

Another peculiarity connected with this building is the construction of the shutters, closing in the shop windows and doors. They are made in two pieces in the height, of plate iron, and extending the whole width of each compartment. The upper portion of the shutters run up into a recess behind the frieze cornice and dado over the shop windows; while the lower portion runs down the stone pier, and being hung by pulleys and chains, so as to balance one another, are opened and shut with remarkable ease and expedition.

The general features of the building are—lightness of construction, giving great admission of light, unobstructed floor room, and facility of division, to suit different classes of tenants. One powerful heating apparatus is being made to heat the whole premises.

The framed girders above referred to are constructed of malleable iron flat bars at top and bottom, having cast-iron distending frames or blocks placed between them and secured together by malleable iron bolts, spaces being left for the joists to pass through the girder, the only part of which below the joists is the bottom flat bar.

These girders and the shop shutters to be used at this building have been invented by Mr. Robert M'Connel, the contractor for the iron work, and are now secured by patent.

MALTA, FEB 13.—An act of great heroism took place here last week by the Rev. Mr. Evans, chaplain to the forces. A Mr. and Mrs. Evans, with their son, about eight years old, were crossing from Valetta to Vittoriosa, when the little fellow, in endeavouring to catch hold of a piece of stick, overbalanced himself, and instantly sank before the eyes of his parents. Mr. Robinson, who was following in another boat, seeing what had occurred, immediately jumped into the sea, and succeeded in bringing him, apparently dead, into it. Mr. Evans, the father of the boy, feeling much gratified for what the rev. gentleman had done, sent him a cheque for £500, which was at once returned. The two gentlemen who have so unexpectedly become acquainted with each other are relatives and members of branches of the same family; but, in consequence of differences which took place many years ago, they had not seen each other since their boyhood, and each was ignorant of the other's residence in the island until this singular introduction. Mr. Robinson was lately curate of Thomastown, Ireland, and served throughout the latter part of the siege of Sebastopol as Chaplain to the forces, having volunteered for duty in the trenches during the final bombardment, he was struck in the breast by a Minié ball, which providentially lodged in a Prayer-book in his pocket, knocking him down, but doing him no further injury.

MEDAL OF THE ROYAL NATIONAL LIFE BOAT INSTITUTION.—This medal was designed and executed by the late eminent engraver, Mr. Wyon, R.A., of the Royal Mint. He always spoke of this medal, which he executed when a very young man, as one of his best productions. He therefore invariably selected it for exhibition with his other works. It appears that the Royal National Life-boat Institution has voted to officers and others, since its establishment in 1824, seventy-nine gold medallions and 564 silver medals for distinguished services in rescuing life from shipwreck. Some of these medals have also been presented by the society to the fair sex, in admiration of their gallantry in saving life. Since the formation of the institution in 1824, upwards of 9600 lives have been rescued from shipwreck by its life-boats and other means; and for which services the institution has voted honorary and pecuniary rewards amounting together to more than £9600.

SPANISH BANDITTI.—A letter from Madrid says:—"Count de Villariezo, who had been carried off by banditti into the mountains of Toledo, has been liberated, on the payment, by his family, to the brigands of a sum of 600 gold ounces, independently of the ransom of 10,000 piastres, which the commander of the civic guard intercepted on their way to the mountains. It appears that those robbers possess a certain degree of education. They began by telling their prisoner that he had nothing to fear for his life, but that they might be obliged to take him with them into Portugal. All we want, said they, is to make a good job. They supplied him with blankets at night, and when provisions became scarce they went to a neighbouring village in order to augment his purse. He was asked if he had lately attended at the representations of the Royal Theatre, and heard Ronconi. On his replying in the negative, the chief exclaimed that such a thing was impossible in a gentleman."

AVALANCHE IN SWITZERLAND.—A second avalanche has fallen in the mountainous passes of Switzerland. On the 23rd ult. a train of ten sledges was overtaken by an avalanche on the St. Gothard. Five of the sledges were driven down a precipice with their passengers, only three persons escaping—Prince Lobkowitz, his servant, and one of the drivers. By the efforts of these and some persons who happened to be near the spot, nine other persons were immediately rescued, but a tenth, a M. Fragnani, was not got out until he had been lying for about twenty minutes covered to the depth of five feet, by which he was so much injured as not to be able to pursue his journey. It was found necessary to leave him at a neighbouring house to recover, while the other passengers continued their journey.

WATER COMMUNICATION BETWEEN THE BALTIC AND BLACK SEAS.—The blockade of the Russian Baltic provinces and the Black Sea have already led to a new line of communication being opened between the Ukraine, the steppes, and the region around about Odessa and Nicolaieff on the one hand, with the north-west of Europe on the other. The Pinsker Canal, which has been for many years in progress, was opened for navigation in the course of last year. It connects the river Bug, which flows into the Vistula, with the river Pripets, which flows into the Dnieper; and thus it forms the completing link in a chain of water communication extending from the Baltic to the Black Sea. By this route Dantzic has received in the past year 1000 lasts of linseed of unusually good quality (an article that Dantzic has previously never exported), 12,000 cwt. of tallow, which has found purchasers in Holland and Belgium, and about 1,000 cwt. of hemp, of which only 5000 had been shipped when the navigation closed. There has been also about 10,000 cwt. of tallow dispatched thence to Stettin, but from spy on the road that the south which will also be available at the return of spring. The only portion of the navigation of this line of water communication that is described as wanting improvement is the Bug, to which the attention of the Russian authorities has been already happily directed; and we may be sure that, if the war lasts, this defective portion of the connecting route from north to south will not be neglected.—*Letter from Berlin.*

THE WHITE SEA BLOCKADE.—Accounts from the Norwegian ports state that, notwithstanding the armistice, the English Government intends sending a division of light ships of war into the White Sea. Large quantities of coal for the use of steamers have been already landed in the neutral port of Hammerfest. The Russians have been fortifying the Bay of Archangel at all points. The entrance of the channel to Archangel port has been rendered unnavigable by the ships of large size. Batteries have also been erected on both sides of the bay. Several ships of war and two new steamers for the Imperial navy have been built at Archangel since the departure of the Allied squadron, and are, at this moment, completing their armament in that port.

THE CONCORDAT IN TUSCANY.—The effects of the Austrian Concordat with Rome are making themselves felt in Tuscany, where the most strenuous endeavours are made to move the Grand Duke to abolish the Leopoldine law, the last remains of the former liberal *régime*. The attempt has not been fully successful; but it is understood that as a concession the severity of the laws against the press will be increased.

RUSSIAN PREPARATIONS FOR NEXT YEAR'S WAR.—In spite of all the "hauling" of the *Northern Bee*, the preparations for war and for defence are not relaxed; the buoys and sea-marks are being taken up all along the coast: the lighthouses and beacons are no longer to be lit; the vessels in Cronstadt are being released from the heavy covering of ice and snow in which they have been enveloped during the winter, and the crews are fully occupied for the present in scraping and scrubbing, in painting and holy-stoning. This activity is also kept up in the dockyards of Archangel, notwithstanding the frequent visits of inspection which the Grand Duke Constantine pays them. All the high officers in command in the north—Berg, Grabbe, and Sievers—have, after delivering in their reports connected with the late Council of War, left St. Petersburg for their respective posts; the Vice-Admirals and Commanders of the marine fortresses, Helsingfors, Sveaborg, and Cronstadt, of the Marine Guard and the two divisions of the fleet, are as busily engaged in their preparations for defence as though the Allied fleet was already through the Belt. Prince Menschikoff, however, continues in a very ill state of health, as he was when he returned from the Crimea; and it is thought he will hardly be strong enough to undertake the arduous duties of the office of General Governor of Cronstadt.—*Letter from Berlin.*

## NOTICES OF NEW INVENTIONS, &c.

BY JOHN BOURNE, C.E.

### PLOUGHING BY STEAM.

At a meeting of the Society of Arts, on the 5th instant, at which Prince Albert presided, some pertinent remarks on ploughing by steam were made by Mr. Allen Ransome. "There are many and various means," says Mr. Ransome, "of effecting steam-ploughing; but certain it is that the experiment is too great for any one individual—too large for individual enterprise. The cost of investigation, of experiments, of trials, and of errors, is enough to drain the deepest purse, and break the strongest heart. I have no hesitation in saying that, if the object is to be accomplished in a reasonable time, as it is a matter which would confer a national good it should be made a matter of national cost. The funds, I believe, are all that is wanting to bring about some arrangement which will have a practical effect. Until some such general fund is obtained, we shall go on hoping, each hope to end in disappointment." In these remarks I fully concur; and it would be regarded by the nation as a wise expenditure of the public money if the Government were to place £100,000 at the disposal of the Royal Agricultural Society for helping to develop practically the capabilities of the best and most promising plans for ploughing by steam—those plans being selected by a committee constituted for that special purpose.

In a paper on "Cultivation by Steam," lately read before the Society of Arts, by Mr. Fowler, the various expedients for ploughing by steam which have been propounded at different times are enumerated and explained; and Mr. Fowler divides the whole of these expedients into six classes:—

1. Locomotive engines drawing agricultural implements. In this class the necessary reaction to enable the passage to advance is obtained either by the bite of the wheels on the ground, by winding up a chain of which the end is fixed in the ground, by using rack-rails laid along the ground, in which the wheels gear, or by causing the engine to thrust out legs behind to force on the vehicle.

2. Locomotive engines, working ploughs, or cultivating arms, placed on a horizontal revolving shaft.

3. Rotatory cultivator driven by steam in some unexplained way.

4. Portable engines employed to wind ropes which draw ploughs or other cultivating implements.

5. Portable engines giving motion to endless ropes for working windlasses that draw agricultural implements.

6. Portable engines driving endless ropes which work rotatory cultivators.

These six classes, however, all resolve themselves into two main divisions—the direct and the indirect modes of communicating the power; and Mr. Fowler seems to give the preference to the latter alternative. He says:—"There are various schemes patented in the last few years for rotatory cultivators worked by locomotive engines, all varying only in detail; and it has been the favourite subject of many of our agricultural writers. But I believe that a little consideration would have saved them all much pains and expense; as if there is one point more difficult than another from which to approach our subject it is in this direction. The enormous weight of the engines required in which an ordinary farm pressure of steam is used, and the weight necessary to give sufficient strength to the drums and frames; the difficulty of steering such a great load to the nicety required for field operations; the yet unknown difficulties that may meet the rotatory cultivator—though at first sight I confess it appears well adapted to the work; to say nothing of the power wasted in moving such a weight over arable land and up ever so slight an incline, might well deter the most sanguine from any attempt of this kind."

From these conclusions I dissent altogether, and I believe that when the problem of ploughing by steam has passed the experimental stage into practical adoption it will be by some species of direct-acting apparatus that the success will be achieved. I look upon it as indispensable to a perfectly satisfactory result that not only ploughing but sowing and harrowing shall also be accomplishable by the same apparatus; and I also consider that any apparatus which involves the use of ropes, windlasses, or other scattered complications, are not likely to prove satisfactory in practice. An arrangement will probably be found to be preferable to a steam-engine as the source of power, as the weight of the water and of the boiler can thus be got rid of; and an air-engine may be made that will be much more suitable to the construction that carries out the work to be done. There is no power lost in ascending-acclivities that is not recovered in descending declivities, unless the declivity be supposed to be so great that the mere gravitation of the carriage down it will more than suffice for the ploughing operation. A certain part of the power has to be expended upon a break. In practice, however, the declivity can never be so great as to involve this result, especially if the machine be tolerably light, and if a deep cut be taken in the ground. Whatever may be the subordinate details of the apparatus, it should be one that is applicable to the general work of the farm, and should be capable not merely of thrashing corn, and performing the other functions of a fixed engine, but should also be capable of acting as a steam-horse for drawing waggons and other heavy loads. There is no difficulty in the combination of these various functions in one machine without adding materially to the expense that is not superable readily by the ingenuity and mechanical resources of the present makers of agricultural engines, who have heretofore succeeded in meeting all the demands made upon their skill and ingenuity to the satisfaction of the public and to their own emolument and fame.

### MINE EXPLOSIONS CAUSED BY REVOLVING STORMS.

Explosions of coal-mines are caused by the ignition of a mixture of coal gas and atmospheric air. The escape of coal gas into mines is increased with every diminution of the atmospheric pressure, and also with every increase of the temperature of the atmosphere. The great storms which sweep over Great Britain and the continent of Europe during the autumnal and winter months take their rise among the West India Islands. In the cyclones of the northern hemisphere the wind turns in a direction contrary to the hands of a watch, so that during revolving storms the pressure of the atmosphere is not only reduced, but a warm wind blows from the southward These are precisely the circumstances which are conducive to the liberation of coal gas in mines, and at the same time the motion of the air induces the effective ventilation of the mines. In a report on this subject by Mr. Dobson, of St John's College, Cambridge, it is stated that in October, 1821, during a regular West India hurricane which swept over Great Britain, no less than five explosions occurred. In November, 1838, two great explosions took place during a severe storm; and in January, 1844, and November, 1850, serious explosions occurred under like circumstances. There are generally premonitory symptoms in mine explosions which, if attended to in time, will abate the danger to a very material extent.

### IMPROVED BLOWING-ENGINES.

Messrs. Boulton and Watt have constructed some very compact engines for blowing the smelting furnaces of the East Indian Iron Company. The steam-cylinder is set upon the top of a blowing-cylinder of large dimensions. The blowing-cylinder is fitted with a piston in the same manner as the steam-cylinder, and the two pistons are connected, and move simultaneously. The movement of the piston within the blowing-cylinder forces out the air like a bellows, and this air blows the furnaces. The main feature of novelty in this engine lies in the valves by which the air is admitted to and passes from the blowing-cylinder, and which consists of a ring of metal closing perforations all round the cylinder with a view of giving as large a passage as possible to the entering and escaping fluid. This valve is made under Mr. Slate's patent; but, some years before the date of Mr. Slate's patent, I invented and made public this identical valve. The depth of the metallic ring, which constitutes the valve, is about the same as the depth of the piston; and a ring or collar is fixed down like an annular piston of short stroke; or to work it a short distance round the cylinder, and then back again; or to work it round and round the cylinder continuously, with a slow motion, by appropriate gearing.

### CIRCULAR WEAVING.

Cloth is at present woven in a flat sheet, or web, by means of a shuttle driven from side to side carrying a thread or weft-line operation is, in fact, a repetition of darning, only the darn lifts up and presses down every alternate thread to enable a needle so large as the shuttle is to pass through. Now it is clear that, instead of the cloth being formed in a flat sheet, it might be formed in a pipe if the threads among which the shuttle has to pass were arranged vertically in a circular form, and the shuttle were made to pursue a circular track among them. The difficulty of a loom formed upon this principle is, that as there is a wall of threads upon the outside of the shuttle, and a wall of threads on the inside, it would be impossible to extend an arm from the central axis of the machine to drive the shuttle round; and it is difficult, therefore, to see in what way the shuttle can be driven. For some years past I have been considering how a circular loom could be made that would enable a satisfactory connection to be formed between the shuttle and the moving parts of the machine; and some of the modes which occurred to me in many have recite. One mode was to form the shuttle of iron, and to cause powerful magnets to revolve as near as possible to the external and internal walls of threads. These magnets would draw round the shuttle. Another mode was to form the shuttle into an electromotive engine, and to convey the electric current to it by means of reeds which pass between the threads to press the thread left by the shuttle upon the cloth already formed. In Normandy's circular loom which has been recently patented, the reeds are made elastic, and propel the shuttle by the pressure which they exert upon the end of it, or upon pulleys attached to it for receiving this pressure without occasioning friction. It appears possible to effect the desired object by the gravity of the shuttle. If a small carriage be placed upon a circular table furnished with an external ledge, the carriage may be made to run round and round the table by inclining the table alternately in every direction. A similar arrangement may be employed to propel the shuttle which will answer to the carriage in the case described.

### DESCHAMPS AND VELCOCQ'S DIVING BOAT.

This is a close vessel, weighted so as to be near the specific gravity of water, which is propelled by a screw at the stern, and raised or lowered by inflating or collapsing two gutta percha tubes. The vessel is furnished with windows at the sides, and with sleeves for enabling a person within to grasp any external object. It is to be lighted by the electric light, which does not consume air. The main feature of novelty appears to be the sleeves.

### IMPROVEMENTS IN HOLLOW SHOT AND SHELLS.

Mr. Robert Mallett, of Dublin, has patented an improvement for forming hollow shot, that marks of by his usual ingenuity. He first casts two hemispheres which are placed together in a mould, and molten iron is poured round them. By this expedient he obviates the necessity of using a core of loam which has afterwards to be picked out through a small hole. Mr. Richard Peters has patented another mode of forming hollow shot, which is also very ingenious. He pours the molten metal in the proper quantity through a tube which descends to near the centre of the mould, and the mould is then put into rapid rotation in two directions at right angles with one another. The centrifugal force causes the metal to adhere to the circumference of the mould, leaving the centre hollow.

### THE FANTANENHUDE PROPELLER.

This is a species of propeller invented by M. Michelot Juin d'Allas, of which the principle is that the power of the wind shall aid in the propulsion of a vessel, from whatever quarter it may blow; but the mode in which the principle is to be worked out is not yet made public: and the principle itself is enunciated in a very general and mysterious manner. Several years ago, I explained, in my "Treatise on the Screw-Propeller," the practicability of enabling a vessel to sail directly against the wind, by the force of the wind alone, and with a progression greater in the proportion of the force of the wind, so that the stronger it blow the faster would the vessel advance against the storm. This new propeller appears to be a reproduction of this idea. To explain in what manner this idea may be carried out, I may premise that in America and in some other parts of the world there are boats which are propelled upwards against a stream by the force of the stream itself, a project which appears in the Marquis of Worcester's "Century of Inventions," published in 1663. One form of apparatus by which this object is effected consists of paddle-wheels placed on each side of the vessel, which wheels are turned round like water-wheels by the stream. On the axis of the wheels a rope is fixed, of which the other end is attached to the bed of the river by an anchor, or otherwise, some distance in advance of the vessel. As the wheels are turned round by the stream, the rope is wound upon the axis, and drags the vessel upward against the stream. Now, in the case of a vessel advancing against a storm, the circumstances are very similar to those just related. If a windmill be erected in the ship, and be made to wind up a rope fixed to some stationary object in advance of the ship, it is quite clear that the vessel will be advanced with a degree of rapidity that is proportional to the force of the wind. In a vessel at sea there is of course no stationary object to which a rope could be fixed, but the inertia of the water encountered by a large propeller may be sufficient to attain the same end not indeed without some loss from slip, yet with sufficient completeness to enable the ship to advance in an effectual manner. It will follow, therefore, that a windmill may be erected in a vessel, and be employed to give motion to a large screw propeller, revolving in the water, the vessel so fitted will be able to advance against the strongest winds. No doubt the vessel will be pressed back by the windmill as well as by the forward by the screw, but these pressures will not balance one another if the apparatus be suitably constructed, and the available impelling pressure will, within certain obvious limits, be greater the more the face of the windmill vanes comes into the direction of the wind, and the more the face of the screw comes into right angles with the keel.

RUSSIAN SERFS.—A ukase recently issued orders that the law of July 11, 1853, according to which such serfs as desire from any cause to become Crown peasants or citizens, with or without land, are, for the term of forty years, to pay higher taxes than the peasants of the latter citizens, for the purpose of repaying the increased costs incurred by the State on their account, shall be extended to the Transcaucasian provinces, with certain modifications applicable to the localities.—*Letter from Berlin.*

EXHAUSTION OF INDIAN FORESTS.—Almost the last remaining source of supply of timber within British territories is Pegu. There are, it is true, considerable forests of teak still remaining to the westward, within Dr. Gibson's jurisdiction. There are teak "plantations" also in Canara, Nagpore, but they belong to petty independent chiefs, whose barbarian dread of European intercourse leads them positively to deny the fact. There may be patches also on the frontier to the north east; but of these sources are too remote and possibly too insignificant for a general commerce. Pegu alone remains; and of Pegu Dr. M'Clelland's report is by no means hopeful. The Burmese Government has overworked the forests—the native squatters have overworked the forests—the British Government has undoubtedly overworked the forests, and this grand source of wealth stands in need rather of renovation than of further drainage.—*Friend of India.*

RUSSIAN TARIFF.—The Russian Government intends to modify the tariff of duties on foreign goods imported into Russia, if she cannot get the knot herself dissolved, that two countries with a form of government so opposed, and with institutions so different, however they may unite for common safety in days of difficulty and peril, will be dissevered when the danger is gone by, and that there are a hundred chances, any one of which may be advantageously made use of to that end. Were the small extremity of the wedge to be inserted, Russia would answer for the ultimate introduction of the whole. Indeed, Russia anticipates no small amount of confusion and quarrelling after the peace. How is it possible, she asks, for the Emperor Napoleon to remain quiet? He is an absolute Sovereign, and the liberal party he has put down in France in will not tolerate elsewhere. He cannot do so if he would; and Piedmont, Spain, and perhaps Belgium will soon have to look to themselves and their institutions. This reasoning is more specious than real. If Louis Napoleon Bonaparte be an absolute monarch, he is not absolute in the same sense as the Emperor of Russia or the Emperor of Austria; and if he has forced Russian Plenipotentiaries to come to Paris and sue for peace, he has done so by his union with England and Piedmont, two liberal countries; and supported by the sympathy, if not by the contingents, of Spain and Portugal. The scattered elements of real liberalism in Europe have aided, mutually or materially, in the glorious cause of resistance to barbarous aggression.—*Letter from Paris.*

## FASHION IN FLORICULTURE.

The history of flowers presents many curious examples of the caprice to which all objects of taste and luxury are occasionally subjected by the despotic sway of Fashion. Yet, when we reflect on the whimsical fancies which marked the floral tastes of past generations, it is not a little gratifying to observe the improvement that has supervened. The taste of the present day is decidedly in favour of pure and positive beauty; and the fantastic passion for mere peculiarity may be said to be a thing gone by. Now and then, it is true, we find an amateur lavishing extravagant admiration on a plant for the sake of certain forms or certain colours; but, generally speaking, the favourites of the greenhouse or the parterre are selected with unexceptional taste.

Some striking instances of the kind may be cited. Many flowers, indeed, in some instances, the interest attached to floricultural rarities amounted to a sort of fanaticism. When, by the result of accident or skill, a flower possessing any peculiar qualities was produced, it immediately acquired a fashionable notoriety, and its acquisition was eagerly sought at almost any price.

But tastes and manners have changed. Botanists, traversing the globe in every direction, have brought home to us new and curious flowers from distant regions of the earth. Though many of these lovely exotics might have seemed destined to enjoy perpetual favour, and well deserved to be always in fashion, yet, after a time, they have each in their turn been superseded by new introductions.

While, from time to time, numerous exotics imported, new flowers, in even greater numbers, are continually introduced by floricultural skill. Hybrid productions have become a very lucrative branch of the gardener's craft, and we are indebted for many favourite flowers to the ennoblements of an art on the dominion of nature.

Though a fashionable rage for particular flowers has occasionally led to the strangest absurdities, yet it must not be forgotten that the various floral fashions which have successively enjoyed their seasons of favour have greatly contributed to the adornment of our gardens. But not only have changes in floral taste conferred beauty and variety on our parterres, they have at the same time stimulated the efforts which have brought to perfection the various methods of rearing particular flowers.

Holland is the cradle of floriculture. The commercial spirit of the Dutch, which led them to distant lands seldom visited by other nations, enabled them at an early period to become the possessors of many rare plants. Owing to this circumstance, a passion for flowers spread rapidly among all classes in the Netherlands.

In Holland the love for flowers has had its influence on art and manufactures. The beauty of design which usually distinguishes the lace of the Netherlands may fairly be attributed to the floral taste generally diffused among the people. Still more remarkable is the influence of that taste on the works of the Dutch painters. The marvellous perfection which the art of flower-painting attained in Holland during the sixteenth and seventeenth centuries is attested by the works of Van Brenghel and many others.

The Dutch soon turned their love of flowers to profitable account. With them floriculture not only became the source of extensive traffic, but it led to the scheme of making flowers the objects of monetary speculation in another way. Who has not heard of the *Tulipomania* which raged in Holland about the middle of the seventeenth century? Amsterdam, Haarlem, Utrecht, Leyden, Rotterdam, and Horn were thrown into a fever of agitation by this epidemic. But the extravagances recorded of the Dutch tulip fanciers were not in all instances prompted merely by the desire of possessing rare and curious specimens of the favourite flower. On the contrary, the passion for tulips was frequently a mere cloak to conceal the passion for gambling. Tulip speculations were carried on in the same manner as stock-jobbing transactions. A speculator would bid several thousand florins for a tulip which he had never seen, and was never destined to possess, and which he would in his turn engage to deliver to another purchaser at a given time. The sort of speculation reached such an excess that it occasioned ruin and bankruptcy to many families.

The prices stated to have been given for tulips by the Dutch florists of that time seem almost incredible. The value of bulbs rose almost as high as that of the precious metals. Enormous sums were laid on the actual superiority of promising seedling bulbs, and flowers from which fine seedlings were to be expected realised sums the amount of which was really greater than what they now seem to be, on account of the higher value of money at the time. The spirit of floral gambling to which the Tulipomania gave birth reached an incredible excess about the year 1636. On one occasion during the height of this madness twelve acres of land were given for a single root, and engagements equivalent in amount to 4,000 were contracted for a tulip of superior quality. It even it happened that a bidder could not be found willing to offer a sum equal to the ideal value of a fine flower of this kind, it was disposed of by way of lottery or raffle.

A ludicrous story is related of a sailor who, having been sent to convey a package of goods to the warehouse of a merchant in Amsterdam, had a herring given to him along with his *trink-geld*. Seeing what he supposed to be a number of small onions lying on a table, he carelessly took up a handful and ate them with the dried herring for his breakfast. The supposed onions proved to be tulip bulbs of such high value that it was estimated a magnificent dejeûner might have been given to the heads of the Dutch Government at less expense than the cost of the continent to which the luckless sailor had unwittingly helped himself. In the year 1637 the ruinous and absurd tulip speculations were suppressed in Holland by a proclamation issued by the Dutch Government.

The Tulipomania extended in a partial degree to Paris, where extravagant prices were frequently paid for flowers and bulbs; but in that gay city tulip-fancying, like other fashions, had merely an ephemeral existence. After raging for a time, it died away and was forgotten. It is probable that the unsettled state of public affairs in England at the period in question saved us from the visitation of the Tulipomania.

The next phase in floral fashion was marked by the high favour bestowed upon the Ranunculus, a flower originally imported from the Levant about the year 1580. The Turks cultivated the Asiatic ranunculus several years before it was generally known in other parts of Europe. In the reign of Queen Elizabeth we were accustomed to send to the East for ranunculus roots. Gerard, in his "Herbal," tells us that one kind of ranunculus "groweth naturally in and about Constantinople, and in Asia, on the farther side of the Bosphorus, from whence there hath been brought plants at divers times, and by divers persons; but they have perished by reason of the long journey and want of skill in the bringers, that have suffered them to be in a box, or such like, so long that when we have received them they have been all one as ginger. My Lord and maister, the Right Honourable the Lorde Treasurer had divers plants sent him from thence, which were dry before they came, as aforesaid." But from the time of old Gerard to the period when the ranunculus became fashion's favourite flower, considerable advancement was made in its cultivation. In 1620 eight varieties were known. In 1665 that number was increased to upwards of twenty; and then, after the lapse of a little time, several hundreds were enumerated. Almost simultaneously with the ranunculus another Eastern flower, the Anemone, made its appearance in Europe, and won general admiration. But neither the ranunculus nor the anemone ever rose to an exaggerated value, or obtained exorbitant prices.

About the close of the seventeenth century the Hyacinth began to be an especial object of floricultural care. The beauty of this flower soon rendered it a successful rival to the tulip, even in the hearts of the Dutch florists. The hyacinth is a native of the Levant, and it grows abundantly about Aleppo and Bagdad. It seems to have been common in our English gardens, even prior to the year 1597, and it is supposed that hyacinth bulbs and seeds were brought to this country during the early part of the reign of Elizabeth.

One of the earlies' cultivators of the double hyacinth, was Peter Væhelm, a Dutch florist, who lived about the beginning of the last century. Before his time, none but the single kind of hyacinth had been propagated. Væhelm, by his favourite double hyacinth, the name of "Mary," in honour of our English Queen. Unfortunately that species of hyacinth is now lost. On the third double hyacinth which Væhelm succeeded in bringing to perfection he conferred the title of "King of Great Britain" (William III.), and this is now the double hyacinth known. A bulb of the "King of Great Britain," used to be sold in Holland for a thousand florins, or about one hundred pounds sterling. During the fashionable rage for hyacinths, two hundred pounds was no uncommon price for a favourite florin.

In the course of time the hyacinth was produced in hundreds of varieties, and bulbs fell so considerably in price as to come within the reach of even the humblest flower-fanciers. During a considerable period all our bulbs were imported from Holland, the Dutch florists having established a monopoly in growing hyacinths, for which the soil of Haarlem, in particular, was supposed to be favourable. But the gardeners of Berlin having directed their attention to hyacinths, they succeeded in rearing them so well that they soon supplied bulbs to the whole of Germany, besides exporting them in considerable numbers to foreign countries.

From the hyacinth the votaries of floral fashion transferred their favour to the Pink and the Auricula. The taste for these two flowers arose about the beginning of the last century; and for the space of a hundred years they almost exclusively engrossed the attention of amateurs.

The native land of the pink is not known with any positive certainty; but there is reason to believe that it came to us from the mountainous regions of Southern Europe. In the reign of Queen Elizabeth the pink was known in England by the name of the "wild gilloflower." Mention is even made of this flower in some of the old romances of chivalry; and it has been conjectured that it was originally brought from Tunis, by Saint Louis, as early as the year 1270. This supposition derives support from the fact that the pink anciently bore the names of *tunica* and *herba tunica*.

No flower more than the pink owes its beauty and variety to the labour of the gardener. That it early became the object of floricultural care in our own country may be inferred from the remark of one of the oldest English botanists, who says, "The Garden Gelowres are made so sweete by the labour and witte of man, and not by nature." The pink was much cultivated in England during the early part of the seventeenth century, and many fine varieties of this flower were known in the reign of Charles I. But it was not until the last century, when the rage for the bulbous plants of Holland began to decline, that the pink became really a fashionable flower. An English catalogue, printed in 1702, enumerates no fewer than 360 varieties.

The art of rearing pinks was brought to marvellous perfection by the gardeners of Flanders, Brabant, and Hainault, and from these places the finest species were scattered through Europe. Pinks gradually rose into such importance, that about the year 1820, there existed several hundred botanical publications exclusively referring to those flowers. Floral systems were established on the art of rearing pinks, with the view of producing certain colours, marks, and forms; and the arbitrary laws laid down on this subject were so rigorously observed that collectors would reject specimens, however beautiful, if they did not strictly accord with prescribed conditions.

About the beginning of the present century the introduction of numerous new flowers occasioned a decided decline in the rage for pinks, and from 1820 to 1830 choice collections became more and more rare. At length this once-favourite flower fell into unmerited neglect, until it was partially restored to favour by the discovery of the method of flowering in winter as well as in summer. But what this flower has lost in aristocratic patronage it has gained in popular regard. The pink has become the favourite of the poor. It forms one of the principal ornaments of the cottager's garden, and in most manufacturing districts pots of pinks ranged on the window-sills shed refreshing fragrance into the rooms of the workpeople. The partiality of the manufacturing classes for pinks is proverbial on the Continent, as well as in our own country; it is particularly remarkable in Paisley; at Verviers, in Belgium; and in several towns of Germany and Switzerland.

The auricula, which enjoyed but a brief interval of fashionable vogue, is a native of the Alps, whence it was first brought by Flemish botanists. This flower has been cultivated for several centuries. Our old English botanist Gerard, writing in the year 1597, calls it "Beare's-eares," and observes, "It do grow in our London gardens."* The cultivation of the auricula attained high perfection about the close of the last and the beginning of the present century. English florists, especially those of Lancashire, have been celebrated for rearing this flower. In the art of flowering the auricula the English have outstripped even the Dutch. About a century ago, when this flower was much in fashion, vast importance was attached to its form, marks, and colours; but the auricula was never so extensively cultivated nor propagated in such numerous varieties as the pink.

Among the flowers that have excited the mania of fashion in our time, the Dah is stands foremost.† It may, indeed, be said with truth that the Dahlia mania of the nineteenth century, though fortunately unattended by any mischievous effects, was not less general than the Tulipomania by which our ancestors of the seventeenth century were so fearfully agitated. The mother plant, with single flowers of a light red hue, was sent from Mexico in the year 1789 to the superintendent of the Botanic Garden at Madrid. From Spain it was transferred to the Jardin des Plantes in Paris, where, being considered a botanical rarity, it was cultivated only in the greenhouse. In the same year in which the dahlia was brought to Europe from the New World, it was introduced to this country by Lady Bute, who procured it from Madrid. But, owing to want of care or judgment in the cultivation, these plants were entirely lost to our gardens until seeds were reintroduced by Lady Holland in the year 1804. In 1814 the seeds of a new species of dahlia of a dark red hue were brought from Mexico to Paris, and from those seeds have been propagated all the beautiful varieties which now form the most conspicuous ornaments of our autumnal parterres. The first double flowers were obtained in the year 1820; and before 1830 double flowers, in every variety of colour, were cultivated in most parts of Europe, particularly in Germany and England

The dahlia attained supremacy in floral fashion about five-and-twenty years ago, when the German florists obtained from England large supplies of plants and seeds, for which extravagantly high prices were paid. At present the finest dahlias are reared in Germany, and the locality in which they are produced in the greatest beauty is Rossitz, in the principality of Reuss. When the cultivation of the dahlia was supposed to have attained its utmost perfection attention was directed to the production of the blue dahlia, for which large sums have been offered.

Among the plants cultivated in pots during the last half-century none has been more highly admired than the Hydrangea. This plant is very commonly cultivated in the gardens of China and Japan, whence it was procured by Sir Joseph Banks, who presented it to the Royal Gardens at Kew in the year 1790. On its first introduction into England it excited the highest interest and admiration; and when it became known in Paris it was so eagerly sought for, and bore so high a price, that it made the fortune of the florist who procured the first plants from England. Possibly no exotic was ever been naturalised and propagated so rapidly as the hydrangea. In an incredibly short space of time it made its way from the hothouse to the balcony, and from thence to the humblest village-gardens throughout England. The flowers, though odourless, retain their beauty for a considerable length of time, and the plant is easy of cultivation; circumstances which sufficiently account for the general favour accorded to it. If the hydrangea created a great sensation on its first appearance in this country, the interest attached to it was vastly increased when, by the employment of ferruginous earth, blue flowers were produced.

The Pelargonium, which was brought to Europe from the Cape of Good Hope about the end of the last century, has been so transformed by cultivation that its analogy to the mother plant is now apparent only in the leaves. From 1825 to 1835 the pelargonium invaded Paris, and the total exclusion of many flowers certainly not less beautiful than itself. It afterwards fell into neglect; but a few years ago it was restored to favour, in consequence of the production of some pelargoniums of rare beauty, and possessing the recommendation of continuing long in flower.

The Camellia is, as it justly deserves to be, one of our most favourite exotics. This lovely flower is a native of Japan and China: it was imported in the year 1739. For nearly a century it was admired as a rarity in the greenhouse and the conservatory; but, about the year 1830, it began to become generally known, and soon became the most fashionable of flowers. At the present time no ball-room bouquet or bridal-wreath is complete without the camellia. This flower derives its name from Joseph Kamel, a Jesuit missionary, who was the first to bring it to Europe. In beauty of form and colour the camellia rivals the rose; and it acquires additional charms from its magnificent foliage, and from the advantage of its flowering throughout the winter.

The Fuchsia, though long admired and cultivated by amateurs of taste, did not become a general favourite till about five-and-twenty years ago. It is a native of Chile, in South America; and, though it has now become familiar to most parts of Europe, it was unknown to the Old World until the year 1788, when it was first placed in the Royal Gardens at Kew. This plant derives its name from Leonard Fuchs, a celebrated German botanist. The fuchsia, in its native land, attains the dimensions of a large tree; and when laden with its scarlet blossoms, its aspect, as described by travellers, is wonderfully beautiful. In our own country this plant (now completely naturalised) is cultivated from the palace to the cottage. Since the introduction into Europe of several new kinds of fuchsia, we have obtained by artificial propagation those numerous varieties which now ornament our gardens and balconies.

The Pansy, or Heart's-ease is a flower which owes its present beauty to cultivation. During the last few years it has been in great demand, and many gardeners succeed in rearing pansies of the size of a dollar, and exhibiting the most rich and delicate hues. Formerly pansies were of two colours only, violet and yellow; but now these colours are combined with white, and with various shades of purple and brown. The effect of these variegated pansies when planted in masses is wonderfully brilliant, and well accounts for the favour in which these flowers have been held for some years past.

About ten or twelve years ago the attention of amateur florists was greatly engaged by cactuses, orchids, and plants of fantastic forms. These gnomes of the greenhouse had their reign of fashion, during which their varieties became numerous and their forms infinite. But the interest which these plants excited died away when the eye became familiarised with that singularity of aspect to which, when first introduced, they owed their chief attraction.

In latter times floral fashion has run into two separate extremes—dwarf plants, and plants of gigantic dimensions have alike found favour. Among the large flowers the first place must be assigned to the Victoria Regia, that superb queen of the water, whose floating leaves attain, even in Europe, the magnitude of several feet in diameter.

The great Water-Lily of South America is a native of the lagoons of the immense rivers tributary to the Amazon. It was first discovered by Humke in the year 1801, but it was not until nearly forty years later that we obtained any detail of its history. Sir Robert Schomburgh when travelling in British Guiana, in 1837, discovered the water-lily there, and he gave a glowing account of the discovery in a letter addressed to the Royal Geographical Society of London. In his progress up the river Berbice, at a part where it expands and forms a currentless basin, some unknown object attracted the traveller's attention. He was unable to form any idea of what it was, but, animating his boat's crew to increase their rate of paddling, he soon approached the object which had attracted his curiosity. He beheld a vegetable wonder. "There were," he observes, "gigantic leaves, five or six feet across, flat, with a broad rim, light green above and vivid crimson below, floating upon the water; while, in character with the wonderful foliage, I saw luxuriant flowers, each consisting of numerous petals, passing, in alternate tints, from pure white to rose and pink. The smooth water was covered with the blossoms, and, as I rowed from one to the other, I always found something new to admire."

When the great American water lily first became known in Europe a strong desire was evinced to obtain its introduction into this country in a living state; but it was not until after a series of futile attempts that the Victoria Regia was successfully introduced into the exotic aquarium at Kew, where it sprang from seeds in 1849.

That decided error of taste, Lilliputian gardening, gained only a short-lived favour. For this fashion we were probably indebted to the Chinese, who bestow infinite pains on the cultivation of dwarf flowers and plants.

Fortunately there seems little reason to apprehend that bad taste in gardening will ever regain any considerable ascendency. The feeling for the beautiful in nature is now so universally diffused that any future aberration of taste is not likely to exercise the evil influence of a similar kind, which will, to a certain extent, may feel inclined to follow.

T. R.

* The leaves of this plant are thought to resemble the ears of the Bear, for which reason botanists gave it the Latin name of *Auricula Ursi*.

† The name Dahlia was conferred on this plant in honour of Andrew Dahl, a Swedish botanist, and a pupil of Linnæus.

## LORD JOHN RUSSELL'S RESOLUTIONS ON EDUCATION.

THE following are the terms of Lord John Russell's resolutions which he intends to move in Committee on Education —

1. That, in the opinion of this House, it is expedient to extend, revise, and consolidate the minutes of the Committee of Privy Council on Education.

2. That it is expedient to add to the present inspectors of Church schools eighty sub-inspectors, and to divide England and Wales into eighty divisions for the purposes of education.

3. That it is expedient to appoint sub-inspectors of British, Wesleyan, and other Protestant schools not connected with the Church, and also of Roman Catholic schools, according to the present proportions of inspectors of such schools to the inspectors of Church schools.

4. That, on the report of inspectors and sub-inspectors, the Committee of Privy Council be empowered to form in each division school districts, consisting of single or united parishes, or parts of parishes.

5. That the sub-inspectors of schools of each division should be instructed to report on the available means for the education of the poor in each school district.

6. That, for the purpose of extending such means, it is expedient that the powers at present possessed by the Commissioners of Charitable Trusts be enlarged, so that funds now useless or injurious in each division may be applied to the education of the middle and poorer classes of the community.

7. That it is expedient that in any school district where the means of education, arising from endowment, subscription, grants, and school-pence, shall be found deficient, and shall be declared to be so by the Committee of Privy Council for Education, the ratepayers should have the power of taxing themselves for the erection and maintenance of a school or schools.

8. That, after the 1st day of January, 1858, when any school district shall have been declared to be deficient in educational means for the education of the poor, the quarter sessions of the peace for the county, city, or borough, should have power to impose a school rate.

9. That, where a school rate is imposed, a school committee, elected by the ratepayers, should appoint the schoolmasters and mistresses, and make regulations for the management of the schools.

10. That, in every school supported in whole or in part by rates, a portion of the Holy Scriptures should be read daily in the school, and such other provision should be made for religious instruction as the school committee may think fit; but that no child should be compelled to receive any religious instruction, or attending any religious worship, to which his or her parents or guardian shall on conscientious grounds object.

11. That employers of children and young persons between nine and fifteen years of age should be required to furnish certificates half-yearly of the attendance of such children and young persons at school, and to pay for such instruction.

12. That it is expedient that every encouragement should be given, by prizes, by diminution of school fees, by libraries, by evening schools, and other methods, to the instruction of young persons between twelve and fifteen years of age.

DIFFERENT accounts having been given of the date and place of Braham's first public appearance, a Correspondent (Mr. John Bullock), has sent us a copy of the following playbill, which settles the question:—"For the benefit of Mr. Leoni, at the Theatre Royal, Covent Garden, on Saturday, April 13, 1787, will be performed the comic opera called" The Duenna; *Ferdinand*, Mr. Johnstone; *Isaac*, Mr. Quick; *Don Jerome*, Mr. Edwin; *Antonio*, Mr. Davies; *Lopez*, Mr. Wewitzer; *Carlos*, Mr. Leoni; *The Duenna*, Mrs. Wilson; *Louisa*, Mrs. Martyr, and *Clara*, Mrs. Billington. At the end of Act I. 'The Soldier Tired of War's Alarms,' by Master *Braham*, being his first appearance on any stage." Then the farce of "The Guardian" is announced, and it is added: "End of the first act of the farce, the favourite song of 'Ma chère Amie,' by Master Braham." The Royalty Theatre (at which it has been generally said that Braham made his first appearance) did not open until the 20th June; on which occasion the *Chronicle* said, "Between the acts of the play, 'The soldier tired of war's alarms,' was sung with great success by a little boy, Master *Abraham*," and another paper said, "Yesterday evening we were surprised by a Master *Abraham*, a young pupil of Mr. Leoni. He promises fair to attain perfection, possessing every requisite necessary to form a capital singer."

WILLS.—The will of John Adams, Serjeant-at-Law, has been proved under £70,000 personalty; Nathaniel Mitchell-wall, Esq., of Tavern Hall, £60,000; Isaac Smith, Esq., of Brighton, £30,000; James Selmes, of Beckley, farmer, £45,000; John Randell, of Maiden-lane and Hadley Common, £30,000; Thomas Mullow Williams, naturalist, of Oxford-street, £9000.

CHARITABLE BEQUESTS.—Sir Benjamin Fonseca Outram, R.N., K.C.H., has bequeathed to the Fatiola Hospital, £100; Institution for the Widows of Medical Men, £100; Naval School for Boys, Near-cross, £100; Naval School for Girls, Richmond, £100; Naval Benevolent Institution, £100; Distressed Governesses' Society, £100.—Miss Frances Crowe, of Pall-mall, £500 to the Charing-cross Hospital; £100 to Shipwrecked Fishermen and Mariners' Royal Benevolent Society; £100 to the Society for Promoting Christian Knowledge; and £19 19s. to the Parochial Schools, St. Martin's-in-the-Fields.—Miss S. Bird, of Brompton-row (personalty, £12,000), has left £100 to the Society for Promoting Christian Knowledge; £100 to the Scripture Readers' Society; £100 to the Church Missionary Society; £100 to the Society for Promoting Christianity among the Jews; and £100 to the Society for Promoting Christianity in the Principles of the Established Church of England.

MOUSTACHE WORN BY CLERGY EPISCOPAL WIG.—In an original miniature of Adam Loftus, Archbishop of Dublin, and also Lord Chancellor of Ireland, who died in 1605, he is represented with a moustache, and a flowing beard, both of them nearly white. The Archbishop has no wig, though his hair appears scanty.—*From "Notes and Queries."*

BRIGANDAGE IN GREECE.—According to the correspondence of the *Trieste Zeitung*, one of the most powerful robber-bands in Greece, has been completely broken up. The band being hard pressed by the troops, separated, one division went from Parnassus to Salona, and the other to the neighbourhood of Athens, where there were but few troops. This last division, consisting of thirty-two men, was attacked at midnight, in a glen, near the city. Nine of them were killed, and seven mortally wounded. The other twenty men threw away their arms and cloaks, and sought safety in flight. The robbers, who went to Salona, managed to obtain possession of three small vessels, and escaped to the Peloponnesus.

ADMIRAL SIR EDMUND LYONS. ADMIRAL HAMELIN. MARSHAL VAILLANT. ADMIRAL SIR R. DUNDAS. GENERAL DE LA MARMORA.

THE COUNCIL OF

PRINCE NAPOLEON

DUKE OF CAMBRIDGE.

THE EMPEROR.

PRINCE JEROME BONAPARTE.

GENERAL CANROBERT.

SIR HARRY JONES.

T PARIS.—(SEE NEXT PAGE.)

## THE COUNCIL OF WAR, AT PARIS.

THE Council of War assembled at the Tuileries, on the 11th January, under the presidency of the Emperor. It was composed of the following members:—The Emperor, the Prince Napoleon, the Duke of Cambridge, Prince Jerome Napoleon, Lord Cowley, Sir Edmund Lyons, Admiral Dundas, Sir Richard Airey, Sir Harry Jones, General della Marmora, Marshal Vaillant, Count Walewski, General Canrobert, General Bosquet, General Niel, General Martimprey, Admiral Hamelin, Admiral de la Gravière, and Admiral Bruat.

The first step which took place at the various meetings. One of the first steps was the appointment of two committees to draw up reports of the conditions of the army and navy. Admiral Lyons and General Canrobert were members of the naval committee, Admiral Dundas and General Niel of the military committee. The discussion at the sitting of Monday, the 14th of January, was chiefly of a general kind, and included the question of withdrawing the army from the Crimea, but keeping possession of Eupatoria, Kamiesch, Balaclava, and one or two other points.

## JOINT-STOCK COMPANIES.

It is satisfactory to find that public opinion is becoming closely directed to the expediency of transferring the winding-up of insolvent companies from the Court of Chancery to the Court of Bankruptcy—from a court already overworked, and in which every stage of each case is characterised by delay, mystery, and heavy cost, to a court possessing a staff of officers peculiarly qualified, whether as lawyers or as men of business, to deal with these operations; where the proceedings are straightforward, intelligible, expeditious, and public; and where the expenses are limitable within reasonable compass. The Law Amendment Society, which has taken the matter in hand, has printed the following draught resolutions of the Special Committee on the Joint-stock Companies Bill:—

1. That all trading companies must be subject to the bankrupt laws; that the bill, as it stands, exempts them from the distinguishing principles of bankruptcy, both as to the rateable administration of assets, the prevention of preferences, and the detection and punishment of frauds.

2. That these principles being admitted, the winding-up clauses ought to be expunged as unnecessary, there being now more efficient means to effect all that is required as between partners and shareholders than those proposed.

3. That this bill wisely permits associations for public objects—not carried on for gain—such as mechanics' institutes, clubs, &c., to be incorporated; care of the peremptory clauses of the bill are applicable only to companies held in shares, which such institutions rarely are.

4. That this bill interferes in many ways with the internal regulation of companies, which should be left entirely to the shareholders themselves.

## THE CASE OF CAPTAIN DONELLAN.

IN your impression of last week is a letter signed John Thomas Rowland, correcting some supposed errors in a paper of mine, on the above subject. I shall be brief in my reply

1. In all country houses of the gentry, at the close of the last century, was found an apartment, called a still-room, in which various processes of distillation, &c., were carried on, and of which a still was a common requisite. In all gentlemen's gardens at that time the *Prunus-lauro-cerasus*, too, would be found growing

2. The medical men on the inquest swore Sir Theodosius was poisoned by arsenic. On the trial, they recanted, and swore he died by laurel-water—(*Prunus-lauro-cerasus*).

3. The fact of the pages of a book being cut only in that portion of the work containing directions for distillation is too trifling to require notice. In my library now lies Dr. Taylor's work on poisons: it is cut only at the alkaloids. I hope Mr. Rowland does not therefore suspect me of getting them up for a nefarious purpose because I have lately had occasion to refer to them!

4. Lastly, no doubt on the evidence, Donellan was convicted, and not satisfied. The indictment was bad. The medical testimony worthless. The production of a suppositious poisonous draught in Court most unjustifiable; and I am thankful for that improved state of knowledge and feeling in the community which would require far clearer testimony before sanctioning the infliction of capital punishment. J. G. B.

THE SLAVE TRADE ON THE BRAZILIAN COAST. An American schooner called the *Mary Smith* attempted to land a cargo of 320 negroes which she had brought from the coast of Africa, but was taken prisoner by the Brazilian war schooner of war *Olinda*, and taken into Bahia. The commander and crew are all Americans, and were immediately after landing ironed and locked up in the gaol of Bahia. The schooner embarked 500 of the poor blacks from the coast, but they were so closely packed on board that they were much cramped, and badly fed during the voyage, that 180 died, and were thrown overboard, and of those landed at Bahia sixty-four died a few hours afterwards. The survivors were entirely fed and clothed, and will be well taken care of until their ultimate destination is resolved upon.—*Letter from Rio de Janeiro, Feb.* 13.

SUSPECTED AMERICAN PRIVATEERS IN RIO.—A misunderstanding arose between the English and French Admirals and the American Commodore in Rio at one time worse than at all serious aspect. An American steamer called the *America*, from New York to California, put into this port to coal and water. On the eve of her departure, Adm. Johnstone received information that the vessel was in reality a British subject, in disguise, conveying a large quantity of munitions of war, Minié rifles, heavy cannon, &c., to the Pacific, and that the greater number of her officers were Russians. The Admiral immediately pulled on board the *Stromboli*, American frigate, and demanded explanations of the Commodore, who, it appears, took rather high ground, and refused to allow a search to be made on board the steamer. Upon this the English Admiral threatened to send his steamers out to overhaul the vessel should she leave the port, and the reply made was that the *Stromboli* should be towed out by her to prevent this offence if necessary. Admiral Johnstone returned to his frigate, bound his sails to the yards, and made ready for sea, and the *Trident* and *Riflemen* got up their steam, whilst the *Stromboli* ran her guns out and actually cleared for action. Subsequently, however, the business was patched up by the Commander of the steamer declaring upon his word of honour that the report was entirely false. The French Admiral, however, declared that he was not satisfied with the explanation. Thus the matter rested. The *America* towed the *Stromboli* out this morning; and the *Indefatigable*, *Rifleman*, *Trident*, and the French frigate *Pourvoirante* sailed last night; but whether a collision will take place outside, or whether the *Indefatigable* and *Pourvoirante* are in reality gone down to the River Plate, as announced, we cannot say.—*Letter from Rio de Janeiro, Feb* 13.

THE UNITED STATES NAVY.—The official Navy Register for 1856 has just been issued. It appears that the number of vessels of war of all classes in commission on the 1st of January, 1856, was 31: of which there were in the home squadron, 4; Mediterranean, 8; Brazils, 3; African, 4; Pacific, 5; East Indies, 8; lakes, special service, and preparing for sea, 6. Of the 31 ships, 14 are sail; of the 190 Commanders, 30 are at sea; and of the 390 Lieutenants, 161 are at sea. The British Navy List of the 1st January, 1856, gives 301 ships of war in commission, of which 240 are steamers; among which is the *Marlborough*, of 131 guns, and 40 of them (steamers) mount over 80 guns each; and such few sailing vessels (says the List) as are yet doing duty are set aside as fast as their terms of commission expire." If the heads of our Navy are so anxious to "promote its efficiency," why do they not compel our naval officers to make themselves familiar with steam? In the British Navy no officer can be appointed to the command of any steam vessel of war who has not passed an examination on steam; and Captains, Commanders, and Lieutenants, as we learn from their Navy List, are ordered to their dockyards "to study steam." In the American Navy such knowledge is deemed unnecessary."—*New York Herald.*

THE CRUISE IN SEARCH OF THE "PACIFIC."—The steamer *Alabama*, which was sent out on the 9th inst. in search of the *Pacific*, returned to port on Sunday morning, having been absent two weeks. She brings no tidings of the lost vessel. The *Alabama* proceeded as far as Cape Race, where she met with large fields of ice, which prevented her further progress. She took a zigzag course, following the usual track of the Collins steamers; sailed round Sable Island, thence to Cape Race, and, returning, put into Halifax, from which port she sailed on Thursday morning last. She spoke some thirty vessels during the cruise, none of which could she gather any news relative to the *Pacific*. Before reaching the Cape Race field of ice she met eight hours through a field of ice, which is described as presenting a very beautiful and singular appearance. The ice was broken up in small and mostly circular pieces, from one to two feet in diameter, and, being smoothed by a slight swell, they presented the appearance of myriads of plates spread out for a grand banquet in honour of Neptune. On reaching Cape Race, however, the ice gradually grew more compact until it became almost impassable. It is thought by some that the *Pacific*, in attempting to force her way through one of these fields of ice, may have broke down and still remains fast in the ice. If this be the case, the Government ship *Arctic*, which is now in search of her, and which was built for an ice-boat, will probably be able to search her out. The *Alabama* could make but little headway where the ice was compact, and she tore a large portion of the copper from her bottom in the slight attempts she did make. As the *Arctic* left Halifax for Cape Race on the evening of the 21st inst., she has doubtless, ere this, traversed a large portion of the ice-fields in that vicinity, and may perhaps have succeeded in finding and relieving the *Pacific*.—*New York Herald, Feb* 24.

## *LITERATURE.*

ANCIENT ARMOUR AND WEAPONS IN EUROPE, from the Iron Period of the Northern Nations to the end of the Thirteenth Century; with Illustrations from Contemporary Monuments. By JOHN HEWITT. J. H and J. Parker.

Mr. Hewitt has taken up an interesting subject in an honest spirit of research. During those long ages in which war was not only in a manner the normal state of society, but seems to have been considered as the grand duty of human existence, arms and armour were articles of the highest degree of importance and consideration; and the history of their various forms and ornaments is closely allied with that of science and art, with that of social condition and manners, and even with that of political revolutions. Mr. Hewitt has judiciously commenced his history with the period when the arms of the people who founded the kingdoms of modern Europe become known to us in a definite manner—that is, at the time of the breaking up of the Roman Empire; and we would only, on perusal, express our regret that he should adopt in any degree the erroneous classification of the earlier periods, of which we real y know nothing, into stone, and bronze, and iron, which was made, we think very rashly, by the antiquaries of Denmark. He has shown well also, we think, to close his volume with the end of the thirteenth century, because that formed a marked period of division. Previously to that time the forms and characters of arms and armour were regulated much more by the changing exigences of medieval warfare than in the ages subsequent, when the forms of arms and armour were varied according to individual caprice, in which they were looked upon chiefly as objects of personal ostentation, and, when, therefore, their variations present none of the regularity which we observe in their older history. The process, too, of writing the history of the two periods is essentially different; for, while the history of arms and armour during what are properly called the Middle Ages requires, above all things, a laborious search after, and investigation of, facts, that of the period extending from the close of the feudal ages to the period when arms were no longer carried but by the professional soldier, requires the exercise of discrimination and taste more, even than the labours of research where facts are abundant. That Mr. Hewitt possesses the qualities required for the successful treatment of the first period is shown by the copious information which his book contains, and by its generally good classification.

The Teutonic nations, when we first become acquainted with them, fought on foot, and their weapons were simple in character and nearly uniform in shape. They consisted of a long broad sword, fitted for cutting or stabbing, a spear, and a large knife, and their missiles were javelins, arrows, and stones or bullets thrown from slings. Their principal weapon of defence was a circular wooden shield with an iron boss, but which does not appear to have had any particular ornament; and we know very little of the exact character of their helmets and of their body armour, except that the latter, from the epithets employed by the poets, appears to have been formed of some thick cloth, lined with rings of iron. The only satisfactory knowledge we have of the arms of the Pagan Teutonic period is derived from the opening of the early barrows and cemeteries, where their arms were always buried with the dead, but they appear to have been interred in the dress they wore at home in time of peace, and not in that in which they went to battle. Mr. Hewitt has illustrated this period copiously from the contents of the Anglo-Saxon and Frankish graves, and he has even obtained examples from the celebrated Faussett Collection—hitherto the least known of any, but which we hope soon to see made public in a manner far superior to that in which any other similar collection has yet been published, in the work edited by Mr. Roach Smith, and printed at the expense of Mr. Mayer, the present possessor of the Faussett Collection.

A great change took place in the military habits of the Teutonic races who settled in Gaul, when they adopted the practice of fighting on horseback, and a consequent change was gradually introduced into the character of their weapons, and this change continued gradually until the first establishment of the feudal system in the course of the tenth century. The change from the mode of fighting of the Pagan age to that of the Christian period was much less marked in our island, and, although there was much more of the feudal system in detail, the general forms of the weapons continued the same, and the Anglo-Saxons fought on foot by preference, even till the period of the Norman invasion; then suddenly the system of warfare, which had been long perfecting on the Continent, was imported into England, and we have here an immediate and great contrast which is not observable elsewhere. At the same time we can hardly doubt that the arms of the Christian Anglo-Saxon period, and especially of the later part of that period to which the illuminators of Anglo-Saxon manuscripts chiefly belong, differed from those of the Pagan period enough to warn us from taking too absolutely the pictorial illustrations of the one period as an illustration of the manners of the other.

A new system of weapon was required against the formidable defensive armour which came in with our Norman period, and which in general was impenetrable to sword or spear. To kill a knight fully armed, it was necessary to a certain degree to uncase him, and a new set of weapons were introduced, bearing a certain affinity of analogy with pickaxes and spades, with which one warrior operated upon another somewhat in the style in which our ordinary labourers proceed to make a hole in a London pavement. The chivalry of the middle ages was thus raised quite above the common order of fighting men, and it was glorious to assault of one knight against another, not to kill, but to unhorse his opponent, who, once on the ground, was at his mercy, and, as a prisoner, was obliged to yield whatever sum for ransom his conqueror might want for him. If he resisted, after being dismounted, the weapons just alluded to were employed to break through his armour, and expose his body more fatally to the edge of the sword or the point of the dagger.

The system of warfare in which this heavy armour was used was extremely ridiculous, and soon became obsolete after the introduction of the practice of employing paid soldiers, and especially since guns and cannons came into general use. The wars of the fourteenth, and more especially of the fifteenth, century showed that the heavily-armed warriors now fared worst in the hour of battle; and the terrible destruction of the aristocracy in England and France during the latter of these periods decided the question of utility. From that time the use of heavy armour began to be laid aside in war, and was retained only, or at least chiefly, in tournaments and for ceremonial occasions; and it was after this period had taken place that so much labour and skill was displayed in costly decoration.

Mr. Hewitt has not entered much into the causes of the changes which took place in arms and armour during the period of which he treats; but, as we have already remarked, he has collected and classified facts with great care. The materials for his history of the Pagan Teutonic period are, as we have said, furnished almost entirely by the graves, but they are in the highest degree authentic and valuable. We think he might justify his history of arms and armour from the Pagan period to the age of Feudalism are much rarer and far less definite. After the eleventh century our materials become more abundant. The illuminations of manuscripts of every succeeding age furnish us with the most ample and correct details of the numerous written records, and especially the romances of chivalry, make us well acquainted with their names, materials, and uses. When we enter the thirteenth century, we encounter a new class of monuments, which are still more instructive, and which consist of sculptures, chiefly being generally of the size of life, and sculptured with the utmost truth and minuteness, give us a perfect knowledge of the subject, which we could not obtain in the previous periods.

As a collection of facts, the result of careful research and judiciously arranged, the book before us is an extremely good one. By facts we mean allusions in the mediæval writers, pictorial representations in manuscripts, and sepulchral effigies. It is a useful, and, therefore, valuable book in every antiquarian or historical library; and we hope we may be justified in saying that it is an excellent introduction to what is much wanted—a comprehensive but perfect book on the arts as applied to arms and armour in the fifteenth and sixteenth centuries.

HERE AND THERE IN PORTUGAL. By HUGH OWEN. Bell and Daldy.

The author of this little work, well known to the public as a successful photograph amateur, has, by the aid of his camera and pen, given the world a pleasant volume of travel, illustrated after his own pictures—an application of the art which is highly interesting, and certain, ere long, to become general. A considerable familiar acquaintance with most of the writers on Portugal—from Costigan to Kinsey, from Southey to Carnarvon—enables us to observe, with pleasure, throughout Mr. Owen's descriptions a singular absence of hackneyed subjects and thrice-told tales. This writer has evidently viewed the country with an artist's eye, and proffers his statements with the confidence of a man who sketches from nature. Some well-related anecdotes of the Peninsular War prove his sources of information to have been ample, and that the story of that great struggle is not yet fully told. We had marked "the defence of Campo Mayor for extract; but want of space compels us to take a briefer passage—the writer's description of his first evening in the Tagus:—

I stayed on deck, and watched the sun sink beneath the sea, leaving on the horizon, instead of a single cloud, a tint as delicate and tender as to resemble the spirits only of departed colours: against which, on the right hand [illegible] the Convent of the Pena, showed in bright and vivid [illegible] in the foreground, the tower of Belem was brilliantly distinct, in picturesque and Moorish beauty, against the darker sea behind; and ere the smoke of the evening sun, that sounded from its battery, had rolled into air, a heavier and deeper boom called my attention to a far different, but even more beautiful, scene in the opposite direction. The light of the rising moon was just visible on the horizon, against which the masts and rigging of the ships forming the English western squadron, under Admiral Corry, were traced like lines of cobweb; above arose the thin blue smoke of the salute to the departed day that had arrested my attention. Whilst I stood in mute contemplation of this scene, the moon arose with a splendour and brilliancy that made me hold my breath with wonder and delight, as I watched her emerge from the darkened waters, now lit up with lines of molten silver. Within a few minutes the sun had set, and the short twilight was over: the unfinished Palacio d'Ajuda on the left, with the long and beautiful buildings of the Convento de San Jeronimo, and the white shining outlines of the city of Lisbon were glittering in the moonbeams; while on the right the crowning battlements of Almada were invested with a dignity that day light and a nearer view subsequently dispelled.

At the Brigarza, the first hotel in the Portuguese division of the Peninsula, and the permanent residence of the Austrian and Belgian Ministers, our traveller found his "sitting-room papered entirely with pictures from the ILLUSTRATED LONDON NEWS." His "fancy for a while was cheated into the belief that he was surrounded by the sight of well-known reproductions of the works of many a personal friend—John Gilbert's 'Sancho,' Lance's 'Fruit,' the landscapes of Jutsum and Branwhite peeped out like old familiar faces," and brought pleasant suggestions of home and an increased appreciation of the art that "speaks in all languages." The following adventure with "Paddy in the Peninsula" is amusing:—

Taking a boat one morning at the Caes de Sodre to go on board a vessel lying in the Tagus, I gave the sturdy boatman a silver piece of twelve vintems—just double his fare. He assailed me with a perfect storm of rude invective, and held out his hand for a larger fee—an act on that would ever have made his meaning clear, had I understood even less of his language—of which one opprobrious epithet, more that once applied, was sufficiently intelligible. Finding me deaf to Portuguese, and unable to reply, he changed his language to unmistakable Milesian, and addressed, "Bad luck to ye for a poverty-struck beggar; p'raps it's all ye've got." I answered him in his own rich brogue, and he bouted, laughing at having been caught off his guard.

An incident witnessed by Mr. Owen on the banks of the Douro is interesting as illustrative of the early lessons which make the perils of future occupation familiar to the child from his cradle:—

A fisherman and his wife stood at the waterside, opposite to a deep and dangerous spot; the latter had a little child, a boy of about a year old, already habited in the costume of his future life, the little trousers tucked up above his tiny knees. She led him towards the river's brink, and wetted his little feet: he was alarmed, and clung to her with soft and affectionate caresses. Again and again she led him to the water, until the little imp, embodsied by her encouragement, ventured down alone, and, only just able to walk, tottered unsteadily to the stream. I trembled at the risk; a few feet farther and the water deepened dangerously; but no cause for fear—guided by a watchful eye, the mother's ready hand ever and again caught the little scrap of infant humanity just in time to save it, and rendered my half-uttered exclamation unnecessary. "*Que este ella fazendo?*" ("What is she doing?") asked my companion of the boatman, who rested on his oars. "*Esta ha tirando o medo*" ("She is *taking the fear out of him*") was the reply.

We are tempted to quote further, but must refrain. The subjects for illustration are well chosen, and the engravings neatly executed. We honestly recommend the volume as a pleasant companion to beguile the tedium of a railway journey or to occupy an evening that cannot be dull with its companionship.

THE CURRENCY QUESTION CONSIDERED IN RELATION TO THE ACT OF THE 7TH AND 8TH VICTORIA. By GEORGE COMBE. Second Edition. Longman. Edinburgh: Fullarton & Co.

Those who affirm that the currency question cannot be treated in so plain a manner as to render it intelligible to the ordinary reader will find, on referring to this *brochure*, that Mr. Combe has achieved that difficult task. Without subscribing to every part of his reasoning, we must admit that he has presented the subject in a form so simple, and illustrated his argumentation by so imposing an array of facts, as to leave very little ground for objection. The fact of a second edition having been called for is a proof that the public take a much livelier interest in the subject than they have ever done hitherto.

## *TO CORRESPONDENTS.*

J. G. T., Rotherham.—Your coin is a penny of Henry VI., struck at the London Mint, worth about 3*s.*

H. L. P., Chancery-lane.—The original of your drawing is a Persian coin, but not sufficiently fine to be valuable

OLD THORN-TREES IN BUSHY-PARK.—A correspondent at Hampton Wick calls attention to the destruction now in progress of the fine old thorn-trees in Bushy-park, Middlesex—a park of all others the people's own. "Unless, therefore, the present wanton and unwarrantable destruction of the thorn-trees by the poor of the neighbourhood is stopped, in a few years Bushy-park will lose its greatest ornament, from which it takes its name. The gamekeepers are not so much to blame as these persons, who have the management of the trees in the Bushy and Home Parks, and Hampton Court Palace gardens, in late years." We commend the poor thorns to Mr. Jesse, who, by virtue of his office (Surveyor of Parks) and his love of rural scenery, as shown in several very agreeable volumes written by him, *we* should consider likely to take up the case.

T. E. R., Bromsgrove.—Your coin is a rupee of British India of no numismatic value.

DECLINED.—Senex, B., Ampleforth, Mary Kate, and B. J. R., Margate.

COURCELLES.—A Nuremberg counter of the sixteenth century, extremely common, and perfectly valueless.

The Light Cavalry charge at Balaclava (Lines).—Inadmissible.

Y. Y. Y.—Mr. W. J. Muller, the celebrated painter, was born in Maiden-lane, Covent-garden. The house is engraved in the ILLUSTRATED LONDON NEWS, No. 340.

LOWER HEAD ROW, Huddersfield, is mistaken.

JOHN OSBIAN ALLAN'S APPEAL.—Declined.

A BROTHER SUB, Gloucester.—We have not space.

W. E. M., Cornwall.—Your note did not reach us in time.

ROW-WOW.—A letter addressed to 198, Strand, will reach the artist.

SCOTUS is mistaken: the Jewel of Saint Andrew was engraved in the ILLUSTRATED LONDON NEWS so long ago as the 19, 1850, with the other regalia of Scotland, accompanied by a minute description of the several articles. See No. 451, page 313.

INQUIRER.—In the historic notes appended to the accounts of the burning of Covent-garden Theatre a discrepancy occurs which is worth explanation. By one of our contemporaries the late theatre is stated to have been the *third* erected on the site, which is scarcely correct, as the first, or Rich's Theatre, was only partially destroyed by Holland: this theatre was destroyed in 1808 and rebuilt in 1809. The *first* Drury-lane Theatre was, however, frequently called Covent-garden Theatre.

N. W., Clitheroe, will find the terms "Whig and Tory" fully explained in a work just published, entitled "Things not Generally Known Familiarly Explained."

CHANCE.—We cannot offer advice on the subject of lotteries.

A CONSTANT READER.—Stephanie, Grand Duchess Dowager of Baden, widow of the Grand Duke Charles Louis Frederick, is the daughter of the late Claude de Beauharnais, Count des Roches Baritand, Peer of France, by his first wife, Mlle. Marguerite Lessy, daughter of the Comte de Marcuil, a Deputy for the Noblesse at the States-General in 1789. This Claude, second Count des Roches Baritaud, was first cousin, through the younger branch, of Alexander Viscount de Beauharnais, the first husband of the Empress Josephine.

A SUBSCRIBER, Oxford.—Younger sons are entitled to all the quarterings of their father.

AN ASPIRANT TO ARMS.—Those who are enabled to deduce descent from an ancestor whose armorial ensigns have been acknowledged in any of the Visitations are entitled to carry those arms by right of inheritance. When, however, such a descent cannot be established, the party must then prove his right as descended from some original grantee, or become a grantee himself, by making application either to the Garter King of Arms, the Lord Lion, or the Ulster King of Arms, as the case may be.

T. C. PAR.—A silver coin of Otthgus and Uro (*Boerica*), now Eeja and Osma; and your gold coin is a ducat of the Doge Pasi Raineras.

JANE P., Camden-town.—Ineligible.

ERRATUM.—In the Obituary of last week it was stated, in a portion of our impression, that Sir H. Hunloke was descended from Thomas Eccleston, Esq., of Scarabrick-hall, county of Leicester, which is a misprint for Lancaster. The hall is situated about midway between Southport and Ormskirk.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*A little chink may let in much light.*—OLD PROVERB.

### SHAKSPEARE READINGS.

VI.

Why in this woolvish tongue should I stand here,
To beg of Hob and Dick that do appear
Their needless voyces? *Coriolanus*, act ii., scene 3.

Such is the reading of the folio 1623, and a terrible puzzler that "woolvish tongue" has proved to every commentator. All seem to concur in thinking it an allusion to the "gown of humility" in which, according to the custom of the Romans, *Coriolanus* is attired while standing in the market-place to solicit the voices of the people.

According to Johnson it signified the *rough, hirsute gown*. Others deny that the gown could be *rough* and *hirsute*, because it is elsewhere described as "napless."

Steevens has a long note on the subject; and suggests that Shakspeare, instead of tongue, wrote *toge*, and afterwards exchanged it for *gown*.

Malone goes into the matter at equal length, and remarks: "The woolvish (gown or) toge is a gown of humility, in which Coriolanus thinks he shall appear in *masquerade*, and not in his real and natural character."

In some editions, then, we meet with "woolish gown," in others "woolvish toge," and Mr. Collier's interpreter gives us "woolless toge." All, as we have said, agreeing that the word *woolvish* appertains to a garment. Mr. Staunton, in his MS. notes now before us, takes quite another view of the passage, and, conceiving that "woolvish" is intended as a term of reproach for the rabble multitude, he submits that *tongue* is a misprint for *throng* (formerly spelt *tong*, *towgue*, *twng*, and *tonge*), and proposes to read—

Why in this woolvish throng should I stand here, &c.

* *Circumstants plebe*

Fortifying his application of the term *woolvish* to the mob by sundry extracts from writers of Shakspeare's age, of which we must be content with the following —

I am no statue, but I must recal the Calamities of the time and the desperate condition of the Nation who seem to have taken quite from the very faculty of Reason and to be possess'd with a pure Lycanthropy with a woolvish Kind of disposition to tear one another in this manner, insomuch that if ever the old saying was verified, "*Homo homini lupus*," it is certainly now. I conclude with the Dutch

"They cry, who write, no Wolves in England range
Here men are all turn'd Wolves, O, monstrous change!"
*Howell's Letters*, pp. 297-98.

In "Lust's Dominion," the Moor, speaking of the "beast multitude," calls it "this wolf." In the "Maid of Honour," we have

" Not an act
" For woolish man."

And in Ben Jonson's "Poetaster," Horace, speaking of the followers of *Lupus*, calls them his "woolfish train."

VII.

Of the inability of a certain "old corrector" to appreciate the language of Shakspeare's day the annotated folio exhibits abundant evidence. The following is an amusing instance

In the Second Part of "Henry IV," act iv, sc. 1, *Westmoreland* is reproving the *Archbishop of York* for his share in the rebellion, and says:—

You, lord Archbishop,
Whose see is by a civil peace maintain'd;
Whose beard the silver hand of peace hath touch'd,
Whose white investments figure innocence
The dove and very blessed spirit of of peace, —
Wherefore do you so ill translate yourself
Out of the speech of peace, that bears such grace
Into the harsh and boist'rous tongue of war?
Turning your books to graves, your ink to blood,
Your pens to lances, and your tongue divine
To a loud trumpet, and a point of war"

The word *graves* was a stumbling-block of old to the commentators, and, notwithstanding Steevens' suggestion of *greaves* (leather leggings or armour, to which the binding of ancient books might well be turned), Warburton's inappropriate reading of *glaives* has been adopted by some editors, and the old word *graves* literally as burial places, by others: Mr Staunton shows by quotations, of which we need give but one, that Steevens' interpretation is correct, but that the old word *graves* for *greaves* should be retained, as that was the mode of spelling it in Shakspeare's time—

The tuishes, cuishes, and the graves, &c. Albion's "England." b. xii., c. lxx.

Till the appearance of the Perkins folio "Emendations," we are not aware, however, that the expression "a point of war" was ever made a subject of dispute. There, not only do we find the Warburton absurdity of *glaives*, but a still more monstrous perversion of the text—

Turning your books to *glasses*, your ink to blood,
Your pens to lances, and your tongue divine
To a loud trumpet and *report of war*

And this is endorsed approvingly by Mr. Collier; and even Mr. Singer proposes we should read—

To a loud trumpet and a *brunt* of war

Mr. Knight adheres to the old reading, because it is the old reading, but is evidently unaware of the use of the phrase by the old writers

Our author here, as in other cases, sets the matter at rest finally by a string of quotations which nothing can resist. We give only two or three:—

To play him hunts up with a *point of war*.
E. Greene's "Orlando Furioso" *Dyce's Edition*, p. 19.

Sound proudly here a perfect *point of war*.
George Peele's "Edward I." 1593. Scene 1.

He shows that the expression was in use even so late as the beginning of the eighteenth century, and cites a passage from a charming paper of Steele's in the *Tatler*, commencing:—"We were alarmed with the noise of a drum, and immediately entered my little godson, to give me a *point* of war."

### NOTES.

MIDWIVES' MAGIC.—A very singular belief prevailed not many years ago in these parts (about Langholme, in Scotland); nothing less than that the midwives had power of transferring part of the primeval curse bestowed on our great first mother from the good wife to her husband. I saw the reputed offspring of such a labour, who kindly came into the world without giving her mother the least uneasiness, while the poor husband was roaring with agony in his uncouth and unnatural pains.—Pennant's "Hebrides."

NOBLE REPLY OF ALLEYN, FOUNDER OF DULWICH COLLEGE, TO ONE WHO TAUNTED HIM WITH BEING A PLAYER. Sir Francis Calton, who had foolishly squandered the property left to him by his father, once taunted Alleyn with having been a player. To this Alleyn replied:—"And where you tell me of my poore originall and of my quality as a player. What is that! If I am richer than my ancestors, I hope I may be able to doe more good with my riches than ever your ancesters did with their riches. You must now beare povertye, and if you beare it more patiently than I, your desert wilbe the greater. That I was a player I can not deny, and I am sure I will not. My meanes of living were honest, and, with the poore abilityes wherewith god blesst me, I was able to doe something for my selfe, my relatives and my freedes, many of them nowe lyving at this daye will not refuse to owne what they owght me. Therefore I am not ashamed."—PETERS.

DULWICH COLLEGE.—Alleyn, the founder, was born on September the 1st, 1566, and died on November the 25th, 1626; being then a little more than sixty years of age His last will is dated on the 13th of November, 1626. He began the building of Dulwich College in the summer of 1613, under the direction of Inigo Jones, and he finished it on the 13th of September, 1619, on which day it was solemnly dedicated, and the completion of the great work was celebrated by a banquet To me his own words from his Diary, "They first hecke a sermond, and after the Instrument of Creacion was by me read, and after an Anthem they went to dinner" Inigo Jones was present at the dedication may be seen in Wilkins' "Concilia." The deed of foundation of Dulwich, or, as Alleyn termed it, God's Gift College, which was enrolled on the 15th of May, 1619, bears date on the 13th of April preceding, and the patent on the 21st of June, though Alleyn did not get possession of it till the 16th of July.

ANCIENT INK.—The receipt for making ink contributed by Mr. Rimbault as given in "Gray's Supplement to the Pharmacopœia," page 322.—

Cudæ sit gallæ, semisque
Sit mucis gummi.
Vitrioli pars quarta:
Bis addas octo Falerni.* JAS LOWE

* A muscadine wine, no doubt containing tartar, and consequently a mordant.

THE ORIGIN OF SOME COMMON PHRASES.—The meaning generally attached to each of the following phrases is very well known. One may of your readers tell me how they came to bear that meaning, and at what period?—"He does not *cotton* with them." "He is *half seas over*." "He gave him something *to boot*." "They ran off *helter skelter*" "She went on a *sleeveless* errand." "He shammed *Abraham*." "I just *saved my bacon*." "They were at it *hammer and tongs*" "How much will he *cut up* for?" "I got it *dog cheap*." "He was quite on his *high ropes*" "He was in *the suds*." "Lackadaisy!" "I shall call you *over the coals*" "I made him eat *humble pie*." "He was as drunk as a *wheelbarrow*." "She kicked the *bucket*." "I am as right as a *trivet*." "I will put a spoke in his wheel." "She was as fine as *gossamer*." "He wants to *carry* favour with you." "I burned a *cold shoulder* upon him."—SCRUTATOR

"I WISH YOU HAD, MRS. CRUMP."—This saying was formerly very prevalent in Gloucestershire, in answer to a wish for anything, and implied that you must not expect any assistance from the speaker. Grose says that it originated thus:—One Mrs. Crump, the wife of a substantial farmer, dining with old Lady Coventry, who was exceedingly deaf, said to one of the footmen waiting at table, "I wish I had a draught of small beer," her modesty not permitting her to desire so very fine a gentleman to bring it; the fellow, conscious that he mistress, Lady Coventry, could not hear either the request or the answer, coolly replied, without moving: "I wish you had, Mrs. Crump." These wishes being again repeated by both parties, Mrs. Crump got up from the table to fetch the small beer herself, and, being asked by Lady Coventry where she was going, related what had passed The story being told abroad, "I wish you had, Mrs. Crump," became a proverbial expression.

### QUERIES.

BANBURY APES.—I shall be obliged if any one will kindly furnish me with a key to the following political pamphlet, "The Bank . . . y Apes: or, the Monkeys Chattering to the Magpye. In a Letter to a Friend in London" The Fourth Edition, corrected. London: Printed, and are to be sold by R Mawson. Price one penny." It consists of four leaves, and has a very rude woodcut of a procession of men, women, and apes. What does it mean? and why is the scene laid at Banbury?—DUNSTAN

ALWAYS SLEEP WITH YOUR HEAD TO THE NORTH.—Is this an old superstition, or a modern dream? If the former, whence and how derived? If the latter, the plain reason?—W. RICHARDSON.

LAWLESS COURT.—In "A Guide to all the Watering and Seabathing Places," published by Phillips in 1806, at p. 386, under the head of "Rochford," I find the following paragraph:—"On an eminence near this town, called Kingshall, the lord of the manor of Rayleigh, a place about seven miles off, holds a court on the Wednesday morning after Michaelmas, at cockcrowing. This is called Lawless Court. The steward and suitors are obliged to whisper to each other, and are not allowed either fire or candle A piece of coal supplies the place of pen and ink: and he who owes service to the court and fails in his attendance forfeits double his rent for every hour's absence. It is said that this attendance was originally imposed on the tenants as a punishment for their having met, at that early hour, in a conspiracy against their lord." Can you or any of your numerous readers inform me who was the lord of the manor conspired against, the nature of the conspiracy, in what year it happened, and if the absurd custom is still extant?—EDWIN J. WHITE, Highbury-vale.

SHAKSPEARE QUERIES.—Can any of your correspondents inform me who has the MS. notes on some obscure passages in Shakspeare by the late Mr. Herron Field? A few only were published among Shakspeare Society's papers" From this sample I should infer that the residue deserve to be made public. Are they likely to be so? I am the possessor of a quarto edition of "Hamlet," dated 1676. No such edition is mentioned in Mr. Halliwell's "Catalogue of Editions of Hamlet." Are copies of this edition scarce? Why does Mr Collier, in his editions of "Hamlet," ignore the quarto of 1609? I have never seen a copy. Where is one to be found?—C. MANSFIELD INGLEBY

THE AFFIX "LEY." Could any of your correspondents inform me of the meaning of the termination *ley* in names of places? I should be glad to know also whether the derivation of *wich* and of *worth* is not open to dispute. P. D. E., North Shields.

[Among terminations to names of places *ley*—variously written *leagh*, *leyh*, *leah*, *legh*, and *ley*—means a field, place, or lea; *wich* means a dwelling-place, habitation, or village (Latin *vicus*, Saxon *wic*); *worth* means a farm, public way, street, or hall. There is no doubt or obscurity about either.]

### ANSWERS.

DUKE SCHOMBERG'S BURIAL PLACE.—Allow me to draw your attention to an error in your "Memorabilia" of the 9th ultimo in B. Blundell's Commentary on "Mr. Macaulay and his Critics," to the effect that Marshal Schomberg was interred in the Cathedral of St. Patrick's, Dublin; which is not according to the fact, as Schomberg was buried in Christ Church, Dublin—which fact of his having been interred there appears from the ancient inscription on the monument erected to his memory in the aisle of that Church.—H. A

GODFREY MEDALS.—In the mistaken and erroneous quotation, "equo cratite Tzeri," may, perhaps, be found a clue to the mystery of the murder The words in Virgil are "Equo ne credite *Teucri*"—Trust not the horse, &c. If the words of the poet were, at the time of the event, used as applicable to the case of Godfrey's death, it may have been that he was in some manner inveigled on horseback, and then murdered. The legend on the edge of the medal may apply to the mode of his death—"Cervus fractâ, fidum suatulet." He may have been straugled, or hung, as an alternative by his murderers for falsifying the confession, &c If the first medal is much worn the "ne" may be obliterated; and the final letters on the two medals referred to are reversed ENS, SNX.—SPES.

DENTISTS OF OLD. -The following quotation from Nares may serve as a reply to your correspondent B. M:—"A tooth-drawer was frequently called kind-heart. It seems that they had a particular costume, at least in the reign of Elizabeth: for in Rond's "Sketches of East and West Looe," p 281, is the following passage:—In the reign of Queen Elizabeth, a fellow who wore his hat buttoned up on one side, and a feather therein like a tooth-drawer, with the rose and crown on his breast for a badge, had obtained a license from the Lord Chamberlain to make a show of a great ape about the country," &c.

THE WORD "BULLY." Is it not possible that this word takes its derivation from the instrument mentioned in the following passage of M. Victor Hugo's novel of "Notre Dame de Paris"?—"Il portait à la main un de ces fouets à lanières de cuir blanc dont se servaient alors les sergents à verge pour mener la foule et que l'on appelait *boullayes*!"—QUARMDOD.

[An ingenious suggestion; but is there any trace of the word in French usage?]

THE HARMONIOUS BLACKSMITH.—In reply to the query in your paper of the 23rd ult., as to the origin of Handel's "Harmonious Blacksmith," I beg to inform your correspondent that, passing through Edgeware about a year ago, I discovered a board over a Blacksmith's forge, with an inscription to the effect that Handel, when in this country, took shelter one day from a storm in that forge, and, hearing the bells of the village church chiming and the blacksmith's hammer ringing its beatings therewith, composed from that circumstance the piece so named.—A. F. FEA

MRS. PIOZZI AND HER FAMILY.—Observing in your paper a mistake in allusion to Mrs. Thrale's second marriage, viz., "that her daughters would never see their mother after that event," I beg leave to state that her youngest daughter was with her and Mr. Piozzi at Edinburgh, and frequently visited my father's house, to whom they had letters of introduction; the young lady was then thirteen or fourteen years of age, and I think her name was Cecilia. I am now in my eighties year, and quite certain of this fact. Should Mr. H. Grey require my name, it is quite at his service.—H. K.

SIR FRANCIS DRAKE was born, 1546, on the banks of the Tavy, in Devonshire; and brought up in Kent. Early in Queen Elizabeth's reign, when his father was Vicar of Upner, Francis was an apprentice on board of a barque that plied occasionally to Zealand and France. On one of the latter voyages he may have touched at Jersey.—MACKENZIE WALCOTT, M.A.

SOLEMNISATION OF MARRIAGE.—In the Act 26 Geo. II., c. xxxiii, the words run thus:—"All Banns of Matrimony shall be published in an audible manner in the Parish Church . . . . upon three Sundays preceding the solemnization of marriage, during the time of Morning Service, or of Evening Service (if there be no Morning Service in such Church or Chapel upon any of those Sundays), immediately after the Second Lesson." Statutes at Large, vol. vii, p. 335. So they stand in Act 4 Geo. IV, c. 76, s. 1.—MACKENZIE WALCOTT, M.A.

### TO CORRESPONDENTS

E. WILSON.—*Turkish Question*. This query was answered by two or three correspondents and we cannot afford space at present for any further details on the subject. Thanks nevertheless, for your kind communication

W. B.—*Yankee Doodle*.—The tune you have sent us and "Yankee Doodle" and you are certainly mistaken in supposing that the old song "Three wooden ships," and the negro song, "Buffalo girls, come out to night" are the same tune

JNO. COLLISON.—*Answering on the Testimonial*.—Your reference, unfortunately, is not exactly our correspondent's query

*Temple-Bar*.—The queries on this subject gives neither name, address, nor signature of any description.

## CHESS.

### TO CORRESPONDENTS

SIGMA.—The non-publication of the late Consultation Games in the pages of this paper must be set down to the surprise

L. M., Hackney.—Neither Problem referred to may be "well as you suggest. Look again and ask some friendly player to explain what is required

FIDES.—There is no case at all different between a Chess Problem and a Chess Enigma

C. M., Bath.—You are mistaken. The Solution we gave of Problem No 626 is the only possible one

J. A., Birmingham.—We believe it may be solved in a fewer moves than the author intended

W. H. W., Ragimor, Alpha, B. N., F. W. P.—All very much below our standard

H. M., An Anglehamian.—We shall have something to say on the subject broached by you ere long.

W. F. H.—Stalemate makes a drawn game.

R. L. F.—Inferior decidedly to both Horwitz and Harrwitz, and not to be named in comparison with any first-class player

SOLUTIONS OF ENIGMAS by Derevan, A Holloway, F. R., of Norwich, Publius, Scrutator, Rideau, M.P., Diggory, A. B., R. P., Frederick, A. C., Mica, D. L., Cuthcun, H. P. W., F. Spalding, S. F., Dover, D. G., Baddam, Dr. Field, Reg'non are correct

SOLUTIONS OF PROBLEM No 625, by Derevan, A. Holloway, Peter, S. S. Murdoch, N. B., Bath'.., Sigma, Asherton, M. F., Scarborough, E. S. A., Lord and Johnson, Dr. Field, D. D., Bedlam, F. L., Norwich, Fred V. E. D., Norwood, are correct

SOLUTION OF PROBLEM No 627, by Dr. Field, onlooker, A. G. Lazard, E. Lee, D. G. Beddam, Lewis, Derevan, P. Sidney, A. Holloway, F. R., of Norwich, John de Hiden, Fred T., Derby, Barnaby, Dax, Mercury, Phiz S., Henry, Alpha, Medicus, Miles, D. D., J. G. Cash, Monas, F. T. M., Philip, A. Onlooker, F. R. S., Alcibiades, B. M., are correct. All others are wrong

*** The greater part of our Notices to Chess Correspondents are unavoidably deferred until next week.

SOLUTION OF PROBLEM No 628.

| WHITE. | BLACK. | WHITE. | BLACK |
|---|---|---|---|
| 1. Kt to Q Kt 4th | K takes R, or (a) | 3. Kt to Q 6th—Mate. | |
| 2. Q to K B 4th | K takes Q | | |

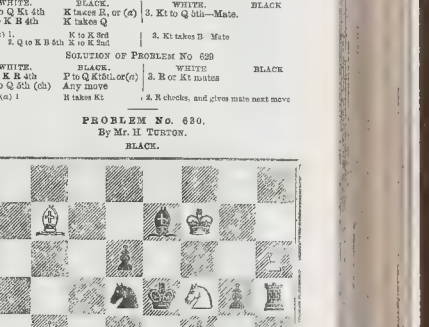
| 1. B to K R 4th | P to Q Kt3rd, or (a) | 3. R or Kt mates | |
| 2. Kt to Q 6th (ch) | Any move | | |
| (a) 1. | R takes Kt | 2. R checks, and gives mate next move | |

PROBLEM No. 630.
By Mr. H. TURTON.
BLACK.



WHITE.
White to play, and mate in five moves.

### CHESS IN THE METROPOLIS.

Instructive Game lately played between Messrs. BODEN and OWEN

*(Irregular Opening.)*

| BLACK (Mr B) | WHITE (Mr O) | BLACK (Mr B) | WHITE (Mr O) |
|---|---|---|---|
| 1 P to Q 3rd (*a*) | P to Q 4th | 20 K takes Kt | Q H to his 3rd |
| 2 P to K 8 4th | Q B to K Kt 5th (*b*) | 21. Kt to Q 6th | Q B to Q 4th |
| 3 P to K B 3rd | B to Q Kt 2nd | 22. P to Q B 4th (*e*) | B takes K (ch) |
| 4 Kt to K B 3rd | P to K 3rd | 23. K takes B | Q to Q B 2nd |
| 5. P to Q Kt 3rd | Kt to K B 3rd | 24 P to K Kt 5th | Kt to K B 4th |
| 6 P to K 4th | B to K 2nd | 25. Q to K 4th | B takes Kt |
| 7 B to K 2 d | K B to K R 5th | 26. P takes B | Q to Q 2 d |
| 8 K to B sq | P takes P (ch), | 27. B to Q B sq | Q R to Q B sq |
| 9 P takes P | P to K B 4th | 28. B to Q K 2nd | Q R to Q B 3rd |
| 10 P to K 5th | Castles | 29. B to K 4th | P to K Kt 3rd |
| 11. Q R to K 3rd | K B to K 2nd | 30. K B to K B 2nd | Kt takes Q P |
| 12 Q Kt to Q 2nd | P to Q B 4th | 31. Q to Q 3rd | Q to K Kt 2nd |
| 13 Q Kt to Q 2nd | P to Q Kt 3rd | 32. K to Kt 4th | Kt to K B 2nd |
| 14 P to Q R 4th | P to Q Kt 4th | 33. Q to Q 7th (*d*) | Kt takes B (ch) |
| 15 K to Q B 4th | K Kt to K B 2nd | 34. P takes Kt | K to Q B 2nd |
| 16. P to K Kt 4 h | P takes P | 35. Q takes K P (ch) | Q R to K B 2nd |
| 16 P takes P | Kt to Q B 3rd | 36. Q R to Q 5th | K to Kt 2nd |
| 17. Q to Q 3rd | Kt to K B 3rd | 37. K R to Q 2nd | Q R to K B 8th (*e*) |
| 18. Q R to Q sq | K to Q 2nd | 38. R to Q 7th (ch) | K to K B sq |
| 19. P to Q B 3rd | Kt takes B | And Black surrendered (*f*) | |

(*a*) This mode of bringing out the Queen's pawn is by no means to be recommended. It is, however, a favourite one with Mr. Boden, and is frequently attempted against him.

(*b*) The utility of this move is not obvious. It counts with us merely as a lost move

(*c*) We should have preferred playing Kt to K B 3rd. In which case the game would probably have been followed up thus—

22 Kt to K 6th ch | B takes K | 24. K to Q 2nd | B takes K R
23 P takes B | B to K sq (ch) | 25 R takes B

If at move 24 White take with Kt, Black must win a Piece.

(*d*) If to Q Kt 2nd, with the view of playing Q to Q B 3rd, would have been much better Chess

(*e*) A very fine move, from the final effect of which there appears to be no possibility of escape.

(*f*) Having no way but by a ruinous sacrifice to avert the threatened mate.

### CHESS IN PARIS.

A fine game played in a match just won by M. DE RIVIERE of HER SCHULDEN in Paris

*(Sicilian Opening.)*

| WHITE (Herr Sch) | BLACK (M de R) | WHITE (Herr Sch) | BLACK (M de R) |
|---|---|---|---|
| 1 P to K 4th | P to Q B 4th | 17 K R to Q B sq | Q to Q h 4 |
| 2. K B to Q B 4th | P to K 3rd | 18 K R to K B 2nd | K R to Q sq |
| 3 Q Kt to Q B 3rd | Q Kt to Q B 3rd | 19. P takes Q P | Q takes P |
| 4 P to Q 4th | K B to K 2nd | 20 Q R to Q B 7th | Q takes Q P (ch) |
| 5 P to K 5th | K Kt to K B 4th | 21. Q B to Q B 3rd | Q takes Q P |
| 6 K Kt to K B 3rd | P to Q 4th | 22 Q to K 4th | Q to Q 3rd |
| 7 P to Q Kt 3rd (*a*) | B Kt takes P | 23. Q R to K 5th (*e*) | Q to K B sq |
| 8. P to Q 3rd | P to Q R 3rd | 24 K R to K 2nd | Q R to Q B sq |
| 9 P to Q R 4th | Q to Q B 2nd | 25 K R to Q B 3rd | Q R to K 5th |
| 10. K B to K 4th | P to Q B 3rd | 26. K R to Q B 2nd | Q R takes Q B |
| 11 Kt takes B (ch) | K takes Kt | 27. B takes R | R to Q 7th |
| 12. Castles | Castles | 28 B to K 5th | P to K R 4th |
| 13 K B to Q Kt 3rd | Q to K B 2nd | 29 Q takes K R P | Q takes P (ch) |
| 14. Kt takes Kt | P takes Kt | 30. K to B sq | Q to K 5th |
| 15. Q B to Q 2nd | B to Q Kt 2nd | 31. K B to Q B 2nd | R to K 8th (ch |
| 16 P to Q B 3rd | P to Q Kt 2nd | | |

And then mates with the Queen next move.

(*a*) We have not time to examine this variation which spring from White's taking the K B Pawn with the Knight, but from a cursory look, we are disposed to think that move would have given the advantage to White. Such followed up, would have led to perpetual check.

NEW SERIES OF THE AMERICAN CHESS MAGAZINE.—We see by the New York papers that Mr. C. H. Stanley, long recognised as the chief player in America, has announced his intention to revive the *Chess Magazine*, which he edited in 1846. As this undertaking will be entirely at his own risk we trust Mr. Stanley will not appeal for support in vain; but that American and British amateurs will vie with each other in giving encouragement to so praiseworthy efforts in behalf of Chess The annual subscription is fixed at 10s., and the Magazine will be published in London as well as New York.

*NEW BOOKS, &c.*

T., the original Maker of a Twenty-five Guinea Pianoforte, has, by the care he has devoted to all branches of the manufacture, obtained the highest reputation throughout the universe for his instruments, unequalled for durability and delicacy of touch, more especially for their excellence in standing in tune in the various climates of our colonies In elegant walnut, rosewood, and mahogany cases, packed for abroad, for £2 10s. extra. H. TOLKEIN'S Manufactory, 27, 28, and 29, King William-street, London-bridge

TO CORNET PLAYERS. The largest stock of Cornopeans in London will be found at BOOSEY and SON'S, 24, Holles-street, comprising the finest and straight models, by BOOSE and BESSON, with cylinder and valve motions, in brass, silver, and gold, at prices varying from 3 to 15 guineas. Every instrument guaranteed of the best description. BOOSE'S ROTARY MOTION is the most perfect in shape, freedom, and quality of tone as regards intonation, ease of blowing, and appearance. The Cornet-à-Piston in B flat is on sale, with 4 valves, an octave higher than the ordinary Cornopean.

UNADULTERATED WINES.—FELTOE, SONS, and CO., Importers of only Pure Wine, from their vaults and Brandy Stills Agents for the Compagnie Française des Vins de Bordeaux, 2, Coenhill-street, Regent-street, E.C.

JUDKIN'S IMPROVED GAS REGULATOR has the following advantages to recommend it to the consideration of all gas consumers:—
1st. It is perfectly adjusted to supply gas at any required pressure below that of the street
2nd. When once adjusted it will admit of No Variation in light burning, whether they are few or many, whatever the fluctuation of pressure may be.
3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.
4th. A saving of at least from 25 to 35 per cent in the consumption of gas is obtained
In advantages over other Regulators are as follows—
1st. It is more simple in its construction.
2nd. It is more sensitive in its operation, having less friction as it works only on two steel centres, which are immersed in quicksilver
3rd. It is not liable to get out of repair, and requires less attention than a meter itself
The Judkin Apparatus has been fitted up on the premises of the Patentee, 33 and 35, Corporation-street, Manchester, and 98, Fleet-street, London, for the purpose of demonstrating the above-named fact.

MANUFACTURERS BY SPECIAL APPOINTMENT TO THE QUEEN.
Obtained the Prize Medal, Great Exhibition 1851
J. S. FRY and SONS have all the advantages of which experience, and a manufactory on a large scale, can command. FRY'S PRINCE'S MIXTURE is the purest and best adapted ROYAL FAMILY, and by the HIGHEST NOBILITY, as specially patronised by Her Majesty the Queen, having also received the Prize Medal, Great Exhibition, 1851, and obtained the only Prize Medal ever awarded for Cocoa. Fry's Cocoa possess perfect solubility—agreeable, nutritious, and delicate aroma—is invaluable to invalids and dyspeptics. J. S. Fry and Sons' Cocoa is the only one that will not separate on the surface of the liquid, and is recommended by the faculty as containing all the nutritious properties of the bean, with the excess of fat or oil extracted. Fry's Cocoa Essence is the most economical, requiring only one-half the quantity to be used of any other cocoa. It will go further than tablets or quarters

No. 790.—VOL. XXVIII.] SATURDAY, MARCH 22, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## BORN IN THE PURPLE.

THE fondest hopes of the most remarkable man of the age and the wishes of a great and generous people have been gratified. An heir has been born to the house of Napoleon. The dynasty of the Bonapartes has been strengthened by the birth of a fourth inheritor of the name. Salvos of artillery have thundered forth the welcome tidings to every part of France; and every part of Europe has responded with sympathy. It is not France alone that is interested in so auspicious a birth. The fortunes of the world may be influenced by it. When France moves it is impossible for Europe to be still. When her mighty heart is stirred, there is danger abroad. When she is quiescent, her neighbours may "sit down in the shadow of their fig-trees," and be at rest. Whatever gives, or tends to give, stability to her government and institutions imparts stability to the thrones and systems of the Continental Monarchies. Free and despotic States alike feel the impulse; the free States, because the French Empire is born of Revolutions, and expresses the popular will; despotic States, because Despotism cannot but see in the person of the Third Napoleon the strong hand that has known how to curb the licentiousness of popular passion; to subordinate wild impulse to law and order; "to wield the fierce democracy" as the warrior wields his sword—an instrument, not a master; and the calm, resolute, indomitable will which betokens greatness in its possessor, and which has not only inherited but achieved it by every quality that combines to form the statesman, the lawgiver, and the hero.

We need not dwell upon the purely domestic incidents of the event, or dilate upon the sympathy with which the brightest eyes in Christendom have glistened on behalf of the Empress Eugenie—a woman who is, perhaps, the fairest and brightest, and who is certainly the most interesting mother of her time. Although the personal and private incidents of her story are among the greatest of the charms which encircle her name and character, and which have created her own popularity and increased that of her Imperial husband, there is no necessity at such a time to recall them. Such considerations speak for themselves, and require no aid from the pens and tongues of politicians to impress them on the popular heart. They appeal to deeper sentiments than are influenced by policy; and move with equal force the imagination and the feelings of mankind.

But on the national and international character of the event so ardently desired, and so auspiciously consummated, it becomes the journalists of all civilised countries to express their opinions. No State is likely, as far as present appearances go, to be uninfluenced by it. All friends of the peace and progress of Europe must hope, whatever their personal feelings may be towards Napoleon III., that this child, "born in the purple," may live and thrive; that the amiable Empress may be spared to give to France many more such pledges for the permanence of the Napoleonic dynasty; and that France, spared from the constant dread of revolution, may have leisure to prosper. Whatever there may be of harsh and arbitrary in the rule of Napoleon III.;—whatever there may be in his system of government, which grates upon the feelings of enlightened Frenchmen, or of the sincere friends of popular liberty in Great Britain and other free countries, will be

ILLUMINATION OF THE MOUNÉE, AT PARIS, IN HONOUR OF THE BIRTH OF H.I. PRINCE IMPERIAL (SEE PAGE 293)

relaxed and removed in proportion as his throne is secured. No man, we believe, feels more strongly than the Emperor himself the exceptional character of the policy which circumstances forced him to adopt with reference to public opinion and its manifestations in France; and no man is more convinced of the desirability and necessity of allowing the institutions which his strong hand has given to the country to expand in conformity with the national sentiment. Development is the law of life, among nations as well as among individuals; and it is because the birth of an heir to Napoleon gives security to his throne—the only thing that was wanting to inspire the French with confidence in the future—that the friends of Freedom welcome the new-comer as a pledge that this development will take its natural course, and that France, under the dynasty of its choice, will become both free and happy.

We shall not add to the number of those who indulge in illomens, and who remind the world that since the days of Louis XIV. no son of France born in the purple has ever succeeded to his father's throne. Such croakings are out of time, and out of place. There are persons of so lugubrious a disposition that at the most joyous of weddings they will remind the eager bridegroom that women are often fickle; that, fickle or unfickle, they are doomed to die; and that all human happiness is empty and transitory. There are people who, when a son is born to a fond couple, will draw a long face, and hope it may escape from measles or small-pox, and turn out a blessing, not a curse, to its parents. Such persons are as unwise as they are disagreeable. The people of France and England have no fellow-feeling with such bores;—bores who, if they be not pedants, are something worse. We prefer to look for favourable omens in the birth of Napoleon IV.; to think that the Imperial infant is destined to break the charm of ill-luck; to hope that his illustrious father may be spared till long after the child shall have reached maturity, and that the child himself, with many brothers and sisters around him, may be spared to increase the greatness of the name which he has inherited, and to govern France in equity and splendour. If good omens are wanting, let them be found in the circumstance that the child comes into the world amid the prayers of Europe for the stable and honourable peace which France, in conjunction with Great Britain, has, by courage and wisdom, succeeded in wresting from the unwilling hands of the aggressive Power that wantonly and wickedly disturbed it. Napoleon III. inaugurated his reign with the emphatic words, "The Empire is Peace." The birth of Napoleon IV. is of happy augury to realise the anticipation.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE interest and curiosity attached to the birth of the Imperial Prince, and to all details thereunto belonging, is little diminished. Besides the real facts relating to the event, a thousand rumours, as absurd as impossible, have been circulated a thousand anecdotes of the most ridiculous nature spread—in order to feed a public greedy of intelligence on the subject. On Saturday so intense was the excitement that the publication of the statement that the settlement of the fifth point had been agreed upon in the Conference, and that little more was now requisite than the final proclamation of the peace, obtained comparatively little attention. During the whole day a dense crowd surrounded the Tuileries, and in the churches numerous private prayers were offered up for her Majesty's safe and happy deliverance. The Empress's sufferings were protracted but intermittent, and it was but a short time before the birth of the infant that she ceased to walk about the apartment. The entrance of the officers of State in the last half-hour produced so painful an impression on her Majesty as somewhat to retard the final moment, and induced her as much as possible to conceal her sufferings. The Emperor was intensely affected, especially at this crisis. The Prince, who is a remarkably fine child, being at his birth nearly as large as the infant of the nurse, who is two months old, continues to thrive most satisfactorily. The Emperor and Empress have announced that they will accept the office of godfather and godmother to every legitimate child born in France on the auspicious day that has thus crowned their own hopes. On Sunday evening the illuminations were unusually abundant and magnificent. The Tuileries, the Elysée, the Sénat, the Corps Legislatif, the Hôtel de Ville, the towers of Notre Dame and St. Jaques, the Bourse, &c., were splendidly illuminated. All the Embassies—the hotel formerly occupied by the Russian Minister, and still kept by Russia, especially—the chief thoroughfares—even some of the least-frequented streets displayed similar marks of rejoicings, hardly a public vehicle could be got for love or money from the time twilight set in, and the *remises* (job carriages) raised their prices from two to five francs an hour. Nearly all the theatres gave representations gratis; and such were the crowds that attended them that from eight in the morning till two—the hour of opening—the people had taken their stations at the doors. In addition to the usual pieces of their répertoires, most of them gave one referring to the great event of the day; and the Opéra and Opéra Comique executed cantatas composed in honour of the occasion. A certain diplomatist forwarded to one of the great bodies of State in session awaiting the news of the Empress's confinement a volume of Voltaire, marked at the page which contained the following singular apropos in the verses addressed to the Prince Palatine, Charles Theodore:—

Est-ce une fille, est-ce un garçon !
Je n'en sais rien, la Providence
Ne dit point son secret à l'avance,
Et ne nous rend jamais raison.
* * * *
S'il nous donne un prince, tant mieux
Pour tout l'État et pour son père,
Surtout s'il a son caractère
C'est le plus beau présent des cieux

Si d'une fille il nous régale
Tant mieux encore ! C'est un bonheur
En grâce, en beauté, en douceur
Je la crois à sa mère égale.

At the bottom of the verses Voltaire, in sending them to the Palatine, adds the following line:—"Puisse la paix servir d'épouse à la naissance du Prince qu'on attend!" A rumour states, that in honour of the birth of the Prince, titles of nobility will be conferred on such of the highest personages attached to the service of the Government as are yet without such a distinction.

The attacks of the clergy on the style of dress at present adopted continue with undiminished vigour. One of the body lately cited in the pulpit a phrase already celebrated as formerly employed under similar circumstances: "That women forgot, in loading themselves with such voluminous garments, that the gates of heaven were narrow." Another celebrated preacher, whose ardour and courage in signalising and condemning the prominent vices of modern society is constant and unabating, has also preached a most energetic sermon against that peculiar breach of morality which, more than all others, tends to ruin the peace and respectability of families, and in which the young men of this corrupt society find a glory in a crime.

It is reported that the Curé of the Madeleine, the celebrated Abbé Daguerry (who commenced his career as a soldier), is to be appointed to the Bishopric of Amiens; others assert that the choice may fall on the Abbé Caire. It is expected that a law of regency will be very soon enacted, by which the Empress will be declared Regent, assisted by a Council composed of the Princes of the Imperial family and the chief functionaries of State.

Monseigneur de la Tour d'Auvergne, the bearer of the autograph letter of the Emperor to request the Pope's consent to become the godfather of the Prince Imperial, also presented to the Pontiff the copy of the "Imitation de Jésus Christ" destined for him. The volume, splendidly illuminated and magnificently bound, was contained in a case embroidered by the hands of the Empress and her Ladies of Honour.

The reports relative to the activity of the measures about to be adopted for the colonisation and advancement of Algeria assume every day greater consistence. It is said that, among other plans, there exists one of furnishing the means of emigration to 50,000 Chinese, for the purpose of cultivating cotton, and mulberry-trees for the benefit of the silk trade. It is the intention of the Emperor to visit Algeria in the course of the present year, in order to form his own opinion as to its necessities and capabilities. On his return he proposes to go to Corsica, with a view to see what may be done to benefit the birthplace of his family, and, at the same time, to utilise its resources for France.

A work of unusual interest is attracting public attention at present: this is "Histoire de Mon temps," by the Vicomte de Beaumont-Vassy. The period chosen by the historian extends from 1830 to 1851. The task, which presented momentous and serious difficulties, has been performed with a skill, a tact, an impartiality, and an interest that are really remarkable: the most delicate points are so treated that important disclosures are made without in any way wounding the susceptibilities of the Government, the public, or the individuals mentioned, and a quantity of most valuable information is very agreeably conveyed.

Grand news for the would-be Ninons of the present century! A collector of autographs has discovered a letter from Fortunio Liceti, the celebrated Italian physician of the seventeenth century, addressed to Ninon de L'Enclos, containing the receipt of a cosmetic, the *rugiada del viso*, which is said to explain the secret of her preserving, till seventy, the charms that distinguished her youth.

One of the principal successes of the moment is the new drama of M. E. Plouvier, at the Porte St. Martin, "Le Sang Mêlé." It is full of passion and interest, and contains much novelty of plan and treatment.

### THE ARMISTICE IN THE CRIMEA.

A despatch received by Lord Panmure from Sir W. Codrington, under date March 15th, announced that the armistice had been signed by the Allied Generals, and that the exchange of documents would take place on the 16th.

This is the only news of any importance from the East. The Vienna papers contain telegraphic despatches from Constantinople, dated the 10th and 13th inst., which state that Omer Pacha has arrived at Constantinople; that there is great mortality among the French in the Crimea; that the fortifications of Nicolaieff are being strengthened; and that General Lüders has ordered all officers on furlough at Odessa to return.

### THE FLYING SQUADRON IN THE BALTIC.

The British steam-sloop *Samson*, 6 guns, arrived at Hamburg on Tuesday from the flying squadron, with despatches from Commodore Watson. The vessels, in their cruise up the Baltic, had found much floating ice along the coasts, and the cold was very severe. With respect to any Russian ships of war having been seen in any time moving about the Gulf of Finland or the Baltic Sea, such a thing had been impossible, even had they wished to do so, on account of the great masses of ice seen on all parts of the coast.

### AMERICA.

The mail steam-ship *Asia*, which left New York on the 5th inst., arrived at Liverpool on Tuesday. No intelligence of the *Pacific* steamer has been received.

The Washington correspondence in the *New York Herald*, in a letter dated March 7, says that "Mr. Crampton has written a note to the editor of the *National Intelligencer*, stating that he was not instructed by Lord Clarendon to submit a proposition to arbitrate the Central American question, but only to inform Mr. Marcy that such a proposition had been made to Mr. Buchanan."

In the United States' Senate, on the 3rd inst., after some remarks by General Cass, relative to the assertion made by Lord Clarendon that the understanding between England and France was perfect in relation to all parts of the world, the bill authorising the construction of ten steam sloops-of-war was taken up and finally passed. These vessels are to cost 507,000 dollars each, including machinery and equipment. Two million dollars are appropriated to start with. The Senate on the 4th passed a bill appropriating 80,000 dollars for new fortifications at Galveston

The Virginia Democratic State Convention and the Pennsylvania Democratic State Convention have assembled, and show a preference for Mr. Buchanan as their candidate for the presidency.

William O'Brien has been arrested in New York on a charge of having enlisted twenty men in Philadelphia and bringing them on to New York for enlistment in the army of General Walker at Nicaragua. He was taken before a United States' Commissioner in Philadelphia, and held to bail in 2000 dollars for an examination. This O'Brien is the man on whose information the Kinney expeditionists were arrested. It is said he was formerly a captain in the army in Mexico, and that he has also held a high position in the navy.

The news from Nicaragua is interesting. The new Government has issued a decree annexing the Mosquito territory. The *Panama Star* reports that "the French are after General Walker." The man-of-war *L'Embuscade* was on its way to Nicaragua to inquire about some property of French subjects which Walker had taken as a forced loan. It is added, that in Nicaragua itself revolutionary parties are organised, and that Costa Rica is sending a force against him. "On the whole," says the *Panama Star*, "notwithstanding what the New York papers say in his favour, we adhere to our old belief that Walker will have to slope from Nicaragua or lose his life before many months."

From San Juan del Norte the *Panama Star* has a slightly different account. Its correspondent writes:—

The establishment of Walker's Government is considered certain to be permanent, if he can only hold out six weeks longer—or, in other words, if he can resist the force coming down upon him from Honduras, consisting of over five thousand men. Walker has 1300 foreigners, and a considerable native force, and with the most vigilant discipline he is drilling and keeping them together No one who goes to Granada without a special permit previously given ever returns. He presses them all into the ranks of his forces.

### ANNEXATION OF OUDE.

A territory the size of Scotland, and a third more populous, has been transferred from a native to the British Government without bloodshed or a blow. Oude, the finest province of Bengal, covers an area of 24,000 square miles, and contains a population of between three and five millions, with a revenue of nearly a million. The Resident, General Outram, having spent some time with Lord Dalhousie, at Calcutta, in January, left on the 22th of that month for Lucknow, to carry out the policy with the execution of which he was intrusted. He reached Cawnpore on the 28th, where a force of 12,000 men had been established, and a bridge of boats constructed to convey them across the river. On the following day orders were issued for two brigades to proceed to Lucknow. The first, commanded by Colonel Wheeler, consisted of her Majesty's 82nd, two batteries with guns, the 1st Light Cavalry, and 13th and 73rd Native Infantry. The second, of the 5th Irregular Cavalry, a battery of artillery, and the 22nd and 41st Native Infantry. These, having proceeded to the capital, were in readiness to overawe the malcontents, should any such present themselves, or to put down disturbance should it threaten to appear. But the King of his own accord had on their approach dismantled his guns, disarmed the garrison, and shut up the palace. General Outram's first interview with the Sovereign occurred on the 4th of February, when, accompanied by Captain Hayes and Captain Weston, members of the mission, his Majesty was urged to sign a deed of abdication. This he positively refused, saying that he would appeal to England, and go in person to London. Upon this General Outram issued a proclamation deposing his Majesty. The General then ordered the Minister to bring to the Residency all the chief officers of State. About midday the following attended:—The Minister, Ally Nuckey Khan; the Revenue Minister, Rajah Bal Kisen; the Custom-house Darogah, Shurf-ood-Dowlah; the City Kotwal; and all other officers of the different branches of administration. The Resident ordered the Revenue Minister to give in the whole accounts of amount of revenue and the details of Purgunnahs, which was at once commenced upon. The Kotwal was directed to furnish the list of Thannahs to Captain Weston, which he did. The Resident then placed guards from Captain Magnese's regiment over the office of the Revenue Minister and Custom-house, directing that all should be allowed to go on as usual, but that no money nor papers were to be taken away. The King has sent a circular to all zemindars and amils informing them that the Company have taken charge of the kingdom, and directing them to pay all rent to the officer sent by the Resident to collect it, and ordering them to offer no opposition. The King had closed the palace gates, and declared that he would never sign the razeenamah. An allowance has been appointed to him of £150,000 a year.

According to the *Bombay Times*, the future administration will be conducted under General Outram, as Chief Commissioner, with four commissioners, Mr. Wingfield and Mr. Christian, of the civil service, and Colonel Goldney and Major Banks, of the Bengal army. Mr. Cooper, deputy secretary to Government, is to be secretary to the Chief Commissioner, and Captain Hayes military secretary.

### THE SANTHAL REBELLION RENEWED.

The accounts brought by the present Overland Mail represent the Santhals as again ravaging and plundering their district. A letter from Bhagalpore of the 25th January says:—

A report has just been received that Sujarampore has been burnt—that is, the Bungalow, and that the Santhals were on the move for Deagoug.

Before their attack on Sujarampore the Santhals had located themselves at Koomree, belonging to the Ghutwals of Tehlea Mohwas, and were levying black mail from all the neighbouring villages.

A letter from Calcutta, dated February 8, says:

A body of Santhals, hitherto quiet, and residing as far north as the boundary of Monghyr, suddenly broke out, plundered one place, threatened another, and announced themselves masters of the country. The new Commissioner, an active man, behaved with decision. Captain Fagan, with a party of the Hill Rangers, was instantly dispatched in pursuit, and fortunately came up with them. The skirmish was short, but the Santhals, for a wonder, stood fire, and thirty-one of their number were left upon the ground. The rest fled, and the movement may possibly be suppressed.

### PERSIAN INTERVENTION IN HERAT.

By the Overland Mail we are informed that a Persian army was marching on Herat. This intelligence is interesting in connection with our alliance, offensive and defensive, with Dost Mahomed. The movement on Herat must be intended either to support or to destroy the Suddozye Prince Mohammed Yusuf, who three months ago recovered the city by the aid of a Persian force, and professed to hold it as the vassal of Teheran. It is said that the Prince finds himself strong enough to throw off his Persian allegiance and set up for himself; and, if so, of course it is not oaths or obligations that will bind him. But his defection would place him between two fires, for he can expect nothing but hostility at Cabul; and it is more probable, therefore, that it is in support of its puppet that the Persian Court has dispatched an army to Herat.

### THE AFRICAN MAILS.—SERIOUS DISTURBANCE AT CAPE COAST CASTLE.

By the *Gambia*, which left Cape Coast Castle on the 14th ult., we learn that a serious collision had taken place between the two parties into which the place is divided. About thirty men were killed and seventy wounded. The military did not interfere, but were kept within the castle, under arms. The King was deposed; and, his life being threatened, he took refuge in the fort. The townspeople were fined 70 oz. of gold for the disturbance, which they at once paid. A great palaver was to take place on the 15th of February at Cape Coast Castle, when Major Ord was to address the traders and others interested regarding the poll-tax. Great numbers of the native chiefs and their retainers were assembling in the town. The following account of the affair is from a private correspondent:—

Major Ord, her Majesty's Royal Commissioner for the Gold Coast, having arrived here from England, the various quarters of the town, through their chiefs and head men, waited on the Major to ask his permission to salute him on the 22nd of January; the day was agreed upon, and the salute was made by five companies out of the six into which the town is divided, and all passed satisfactorily; the King of Cape Coast and the remaining company appointed the next day for saluting. The procession was formed, the King, in his basket (carried on men's heads), with a gold-handled knife in his mouth and a pistol in his right hand (a sign of war and defiance), headed the procession as it passed round the town—he was told not to go into the opposite quarters—till it came to the Benkum Quarter, when it was stopped, and the King was told that he could not pass through their quarter in state, as he had been taken off the stool (i.e. dethroned). A disturbance would have taken place, but fortunately it was stopped by the arrival of Major Ord and a party of soldiers, who brought the King back to his house, and informed him that he must not go out, and the palaver should be properly judged. That did not seem to satisfy the King and his party, who, in the afternoon, began to squabble with some people of the Intah Company, first with sticks then stones. The King was among them, with several men attending him with guns. Several of his party fired, and two men fell. The alarm was raised, every man ran for his gun, the fight became general, and ended at dusk, in the loss of about 30 killed, 100 wounded, and in the destruction of the whole of the houses in the quarter where the King resided, as also some of the houses adjoining. The houses of the merchants escaped by having flat roofs. This unfortunate affair would never have happened if the authorities here had listened to the complaints of the people, now going on for a long period. The King although deposed by the people and the country laws, was supported by the local Government. On the 28th January, by a special commission from the acting Governor, the case was tried by Major Ord (at the special request of the people) in a crowded court, consisting of the Commander of her Majesty's ship *Chiddens* and officers of her Majesty's ship *Alecto*, with the officers of the garrison and the merchants from the town. The King was deposed, and he was found guilty of acts too numerous to mention, unbecoming even a King in this country. It was proved that he went out with the intention of fighting by the fact of his going with a knife between his teeth, and the first shot was fired from his party. The opposition party were fined 80 oz. of gold dust, = £320 sterling, for setting fire to the town. For some time past the people, through disputes arising from the unsettled state of things, have been repeatedly fined by the authorities in sums varying from 20 to 80 oz. of gold dust, but now, through the judicious management of Major Ord, her Majesty's Royal Commissioner, things are being again restored to order. The natives are highly pleased that a Commissioner has been sent by her Majesty's Government to hear their grievances. He has now their good will by his affability, as they have been kept in a most unhappy state by the peculiar policy of the local Government, which was not adapted to the condition of the people.—AFRICANUS

### ALARMING RIOTS IN BERBICE.

From British Guiana we have accounts of serious organised disturbances which had broken out in Berbice, and for the suppression of which a military force had been dispatched by the Governor. The riots, which had their deeper causes in the jealousy of race, were lighted by the ravings of a mulatto named Orr, a creole of the colony, who, under the name of the "Angel Gabriel," caused riots by similar means in Greenock last year. An ordinance has been passed authorising the Governor to enrol and call out the militia, and the steamer *Tyne* had been dispatched to Barbadoes for additional troops.

Serious disturbances have also taken place at Queen's Town and the other parts of Essequibo, and on the islands of Leguan and Wakepasm.

A LUCKY POLICEMAN.—Mr. Daniel Cameron, late Assistant Superintendent of Police in Glasgow, went some years since to Australia, but left the police and took to the diggings. He has been elected a member of the Legislative Council, and the *Melbourne Argus* says—"A private letter from a resident on the Wombat has been shown to us, in which it is stated that Mr. Cameron, the newly-elected member for the district, had the compliment paid to him by his supporters of having the horse he rode on at the time of the contest shod with shoes of solid gold. A more sensible proof of the cordiality of Mr. Cameron's supporters is furnished by the efforts they are making to furnish him with the due qualification for taking his seat in the Legislative Council. At a meeting of the Committee at the Woolshed, no less than £1500 of the £2000 required was subscribed on the spot."

## NOTES OF THE WEEK.

THE birth of a Prince of France and the conclusion of a treaty of peace will connect themselves for many a year in the memory of the present generation. The favourable progress of the amiable Empress is subject for unmixed congratulation; and it is somewhat early to allow our national hope that the negotiations have been duly concluded to be dashed by rumours that the desire of one party for immediate peace has prevented others from insisting upon all that might have been obtained. A few days, however, will bring more definite information. The armistice expires on the last day of the month, and the official announcement of the result of the Conferences cannot be protracted beyond the ensuing week.

Both Houses of Parliament rose on Friday, the 14th, for the Easter recess—the Lords meeting again on the 1st of April, the Commons on the preceding. The subject of Kars will be brought up very speedily after the reassembling of the Lords, unless the more important discussion the Peace Treaty should interpose. A general debate in both Houses on this topic is, of course, inevitable, and will possibly afford the collective wisdom an opportunity for enunciation of larger views and more patriotic sentiments than have been permitted to grace the seven weeks' sitting just concluded. It may be mentioned that nearly the last act of the Government, before the rising of the Commons, was to introduce a bill for the long-promised reform of the Ecclesiastical Courts. There is some probability that this time the measure will be carried, and the terms offered to the holders of existing interests are so liberal that they will be more than ill advised should they offer any resistance to the bill.

The American representative, Mr. Buchanan, has taken leave of her Majesty; and his successor, Mr. Dallas, has arrived. This gentleman is in every way a fitting Envoy from the great nation which accredits him to the Court of St. James's, and his antecedents are all favourable to the presumption that he will adopt that tone in the discussion of the questions at present open between his Government and ours which almost likely to induce to an amicable settlement of each and all. He is already stated to have expressed to a body of commercial gentlemen who received him that there was nothing in the topics of difference which ought to excite fear of a graver dispute. While alluding to America, it is impossible to pass over a subject which is daily acquiring a more serious character. The *Pacific* steamer had not been heard of on the 5th of March, though it was forty-two days since she had left Liverpool for New York. There is still reason to hope that all yet may be well; but it is needless to say that the deepest apprehensions are aroused at so unprecedented a delay.

The week has not been marked by any domestic occurrences of much interest. A robbery of a portion of her Majesty's nursery plate, while the persons in charge of it had gone into a public-house to drink a necessary ceremony even in the brief journey from the Palace to the railway—merely shows that the Queen's private servants do not attend to their duty more vigilantly than a good many other officials in her Majesty's service. The chest in which the property was contained has been found; the "reducers of gold and silver ore" have done the rest. A more interesting announcement in connection with the younger part of the Royal Family has been made. The Prince whose aspiration to the hand of our Princess Royal was made the subject of much objectionable and unjust remark some time ago has obtained his uncle's leave to solicit the Princess's hand, and permission has, of course, been granted.

The Covent Garden investigation has closed, and the jury have been able to return only an open verdict, giving no opinion as to the cause of the fire which has deprived us of the noblest theatre we had. The ruins are being rapidly dealt with by workmen, in order to prevent accident. The proprietors propose to surrender their unexpired lease, which has thirty-eight years to run, to the Duke of Bedford, but the shareholders do not seem entirely to acquiesce in the justice of this summary mode of treating their interests. What will be done with the site is as yet unknown, but it is understood that the Duke is desirous of improving Covent-garden market, and would look favourably upon a scheme for enlarging the area now set at liberty. Many suggestions are made: one is, that the church in the market should be removed to the site of the theatre, so that a compact site for the whole mart might be gained. Another suggestion is, that the site of the theatre should be taken for the Law Courts, which Sir Charles Barry must speedily eject from Westminster, and this place would have many advantages, especially in the proximity of the spot to the business haunts of the profession: it would be far better than spoiling Lincoln's-inn-fields with buildings. But all speculation is somewhat premature. Mr. Anderson, whose entertainment was the means of destroying the theatre, has written a letter to the papers, in which he complains that "a charge of arson" has been advanced against him—a charge of which the public will certainly hear for the first time through his epistle. It would have been in better taste had he taken the opportunity of saying at least one word of regret that owing to an entertainment for his benefit London had been deprived of a magnificent theatre.

It would savour of that false and cruel "delicacy" which is one of the bases of artificial society were not the journalist to call attention to the revolting fact that an organised system is shown to exist in our seaport towns for the entrapping young girls and "exporting" them to the Continent for the purposes of vice. A Jewess has this week been proved to have been an active agent in the system, and a victim has been fortunately recovered. It is impossible but that information as to her, and to other persons connected with the accursed trade, should not be in the hands of the police; and we trust that no quibbles of law will be allowed to interfere with its vengeance, and, if the law cannot reach the culprit, the offence is of such exceptional atrocity that it might be left to chastisement at the hands of the outraged inhabitants of the town where the wretches reside. We are habitually and utterly opposed to violence and irregularity; but there are some crimes at which human nature revolts, and which place the perpetrator beyond the pale of legal protection. But we hope the law will be found powerful enough to do its own work in this instance.

## *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS.—*Rural Deanery:* Rev. T. A. Bangham to Lichfield. *Rectories:* Hon. and Rev. G. R. Gifford to Littleton, Middlesex; Rev. R. Hale to Thorpe Bassett, Yorkshire; Rev. J. S. Hall to Dalby, Yorkshire, Rev. A. Paris to Ludgvan, Cornwall; Rev. H. M. Stowers to Wood Walton, near Huntingdon; Rev. R. J. H. Thomas to Llanwaitog, near Pembroke. *Vicarages:* Rev. E. Buller to Overstowey, Somerset; Rev. G. Chute to Drayton in-Hales, near Market Drayton; Rev. T. H. Green to Leominster, near Arundel; Rev. P. Hale to Burrington, Herefordshire; Rev. J. W. Hedge to Wensenhope, near Malton, Yorkshire. *Incumbency.* Rev. E. Jones to Nerquis, near Mold, Flintshire.

ST. MATTHEW'S, BRIXTON.—In our last impression we noticed the tribute of esteem and respect to the late Curate, the Rev. George Eastman, in the robes, purse, and salver that were presented to him by the wealthy parishioners. We have now the pleasure of recording a tribute from an humbler class—namely, the children belonging to the National Schools, who presented that gentleman, on Saturday last, with a handsomely-bound bible, a sermon-cover, and a set of bands, as a token of the kind manner in which he had watched over and instructed them during the three years he had been Curate of Brixton.

LOSS OF THE "POLYPHEMUS."—An instance of gallant conduct occurred in this wreck which does not appear to have been yet recorded. At the moment the paddle-box boat was swamped, the cries of the master, Mr. Herbert, were heard, when Lieutenant Fyne, First Lieutenant of the ill-fated vessel, sprang into the netting, stripped to his shirt, with the determination of making a leap which must have proved fatal to the best swimmer. At the Captain's command, five or six of the crew immediately seized the Lieutenant; the sea broke over the bodies of the swamped party, and they were seen no more; and with them would have been numbered the Lieutenant, but for the timely interference of the Captain. Upon four former occasions Lieutenant Fyne is known to have jumped overboard, at the risk of his life, to save a fellow-creature.

## THE LATE ASSASSINATION IN BERLIN.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

"Ungrateful as a Crown Prince" was one of the sayings of Jean Paul. A remarkable proof of the truth of the German writer's saying is again afforded by the late scandalous proceedings at Berlin, viz.—the murder committed on Herrn v. Hinkeldey by a member of the "Ro and Pro" Russian Junker party.

That foul and scandalous crime, the offspring of what the English law terms "conspiracy," and holds to be criminal and punishable as such, has all the importance of a political event of the most serious purport. Such must especially be the case in a moment when, in consequence of Prussia having been invited to become a partaker in the Paris Conferences, the eyes of *enslaved* Europe are turned with increased interest upon that State, and when England is going to "ally herself more closely" with her than ever before. The crime of the noble gambler, the member of the Jockey-club, and "Kreuzritter" besides, throws a fearful light upon the internal state of a country of which Mr. Disraeli had the courage to say in Parliament last night, that it is German—that "it is almost Germany" (herself). This event shows that revolution, which was crushed in Prussia by the Royal bayonets in 1848, has already begun to take its revenge there by breaking out anew in the upper classes of society. A brutal Junker who boasts that his family is of a more ancient date than the House of his King, in the so-called metropolis of "German science and intelligence," in the centre of Legislature—hey, what makes matters still worse, almost before the very eyes, with the knowledge (as it appears), and, we may therefore conclude, with the silent toleration, of the King—dares to persecute, to insult, to hunt down, one of the most faithful servants of his King; plans a deliberate conspiracy for the murder of the man whom the King and the country, in their actual critical state, could so ill afford to spare, shoots the man; is congratulated by his brutal and cowardly confederates; and, in sight of his foul crime, in spite of the indignation of the population of a whole city—in spite of the law, which he was allowed to trample under foot—is now confined on parole in his own comfortable residence at Berlin.

Who rules in Prussia? What has German philosophy to say about this example of noble and glorious *Staats-Idee*? Is that the much boasted-of "Organische Entwickelung"? And, in the first instance, we might ask, where was the King?—the King under whose very eyes the cowardly conspiracy against the position and the life of one of his superior functionaries—against one of the "guardians of order"—against one of the intimates of his policy—was plotted? Indeed, it must be dangerous to be the friend of a German Prince, and to serve him faithfully!

You remember, Sir, that Mr. Macaulay, in his essay on the great founder of the greatness of Prussia, knows of a certain "malevolence" and rejoicing of pain inflicted upon his friends inherent in his nature, which, in the eyes of the historian, throws such doubtful light on the private character of the man. Still we must not compare the *great* Fritz with the actual "Fritz" of Prussia. However, our great historian was not, perhaps, so very wrong when he said, "Ungrateful, like a Crown Prince" (he spoke only in general).

Of that noble gratitude of the reigning dynasties of Germany already the tragical death of the famous historian of Hungary, Count Maclath, has told a tale; and that of the Prussian President of Police tells still a more important one. The latter event, besides, opens a vista into the critical state of a society where a degenerated and for the most part wretchedly-impoverished nobility—the reviving Don Quixotes and Hidalgos of a bygone age—are suffered to baffle every consideration of sound State policy by petty and mean caste-prejudices. It is always the sure symptom of an approaching state of political and social decay and dissolution when petty and inferior considerations and interests are allowed to hold sovereign sway over the highest and most important. Such, however, seems to be almost everywhere the case in Germany, and so far Mr. Disraeli may be right when he says "that Prussia is almost Germany." For a reasonable human being the state of German society must have become "almost" quite insufferable (not even, as Dogberry says, "very tolerable, and therefore not longer to be endured"). For these antediluvian "incorrigibles," of the stamp of Herrn von Rochow, Prittwitz, and confederates, there is only one thing a German patriot can desire, and must desire—another day of Jena!

The actual state of *noble* anarchy now reigning in Prussia—which, in this respect, as Mr. Disraeli said, is most truly "almost Germany"—is well described in an ancient and well-known instrument of public law in Germany† in the following remarkable Latin words:—"Omne imperium inter rebiosum collabitur: nam principes ejus facta fiat solu farum."

Two Berlin papers, as I was stated in yesterday's *Augsburg Gazette*, the *Nationalzeitung*, and the *Volkszeitung*, have been confiscated by the police for the sake of their having brought into connection in their leaders the death of Herrn v. Hinkeldey with the predominant power of the nobility (Protestant Prussia) where the press is actually more gagged and fettered than in Roman Catholic countries! Our Protestant alliance! As to what I said about princely ingratitude, hear the following:

The *Augsburg Gazette*, under date of the 2nd of this month, stated that the true cause of the duel between Hinkeldey and v. Rochow has been the circumstance of the former having later denied what he had said before about his having received superior orders (viz., orders from the King) for his severe measures against the Jockey-club. It appears the correspondent of the German paper says that Herr v. Hinkeldey in the beginning of the affair denied, and that he then, in order not to implicate still more deeply a high name in this affair, has exercised that pertinacious abnegation.

I need scarcely add that the murdered man himself is deserving of no particular regret. He was the President of the Prussian police, an officer that nowhere and at no time, but especially not in a German State at the present moment, allows of a pure and respectable private character. He has had a large share in the political persecutions and indignities of these late years, and not less in the composition of the famous "Black Book." Still, all this does neither excuse the brutality and cowardly behaviour of the "Junker party," nor the silent toleration of the affair on the part of the King.

I have the honour to be, Sir, your most obedient servant,

London, March 18. A GERMAN.

* We shall occupy ourselves with Mr. Disraeli's statement in another letter.

† In the beginning of the *Goldene Bulle*.

## *METROPOLITAN NEWS.*

METROPOLITAN IMPROVEMENTS.—The First Commissioner of Works proposes to make very extensive improvements at the west end of the town. The first and least important is to take down Buckingham-house, which now belongs to the War Department, and to build an edifice harmonising in point of outward appearance with those around, extending from the Carlton to the Ordnance Office, and including all the War Departments. The grand project is, to purchase the whole of the blocks of buildings bounded by Parliament street, Great George-street, the Park, and Downing street, and covering it with Government offices—the present width of Whitehall to be continued down to the Houses of Parliament.

MERCHANT SEAMEN'S ORPHAN ASYLUM.—On Tuesday night the anniversary festival of this institution, established nearly forty years ago, for the maintenance and education of the children of deceased merchant seamen, was held at the London Tavern, when upwards of 300 gentlemen sat down to dinner, under the presidency of Mr. Thomas Baring, M.P. The sum of £1918 was subscribed in the course of the evening.

THE INQUEST INTO THE COVENT-GARDEN THEATRE FIRE.—The inquiry was brought to a close on Wednesday last, when the jury returned the following verdict:—"That the theatre was destroyed by fire on the morning of the 6th of March, but how or by what means the fire originated they had no evidence before them to show."

OPENING PUBLIC-HOUSES ON SUNDAY.—On Monday last a deputation, composed of active members in the cause of teetotalism, waited upon Sir George Grey, at the Home-office, Whitehall, to present memorials from Birmingham and other towns, asking the support of Government to a renewed inquiry into the sale of intoxicating liquors during Sunday. In reply, Sir George Grey expressed his strong desire that all practical means should be adopted for diminishing the intemperance so unhappily prevalent. In so doing, however, an eye must be had to the existing state of public sentiment and feeling. He had no doubt that in proportion as public-houses were closed, drunkenness would decrease, but how the public could be wisely compelled was a question difficult to decide. He could, however, not commit himself to any promise on this matter.

FIRE IN DOCTORS' COMMONS.—On Wednesday night, at a few minutes before ten o'clock, a fire broke out in one of the tall houses numbered 4, St. Andrew's-hill, Doctors' Commons, occupied conjointly by Mr. T. Guy, a tailor, Mrs. Clark, Miss Clark, Mr. Bunnell, and Mrs. Manley. It appeared that whilst most of the inmates were preparing for bed a cry was raised that the premises were in flames at the lower part. The inmates fortunately succeeded, at the greatest risk, in effecting a safe retreat, by either rolling down the stairs or running towards the street door. The fire soon extended from the basement to the fifth floor, seizing upon the whole of the furniture belonging to the different parties, and rushed out of the windows with such fury as at one time to threaten the surrounding premises with destruction. No fewer than five or six families have been burnt out, to say nothing of the loss sustained by the surrounding neighbours. Out of the many sufferers only two were insured.

A SURVEYOR OF WORKS has been appointed for the parish of St. George, Hanover-square, at a salary of £450 a year.

FAIR IN THE THAMES TUNNEL.—A fancy fair on a somewhat extensive scale took place in the Thames Tunnel last Monday morning. The whole length was illuminated with variegated lamps, flags, and banners in the shafts. There were also cosmoramic views of the Indian battles, a view of Sebastopol, a pavilion of arts, and many other attractions.

HEALTH OF LONDON.—The deaths registered in London rose from 1029 and 1062, in the two previous weeks, to 1118 in the week that ended last Saturday. If the rate of mortality had been the same last week as it was, taking the average, in the corresponding weeks of the ten years 1846-55, it would have produced 1256 deaths, which is more by 178 than the number actually returned. These results show that the public health is comparatively good; though the cold weather has had some effect in raising the mortality, and it probably accords with common experience that influenza and other catarrhal complaints prevail at this time to an extent greater than can be discovered in the returns of deaths. Of the 1118 deaths, 563 were those of males, and 555 of females.

THE PEOPLE IN KEW GARDENS.—"Of the general conduct of the mass of visitors—varying in number according to the season and the weather, sometimes amounting to 12,000 a day—I have in former reports expressed great satisfaction, and especially of that of the middling and lower classes, who come generally in family parties, and whose dress and demeanour are creditable and praiseworthy; and though improprieties have been committed by persons of these ranks, I have generally remarked that grosser misconduct, rudeness, pilfering, &c., are committed by people apparently of better education and a higher grade. During the fifteen years that I have had the charge of the Royal Gardens at Kew, there is not one to which I can point with satisfaction than that which has just past, on account of the benefits which the public in general have derived from them, both in healthful recreation and instruction. The 'Guide to the Royal Botanic Garden,' illustrated with eighty woodcuts (price 6d.), has gone through thirteen editions (each of 2500 copies) in the short space of eight years. Indeed the very peasant who never read a book on the subject may here see attached to the plant itself the name, vernacular and scientific, of the more useful kinds, while the child from school may acquire an impression of the form and aspect of many plants whose names he had learnt in books."—*Sir W. Hooker's Report.* (The great and steady increase in the annual number of visitors to these gardens since 1841 is very remarkable. In 1841 the number of visitors during the year was 9174; in 1856 it was 316,818.)

THE FIRE AT COVENT-GARDEN THEATRE.—In a letter to the daily papers Mr. Anderson, "the Wizard of the North," denies the statements made by two proprietors at a meeting, that two theatres in his (Mr. Anderson's) occupation had been burned down. No American theatre has ever been burned down during his occupancy. "The one theatre, and the only one, burnt whilst in my possession was the City Theatre in Glasgow." It was built by himself, and cost £15,000. It was burned down one night after the performances of the opera of "Der Freischutz." The insurance was £6500, which was paid, and went so far to mitigate the heavy loss sustained on the occasion.

ROBBERY OF ROYAL PLATE.—Last Saturday afternoon, at half-past three o'clock, a waggon belonging to Mr. Thumwood, of Windsor, the Royal carrier, left Buckingham Palace for the Paddington station, loaded with about twelve chests of the Royal plate and between sixty and seventy other packages, under the charge of five men, namely—Bailey, one of the Royal servants, and one of Mr Thumwood's men, a guard, two helpers, and the driver. On their way to the station they stopped at a public house in South Wharf-street, and all went in to drink, and by their own statement had not left the waggon more than five minutes when, on their return, they observed the rope was cut which had confined the waggon-cloth that had been placed over the goods. This caused them to suspect that something was wrong, and on looking over the waggon they discovered that a chest of plate which had been packed in the middle and fastened by a new rope to the rail, had been stolen. The waggon was afterwards driven to the Paddington station, and sent on the trucks to Windsor, and arrived at the Castle at seven o'clock, when Mr. Thumwood, on being informed of the robbery, returned to town with his man who had charge of the goods, to institute every possible inquiry into the affair. The two helpers and the driver were subsequently taken into custody, but admitted to bail. The chest which was stolen was lighter than the others, and consequently more easy to be removed. It contained a quantity of the Royal nursery plate used by the Princes and Princesses.

## THE PEACE CONFERENCES.

THERE was no regular sitting of the Conferences on Saturday last, but M. Walewski assembled his colleagues that day, in order to read to them the protocols which will serve as the bases to the treaty of definitive peace. Sardinia and Prussia are unrepresented. *La Nord* states that the signing of the treaty was expected to take place this week. The *Indépendance* states that the signature of the treaty will be accomplished as soon as the necessary formalities are fulfilled. As to the Principalities question, the bases of the future arrangement are agreed upon. Those bases are the continuation of the two Principalities, the hereditary Hospodarate, Ministerial responsibility, and deliberative assemblies, with slight political powers, but having permission to exercise a rigorous surveillance on the expenditure of the revenue.

The *Patrie* intimates that it may be necessary to prolong the armistice to the 30th of April.

The *Globe's* Paris correspondent writes:—"According to political gossip their labours will be over by the 22nd; but when it is considered that, independently of the *ozzes bells* questions, which are understood to have been decided last week, the plenipotentiaries have to discuss and settle the knotty points connected with the Principalities, or other equally important accessories of the Eastern question, it is difficult to look upon the report as anything but a mere *on dit*."

A commission, composed of the following members, has been named, it is said, to draw up the treaty:—Lord Cowley, for England; M. de Bourqueney, for France; Baron de Brunow, for Russia; M. de Hubner, for Austria; and Aali Pacha, for Turkey.

It has been reported that Lord Clarendon will probably return before the end of next week; but this is mere rumour. During his visit to Paris his Lordship has resided at the Hôtel du Louvre. The Hôtel Cowper, of which we have given a Sketch, had been previously prepared for him.

## ROYAL VISIT TO WOOLWICH.—RETURN OF TROOPS FROM THE CRIMEA.

ON Thursday (last week) a very gratifying spectacle was witnessed at Woolwich on the return of a number of heroes from the Crimea, and their inspection by her Majesty. The day was also signalised by the opening of the new Pier at the Royal Arsenal. This work was designed by Mr. B. B. Cook, Superintendent of Ordnance Shipping, and it reflects great credit on that gentleman. The pier was formally opened by the disembarkation of nearly 1000 officers and men of the Siege Train belonging to the Royal Artillery.

At about eleven o'clock in the morning the screw transport *Imperatrix*, No. 169, Captain Cox, made her appearance in the river, off the Woolwich Arsenal. Arrived alongside the pier, the soldiers and crew of the vessel got up three rounds of cheers, which were echoed and returned from the shore. At twenty minutes past three the landing commenced amidst the heartiest congratulations and huzzahs. The band of the Royal Artillery Regiment played a variety of enlivening airs. Thousands of persons were congregated on the pier, on the sides of the quay, and down the whole road leading to the outer gates. The artisans and labourers were all permitted to suspend their duties for the occasion. The Royal standard and the colours of the Allied Sovereigns mounted on lofty flagstaffs lined the front of the platform, and the gangway was tastefully decorated with the favourite red, white, and blue. The whole extent of the railing in the gangway bore the names of the various captured fortresses and battles—Sebastopol, Alma, Inkerman, Balaclava, Tchernaya, Bomarsund, &c. Three triumphal arches were thrown across the entrance, bearing appropriate devices, such as "Welcome home," "Where honour and glory lead," "Honour to the brave," "Welcome to the heroes of Sebastopol;" at the entrance were set up "Save the Queen." These preparations were arranged and personally superintended by the Storekeeper of the Arsenal. Every window in the neighbourhood hung out a flag or some other symbol in recognition of the passage of the soldiers from the seat of war. The square fronting the Arsenal contained 10,000 or 12,000 persons. The streets were lined the whole distance by thousands of spectators. The troops proceeded thence to the barrack-field, headed by the band and drums of the Royal Artillery Regiment. Her Majesty the Queen, accompanied by the Prince Consort and his Royal Highness the Duke of Cambridge, attended by a brilliant Staff, formed of the officers of the Royal Artillery, arrived on the ground at half-past three, when the booming of a Royal salute, fired from six of the heavy guns captured at Bomarsund, Hango, and Sebastopol, shook the surrounding buildings. These guns had been brought there for that purpose on the preceding day, and were surmounted by the victorious banner of England. Near these trophies was erected the platform for the accommodation of the Royal party. The ground on this portion of the Common was kept by the 5th Company of Royal Sappers and Miners. On the arrival there of the Crimean heroes, the troops formed into a three-quarter square,

RESIDENCE OF THE EARL OF CLARENDON, AT PARIS.

and admitted them within the inclosure thus made. They then wheeled into a similar column, along which her Majesty and the Royal Princes passed for inspection of the lines. They then retired to the Royal platform, when the seventeen companies, comprising the siege-train newly arrived, marched past in quick time, and proceeded to their quarters. The review thus terminated at five o'clock precisely, when the Royal visitors returned to London. The guard of honour was furnished by the Royal Artillery, and consisted of Lieutenant-Colonel Frankland, Brevet-Major Rogers, three lieutenants, six sergeants, and 100 rank and file.

The landing from the *Imperatrix* of the soldiers' baggage, consisting of about 500 tons, and the disembarkation of a large body of troops, amounting to 987 officers, non-commissioned officers, and privates, was safely effected in perfect order in divisions, the time occupied in landing not exceeding twenty minutes. The officers and soldiers are unanimous in applauding the comfort and accommodation of the *Imperatrix*. She has been actively employed during the greater portion of the late campaign, and has carried three complete regiments to the East. She conveyed 2800 infantry and 250 horses of the army of Omer Pacha from Bulgaria to Eupatoria; and a like number of the Egyptian army from Eupatoria to Trebizond. She was likewise employed in the transport of Sardinian troops of the line and cavalry. The *Imperatrix* embarked at Bourgas, in Bulgaria, 1280 Turkish soldiers, with all their baggage, camp equipage, &c., the time only occupying forty hours. Subsequently to this, and almost immediately after their landing, they were engaged in repelling an attack by the Russians. In the conveyance of upwards of 12,000 troops and a large number of invalids, only twelve deaths have taken place.

OFFICERS AND PRIVATES OF THE SIEGE-TRAIN (ROYAL ARTILLERY) PASSING BEFORE THE QUEEN AT WOOLWICH.

REVIEW OF THE BRITISH-ITALIAN LEGION, AT NOVARA.

## THE BRITISH-ITALIAN LEGION.

This highly-efficient force is now composed of four regiments, each numbering one thousand and seventy strong; the entire nearly equipped, and fit for any service. The three first regiments are in scarlet, and are armed with the Enfield rifle; while the fourth regiment is in grey, and is being formed as a rifle regiment. The men are a remarkably fine body, well formed, and averaging a standard of five feet eight inches. They are tractable and well disciplined, and consist of Piedmontese, Sardinians, Lombards, and men from Savoy, Parma, Modena, &c. The regimental officers are good, many of them served in the war of 1849. Great praise is due to Sir James Hudson for originating the idea of the formation of the Legion, which may be augmented to an incredible extent, and in an extraordinarily short time, if required. With Lord Panmure's selection also of British officers to this Legion the country have every reason to be satisfied; it is evident that he at least has appointed without favour, and for the good of the service. We may instance Lieut.-Colonel Read, admirably adapted for the formation of the Legion; Lieut.-Colonel Burnaby, acting as Quartermaster-General, an officer of great ability as a soldier, and as remarkable for his administrative talent and conciliating manners as his extensive knowledge of languages, qualifications highly essential to the formation of a force constituted as this force is, and which has materially added to its success.

In the accompanying illustration the Artist has sketched a review of a portion of the Legion at Novara, in Piedmont. In the foreground is Sir James Hudson, K.C.B., the British Minister at Turin; Lieut.-Colonel Read, charged with the formation of the Legion; Lieut.-Colonel Burnaby, performing the duties of Quartermaster-General; Lieuts.-Colonel Grant De Horsey, Sir Coutts Lindsay, and other officers.

ANNIVERSARY DINNER OF THE ROYAL MASONIC INSTITUTION FOR BOYS.—(SEE NEXT PAGE.)

## ROYAL MASONIC INSTITUTION FOR BOYS.

THIS—the second of the masonic charities—the girls' school dating from 1788, was established in 1798 for the purpose of clothing, educating, and apprenticing the sons of indigent and deceased Freemasons. This charity, unlike most others, takes under its care the children of the brethren, without regard to religious persuasion. Hitherto the children have been educated in a somewhat desultory manner in good schools in the immediate vicinity of the residences of their parents or guardians; the great improvements which have been made in education of late years have forced on the notice of the committee and the craft the great advantages which might be derived from as many as possible of the boys being aggregated in one building, as is the case with the female children, and placed under one system of educational training, so as to render them the better fitted for holding responsible positions in society suitable to the class from which the large majority of them have sprung. In carrying out this design, however, it is not intended to lose sight of the comprehensive system of toleration on which the institution is founded; and those children whose guardians object to their being educated in the principles of the Church of England will continue to be placed in private schools as at present. In order to assist in providing a school-house at the earliest possible period—the building fund only amounting to about £2500—the R. W. Deputy Grand Master the Right Hon. the Earl of Yarborough proposed at the anniversary festival last year that a second festival should be held towards the close of the season, over which his Lordship kindly promised to preside. Before the project could be carried into effect, however, the noble Earl was seized with a severe illness, from which he has as yet only partially recovered, and it was abandoned for the time. To make up for this abandonment, more than ordinary exertions were made to get up this year a festival on a scale of greater extent than usual. Accordingly a board of stewards, consisting of forty-eight, and comprising many of the leading members of the order, was formed; and the result was that nearly 300 brethren attended the banquet, and about 100 ladies were present in the gallery.

This festival, of which our Illustration gives a view at the moment when the boys were introduced to the Grand Master by the stewards, took place in Freemasons' Hall, on Wednesday, the 12th inst. The tables were elegantly decorated with vases and candelabra, and the whole presented a very imposing spectacle; whilst the excellence of the viands did great credit to the establishment.

The chair was to have been taken by Lord Londesborough, F.S.G.W., but in consequence of his lordship's illness the brethren were presided over by the M.W.G.M. the Earl of Zetland. In proposing the toast of the evening, prosperity to the "Royal Masonic Institution for Boys," the noble Earl pointed out the great benefits it had conferred upon the children of the poorer members of the craft—794 children having been clothed and educated by it, and there being now 70 boys on the fund. He likewise expressed his opinion that the children would be much better looked after and their education much improved if they had a school-house similar to the noble institution in which their girls were educated; and trusted that the result of that evening would materially add to the building fund, which now amounted to £2500. Several prizes (annually presented by Brother Smith, of St. Martin's-lane) were given to the boys, and a number of appropriate toasts drunk. The subscriptions of the evening amounted to between £1400 and £1500, two-thirds of which went to the building and the other third to the general fund. The musical arrangements, conducted by Mr. Donald King, gave unusual satisfaction. Mr. King was assisted by Miss Poole, Miss M. Wells, and Messrs. Francis, Winn, Cummings, and Coward, who presided at the pianoforte. Herr Rabich also played a solo on the trombone with great taste. At the conclusion of the festival the stewards and their friends joined the ladies in the glee-room, where a further selection of music was played.

We are assured that the committee of the school are now anxiously engaged in looking for a building which may be so adapted as to give the required accommodation to about sixty boys, there being little doubt that the funds will rapidly increase when the brethren once see that their cherished desire is being earnestly carried into effect.

## OBITUARY OF EMINENT PERSONS.

### LORD BOSTON.

THE Right Hon. George Irby, D.C.L., third Baron Boston of Boston, in the county of Lincoln, and a Baronet, was the eldest son of Frederick, the second Baron, by his wife, Charlotiana, only daughter of Paul Methuen, Esq., of Corsham House, Wilts, grandfather of the late Lord Methuen. He was born the 24th Dec., 1777, and married, the 17th Oct., 1801, Rachel Ives, eldest daughter and coheir of William Drake, Esq., of Amersham, a descendant of the Drakes of Shardeloes, and the Garneys of Bayland Hall, and by her (who died the 6th April, 1830) had issue four sons and six daughters: of the sons three survive, viz., George Ives, Augustus Anthony Frederick, and Llewellyn Charles Robert, in Holy Orders, who married, July 1, 1845, Emily, daughter of Jonathan Bullock, Esq., of Faulkbourn, Essex: of his Lordship's daughters four are married, viz., Mrs. Prowse, the Countess of Orkney, Mrs. Edward Hussey, and Mrs. Walter Caulfield Pratt. Lord Boston inherited the family honours, as third Baron, at the decease of his father, the 28th March, 1825. His Lordship died on the 12th instant, at his seat, Hedsor Lodge, near Maidenhead, Bucks, and is succeeded by his eldest son, George Ives, now the fourth Baron Boston, who was born September 14th, 1803, and married, January 26th, 1830, Fanny Elizabeth, eldest daughter of W. H. Hopkins Northey Esq., of Oving House, Bucks, by whom he has issue two daughters, and a son, Florance George Henry, born 9th March, 1837, a Captain in the "King's Own" or "Royal Bucks Militia." George, third Lord Boston, subject of this notice, went to Eton at six years of age, where he remained until the age of sixteen, when he entered the cavalry, and subsequently attained the rank of Major. His father, Frederick, the second Baron, being Lord of the Bedchamber to George III., that Monarch stood sponsor to the son, the future third Baron. A very handsome gold urn, still in possession of the family, was presented by his Majesty to his godchild on the occasion. The Peer just deceased was a man of the most unostentatious manners and the most benevolent and charitable disposition. The house of Irby, Lords Boston, is one of great antiquity in Lincolnshire. Edward Irby, Esq., M.P. for Boston, was created a Baronet in 1764, and his son William became the first Baron Boston in 1761.

### SIR F. COX, BART.

SIR FRANCIS COX, ninth Baronet, of Castletown, in the county Kilkenny, was the second son of Richard Cox, Esq., and the grandson of the Most Rev. Michael Cox, Archbishop of Cashel. He was born the 23rd July, 1769; and married, in 1803, Anna Maria, second daughter of Sir J. Fenn, but has had no male issue. He succeeded to the title as ninth Baronet at the demise of his nephew, Sir Richard, the eighth Baronet, in 1846. Sir Francis died on the 6th inst., at Mountown, county Dublin. The baronetcy now devolves on his nephew, Hawtrey, the eldest son of his late brother, the late Rev. Richard Cox, Rector of Caherconlish, county Limerick. The first Baronet of this family, Richard Cox, was Lord Chancellor of Ireland in the reign of Queen Anne.

WILLS.—The will of Colonel Sibthorp was sworn under £100,000 personalty; Lieut.-Gen. Sir John Hunter Littler, G.C.B., Hon. East India Company, £30,000; Lieut.-Colonel H. H. Irving, £9000; the Hon. George C. Agar, Lieutenant and Captain in the Guards, £20,000; the Rev. Edward W. Wakeman, M.A., £50,000; John Drinkwater, Esq., of Sherborne, £60,000; W. Chisholme, Esq., of Lincoln's-inn-fields and St. John's-wood, £70,000; Jonathan Phillips, Hampstead and Oxford-street, £35,000.

CHARITABLE BEQUESTS.—Mdme. Mary de Polier Vernand, of Fantaise, Switzerland, died possessed of personalty in England valued at £50,000 sterling, having left to the Asylum for the Aged at Yverdons, £300; Society des Amitables, £200; Blind Asylum, £200; and other bequests to charitable institutions.—W. Parker, Esq., of Skirwith Abbey, Cumberland, personalty £40,000, has bequeathed to the British and Foreign Bible Society, £500; Church Missionary, £500; Wesleyan Missions, £500; Manchester Infirmary, £500; Cumberland Infirmary, £500; Stockport Infirmary, £250; Stockport Sunday School, £100.—W. W. Brown, banker, of Chapel Allerton, Leeds, has bequeathed to the Leeds General Infirmary, £400; Leeds Dispensary, £300; Leeds Hospital, or House of Recovery, £200.

THE FERMOY PEERAGE CASE is fixed for hearing on the 8th April, in the House of Lords. Serjeant Thesiger, Sir F. Kelly, and Mr Peter Burke are the counsel retained for the claimant.

### CALENDAR FOR THE WEEK.

SUNDAY, March 23.—Easter Sunday. Shakspeare born, 1564.
MONDAY, 24.—Easter Monday. Annunciation.
TUESDAY, 25.—Easter Tuesday. Lady-day.
WEDNESDAY, 26.—Duke of Parma stabbed, 1854.
THURSDAY, 27.—Gunpowder introduced, 1380.
FRIDAY, 28.—Abercrombie died, 1801.
SATURDAY, 29.—War declared against Russia, 1854.

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, MARCH 22, 1856.*

IT is the general belief that the Conferences of Paris have done their work, that the bases of pacification are definitively settled, and that the war is at an end. It is not, however, the general belief that the terms of the peace thus formulated are satisfactory to all the Allied Powers. There is a misgiving, especially in England, that there has been a display of undue tenderness to the pride or the dignity of Russia, together with a too obstinate predetermination in powerful quarters to "patch up" existing differences, and to sacrifice to-morrow for the sake of to-day. We trust these forebodings are unfounded; and that the Peace which the world owes to the diplomatists now assembled in Paris will be both durable and honourable. It cannot be the one without the other. The mistrust excited by the admission of Prussia to the Conferences has, to some extent, been removed by the explanation that the work was actually done before Prussia was called upon, and that, in fact, her signature was simply asked in ratification and approval of the foregone conclusions of those who had a right to sit at the Council Board. Though the deliberations of the Conference have been kept secret, the results have been permitted to come before the public with more or less show of authenticity and authority. In these semi-official declarations the public is taught to believe that Russia has yielded on every point; that there are no difficulties with regard to Nicolaieff or to any other fort or arsenal in the Black Sea; that the Aland Isles are no longer a stumbling-block in the path; and that the rectification of the frontier line between Turkey and Russia is conceded both in principle and in detail. These are no doubt great results; and, if no greater could have been attained, there is every reason why they should be received with thankfulness. But if so noble an opportunity for the reconsideration of the whole European system have been lost, or only partially improved, there will, at the same time, be reason to regret that the statesmen charged with this weighty task should have narrowed their views and aspirations to the expediencies of the hour, and given so little thought to the exigencies and duties of the morrow. It was not merely for the sake of the Turkish empire that the heart of Europe was moved. It was not for Turkey alone that Sardinia took up arms, or that Sweden was induced to make her partial but significant entry into the Anglo-French alliance. The decadence of Turkey was and is not the only source of disquietude to Europe; and the sittings of the Conference afforded the natural opportunity for the adjustment of other differences, and the prevention of other causes of quarrel. The question of Poland has evidently been ignored; and that of Italy—which threatens to be still more troublesome—for Italy lives, moves, and expects—has received no consideration. Diplomacy may argue "that sufficient for the day is the evil thereof," and that, neither of these countries having produced the war, they were neither of them included in the terms of the pacification. But it is surely unwise to be contented with quenching the fire in the attic, whilst we leave it smouldering in the basement; and at such a critical period of the fortunes of Europe to have left for future growth those complications and difficulties which the forethought and courage of so great and authoritative a conclave might have successfully grappled with. It is not enough for men like Napoleon III. to state "that a new era of general reconciliation dawns upon Europe;"—that he will teach his new-born son "that nations must not be egotistical," and that "the peace of Europe depends on the prosperity of each nation." More than this is required. Nations—and the rulers of nations—must show that they are not egotistical, or afraid of sacrifices in a great and a good cause, and when they have the opportunity they must use it so as to allow other nations to arrive at that prosperity which is truly asserted to be the bond of peace between all who form portions of the great European commonwealth. It was well for the French Emperor to teach this lesson to the magnates of the Conference. It would be still better if the Conference, as a body, promulgated the same truth, and took the necessary means to secure its application.

IF we were not at war against Russia, and threatened with a war against the United States, such an event as the annexation of Oude would occupy half the pens and all the tongues of the country for the next two or three months. But in the present whirl of politics the event, important as it is, will pass over with comparative silence. It will be recorded one day; commented upon the next; accepted as a *fait accompli*, and banished forthwith from the attention of those who make politics their study or their talk. Yet the event is one calculated to excite more enduring attention. A country almost as large as England, rich and populous, and situated in the heart of India, has, without bloodshed, and almost by a stroke of the pen, been wrested from its native Sovereign and annexed to the British empire.

The enemies of England sometimes assert that she is as greedy of dominion as the Czars whom she has undertaken to restrain, and that, in one part of the world or in another, and more especially in India, she is continually invading, subjugating, absorbing, or annexing the weaker States which have the misfortune to be her neighbours. But it must be conceded that Great Britain is involuntarily driven into this course; and that she is compelled by the evil behaviour and insupportable tyranny of the Princes of India themselves to coerce and restrain, and ultimately to annex. And, what is of far more importance, as a justification of the course which imperious necessity commands, the subjects of the dispossessed Sovereigns have reason to be grateful for the change from the despotism of their native rulers to the enlightened government of the British. If we conquer, we civilise. If we deprive Rajahs and Maharajahs of power which they abuse, and of dignity which they disgrace, we secure tranquillity for the people whom they misgoverned, and we develop the resources of magnificent countries which need only such development to be happy, prosperous, and contented, and to add to their own wealth and to that of all who have intercourse with them. One by one the protected States of India are disappearing. It is better that it should be so. The unity of wise and strong rule is infinitely preferable to the disunity of weak and avaricious despotisms, which have no other principle of government than the robbery of the people; and which rely upon terrorism to enforce the spoliation by which alone they subsist. Still better it is when such inevitable annexations are accomplished, as in the case of Oude, without bloodshed or protracted resistance.

THE blue-book, containing the criminal returns for 1854, was laid before Parliament last week, and we are sorry to find, from an inspection of its contents, that they are much less favourable than those of the preceding year. In 1853 the number of committals in England and Wales was 27,057, showing a decrease of nearly 500, as compared with the returns for 1852. Last year but one the committals rose to 29,359, an increase of 2302 over those of the previous year. Various causes have been assigned for this unfavourable change. These, however, we shall not attempt to discuss at present. Our object in calling attention to the blue-book in question is merely for the purpose of showing what improvement society has made of late years, so far as the fact can be ascertained from the returns relating to crime.

A few years after the passing of the Reform Bill, Sir Archibald Alison and other writers, in *Blackwood's Magazine*, endeavoured to show that the country was running headlong to destruction in consequence of the efforts made by the Liberal party to promote what is called the "march of intellect." Taking the criminal returns as the best criterion of the morality of the community, and finding that the number of committals had increased 350 per cent during the twenty years ending in 1834, while population had not increased 50 per cent during the same period, these alarmists jumped to the conclusion that this frightful state of things was owing to the education of the poor. To those who were content to look at the question through the green or yellow spectacles of Sir Archibald's prejudices, the argument seemed plausible, and many a Conservative in those days fancied that the best mode of preserving "our glorious Constitution" from total destruction was by opposing with might and main every scheme for the effectual education of the people. Fortunately for themselves, as well as for their countrymen, they have not been able to prevent the progress of society; and it is gratifying to find that the record of crime, so far from strengthening the argument of Sir Archibald Alison in favour of popular ignorance, has completely destroyed the fallacy.

From 1814 to the period embraced in the recent returns we have two periods of twenty years—the first ending in 1834, the second in 1854. That crime should have increased rapidly for some time after the conclusion of the war with France was not surprising. In 1814 the number of committals was 6390. Six years later, after much suffering and privation among all classes, it had risen to 13,710. The next four years, during which trade was good, showed a very remarkable diminution in the list of criminals, which was followed by a rapid increase up to 1834, when the total number of persons committed amounted to 22,451.

As no one will venture to affirm that the education of the people has been proceeding at a diminished rate during the last twenty years, let us now compare the criminal returns of 1814 and 1834 with those of 1854:—

| Years. | Total Committals. |
|---|---|
| 1814 ... ... ... ... | 6,390 |
| 1834 ... ... ... ... | 22,451 |
| 1854 ... ... ... ... | 29,359 |

In the first period the increase was about 350 per cent; in the second it had fallen to 30 per cent. If there are still any believers in "Mr. Wordy" who cling to the old delusion that popular education is a demoralising agency, surely these figures will tend to open their eyes. If they still hold out on the ground that a single year is not a fair test, we are happy to inform them that the evidence is not limited to so short a period. Taking the four years ending in 1844, and the four ending in 1854, we find that the annual average number of committals was considerably higher ten years ago than it was for the four years ending in 1854 notwithstanding the increase of population which had taken place since the former period.

MONTAGUE HOUSE.—The Duke of Buccleuch has abandoned his intention to rebuild Montague House, Whitehall, for the present. The noble Duke and family will occupy it during the season. His Grace has rented the late Earl Brownlow's mansion, in Belgrave square, during the last two years, which, however, the ducal family have not resided in. The noble Duke has just made over the unexpired term he held of that elegant mansion to Lord Aveland.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE most interesting recent announcement in literature relates to the papers left by Sir Robert Peel to his literary executors, Lord Mahon (now Earl Stanhope) and Mr. Cardwell. In a few weeks we are to have a part of Sir Robert Peel's *own* memoirs of his life, and that part one of very great interest, relating as it does to his conduct when the Roman Catholic Relief Bill was passed. The profits of the work are to be applied by Peel's own desire to the assistance of deserving men in need who had followed the pursuits of art, literature, and science. The first fruits of the intended publication were handed over on Saturday last by Lord Stanhope to the Artists' Benevolent Fund, in a cheque for one hundred guineas.

We are glad to observe that Government is alive to the necessity of restoring the Tower of London, and that the restoration of the Salt Tower (on the south-east side of the building) is to be put in hand forthwith. The sum required for the restoration is £1737. No architect is named; but we trust that Mr. Salvin, who restored the Beauchamp Tower in the same building with so much conscientious care and mediæval knowledge, may be employed. Other improvements affecting the west end of London are in hand. The footpath in the Birdcage-walk is to be paved, at an expense of £1600; and the footway between Hyde-park-corner and Knightsbridge (too often in a dirty condition) is to be paved, at an estimated cost of £375. The filling-in of the basin in the Green-park, opposite Devonshire House, costs £1454. The removal of the basin or reservoir will materially add to the beauty of the Green-park.

The controversy about the recent Paul Veronese acquisition for the National Gallery is still raging. The President of the Society of Artists in Suffolk-street has given his opinion against the wisdom of the purchase made by the President of the Royal Academy in Trafalgar-square. Mr. Hurlstone has divided with Mr. Coningham against Sir Charles Eastlake. This purchasing of pictures for the nation seems to be a thankless task.

The nation and the family representatives of Mr. Turner have made up their differences, and the will of the great painter, after a little, and it is said a just, surrender to his relations, will be forthwith proved and set for ever at rest in Doctors' Commons. The glorious landscapes of this great master in landscape-painting will now be unrolled, framed, and shown permanently to the public. The points in dispute between the executors and the relations have been argued for four years and more.

The new volume of the Philobiblon Society, issued this week to its thirty-six members, contains some very curious and important articles. Mr. Monckton Milnes contributes a highly-interesting series of extracts from an unpublished note-book kept by Boswell, the biographer of Johnson. From this portion of the volume we take the following extracts:—

Boswell, who had a good deal of whim, used not only to form wild projects in his imagination, but would sometimes reduce them to practice. In his calm hours he said, with great good humour, "There have been many people who built castles in the air, but I believe I am the first that ever attempted to live in them."

I have not an ardent love for parties of pleasure; yet am I once engaged in them, no man is more joyous. The difference between me and the one who is the promoter of them is like that between a water-dog and an ordinary dog. I have no instinct prompting me. I never go into the water of my own accord; but throw me in, and you will find that I swim excellently.

The difference between satire in London and in Scotland is this:—In London you are not intimately known, so the satire is thrown at you from a distance, and however keen, does not tear and mangle you as when you are hacked and hewed with a coarse weapon close to you. In London the attack on character is clean boxing: in Scotland it is grappling. They tear your hair, scratch your face, get you down in the mire, and not only hurt but disfigure and debase you.

Lord Mountstuart said it was observed I was like Charles Fox. "I have been told so," said I. "You're much uglier," said Colonel James Stuart, with his sly smile. I turned the laugh against himself. "But you're full as like, Colonel James!" Young Burke said, "Here there was less meant than meets the ear."

Boswell, it appears, was forming collections for a work to be entitled "Uxoriana." He drew, of course, much from his own experience, but MR. BOSWELL'S sayings (from the specimens supplied by MR. MILNES) were not remarkable.

To the same volume MR. MURRAY, of Albemarle-street, contributes thirteen unpublished letters from Laurence Sterne to Miss Catherine de Fourmantel, whom he addresses as his "dear Kitty." The letters relate to the period when Sterne was in London, receiving the honours which attended the publication of "Tristram Shandy." What these honours were we shall allow Sterne to tell in his own words:—

My lodging is every hour full of your great people of the first rank, who strive who shall most honour me. Even all the Bishops have sent their compliments to me, and I set out on Monday morning to pay my visits to them all. I am to dine with Lord Chesterfield this week, &c., &c.; and next Sunday Lord Rockingham takes me to Court. . . . . I long most impatiently to see my dear Kitty. Tell me, tell me what day or week this will be. I had a purse of guiness given me yesterday by a Bishop (Warburton); all will do well in time . . . My Lord Falconberg has this day given me a hundred and sixty pounds a year (the living of Coxwold), which I hold with all my preferment, so that all or the most part of my sorrows and tears are going to be wiped away . . . . From journeying to night my lodgings, which by-the-by are the genteelest in town, are full of the greatest company. I dined these two days with two Ladies of the Bedchamber . . . I am invited by Lord Rockingham to be one of his suit when he goes to Windsor to be installed Knight of the Garter . . . . I have 14 engagements to dine now in my books with the first nobility . . . Mr Garrick pays me all and more honour than I could look for. I dined with him to-day, and he has promised numbers of great people to carry me to dine with them. He has given me an order for the liberty of his boxes and of every part of his house for the whole season, and indeed leaves nothing undone that can do me service or credit; he has undertaken the management of the booksellers and will procure me a great price.

The bookseller chosen was Becket, in the Strand, and the book was "Tristram Shandy."

It is remarkable that none of the speakers at MR. WEBSTER'S admirably got-up meeting at the Adelphi Theatre, in favour of his Dulwich College plan, should have referred to the friendly interest which English actors have ever evinced towards the College. Cartwright, an actor in the reign of Charles II. (he was celebrated as *Falstaff*), bequeathed a curious collection of portraits and playbooks to the college. The portraits, chiefly of actors, and those some of Shakspeare's "fellows," still remain, but, (shame to say) the quarto playbooks were exchanged with Malone for quarto sermons. Gold we allude to their money value) for lead. The sermons are still at Dulwich, and the playbooks by Malone's bequest are now in the Bodleian. When SIR FRANCIS BOURGEOIS, the painter, asked John Philip Kemble, the player, to what institution the painter should leave his fine gallery of pictures, the player Kemble im. mediately recommended the College of the player Alleyn, and thus the Bourgeois Gallery was sent to Dulwich. Nor is this all. Within our own time MR. BARTLEY, the actor (happily still alive and in good health), made an important present of pictures to the gallery of "famous Ned Alleyn." These things should be remembered by the Charity Commissioners to the advantage of the "poor player."

---

A PEERAGE DECLINED.—The Right Hon. E. Strutt, M.P. for Nottingham, has, we believe, declined the offer of a Peerage. It was considered that MR. STRUTT—a man of good abilities and noble character—had been somewhat hardly or disrespectfully used by Lord John Russell in some Ministerial arrangements two or three years ago; and it was a graceful compliment in Lord Palmerston to offer to raise him to the House of Lords—although, perhaps, the declinature of that offer is no less graceful.—*Scotsman.*

CREWE JUNCTION RAILWAY.—This new line, which is nine miles in length, and joins the Scottish Central Railway, was opened amid great rejoicing on the 12th inst. This will afford easy access to the beautiful country which the pen of Scott has so vividly described, with other portions of the Highlands.

## THE COURT.

THE arrival of the King of the Belgians, to be present at the confirmation of his goddaughter, the Princess Royal of England, has been the great feature of the past week in Court life. Her Majesty and the Prince Consort, with the members of the Royal family, took their departure from Buckingham Palace on Monday afternoon, for Windsor Castle, to be in readiness to receive their illu-trious relative. His Majesty landed at Dover on Monday night, and came to London on the following morning, by the South-Eastern Railway, proceeding from the Bricklayers' Arms station direct to Nine-elms, where a special train of the South-Western Railway was in readiness to convey the King to Windsor. The ceremony of confirming the Princess Royal took place on Thursday with becoming solemnity, in the private chapel of the Castle. The Archbishop of Canterbury and the Bishop of Oxford officiated. The Duchess of Cambridge and the Princess Mary, and the Duke of Cambridge were present; and his Excellency M. Van de Weyer and Lord Palmerston were among the visitors.

Previously to the departure of the Court from London his Excellency Mr. Buchanan had an audience of her Majesty, to present his letters of recall as Envoy Extraordinary and Minister Plenipotentiary from the United States of America.

On Tuesday the birthday of the Princess Louisa was celebrated at Windsor with the usual honours.

His Serene Highness Prince Victor of Hohenlohe took leave of the members of the Royal family on Saturday last, and returned to his duty at Portsmouth.

A matrimonial alliance is arranged, and will shortly take place, between the Lady Lavinia Bingham, daughter of General the Earl of Lucan, and the Hon. Charles Hardinge, M.P., eldest son of Field-Marshal Viscount Hardinge.

The marriage of the HON. Miss Thellusson with MR. William Rose took place on Saturday, at St. George's, Hanover-square, in the presence of a select circle. After the ceremony Lord and Lady Walsingham gave a déjeûner in Arlington-street; and subsequently the bride and bridegroom left London for Tichford Park, one of Lord Carington's seats, in Buckinghamshire.

*The range of temperature during the week* was 21·3 deg.

*The Weather.*—Rain, with cold, brisk, easterly wind, with clouds of dust. On 16th, snow from 3 p.m. till 4 p.m.; rain from 9 p.m. on 16th till 1 p.m. on 17th, and from 9 p.m. on the 18th.

*The direction of the wind* was, on 12th, S. until 2h. 30m. a.m., when it crept through the E. to the N.E., becoming N.N.E. at 3h. 45m., and again N.E. at 4h. 45m. a.m., E.N.E. at 9 a.m., E. at 2h. 45m. p.m.; in which quarter it remained till 6h. 30m. p.m. on the 13th, when it became E.S.E., changing to N.E. at 1h. 15m. a.m. on 14th, E.N.E. at 6h. 30m. a.m.; changing to E. at 11 a.m. on the 15th, became E. by N. at 6 p.m.; E. at 7 a.m. on 16th, E. by S. at 8 a.m., E.S.E. at 9h. 30m. a.m., S.E. at 10h. a.m., S.S.E. at 5 p.m., S. at 12 a.m. on 17th, S.S.E. at 3h. 15m. a.m., E. at 1 p.m., E.N.E. at 10h. 15m. p.m., N. at 12 a.m. on 18th, E.N.E. at 2h. 45m. a.m., E. at 9 a.m., N.N.E. at 11h. 15m. p.m., E.N.E. at 6h. 45m. a.m., N.N.E. at 10h. 45m. p.m., and N.E. by N. at 11h. 15m. p.m.

Solar halo on the 16th from 11 a.m. till 1 p.m.

E. J. LOWE.

DEATH OF AN ECCENTRIC CHARACTER.—On Friday, the 7th inst., were consigned to their final resting-place, in the churchyard of Keighley, in Yorkshire, the mortal remains of one of the most eccentric individuals that ever lived; in fact, a parallel seems scarcely possible, of a man voluntarily going to bed in good health, and remaining there for a period of forty-nine years! He went by the cognomen of "Old Theodore" in the neighbourhood, but his real name was William Sharp; he lived at an isolated house called "Worlds," probably an abbreviation of "World's End," not far from Braithwaite, in the parish of Keighley. He was the son of a small farmer, born A.D. 1777, and from an early age showed little predisposition to steady work. When thirty years of age he took to his bed and the room, which he never left till carried thence on the day of his funeral. The cause of this extraordinary conduct is believed to have been a matrimonial disappointment: a wedding-day was fixed, accomplished by a friend he wended his way down to the parish church, where there patiently awaited the arrival of his bride-elect; but she never came; her father having sternly and steadily refused his consent. Henceforth the young man consigned himself to a small room, nine feet square, with the determination of spending the remainder of his existence between the blankets,—which resolution he kept most unflinchingly. At the time of Sharp's death, the window of his room had never been opened for thirty-eight years! In this dreary abode did this strange being immure himself. He obstinately refused to speak to any one, and, if spoken to, never answered, even those who were his constant attendants. His father, by his will, made provision for the temporal wants of his eccentric son, and so secured him a constant attendant. During the whole period of this self-imposed confinement he never had any serious illness, the only case of indisposition those about him can remember being a slight loss of appetite for two or three days, caused apparently by indigestion, and this notwithstanding he ate on the average as much as any farm labourer. Though arrived at the age of seventy-nine years, his flesh was firm, fair, and unwrinkled save with fat, and his weight was estimated at about 240 pounds. The curious used to come from far and wide to see him, but whenever a stranger was ushered into his den he immediately buried his head beneath the bedclothes. Almost all persons before his death his appetite began to fail, and his limbs became partially benumbed, so that he could not take his food in his accustomed manner. From this attack he seemed to rally, and not until the evening before his death were any apprehensions entertained that the attack would prove ultimately fatal. However, during the night of Sunday, the 2nd inst., he became rapidly worse, and died at four the following morning, as before stated, in his sixty-first year.

SENTENCE ON THE RUGELEY POSTMASTER.—At the Stafford Assizes, on Saturday last, MR. BARON BRAMWELL sentenced Samuel Cheshire, late postmaster at Rugeley (who was found guilty on the previous day of opening Dr. Taylor's letter, and making known the contents to Palmer), to twelve months' imprisonment with hard labour, remarking that the mildness of the sentence was owing to the strong recommendation to mercy made by the jury.

THE POISONING BY STRYCHNIA AT LEEDS.—The adjourned inquest on the body of Mrs. Dove was held at Leeds on Monday last. So intense was the excitement caused by the case that as early as eight o'clock the various approaches to the court were besieged by a multitude of persons desirous of gaining admission: and on the doors being opened the rush was tremendous, and the court became almost instantly crowded in every part. Among the audience was a great number of ladies, who were content to stand in the dock or in any other part of the court. From a joint report made by MR. MORLEY and MR. NUNNELEY it appeared that they had, as a further test of the presence of poison in the stomach, and one which, as nearly as possible, would amount to demonstration, determined to try whether the spirituous extract obtained from the contents of the stomach already shown by chemical tests to contain strychnia possessed really the poisonous properties of that substance. They selected for experiment two rabbits, two mice, and one guinea-pig, and, as the most expeditious method of acting upon such animals with small quantities of poison, they applied it by inoculation through small openings either into the cellular tissue between the skin, or into one of the serous cavities of the body. In each of these five animals thus submitted to experiment the characteristic effects of poisoning by strychnia were produced. In three of them (the two mice and a vigorous rabbit) death ensued respectively in two minutes, twelve minutes, and fifty minutes from the first introduction of the poison. The symptoms preceding death were disturbed respiration, general distress, convulsive twitchings, outstretching of the legs, and great rigidity of the body—symptoms which are exactly those commonly produced by strychnia. The Coroner addressed the jury at great length, the charge having occupied three hours. The jury then retired to consider their verdict, and were absent nearly an hour. On their return into court the verdict given was, "That Harriet Dove has died from the effects of strychnia, wilfully administered by her husband, William Dove." The Coroner: That is a verdict of wilful murder against William Dove?—The Foreman: Yes, that is our intention. The delivery of the verdict caused a great sensation in the court. The Coroner at once signed the warrant for the prisoner's committal to York Castle on the charge, and the witnesses were all bound over to give evidence at the next assizes. The prisoner received the announcement of the verdict without manifesting the slightest emotion.

## EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The charge of American affairs in London was transferred by Mr. Buchanan, on Monday last, to Mr. Dallas, the new Minister. Mr. Philip N. Dallas was appointed Secretary of Legation, in the room of Mr. Benjamin Morse.

Count Orloff was one of the first to congratulate the French Emperor on the birth of the Prince Imperial.

It has been decided to send the Count de Morny on a special mission to St. Petersburg almost immediately. Of course this news assumes that peace will speedily be made.

The Governor-General of India and Lady Canning left Bombay for Madras and Calcutta on the 6th and arrived at Madras on the 14th of February.

The King of Sardinia reached his thirty-sixth year on the 14th instant.

Lord Howard de Walden, the English Minister at Brussels, gave a grand dinner last week, at which Count de Creptowitch, the Russian Minister, was present. The day after Count Creptowitch, in his turn, entertained at dinner the English and French Ministers.

It was stated last Saturday by Lord Stanhope, at the festival of the Artists' General Benevolent Institution, that a portion of the papers of the late Sir Robert Peel, consisting of memoirs written by that statesman himself, would shortly be published.

Dr. Conneau, first physician to the French Emperor, has been promoted to the rank of Commander in the Order of the Legion of Honour.

General Sir George Berkeley has been added to the Commission of general officers appointed to inquire into the allegations in the Crimean report, in the room of General Sir T. M'Mahon, whose health does not permit his attendance.

The King of Holland has just appointed General Palud to be Governor-General of the Dutch Colonies in India. This is the best-paid situation at the disposal of the Government, the salary, &c., attached to it amounting to 300,000 florins (£33,000 f.), or £25,320.

The Grand Duchess of Tuscany arrived at Rome on the 9th, under the incognito of Countess Pitigliano, and alighted at the palace of the Tuscan Embassy. On the following day her Imperial Highness proceeded to the Vatican and had an audience of the Pope, and on the 11th she proceeded on her journey to Naples.

Sir George Russell Clerk, K.C.B., who has filled the important office of Lieutenant-Governor of the North-West Provinces of India and Governor of Bombay, has accepted the permanent Under-Secretaryship to the India Board, vacated by Sir Thomas Redington.

Generals Canrobert, Bosquet, and Randon have been made Marshals of France.

A new street in Paris, leading from the Rue St. Denis to the Rue Lavandières, Sainte-Opportune, has been named Rue du Prince Impérial.

The Lord Mayor was entertained on Wednesday evening at a sumptuous dinner, at the Gresham Club, by his fellow committee-men.

The Countess Danner, morganatic wife of the King of Denmark, is dangerously ill.

Letters from Vienna state that Prince Stirbey has no intention of retiring from public life; on the contrary, he hopes that the great Powers will render the Hospodarate of Wallachia hereditary in his family.

The preliminaries are arranged for a matrimonial alliance between the Hon. Charles S. Hardinge, M.P., eldest son of Field-Marshal Viscount Hardinge, and the Lady Lavinia Bingham, daughter of Major-General the Earl of Lucan, and niece of the Earl of Cardigan.

General Prim arrived at Bayonne on the 13th inst. from Madrid, on his way to Paris, where he is about to marry a rich American lady.

M. de Zedlitz Neukirch, Chief Councillor of the Government at Liegnitz (Silesia), is appointed successor to M. Hinckeldy in the Director-Generalship of Berlin Police.

The King of Saxony has authorised the creation at Leipsic of a Crédit Mobilier establishment, with a capital of twenty millions of thalers (seventy-five millions of francs).

The subscription opened for the family of M. de Hinckeldy in Berlin already amounts to more than 10,000 thalers.

The celebrated Bowyer Bible, in forty-five folio volumes, and containing 6000 engravings, was sold by auction at Bolton last week, and brought the large sum of £1600.

The Court of Athens, having waited in vain for an invitation to be represented at the Congress in Paris, has determined on sending its Ambassador at London, M. Tricoupi, to present a memorandum to that diplomatic assembly.

A bill has been introduced in the Legislature of Kentucky imposing a tax upon bachelors over thirty years of age of five dollars on each 1000 dollars' worth of property, *ad valorem*, to educate other people's children.

The Russians taken prisoners by the French have been sent to Odessa, and exchanged for Turkish prisoners.

Accounts from Manilla state that bands of brigands are scourin the country, and spreading incendiary proclamations against the Spaniards.

There are forty candidates for election into the Royal Society this year. This number exceeds that of any preceding year since 1847.

The Danish Minister Scheele has communicated to the United States' Government that the treaty with Denmark relative to the Sound Dues, which expires on the 14th April, will be prolonged for two months.

A monthly line of American steamers is about to be put on between New York and London, calling at Cork. The first of the line of these steamers is appointed to leave New York for London on the 1st of April next.

The Chamber of Representatives of Belgium has finally voted by a large majority the law authorising the establishment of gaming-houses.

The merchants and manufacturers of Wolverhampton have, in imitation of Birmingham, Manchester, Bristol, and other large commercial communities, resolved upon establishing a Chamber of Commerce in that town.

The aqueduct of Sebastopol has been blown up by our engineers. The canal or grand aqueduct of Sebastopol was about eight miles in length. Its width was six feet and its mean depth seven feet and a half.

The specie brought by the *Asia* from New York on Tuesday last amounted to 559,747 dollars—of which 200,000 dollars were on account of Havre merchants.

Some sergeants of the Spanish army have been arrested at Cadiz on suspicion of being concerned in a republican conspiracy.

The execution of Bousfield, who was convicted at the last session of the Central Criminal Court of the murder of his wife, and against whom there are three other indictments for the murder of his three children, is fixed to take place on Monday week.

In consequence of the *Brussels Indépendance* having passed into foreign hands, measures are being taken to establish a new Liberal political and exclusively Belgic journal.

The firmament has lately presented an aspect of peculiar magnificence at Bombay, the whole five planets having been visible for nearly a week, some time betwixt sunset and dawn. Mercury has now disappeared—Jupiter, Saturn, Venus, and Mars, are still in sight.

The Paris Correspondent of the *Indépendance Belge* alleges that the French army in the East counts no less than 30,000 sick in the ambulances and hospitals.

A fund is being raised to erect a solid block of marble in the Crimea to the "Memory of the (Masonic) brethren who have lost their lives in the Eastern Expedition in 1854 and following years," to be raised by Freemasons of Malta and the United Services.

A proposal has been made that the Sardinian carabiniers should be armed with double-barrelled rifles, in order the better to cope with the bandits, who all possess rifles, and are also said to be provided with reconnoitring telescopes.

In the Queen's Bench prison one man has been confined since 1812 for not answering satisfactorily; four have been in prison since 1849, one each since 1843, 1844, 1845, 1846, 1847, and 1848. In almost every case there is stated to be "no apparent legal impediment to an early release."

The trial of the Danish ex-Ministers, although finished, as regards those gentlemen, is likely still to occupy public attention in Denmark. M. Salicath, one of the counsel for the accused Ministers, has lodged a complaint for calumnious imputations against the Copenhagen journal, the *Dagbladet*.

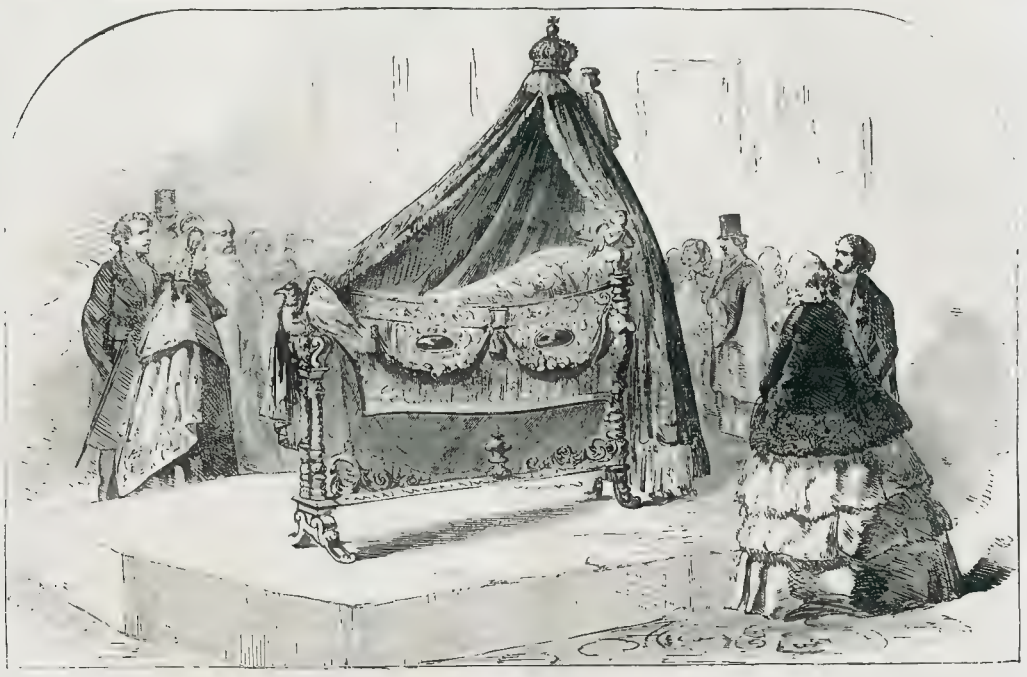
The New Ross election has terminated in the return of MR. Tottenham. The numbers were—For Tottenham, 84; Redington, 67.

The Mixed Commission charged to prepare the bases of a Customs Union between the United Kingdoms of Sweden and Norway have presented an international bill on the subject.

The King of Naples has authorised the exportation of corn at a duty of one or two ducats the cantare.

JOHN FOWKES, who was convicted of the murder of his nephew at the last assizes, was executed at Leicester, on Wednesday last.

HER IMPERIAL MAJESTY THE EMPRESS OF THE FRENCH



THE CRADLE FOR THE PRINCE IMPERIAL.

## BIRTH OF PRINCE NAPOLEON.

Sunday last added another to the many instances of the great good fortune which has attended Napoleon the Third. His dearest wishes as a husband and the founder of a dynasty are fulfilled. He has now a son and heir, and the Imperial infant is said by those who have seen him to be a remarkable fine robust boy. He is described as rosy, plump, well made, fully developed, and with a surprising abundance of chestnut-coloured hair, resembling his father's. The name given to him is Napoleon-Eugene-Louis Jean-Joseph. The reasons for these names are very simple. He is called Napoleon and Louis after his father; Eugene from his mother Eugenie; Jean after the Pope, who is to be his godfather; and Joseph in compliment to his intended godmother, the Queen of Sweden, whose name is Josephine.

On Saturday night a considerable crowd had collected round the Tuileries and the Place du Carrousel, anxiously waiting to hear the cannon announce the birth of an Imperial infant. Soon after three o'clock the assembled multitude were gratified; and when 101 guns proclaimed the birth of a Prince there arose a murmur of universal satisfaction. Couriers were seen leaving the Tuileries on horseback, and carriages were driving about at full speed; in fact, the Rue de Rivoli looked as animated as if it were mid day. The preparations for illuminating had been going on all night in every quarter of the city; and, as soon as the intelligence was universally known, thousands of flags decorated the boulevards and principal streets of Paris. The banners of France, Turkey, Sardinia, and England were seen in all directions. So general were the signs of rejoicing that, on looking down a street, the more distant houses appeared to be completely covered with gay drapery.

Immediately after the accouchement (which took place at a quarter past three on Sunday morning) the infant was presented by Madame Brust, Governess of the Children of France, to the Emperor and to the Empress, to their august Highnesses Prince Napoleon and Prince Lucien Murat, and to their Excellencies the Minister of State and to the Keeper of the Seals. The *procès verbal* of his birth was then entered upon the Registry of the Civil State of the Imperial Family by his Excellency the Minister of State, assisted by his Excellency the President of the Council of State, conformably to the article of the *Senatus consultum* of the 28th of December, 1852, and to Article 13 of the Imperial Statute of the 21st of June, 1853. In the chamber of her Majesty, when the birth took place, were—the Emperor, the Countess de Montijo, the Duchess d'Esling, and nurse and doctors. The grand dignitaries of State were assembled in the Salon Vert, near the chamber of her Majesty. In the adjoining *salons*

THE LAYETTE, OR OUTFIT FOR THE IMPERIAL INFANT.

were the Aides-de-Camp of the Emperor and the officers of the Imperial household.

Within a few minutes of the birth of the Prince the Emperor sent messages in his own name announcing the event to the Pope, the Queen of England, the King of Piedmont, the Queen of Sweden, the Grand Duchess Dowager of Baden, and several other Courts. It is a very curious fact, as showing not only the wonders of the electric telegraph, but also the activity of great personages at hours when the world at large is wrapped in sleep, that telegraphic messages of congratulation were received in answer before six o'clock from the Pope, Queen Victoria, and the Queen of Sweden.

The Senate and Corps Legislatif remained the whole of Saturday in their respective palaces, waiting for the announcement of the event. To beguile the tedium of the long hours of expectancy, they not only made ample provision of eatables, champagne, and cigars, but sent for music, and invited their wives and daughters to keep them company. After remaining *en permanence* till half-past one on Sunday morning, a message was received from the Palace giving them leave to go home. They could, however, have had but little sleep, for between three and four o'clock most of the members were knocked up by their private messengers bringing the great news, and by eight o'clock they were again assembled in public sitting, waiting to receive the official communication of the intelligence. The Senate, as they are compelled to do by the constitution, sat with closed doors. To the Corps Legislatif the public were admitted. The proceedings were very short. The President, Count de Morny, on taking the chair, said in a voice betraying much emotion :—

Gentlemen,—This night, at four o'clock, the Emperor sent an orderly officer to inform the Corps Legislatif of the happy deliverance of the Empress. Her Majesty gave birth to an Imperial Prince at a quarter past three (Cries of "Vive l'Empereur!" from all parts of the house). I see, gentlemen, animated the Count de Morny, that you participate in the joy of all France. "Vive l'Empereur!" cried the President, "Vive l'Impératrice!" "Vive le Prince Impérial!"

The Paris Municipal Commission was also called together on the occasion. At half-past three M. Favé, one of the orderly officers to the Emperor, arrived at the Hôtel de Ville to announce the birth of the Prince. Messengers on foot and horse-back were at once sent off to summon the members of the municipal body. As soon as they had all arrived, M. Favé was introduced into the Salle du Trône, where they were assembled, and took his seat in an arm-chair of ceremony prepared for him, and then, in presence of the Prefect of the Seine, the Prefect of Police, and the other functionaries present, he announced officially the birth of the Prince Imperial. This intelligence was received with loud cries of "Vive l'Empereur!" "Vive l'Impératrice!" "Vive le Prince Impérial!" The Prefect made a suitable reply, and announced that the City of Paris, happy to enable the indigent to participate in this joyful event, had voted a sum of 200,000f., to be thus appropriated—100,000f. for the payment of money in arrear to nurses engaged to bring up other persons' children, and 100,000f. for redeeming small objects from the Mont-de-Piété.

The half-baptism (*ondoiement*) took place on Sunday, at twelve o'clock in the chapel of the Tuileries, after the Imperial mass. All the places at the sides and in the tribunes were reserved for the grand dignitaries of State, and for the persons of the household of their Majesties. Near the altar were placed Cardinal Dupont, Archbishop of Bourges; Cardinal Gousset, Archbishop of Rheims; Cardinal Donnet, Archbishop of Bordeaux; Cardinal Morlet, Archbishop of Tours; and M. Legrand, the Curé of St. Germain-l'Auxerrois, the parish in which the palace of the Tuileries is situated. Opposite them were the Bishop of Nancy, the first chaplain of the Emperor, and his clergy. In the middle of the sanctuary, opposite the *fauteuil* of the Emperor, was a table covered with white drapery, on which stood a magnificent baptismal font in silver gilt, with all its accessories. On each side of the chapel were the Admirals and Marshals of France and other high dignitaries, the Grand Master of the Imperial Household, and the Deputy Masters of the Ceremonies; and on the other side, the Princess Mathilde, the Grand Mistress of the Household, the Ladies in Honour of the Empress. At about half-past twelve the Emperor entered, followed by the members of the Imperial family, the Ministers, the Presidents of the Senate and the Legislative Body, the Grand Chamberlain, and Grand Master of the Ceremonies. The Bishop of Nancy celebrated the mass. After the Gospel the Abbé Deplace, the preacher at the Court, ascended the pulpit, and took for his text, "Benedictus qui venit in nomine Domini" (Blessed is he who cometh in the name of the Lord). "It is Jesus Christ," said the Abbé, "who is the envoy of the Lord and God himself, to whom are addressed the prayers, not of a people, but of the whole world." After calling to mind that the envoy of God was personified in his Church, the preacher, with an emotion in which all the auditory shared, concluded :—

But it appears to me that your ideas anticipate mine, and that public gratitude mingles with the prayers which every believer is ready to pour out at the triumphal pomp of the Saviour of the world on Palm Sunday. Lord Jesus, the Supreme Master of kings and nations, you have heard our prayers, and have granted the wishes of the Sovereign and of the nation. We return you thanks before your altars for having given to an august union that fruitfulness which constitutes the joy of the day. It is you who have blessed, in the heir to the throne, both the faith of the Prince who proclaims, before all the world, his mission and your Providence, and the charity of the pious Princess who honours herself in being the protectress of the unfortunate, and the mother of the poor. Complete your mercies, O Lord! and watch over this cradle, the depository of so many hopes! Form yourself the Prince now born to be the happiness of a great people! Give him, from his father, ability, genius, and magnanimity; from his mother, kindness and inexhaustible benevolence; and from both, sincere faith and true religious feeling. To sum up all in a word, give him, O God, a heart worthy of his destiny and of his name.

After Divine service, the Prince, carried by his *gouvernante*, was brought in with the prescribed ceremonial, and was placed on or received the holy water. The Emperor presented the Prince to the Bishop, his first chaplain, and the Curé of St. Germain l'Auxerrois took the water from the baptismal font and sprinkled it over the child, repeating the sacramental words amidst the most profound attention of the congregation. The Prince received the name of Napoleon-Eugene-Louis-Jean-Joseph. After the ceremony was concluded, a "Te Deum" was sung by the choristers of the Imperial chapel, accompanied by the organ. While the "Te Deum" was being sung the Bishop of Nancy remained standing at the foot of the altar. The font was then removed from the table, and the Curé of St. Germain l'Auxerrois placed on it the two registers in which was inscribed the fact of the Prince's baptism, with the names just mentioned. His Majesty then received the pen from the Curé, and signed the two registers. The signature of the Emperor was followed immediately by those of Prince Murat, the Duke d'Albe, Marshal Vaillant; M. Troplong, President of the Senate; and the Count de Morny, President of the Legislative Body. When the "Te Deum" had finished the officiating Bishop read the suitable thanksgiving prayers, and the "Domine Salvum" was performed. His Grace then gave the pontifical benediction, and the Emperor left the chapel with the customary ceremonial, the Imperial Prince being carried to his own apartment by Madame Brunt and the assistant-gouvernantes.

After the mass the Grand Chancellor proceeded to the apartment of the Prince, and carried to him the grand cordon of the Legion of Honour and the military medal.

The Emperor has decided that he will be godfather and the Empress godmother of all the legitimate children born in France on the day of the 16th of March

On the occasion of the happy delivery of the Empress a "Te Deum" was sung and prayers of thanksgiving offered up on Sunday in all the churches of the Reformed Church in Paris and the banlieue. The same will take place on Sunday (to-morrow) in the other parts of the Consistorial circumscription.

The illuminations on Sunday night were the most general that have been seen in Paris for years. Not only were all the public offices, theatres, ministries, &c., brilliantly lit up, but private houses almost everywhere hung out many coloured lanterns. Those of the Bourse shone forth conspicuously, and were the more remarked because the Bourse had never illuminated on any of the many recent occasions of public rejoicing. The decoration erected in front of the Bourse consisted of a triumphal car, surmounted by an Imperial crown. On the frieze was the inscription, in coloured lamps, "The Agent de Change to the Imperial Prince." The arch was united by garlands of flowers and evergreens to four pyramids, surmounted with stars, ornamented with the national flag, and bearing the inscriptions, "Vive l'Empereur!" "Vive l'Impératrice!" Between the pyramids were four escutcheons, bearing the words, "Confidence," "Prosperity," "Credit," "Security."

On Monday the women of the markets, or, as they are called, *les dames de la Halle*, went to the Tuileries to congratulate the Emperor on the birth of the Prince Imperial. A deputation of them, carrying magnificent bouquets, were admitted to the Emperor, and his Majesty received them with marked kindness. After conversing a few minutes with them, the Emperor led them himself to the apartments of the Prince, and presented the infant to them. All the corporations of workmen of the capital also manifested a desire to be allowed to present their congratulations to his Majesty; but the Emperor, from regard to the health of the Empress, and also on account of the bad weather, charged the Prefect of Police to tell them that he regretted not being able to receive them, but that he would accept their visit at the moment of baptism.

By order of the Emperor, gratuitous representations were given at two o'clock on Monday, at the expense of the Civil List, in the theatres of Paris, in celebration of the birth of the Imperial Prince. Long before the hour appointed for the performances an immense number of people had assembled outside the different houses. The cost of the entertainment was at the expense of the Civil List, and at all the theatres the first *artistes* performed. The following theatres, in addition to their ordinary performances, gave something appropriate to the occasion :—At the Grand Opera a cantata was executed; at the Théâtre Français an ode on the birth of the Prince Imperial: Opéra Comique, a cantata; Odéon, "Le 16 Mars;" Théâtre Lyrique, a cantata; Vaudeville, "L'Espoir de la France;" Variétés, "Le Berceau Impérial," Palais-Royal, "101 Coups de Canon;" Porte-Saint-Martin, divertissement allegorique; Gaieté, "L'Enfant de la France;" Ambigu Comique, "A la Voix du Canon;" and at the Cirque Imperial, a cantata. Every theatre was crowded, generally with persons in the lower classes of society, and better-conducted audiences it was impossible to find anywhere. At the Français the ode, composed by M. Mery, was recited by M. Beauvallet. The cantata at the Opera was by M. Adam, the words by M. Pacini. The cantata of the Opéra Comique was composed by M. Halévy.

On Tuesday, at half-past one o'clock, the Emperor received the felicitations of the Senate, Legislative Corps, Council of State, Magistracy, the Institute, clergy of different persuasions, the Municipal Corps, and deputations from the National Guard and from the army and navy. The registrates were in full costume, and the civil and military functionaries in full uniform. The reception took place in the Throne-room, and the Emperor, who, as usual on such occasions, wore the uniform of General of Division, with the grand cordon of the Legion of Honour, remained during the ceremony standing in front of the throne. At his right stood Prince Napoleon. The next place of honour belonged to Prince Louis Luden; but his Highness is still confined to his apartment, and was unable to be present at the ceremony. The Emperor replied to the address of the presidents of the various corps in a few words, which were loudly applauded. Count de Morny having addressed his Majesty in the name of the Legislative Corps, the Emperor replied with emotion, reminding the Deputies that the Napoleonian dynasty had sprung from the people, that it had been tried by forty years' adversity, and that the Imperial Prince was born amid the hopes of peace. The various bodies were then successively introduced into the apartments of the Pavillon Flore, when they returned to those occupied on the ground floor by the Prince. The Imperial infant was sleeping in its cradle, and by it stood the Princess d'Essling, with the governesses and sub-governesses. The *cortége* soon after retired.

The *Moniteur* of Tuesday announces that M. Paul Dubois is promoted to the rank of Commander of the Legion of Honour. It also states that the Emperor has granted out of the funds of the Civil List the following donations :—10,000f. to the Society of Authors and Dramatic Composers; 10,000f. to the Society of Men of Letters; 10,000f. to the Association of Dramatic Artistes; 10,000f. to the Society of Musicians; 10,000f. to the Society of Painters, Sculptors, Engravers, and Designers; and 10 000f. to the Society of Inventors and Industrial Artistes. The *Moniteur* also publishes a poem of twenty-four verses by M. Theophile Gautier, entitled "Bethsabé."

Such an immense number of presents for the Empress and the Imperial infant have lately been sent to Paris that it has been found absolutely necessary to send orders to all the railway stations and diligence offices in the country not to receive any parcel for such a destination. The money spent in paying for the carriage has been enormous. Of course very few could be accepted, and the greater part were returned to the senders, with thanks for their offer. The carriage of al. these returned parcels was paid by her Majesty. Among the gifts presented is a very curious character. Among the gifts for the infant was an enormous case of honey, the carriage of which came to twenty francs. The Empress received from a woman in the south of France an extremely dirty girdle, which the donor said she had worn for seventeen months as she had had only boys, she thought the Empress would be glad to wear it for luck.

## THE IMPERIAL CRADLE.

The presentation of the cradle by the city of Paris for the Imperial infant took place last Wednesday week, at the Tuileries. The cradle is in the form of a ship, as being a prominent figure in the arms of Paris. At the prow an eagle is placed with wings half outspread, while at the poop is a figure representing the city of Paris, covered with a robe of gold; and arms of silver, supported by a dolphin support the Imperial crown. At the feet of the syrens two sea deities regard the cradle with a protecting look; and below, at each corner, winged syrens of silver twine in numerous spirals the folds of their tails, formed of scales enamelled with various colours. On the sides of the cradle, four medallions of blue enamel represent in gay hues the cardinal virtues of peace—Force, Vigilance, Prudence, and Justice. Between each medallion are to be seen the initials "N I." The materials used in the construction of this rich and beautiful work of art are rosewood, enamel, and oxydised silver, and the effect produced is most exquisite.

## THE IMPERIAL LAYETTE.

As everything connected with the birth of the heir to the French throne becomes interesting at the present moment, we have this week given a Sketch of the Show-rooms of Mdlle. Felicie, in the Rue Vivienne, where the *layette* for the Imperial infant was on view for some days previous to the auspicious event. Three rooms, one of them of great size, were thrown open for this purpose, and everything exhibited in them formed part of the *layette*. At the first glance the only colour to be seen was white; but afterwards the eye perceived that the ribbons and satin used for trimming several of the articles were blue. But as blue is the colour appropriated to male children, as rose or pink is to those of the opposite sex, the idea would occur to the looker on that everything had been prepared exclusively for a Prince. Such, however, was not the fact; for, as the Imperial infant was *vouè au blanc*, blue is used in such a case indiscriminately for either sex. As some of our readers are not perhaps aware what *voué au blanc* exactly means, it may be as well to state that sometimes in France a mother consecrates her child before its birth to the Virgin, placing the infant under her especial protection, and, as a sign of her having done so, clothes the child in white only (with rare ornaments of blue at times), and keeps it in that attire for a certain number of years—three, five, or seven—and on some occasions to the period of the child's first communion. It is in accordance with this custom that some of the articles of the Imperial *layette* were ornamented with blue, without any reference to the sex of the infant. In the large room at Mdlle. Felicie's all the tables along the sides, as well as an exceedingly broad one down the centre, were completely covered with the most beautiful articles of lace, embroidery, silk, satin, and cambric that perhaps were ever collected together for any one child. Of dresses alone there were no less than twelve dozen. All were embroidered with such rare perfection as to rank as works of art, and the vast quantity of *point d'Alençon* with which they were trimmed must have been of immense value. Along the tables are also to be seen babies' caps, hats, and head dresses in such abundance as to excite one's wonder, and of these also twelve dozen were prepared—all beautifully embroidered, and all trimmed with most costly lace. Of course, the richer articles were not ordered in such profusion—as, for instance, the long mantles, of which there were a dozen for State occasions, most richly embroidered and trimmed, while others were in satin, in silk, or in cashmere, but all of the greatest beauty. The quilts also, some in satin and some in white, were on a more limited scale; but all as rich as human ingenuity could make them. At the end of the room stood the cradle—not that which the city of Paris presented for the Imperial infant, but still one of great beauty. A lofty *flèche* at the head, formed of a vine-branch of gilt bronze, gently bends over the part in which the infant is to sleep. From the *flèche* curtains of Mechlin lace lined with blue silk are suspended at each side, the whole being looped up with gold cords terminating with torsades to match of the same. One *couvre-pieds* is of white satin, and another of blue, and the whole is covered over with Alençon lace, with the initials N. E. in the centre—the whole producing an effect of the rarest [illegible]. Opposite the cradle, on the centre table, stood the *robe de baptême*, all of *point d'Alençon*, with mantle and head-dress to match. Near it was a muff of ermine, with a mantle of white satin lined with ermine. On the table lay the child's coral for the period of teething—in this instance made of amber, the ball for the rattle being hollowed from the solid mass. A little plaything alone cost 800f. Near it was placed an amber necklace with a small gold medallion in the centre, to which the Archbishop of Paris has given his benediction. Three *corbeilles de baptême* lay near, all lined with blue satin, and covered with Alençon lace, and bearing the Imperial cipher and arms

## EXHIBITION OF THE NATIONAL INSTITUTION OF FINE ARTS.

THE first impression of this the Ninth Annual Exhibition of the National (*late* the Portland) Institution of Fine Arts is, that the whole school of British painters had, since their last Exhibition, been turned out to grass—that they had run from books and men, from galleries and cabinet collections, into a kind of salad and marine nature such an oppressive overflow is found at every turn of green lanes, shady pools, haunted streams, gipsy encampments, peaceful cots, gleaners returning, ploughboys resting, milking-time at the old farmhouses, woodland cottages, calves in a stall, spring and summer showers, autumn effects, and wintry wilds, cloudy or incense-breathing mornings, sultry noons, mid-day rests, calm evenings, sunrises and sunsets, approaching storms, river breezes, milldams, varied occasionally by glimpses of the coast, and reverse still by harbours returning, or a rough sea. There is an utter absence throughout of pictures from Scripture, from English history, or English poetry, or even English fiction.

And this first impression is rather strengthened and abused as the visitor proceeds with the examination of the six hundred works of art set forth to catch his eye and open his purse strings. Here are landscapes of almost every order of merit, from ex cllence down to stupid mediocrity. Here are pictures varying in price from two hundred guineas, the largest sum, down to three guineas, the lowest. Here are many pictures painted at and for Art-Union Prizeholders, and here are a few pictures that Mr. Sheepshanks might add to his very choice collection with no discredit to his taste or disadvantage to the reputation of his gallery.

Mr. J. E. Lauder, Mr. A. B. Clay, Mr. C. Rossiter, and Mr. H. Stacy Marks are among the solitary and ambitious contributors to the figure department of the exhibition. Mr. Lauder has sent the largest picture in the Gallery, No. (332), "James Watt and the Steam-engine—the Dawn of the Nineteenth Century," for which he asks £210. This is an oblong shaped picture, representing the great inventor in a rather affected attitude—seen to his knees—surrounded by the apparatus that led to his discovery. The colouring is rich and harmonious, but the composition is awkward. Mr. Clay's one-hundred-pound picture (304) is called "The Visit to Bethany;" it is a small-sized canvas, treated with so much thought and care that we have selected it for engraving. What further remarks we have to make on it we shall reserve for the number in which the engraving appears. Mr. Rossiter sends (124) "Fluellen Compelling Pistol to Eat the Leek," for which he asks seventy-five pounds. This is a well-considered picture—full of character, with a touch of Shakspeare in it, and free from any thing like common treatment. Of the same order of merit, perhaps a little higher, is (502) Mr. H. Stacy Marks' sixty-three-pound contribution, "The Gravediggers in Hamlet." Here the artist has read his author for himself, and has caught the dry humour of the scene with a sense of Shakspeare upon him. It is always a pleasing duty to point the finger of admiration to those works in which artists will think for themselves, and think correctly, as Mr. Marks and Mr. Rossiter have thought in these two pictures.

The Gallery of the Institution is divided, as many of our readers will doubtless remember, into three rooms, the two largest having screens for water-colour drawings and small-sized oil pictures. There is a line of sight, and a little below the line and a little above the line; but none of those cornice and rafter-reaching heights which artists complain of so justly at the Royal Academy. Whatever is worth seeing can here be seen to advantage.

The pictures that arrested our attention at first sight we shall instance in numerical order :—

### FIRST ROOM.

21. "A Summer Eve by Haunted Stream." A. W. H. Hunt. Portical, but somewhat hard.

38. "A Storm Gathering on Cader Idris, North Wales." S. R. Percy. Very picturesque and true to nature.

41. "A Green Lane at Langley, Bucks." T. Frowd. Price £10, and fairly worth £10. If we are to judge by the prices affixed to other pictures.

52. "The Cliffs." J. Wright Oakes. Evidently direct from nature, but the water too hard.

64. "Simon and Iphigenia." F. Underhill. This we shall engrave. *Simon* is a play on *Cymon*, and *Iphigenia* is a village girl of six or seven.

65. "Swaledale." James Peel. Good and true scenery of Yorkshire.

77. "A Glimpse at Wharfdale, Yorkshire." F. H. Henshaw. Equally true to nature.

88. "The Morning Rest in Ploughing Time." A scene in Sussex, near Newhaven. H. B. Willis. Here we have a glimpse of the coast of Sussex, with the Martello Towers. A very truthful and brightly-coloured picture.

108. "Summer." Nevil Lupton. Very careful in execution.

112. "A Welsh Valley." F. W. Hulme. Good.

120. "An English Farmyard." A. F. Rolfe and J. Frederics. An oval in the manner of Herring, and up to his level; though bearing too evident marks of constant attention to Mr. Herring's manner.

124. "*Fluellen* Compelling *Pistol* to Eat the Leek." C. Rossiter. Of this we have already spoken.

### MIDDLE ROOM.

292. "In the Marshes—Morning." G. A. Williams. This we shall engrave.

304. "The Visit to Bethany." A. B. Clay. This is in the engraver's hands.

314. "The Mid-day Meal." H. B. Willis. This also is in the hands of the engraver.

332. "In the New Forest." Sidney R. Percy. Felled timber in the foreground. Somewhat hard, with all its carefulness.

344. "Approaching Storm." Alfred W. Williams. Among the very best pictures in the collection.

356. "The Swale, above Richmond, Yorkshire, looking across the Vale of Mowbray." James Peel. The same remark as on No. 65.

380. A Breeze down the River." E. C. Williams. Truthful.

### THIRD ROOM.

404. "Waterfall on the Lang Strath, Stonesthwaite Borodale, Cumberland." Henry Moore. Painted on the spot, and painted with care and skill.

424. "Early Morning—Sunrise, Hastings." E. C. Williams. The sunrise on the cliffs exquisitely rendered.

430. "Evening." H. B. Willis. A small, good picture. Price £21.

441. "Shades of Autumn." Alfred W. Williams. Price £200.

451. "The Heron's Haunt." H. Moore. Price only £8; and of course marked "sold."

483. "A Rough Sea." John Thorpe. Small and good.

502. "The Gravedigger's Riddle—"Hamlet," act v., scene 1." H. Stacy Marks. We have already spoken of this.

505. "Summer Morning: Crossing the Ford." T. J. Soper. This we shall engrave.

It will be seen that nearly all the pictures we have selected from the 600 are landscapes. We shall continue our observations on the National Institution Exhibition, with the Engravings from it to which we have already referred.

## THE CRIMEAN EXHIBITION.

A HIGHLY interesting exhibition has just been opened in Pall-Mall (over against the Opera Colonnade), called the Crimean Exhibition. The leading features of the exhibition are two large, nobly-conceived, and finely-executed pictures, called "The Battle of Balaclava," and "The Battle of Inkerman," both from the skilful pencil of Mr. Edward Armitage. The minor attractions are the far-famed ninety-one drawings made by Mr. William Simpson, for Mr. Colnaghi; the fifty-two drawings made by Carlo Bossoli, who lived in the Crimea, in the suite of Prince Woronzoff, together with a curious collection of Crimean relics from Balaclava, Inkerman, and the Malakoff itself.

Mr. Armitage obtained his reputation in England as an artist during the first cartoon competition in Westminster Hall, when he carried away the first prize for—it we remember rightly—his Julius Cæsar Landing. The fame he thus acquired was materially strengthened by his "Battle of Meanee," in which he portrayed with marvellous power of drawing and skilful combination of forms and incidents the excitement of a soldier, together with the spirit of an artist and the fidelity of a photographer. Mr Armitage works in the school of Vernet, and draws a battle as Sir Walter Scott would have described one. In his "Battle of Inkerman" we have a picture on canvas equal in merit to the celebrated design for the same great occasion by the Correspondent of the *Times*. In the "Battle of Balaclava" we have a picture infinitely superior to the ode in which the Poet-Laureate attempted to describe that dreadful carnage. Which are the finer follows in this bloody contest, the Scots Greys or the Inniskillings? It is impossible to decide. Mr. Armitage has done justice to both, as the Greys and the Inniskillings did, on that memorable day, justice to themselves, their comrades, and their country.

Whoever wishes to understand the history of the recent struggle in the Crimea should give a day to this highly-instructive and interesting Exhibition. Maps and models will do much, but the pictures and drawings here assembled will do a great deal more.

## MUSIC.

In the absence of dramatic entertainments during Passion-week there have been many musical performances.

"THE MESSIAH" has been three times given during the week: on Monday by Mr. Hullah at St. Martin's-hall, on Tuesday by Mr. and Madame Goldschmidt at Exeter-hall, and on Wednesday by the Sacred Harmonic Society at the same place. These performances, being precisely similar to those already given by the same parties, furnish no matter for description or criticism. The same oratorio has likewise been given at several places in the provinces; and when we consider how many thousand people have, during this sacred season, listened with attention and reverence to the most sublime and awful music ever heard by human ears, we cannot but be struck with the increasing power of this art when associated with the most solemn thoughts and feelings which can enter into the mind of man.

THE musical entertainments of the week have not been altogether sacred. On Monday evening there were two "Monster Concerts," as they are called—the one given by Mr. George Case, at Exeter-hall; the other by Mr. Howard Glover, at Sadler's Wells Theatre. They were, as such things always are, made for the multitude; each of them presenting a cheap and ample bill of fare, made up of dishes acceptable to the popular taste. Between them they gave employment to a perfect host of singers and players, many of whom, notwithstanding the distance, contriving to appear at both. Such concerts furnished little or nothing that is new to a musical listener, as the performers sing and play familiar things which cost no trouble in preparation and rehearsal; but which, nevertheless, do very well for a popular audience. Accordingly both concerts drew crowded houses.

On the same evening the AMATEUR MUSICAL SOCIETY had their third concert of the season at the Hanover-square Rooms, which were filled to overflowing. The programme included Mozart's Symphony in G minor, overtures by Balfe and Herold, and Beethoven's first pianoforte Concerto in C. The last piece, which is less often played than Beethoven's other pianoforte Concertos, was played by Mr. S. Waley, the distinguished amateur, whose admirable performances have created so great a sensation at these concerts. Mr. Waley is one of those few amateurs who possess the powers of the first professional artists; and, on this occasion, his brilliant but smooth and finished execution, his thorough comprehension of his author, and his graceful and expressive style, would have done honour to the greatest pianist of the day. The vocal music consisted of German part-songs by the Amateur Society of Gentlemen of the City, who practise under the direction of M. Pauer; and of two songs—the romance, "Sombres forêts," from "Guillaume Tell," and the Scotch ballad, "Annie Laurie," sung by a young lady, called in the bills Miss Louisa Miller, but who really bears the name of a highly-eminent member of the theatrical profession. She sang very charmingly, but with somewhat too great exuberance of ornament. In the Scotch ballad, especially, her singing was too florid to be characteristic. In this kind of music the only legitimate ornament is graceful simplicity. The concert was conducted by Mr. H. Leslie with his usual ability, and was one of the most successful ever given by the society.

THE seat of the Royal Italian Opera, for this season at least, is to be the Lyceum Theatre; Mr. Gye having endeavoured in vain to obtain possession, first of Her Majesty's Theatre and next of Drury Lane. The Lyceum is already in the course of preparation for the reception of the Italian *troupe*, and will, it is said, be made the most elegant *bijou* that can be imagined. In the pit there are to be two hundred stalls and two hundred ordinary seats; and the two tiers will be divided into about sixty boxes. How Mr. Gye will contrive to squeeze his immense establishment into this little place, and get up his operas with their accustomed splendour, it is difficult to conceive. As to anything like remarkable, it is out of the question; but it is Mr. Gye's object, doubtless, to keep his magnificent company together, looking to what he may be able to accomplish in another year.

MR. AND MADAME GOLDSCHMIDT are about to make an extensive tour in the provinces, which will occupy the whole of April. Herr Ernst, the celebrated violinist, has arrived in London, and is to accompany them on this tour.

FRANCHOMME, the famous Parisian violoncellist, is coming to London for the first matinée of the Musical Union. He will be heard only on that occasion, as he returns to Paris immediately afterwards.

AT DRURY-LANE THEATRE an operatic season will be commenced on Monday, by Mr. J. H. Tully, with "Il Trovatore;" and a new musical after-piece, called "A Legend of Love."

SOCIETÉ UNIVERSELLE, PARIS.—A medal of honour has been given to Major Sir Warwick Tonkin, one of the Presidents of this Society, for his ingenious and scientific method for facilitating the study of music and harmony.

## NATIONAL SPORTS.

SALISBURY gave us a rare augury for the coming season, and not only introduced us to very strong fields of two-year olds, among which Hurdle (sold by Lord Exeter to Mr. Gully) and Arsenal each lowered the tricolor on its own ground, but showed us that little Sancebox is likely to support his high Doncaster character over Queen's Plate and Cup courses. The ensuing week will bring out the studs in earnest. Coventry has its flat-race meeting on Monday, followed by steeplechases, over the best course for seeing that we possess, on Tuesday; and then the racing men will move onwards to discuss a very ample list at Northampton on Wednesday and Thursday. Catterick-bridge has also a very well-filled list for Monday and Tuesday; and Hospodar, who has been busy trying Lord Zetland's young Voltigeur, will probably commence his fourth season with his old friend "Joe," at 8st. 11 lb., in the Craven Handicap, which they won last year at 8 st. 7 lb. The other races of the week are Newhall, near Sheffield, on Monday, and the Hoo on Saturday, while the steeplechase men will find some amusement at Lavenham on Tuesday, at Henley-on-Arden on Wednesday, at Manchester on Saturday. Fly-by-Night is well reported of, and once more in the ascendant, both for the Derby and Two Thousand Guineas, while Wentworth is tottering, and Bird-in-Hand healthy. Sir Peter Laurie has gone to the stud. Neville has, we believe, been backed in for 800 gs.; and it is quite decided that Bataplan is to race no more, but keep Newminster company at Tickhill Castle, close by the scene of his last contested victory. He was a marvel of endurance in his way; but the mare "Ironsides," who also walked 130 miles in 24h. 8m. consecutively, fairly makes him hide his head. The recent rain will work wonders for scant, which has been anything but first rate throughout the entire season; that is now so rapidly drawing to a close. Mr. Richard Sutton's hounds met for the last time on Saturday, and the eighty couples are advertised for sale by private contract. We hear that if no private purchaser is found they will be sold on April 4th. It is finally arranged that Mr. A. Thompson will continue the mastership of the Bicester Hounds, and that the Durham County Pack will be managed by a committee. The Cumbrians are also bestirring themselves, and have resolved to discontinue their Carlisle Harriers, and once more have a subscription pack of foxhounds in the county. They have, therefore, made an application to Wilfred Lawson, Esq., to convert his present private pack of foxhounds into a subscription one; and we have every reason to hope that the "Royal Inglewood Forest Hunt," which has now been discontinued for some fifteen years, will once more resume the position it held under Major Colomb and Mr. Hasell. The Eden, which intersects the county, and winds its rocky way past some of its finest covers, is a sad bar to riding, and the covers generally are very large; but still there are some parts of the county—for instance, if a fox can be got to break from the Coombs away to the fells—as fine as a man need wish to ride over. The Badsworth are having a capital season, and killed three dog-foxes (one of them with only three legs) one day last week; and the Heythrop did the same by a lemah they found in the shades of Wychwood Forest. There have been some odd fox incidents this season; and the South Wold had one last week, when they ran a fox round and round a chalk-pit, until an adventurous Lubin seized it by the brush, and saved it for another day. Lord Granby is, we regret to say, still suffering from his severe hunting accident; and Mr. Crawfurd has also had a very severe fall, which at one time seemed likely to prove fatal.

THE Oxford and Cambridge rower had a greater boat match than that of last Saturday, but the victorious "Sky-blues" did not seem to rejoice in such force on the steamers (which were as usual nearly all beaten off by their pace) as their "Waterloo Blue" opponents. Weight always seems to tell, as the Oxford was the heaviest crew when they last won; and now Cambridge, which scaled an 11st. 7lb. average to the 10st. 12lb. at Oxford, just pulled through by half a length. Cambridge made its desperate "Chifney rush" at the Crab Tree, and although Oxford came again close at the finish, with a pluck which was perfectly heroic, it could never quite get up. It was a desperate race of alternate leads throughout, and perhaps the finest continued specimen of science and gameness that we ever saw. The Oxford men were thoroughly satisfied, as they did NOT at all expect to win. Their style was decidedly the best; and our only wonder is that the Cambridge men, with their short quick stroke, can ever be got to "stay" over so long a course. On Easter Monday the Nautilus Club row their four-oared races, open to all, for silver goblets; and all Newcastle will line the banks of the Tyne to see Henry Clasper and Taylor contend for £50 a side. Coursing is nearly ended, and Biggar (open) on Tuesday, &c., Limerick (open) on Wednesday and Thursday, and one or two smaller meetings in Shropshire, are the only "remants" in the trial lists of the coursing judges.

## CHESS.

TO CORRESPONDENTS.

H. H.—1. The exchanges you mention were probably made to gain some slight advantages in position, and not from any belief in the superiority of a Knight over a Bishop. To such a player a very small superiority of situation is generally sufficient to decide the game. 2. You will find a scale of the relative value of the chess-men in the "Chess-Players' Handbook."

FERGUS.—You may obtain the new Paris Chess Magazine, *La Régence*, through any foreign bookseller; and no amateur should be without it.

A TRAVELLER.—The Contest v. to speak of in Paris is between the celebrated players M. St. Amant (who for many years has been out of the Chess circle) and M. de Rivière, the editor of *La Régence*. In this match M. St. Amant engages to give the odds of the Pawn and move in each game. The first game has been scored by M. de Rivière.

H. W., Newcastle.—It shall be examined and reported on shortly.

LEWIS A., Forfar.—A King cannot be castled while he is in check.

F. H., Thetford. G. A. B., Lordet, Omega, Ernest.—Problem No. 687 admits, unfortunately, of two solutions.

J. CASH.—The moves given are, of course, the best moves, or the Problem would be worthless.

D. J. JAFFE.—For an explanation of the Chess Notation adopted in this country, see the TYRWHITT enclosed above in the notice to "O. P."

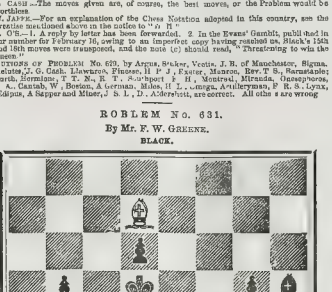
J. J. O'B.—1. A reply by letter has been forwarded. 2. In the Evans' Gambit, published in our number for February 16, owing to an imperfect copy having reached us, Black's 15th and 16th moves were suppressed, and the note (c) should read, "Threatening to win the Queen."

SOLUTIONS OF PROBLEM No. 629, by ARGUS, Stoker, Vectis, J. B. of Manchester, Sigma, Meletes, J. G. Cash, Llewerco, Finesse, H. P. J., Exeter, Manico, Rev. T. S., Barnstaple; Garth, Hermine, T. T. N., R. F., Norbert, F. H., Montreal, Miranda, Gamesystems, B. A., Cantab, W., Boston, A German, Miles, H. L., Omega, Artilleryman, F. R. S., Lynx, Gilpius, A Sapper and Miner, J. S. L., D. Aberdeen, are correct. All others are wrong

### PROBLEM No. 631.

By MR. F. W. GREENE.

BLACK.



WHITE.

White to play, and mate in four moves.

### CONTINUATION OF THE GAMES BY CONSULTATION AT THE ST. GEORGE'S CHESS-CLUB.

Game played by Messrs. STAUNTON and BARNES against Messrs. LOWENTHAL and OWEN.

(*Evans' Gambit.*)

| WHITE. (Messrs. S. and B.) | BLACK. (Messrs. L. and O.) | WHITE. (Messrs. S. and B.) | BLACK. (Messrs. L. and O.) |
|---|---|---|---|
| 1. P to K 4th | P to K 4th | 26. K R to Q B 2nd | Kt takes B |

| 13. P takes P | K R to K B 3rd (*e*) | 38. Q takes Q (ch) | K takes Q |
| 14. K R to Q sq (*f*) | K R to K Kt 3rd | 39. R takes R | P takes P |
| 15. P to K B 3rd | Q R to Q sq | 40. K takes P (*n*) | K to K 3rd |
| 16. Kt to Q B 3rd | P to K B 6th | 41. R to Q 6th (ch) | R to K 4th |
| 17. K R to Q 2nd | Q to K R 4th (*g*) | 42. R to Q 8th | R to K 3rd |
| 18. K R to Q Kt 2nd | K Kt to K B 3rd | 43. P to Q R 4th | K to B 3rd |
| 19. P to K R 3rd | K Kt to K B 4th (*h*) | 44. K to Kt 4th | R to K 7th |
| | (*h*) | 45. R to K B 8th (ch) | K to Kt 2nd |
| 20. K B to Q B 4th | K Kt to K 6th | 46. R to Q Kt 8th | R ties K Kt P (ch) |
| 21. B takes B (ch) | K R takes B | 47. K to B 5th | P to K Kt 5th |
| 22. Kt to Q B 2nd | Q to Q 4th | 48. R to Q Kt 7th (ch) | K to Kt sq |
| 23. Kt takes Kt | K B takes Kt | 49. K takes K B P | P takes P |
| 24. Q to K B 2nd | Kt to K 6th | 50. K takes P | R to K Kt 4th |
| 25. Q R to Q sq | Kt to Q B 5th (*i*) | 51. R takes P | E takes K R P |

And after a few more moves the Game was resigned by agreement as a drawn battle.

(*a*) The defence is little known and requires to be met with great caution, or the attacking party comes off, as in the present case, with an inferiority of position.

(*b*) From want of knowledge of the peculiar defence adopted by their opponents, White do not play the best moves now which is to take the Pawn with their Bishop, checking

(*c*) This masks their Q Bishop, and on that account is objectionable, but it was necessary, to prevent the adversaries playing the Q Kt to Q 5th.

(*d*) A faulty move, as White's remainder shows.

(*e*) Had they taken the Pawn with Kt it would obviously have cost them a Piece.

(*f*) Inconsiderate. Having regained the attack, White should have kept it consciously. If, instead of this merely defensive step, they had boldly played out their Kt, they must have won the exchange, we believe, at least. For example —

| | | | |
|---|---|---|---|
| 14 Q Kt to Q B 3rd | Kt takes Q P, or | 15. B takes Kt | B takes Kt |
| 15. Kt takes | Kt takes Q (ch) | 16. P takes B, &c. | |
| *Or* | | | |
| 14 | Q to Q sq | 15. Kt takes B or Kt | |
| 15. P to Q 5th | B or Kt takes P | And then, as before, B takes R, &c. | |

(*g*) Q Kt to K 4th looks promising, but is not really so good as the move made, because in reply White might move their King to Rook's sq, avoiding the threatened peril.

(*h*) Black have undoubtedly a fine attacking game at this moment, but they fail to make the most of it.

(*i*) Kt takes K R P (ch) looked tempting, but would have been imprudent

(*k*) We have grave doubts as to the wisdom of this move.

(*l*) Better certainly to have thrown forward the Q B P, and if White took it, to have retaken with the Queen, threatening a ruinous check by discovery.

(*m*) King to Bishop's 2nd was objectionable on account of Black answering with *Q to Q Kt 6th*.

(*n*) Once more White's star is in the ascendant. They have fairly out-fought all the difficulties entailed upon them by a violent opening, and from this point, with due care for themselves and with the chances of hour for each, they must, in our opinion, have made sure of victory

PRESENT SCORE.

Mr. S. and ally, 4; Mr. L. and ally, 1; Drawn, 2.

### CHESS ENIGMAS.

No. 977.—By HERR RIES, of Stuttgardt.

*White:* K at K B 7th, Q at K 5th, Rs at K R 8th and Q Kt 8th, B at Q Kt sq, Kt at K 8 6th.

White to play, and mate in five moves.

## THE THEATRES, &c.

DRURY LANE.—Passion-week is devoted to entertainments; and the theatres, deprived of the power of performing dramas, resort to other attractions. Actors still like to be acting, and unwillingly rest from their labours during the season of sacred contemplation. Performances analogous to the dramatic, and exhibited on a public stage—such as Mr. Love's and Mr. Woodin's—continue, however, to be exhibited; and the diligent actor feels himself in an anomalous position, from which he seeks to be relieved. Mr. Emery, for one, appears to have determined on making occupation where he could not find it, and accordingly engaged Drury-lane Theatre for a personal semi-dramatic display, consisting of pieces so constructed that all the characters could be played by himself. On Monday he thus appeared in a new comic entertainment, called a "Tale of a Train," in which he represented seven individuals, all arriving at a railway station, the scene of which occupies the stage. Several of these characters were amusing, particularly the two brothers *Muggles*, with their confused notions and memories, and a *Widow Wimpstraw*, still romantic enough to make a second runaway match, and bound for Gretna. This piece was followed by a series of tableaux which were remarkably well executed, Mr. Emery serving for the hero of several great historical pictures. Among these was Oliver Cromwell by the body of Charles I.; as also Napoleon Crossing the Alps, at Fontainebleau, and St. Helena. The resemblance of the actor to the portrait was very remarkable. The performances concluded with a piece, written by O. U. Dyce, Esq., called "Balaclava Bay;" but, from defective rehearsal and fatigue, Mr. Emery was not able to do himself justice, and apologised to the audience for his defective representation, promising a more complete one on the ensuing evening. The house was very numerously attended.

OTHER theatres have been similarly occupied. At the PRINCESS' Mr. Adams has appeared with his annual Orrery; at the ADELPHI Pico produced marvels from his whistle, and at SADLER'S WELLS Miss Emma Stanley exhibited her "Seven Ages." Mr. Woodin's and Mr. Love's entertainments proceeded in their usual course, and have been well attended.

THE principal Easter novelty at ASTLEY'S will be a Steeplechase, which the characteristic resources of the theatre will enable the proprietor to represent with a host of vivid attractions.

INTERIOR OF THE REDAN.—In our journal of last week we omitted to state that the illustration of the Interior of the Redan was copied from the photograph in Mr. Kilburn's Crimean Exhibition.

THE RENTERS OF COVENT-GARDEN THEATRE.—The renters or annuitants of Covent-garden Theatre met on Saturday last to consider the condition of their property. Mr. Surnam, solicitor, attended on behalf of the proprietors, and gave an explanation. The present shareholders, renters, or annuitants represent the original shareholders, who were entitled to £25 a year each for the whole term of the lease, and also to free admissions transferable once a year. In 1832 the proprietors agreed to take £12 10s. a year, instead of £25, and since then the annuities had been regularly paid. The rent of the theatre was £1585 a year. The other charges on the theatre were for taxes, salaries of firemen, salary of Mr. Robinson, and miscellaneous expenses; and the whole of the charges added together amounted to about £6000 yearly. Mr. Surnam stated that he had informed the Duke of Bedford's agent that the proprietors were not in a position to rebuild the theatre. Another conversation ensued, in the course of which it was suggested that Mr. Gye had received £8000 from an insurance company, in addition to the sums received from Mr. Anderson and the concerts, and that they should direct their attention to that point. It was then resolved, on the motion of Mr. Sharpe, that a committee should be appointed to investigate the affairs of the theatre. The 125 annuitant shares are held by 110 persons, including the Duke of Cambridge, the Duke of Devonshire, the Earl of Dartmouth, the executors of the Duchess of St. Albans, and the Marquis of Salisbury. The agreement with Mr. Gye was for a period of ten years, from the 1st October, 1853, at a rent of £6500 for the first three years, and £7000 for the remainder of the term. The theatre was not insured, because the payment of the large sum that would be required for premium was deemed impossible.

## THE FIRE-SPIRIT:

SUGGESTED BY THE DESTRUCTION OF COVENT-GARDEN THEATRE.

Hurrah! hurrah! for the Carnival,
The jest and the laughter—the masque and the ball.
Light-hearted revellers, merry men all,
Hurrah! hurrah! for your Carnival!

Holding your orgies from midnight to noon,
Shaming with riot the glimpse of the moon,
Scaring the day till the sun stands aloof,
Profaning the anthem that rolls to the roof;
Hurrah! hurrah! for the Carnival,
The glare and the glitter—the masque and the ball!
Sport-loving rioters, merry men all,
Hurrah! hurrah! for your Carnival!

I will fling ye a brand that shall dazzle with light
The bounding boards ye have trodden to-night;
Ye have juggled, and mimicked, and played out your *rôle*,
Ye shall dance by my kindled light to the roll up the whole.
Hurrah! hurrah! for the Carnival,
The music and mumming the masque and the ball!
Rant-loving revellers, merry men all,
Hurrah! hurrah! for your Carnival!

Ho! ho! Tramp, tramp go the hurrying feet—
Hark,—hark to the rush in the crowded street!
But wilder, and fiercer, and madder the rout
Shall resound through these walls ere my flames be crushed out.
Hurrah! hurrah! for the Carnival,
The rushing and crushing—the masque and the ball!
Storm-loving rioters, merry men all,
Hurrah! hurrah! for your Carnival!

Fled—fled are the harpers, and hushed is their tuning,
And trampled the women, all shrieking and swooning;
Amid crackling and crashing more loud grows the roar—
Ho! leap to the portal and batter the door!
Hurrah! hurrah! for the Carnival,
The gnashing and wailing—the masque and the ball!
Self-loving revellers, merry men all,
Hurrah! hurrah! for your Carnival!

Look up! the blue ether still bends over all,
Yet the wreaths of my smoke may ere long be your pall;
To show ye—degraded!—one glimpse of the sky
Mid your palsy of horror, my flames leap on high.
Hurrah! hurrah! for the Carnival,
The groaning and writhing—the masque and the ball!
Sin-loving rioters, merry men all,
Hurrah! hurrah! for your Carnival!

Hence! Away in your folly, go scathless and free;
They are purer than childhood that gambol with me:
Speed away like the wind from the flash of my ire,
Nor venture to bathe in my fountain of fire.
Hurrah! hurrah! for the Carnival,
The seething and burning—the masque and the ball!
Show-loving revellers, merry men all,
Hurrah! hurrah! for your Carnival!

The black night is ended, the pure dawn shall rise
With a flush on its brow, and rebuke in its eyes,
While yon flame-blasted walls where my corpse-lights still dance,
Shall stand cowering in shame in the Fire Spirit's glance!

Hurrah! hurrah! for the Carnival,
The wreck and the ruin—the masque and the ball;
Stone-hearted rioters, merry men all,
Hurrah! hurrah! for your Carnival!—E. L. HERVEY.

THE BURNING OF COVENT-GARDEN THEATRE.—FLIGHT OF THE MASQUERADERS.—(SEE PRECEDING PAGE.)

THE DULWICH COLLEGE CHARITY MEETING AT THE ADELPHI THEATRE.

## DULWICH COLLEGE CHARITY.—THE MEETING AT THE ADELPHI THEATRE.

We referred last week to this interesting meeting, and now present an Engraving of some of the celebrities who attended Mr. Webster's invitation to memorialise the Charity Commissioners on behalf of the theatrical profession. The statement made by Mr. Charles Dickens, the chairman on the occasion, proves that the poor player has a strong claim upon the munificent bequest of his wealthy predecessor, Edward Alleyn; and we cannot believe that the modest request set forth in the resolutions given in our last impression can meet with opposition or rejection.

After a few introductory sentences, Mr. Dickens proceeded to say:—

"Our object is to look closely into the history of the ounder of Dulwich College, and in particular to ascertain whether he had any peculiar and close associations with the stage. His name was Edward Alleyn -and he lived in the days of a rather remarkable man, who, although he died a commoner, and never even belonged to any recognised profession, did the state some service—one William Shakespeare. His mother was the wife of an actor. He was bred himself to the stage. His brother engaged in theatrical pursuits and speculations. He married the daughter of the wife of an actor, who was herself an actress. He was himself a famous actor, and a great and prosperous theatrical manager. He was the manager of the Rose and afterwards of the Fortune Theatre, and had a large share, supposed to have been purchased from Shakspeare himself, in the Blackfriars Theatre. He was also one of the two appointed masters of the King's Games. Besides inheriting considerable property, he acquired by the actor's art and the manager's enterprise a great deal of money, retiring from the stage before he was fifty years old; and, being already lord of the manor of Dulwich, he founded there a college for the maintenance and support of one master, one warden, four fellows, six old men, six old women, and twelve boys, to be educated in good literature. To this College, after its completion, he himself retired, and there, wearing its habit, and conducting himself in observance of

SCENE FROM THE NEW DRAMA OF "THE EVIL GENIUS," AT THE HAYMARKET THEATRE.

its rules, he lived, and there he died, and there was buried in the year, I think, 1668, when he was sixty years of age. When his ashes have lain under the chapel of that institution for more than two hundred years a certain useful and very much needed public body, called the Charity Commission, find that his endowment is extremely rich, and capable of great extension—which extension they recommend to the Legislature. Hereupon up rises, true to his art, and true to his trust, another famous actor and theatrical manager of our own times, and prays—always keeping within the proposed extension—pray that one-fourth of the benefits may be awarded to poor players of both sexes, and to the children of poor players. This appeal the gentleman makes in remembrance of the stage which Edward Alleyn graced—in remembrance of the means by which he acquired fame and fortune—in remembrance of his unvarying interest in, and kindness to, the poor actor during the whole course of his life—and in remembrance of the desire which such a man must in all reason be assumed to have had to benefit his own class among others, when he devoted his munificent spirit to the foundation of Dulwich College. In the original gift Edward Alleyn limited the benefits thereof to the inhabitants of certain particular parishes, including his own. Now, these parishes expressly include the very districts about the theatres in which the actors of that time habitually resided. Not to embarrass you with the names of persons and places and dates, it may be enough to say that the rate-books of the liberty of the Clink, in Southwark, are still in existence, and we find on them the names of no less than ten thoroughly well-known actors who were rated to the relief of the poor—two of the highest being Edward Alleyn himself and William Shakspeare. Surely, we could hardly have a more striking corroboration of the intention that must have been in the mind of such a man than the express naming of the districts in which these parties lived. Add to this, that the very first successor of Edward Alleyn, as the master of Dulwich College, was himself an actor; and there is strong reason to believe—I say believe, because the spelling of that age often renders the specific identification of names very difficult—there is strong reason to believe that two of the original officers of that charity were also actors. Add to this also, that at the very period of his life, long after his retirement from the stage, and his retirement to Dulwich, Edward Alleyn never forgot the actor, or was forgotten by the actor, or ceased to be remembered for his fame as an actor. Alleyn himself writes to the former possessor of that ground on which the College now stands, and in which his ashes now repose, the following words, in answer to a request, that he would point out (might have thrown out, that he had belonged to his old profession—"That I was a player I cannot deny, and I am sure I will not. My means of living were honest, and with the poor abilities wherewith God blessed me I was able to do something for myself, my relations, and my friends. Many of them living at this day will not refuse to own what they owe to me. Therefore am I not ashamed." Now, it would surely be a grievous wrong to the writer of these noble words, and a great injury to the memory of the possessor of so much genius and so much capable of having spurned down the ladder by which he had risen, and of setting his face against the road by which he had come. I venture to say that in all biography there is not an instance of any man of honest self-reliance and self-composure ever guilty of so base an action. Accordingly, Edward Alleyn never was. The industry of my friend, Mr. Payne Collier, shows him to us in his habit as he lived; and it is easy, even in his secluded life at Dulwich, to trace many pleasant tendings of his feet towards the old pails, and many delightful tendings of his mind towards the old occupation. When he goes up on an occasional visit on horseback from Dulwich to London, he delights to dine at the theatrical ordinaries, and to surround himself with the old familiar theatrical faces. He has a twelfth-Night party at Dulwich itself, and the boys act a play before the good old player. Late in life his theatre is burnt down; and he immediately applies himself, being at Dulwich, to its reconstruction. One of his old parts, copied out by the theatrical copyist, is found among his papers ages after he is dead. Everything on and about him testifies to the truth and fidelity of his simple heart.'

To the admirable statement Mr. Webster added that so great a fund derived from the previous condition could not be better applied than to the members of that profession, even in a small proportion, feeling that to actors, actresses, and their children, education was of the most vital consequence—that some of the children of actors and actresses might obtain the advantages of Edward Alleyn's generous and noble foundation. Mr. Webster then referred to the sons of actors who had risen to the highest rank in society, as Canning and others, and concluded a long and most interesting speech, by stating that the amount of wealth possessed by Dulwich College was perfectly astounding. The estate consisted of 1145 acres, and Sir Charles Barry had calculated each acre to be worth £1000, so that the total value of the property was £1,145,000. Under good management that estate would realise £50,000 a year, but at present it did not produce more than £8000. He trusted that the actors would be united, and press their claims on the attention of Parliament, and he hoped that in "God's Gift" they would find a "God-send."

The Illustration upon the preceding page portrays Mr. Dickens, the chairman, addressing the meeting.

## HAYMARKET THEATRE.

"THE EVIL GENIUS" is a comedy likely to prove prosperous at the Haymarket, fitted as the leading character is for the style of Mr. Buckstone's humour. Though decidedly a conversational drama, the incidental situations are novel, and for the most part are introduced as surprises. The first act concludes with an instance. In bringing about the incident, the senile postman, with as little interest as possible, is liable to be played on by any one sufficiently interested, is made use of by *Tom Hipstone* for the annoyance of *Hall Cooley*. The stuck-up lady, *Mrs. Montgomery* (Mrs. Poynter), is closeted for his own purposes, and *Cooley* for the world would not have her leave her room by his company; but *Tom* is determined to have her out; and, in order to accomplish his object, puts a trick on *Joe Withers* (Mr. Compton), charging him to give the "View halloo!" right into the lady's chamber. This not only brings the lady forth, but, as the old man is proud of the achievement, and repeats the noise, nearly all the *dramatis personæ* are gathered on the stage; and *Cooley* has, in the best manner he can, to soothe the indignant *Mrs. Montgomery*, whom he escorts from the scene of action as soon as possible. The interest of the drama consists in the petty annoyances of the sort with which the fertile invention of *Cooley's* old friend *Hipstone* is continually occupied, in order to plague him into a recognition of his neglected boy, and break off the match that the ambitious snob is desirous of effecting with a woman of fashion and family, whose only motive for the alliance is the wealth that it will bring to herself. *Tom* is, therefore, really serving not only the orphaned boy, but the unprincipled father himself, though not exactly in the way that the latter would prefer. Our illustration will convey an idea of the manner in which the play is mounted. The scenery, by Calloott, Morris, and O'Connor, is magnificent.

THE *Resolute* steam-transport sailed on Saturday from Liverpool for the Crimea, with detachments of Royal Artillery, who will be landed at Kingstown. She will then proceed to Malta with two officers and 70 men of various regiments. The medical corps, in the ancient Egyptians, and the word bun is derived from the early Greeks. It was a sacred cake, marked with the cross, as depicted in Greek sculptures and paintings. Wickleman also relates the discovery of the hoary pagan buns at Herculaneum: each was marked with a cross, within which were four other lines. Hesychius describes the *boun* as a kind of cake, with a representation of two bulls' feet and the head of Bacchus, the same terms by Julius Pollux. Diogenes Laertius describes "a sacred libra," called a *boun*, and Cecrops is said to have first offered up this sweetbread, made of flour and honey. According to the earliest times of the Christian æra, hot cross buns were the Eulogiæ, or consecrated loaves, made from the dough whence the host itself was taken and given by the priests to the people; they were marked with the cross, also the Good Friday loaf. Long formerly in England, the superstitious preserved Good Friday buns from year to year, from the belief of their efficacy in the cure of diseases; Poor Robin, 1733, his Almanack for 1760, says—

Whose virtue is, if you believe what's said,
They'll not grow mouldy like the common bread.

—(From "Things Not Generally Known Familiarly Explained.") Chelsea buns were formerly sold by thousands on Good Friday, when upwards of 50,000 persons have assembled around the Bun-house at Chelsea, and £260 has been taken during the day for buns. Even so lately as Good Friday, 1835, there were sold at Chelsea 240,000 buns during the day.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE Funds have been remarkably steady this week as regards price; but the money business transacted in them has been comparatively small. Evidently, the late continuous upward movement in the quotations was the result of peace prospects; and, now that they are nearly realised, we have a very slight difference in the price of Consols and Three per Cents for the first quarter—at least, an impression has gained ground that the highest point of value has been reached for the present.

The resumption of specie imports from America—a most convincing proof that our trade with that country is increasing—is regarded in a most satisfactory light. Over £10,000 has come in; but it is stated that about one-half of that amount will go to France; and there may be remarked that we continue to receive small remittances, as balances, both from France and Turkey, notwithstanding that gold is still purchased for the Continent. In addition to the above supply, about £25,000, chiefly in silver, has come to hand from Belgium, and £85,000 has been reported from Mexico. The shipments have been £411,020—£400,720 being in silver, and £7300 in gold—to India, China, &c., and about £100,000 to other quarters.

There is still a full average supply of money in the Stock Exchange; and less difficulties have been experienced in obtaining discounts in Lombard-street. The rates, however, have ruled high—the lowest being 6 per cent per annum for the best 60-days' bills.

On Monday very little change of consequence was quoted in the value of the National Securities. The Three per Cents for Money were 92¾ to 92, and for the Account, 92¾. Exchequer Bills marked 1s. dis. to 1s prem; and Exchequer Bonds, 98¾. The market on Thursday was steady, and the quotations were well supported. The Three per Cents for Money were done at 91¾ to 92¾; for Account, 92¾ to 92¾. India Bonds, 10s. discount; Consols Scrip, 2¾ prem.; Exchequer Bills, 1s. dis. to 2s. prem., Exchequer Bonds, 98¾ per both series. The dealings on the following day were by no means extensive; but there was a much better feeling in the demand for Exchequer Bills, which realised 1s. dis to 5s prem. The Three per Cent Consols were 92¾; New Three-and-a-Half per Cents, 7½; India Bonds, 6s. 8s. dis.; Consols Scrip, 2¾; Exchequer Scrip, 2¾ prem. On Thursday very little business was done, yet prices ruled firm. Consols were 92¾ ¾ for transfer, and 92¾ ¾; New Three-and-a-Half per Cents, 75; India Stock, 225 to 227; Consol Scrip, 2¾ prem.; Exchequer Bills, 1s. to 5s. prem.; Ditto, Scrip, 2¾ prem. The dealings in the Foreign-house have been generally devoid of interest: nevertheless, the quotations have ruled tolerably firm. We have had transactions in Granada One-and-a-Half per Cents New Active at 21; Mexican Three per Cents, 20¾; Peruvian Four-and-a-Half per Cents, 70¾ ex div.; Russian Five per Cents, 104 ex div.; Russian Four-and-a-Half per Cents, 88¾; Sardinian Five per Cents, 92½; Spanish Three per Cents, 45¾; Ditto, New Deferred, 25¾; Ditto, Passive, 7¾; Ditto, Committee's Certificate of Coupon, 6½ per cent. Turkish Six per Cents, 1839, 103 per cent; Ditto, Ditto (guaranteed), 100¾; Ditto, Two-and-a-Half per Cents, 63½; Dutch Four per Cents, 96; Buenos Ayres Six per Cents, 88¾; Equador New Consolidated, 14¾; and Portuguese Four per Cents, 4.

The last return of the Bank of France shows the following results when compared with the previous month:—

| | | | |
|---|---|---|---|
| Coin and Bullion .. .. .. .. | £8,353,893; | decrease | £11,360 |
| Bills discounted .. .. .. .. | 17,985,893; | decrease | 393,900 |
| Notes in Circulation .. .. .. | 14,764,400; | decrease | 342,400 |
| Treasury Balance .. .. .. .. | 3,431,200; | increase | 1,174,200 |
| Private Deposits .. .. .. .. | 5,052,000; | decrease | 291,500 |
| Advances on Public Securities .. | 5,447,600; | increase | 7,100 |
| Advances on Railway Securities .. | 1,837,900; | increase | 7,100 |

We learn from the above return the loss upon the issues of bullion in this country, during last month, was £52,000. The increase in the Treasury deposits is not large, when it is considered that the dividends upon the Four-and-a-Half and the Four-per-Cent Rentes are just due, and which will require £3,459,000.

Most Mining Shares have met a dull market:—St John del Rey have marked 95¾; Cobre Copper, 67½; Sortridge Consolidated Mining Company, 3¾; United Mexican, 3¾.

The business doing in Joint-Stock Bank Shares has been limited; but prices have ruled firm. Bank of Egypt have realised 18¾; Bank of London, 65; Chartered of Asia, 5¾; London Chartered of Australia, 1½; London and Country, 4; London and Provincial, 7¾; London and Westminster, 11¾; Oriental, 14¾; South Australia, 8¼; Union of Australia, 72½; Ditto, New, 7¾.

Miscellaneous Shares have sold as follows:—Australian Agricultural Company, 10¾; Canada Land, 8¾; Canada Provident, 1¾; Crystal Palace, 2¾; General South American, 2¾; Hudson's Bay, 16¾; Imperial Brazilian Mining, 1¾; Imperial Ottoman Bank, 11¾; Land Corporation of Canada, 1¾; Liverpool Commercial, 1¾; Peninsular and Oriental Steam, 86¾; Royal Mail Steam, 79½; Van Diemen's Land, 14½; Victoria Government Six per Cents, 104.

There have been a few transactions in Ashton and Oldham Canal Shares at 14; Loughborough, 55½; Oxford, 19¾; Regent's, 4¾; Leeds and Liverpool, 420; and Monmouthshire, 75¾. Railway Shares have marked 68¾; Kent, 7¾; Grand Junction, 70¾; Hungerford Bridge, 12; London Docks, 100; St. Katherine, 83¾; and Southampton, 38¾.

We have to report a very moderate amount of business in the Railway Share Market. Prices, however, have slightly improved. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 45; Bristol and Exeter, 90; Caledonian, 60¾; Chester and Holyhead, 14; Eastern Counties, 9¾; East Lancashire, 78¾; Edinburgh and Glasgow, 80; Great Northern, 88¾; Ditto, A Stock, 79¾; Ditto, B Stock, 12¾; Great Southern and Western (Ireland), 80¾; Great Western, 57¾; Lancaster and Carlisle, 100; London and Blackwall, 10¾; London and North-Western, 102; London and South-Western, 87½; Manchester, Sheffield, and Lincolnshire, 47¾; Midland, 67¾; Ditto, Birmingham, 74

## AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—On EASTER MONDAY, March 24, and Every Evening, the new and greatly successful Comedy of "The Ex-Leaguer." After which the renowned Spanish Dancer Sonora Pauce Noca, with Manuel Perez and a new company of Spanish Dancers, will appear in a new Ballet Pantomime, entitled "El Gamberrista; or, the Madrid Gobbesche." The Music composed by Edward Filewell, and the New Scenery by Mr. William Calloott. And "Lend Me Five Shillings."

ROYAL PRINCESS' THEATRE.—On EASTER MONDAY, A WONDERFUL ENTERTAINMENT, which will be revived (first it is this season), FAUST AND MARGUERITE (and first time) a new Farce, called a PRINCE FOR AN HOUR. To-day, THE FIRST PRINTER. After which (first time) a Comedy in One Act, called THE VICTOR VANQUISHED. And a PRINCE FOR AN HOUR. Wednesday, LOUIS XI. To-morrow, THE VICTOR VANQUISHED. And A PRINCE FOR AN HOUR. On Saturday (last night but one) HENRY VIII. THE VICTOR VANQUISHED. And A PRINCE FOR AN HOUR. Friday, A WONDERFUL WOMAN. FAUST AND MARGUERITE, and A PRINCE FOR AN HOUR. Saturday, THE [illegible] BROTHERS. THE VICTOR VANQUISHED. And A PRINCE FOR AN HOUR.

ADELPHI THEATRE, EASTER MONDAY, and DURING THE HOLIDAY AMUSEMENT will be given Monday DOMESTIC ECONOMY. Mr. Wright, URGENT PRIVATE AFFAIRS. Messrs. Wright and Paul Bedford. And, TIME AND THE HOUR. Mr. Keeley, Wright and Paul Bedford. And, THE MAN WITH BLUNDERBUSS. Mr. Keeley, Wright and Paul Bedford. Tuesday, Mr. Keeley, Wright and Mother Goose at Home Again. Jack of Harlequin. Madame Celeste. Mother Goose and Columbine—Miss Wyndham.

ASTLEY'S EASTER ATTRACTIONS.—A GREAT SPRING MEETING AND NATIONAL STEEPLECHASE.—Mr. COOKE announces a striking novelty for the above title, introducing his new Racing Stud and daring Jockeys; with the inspiring and exhilarating Chase over hill and dale from the starting to the winning post. All the elaborate and complicated machinery of the Amphitheatre is made available to give due effect to this gigantic spectacle, the realisation of a general Steeplechase. First appearance of the Twin Rose-dancers, the Misses Berry. Also, the GREAT RIVAL, and all the celebrated Spectacle Equestre. THE ARAB OF THE DESERT AND HIS FAITHFUL STEED, the horse trained by Mr. W. Cooke. After which, a New Series of Scenes in the Circle with (first time) an Act called THE POSTMAN'S KNOCK; Grand Act of DOUBLE LIGHT HOPE. To the Misses Berry, the new and original Drama, GREAT SPRING MEETING AND NATIONAL STEEPLECHASE; and other Entertainments.

GREAT NATIONAL STANDARD THEATRE, [illegible] Proprietor, Mr. JOHN DOUGLASS [illegible] Mr. HARRISON and Miss REBECCA ISAACS. Shakspeare's Play of KING JOHN will be produced on EASTER MONDAY. King John, Mr. C. Dillon; Constance, Miss Glyn; Lady Constance, Miss Glyn; Prince Arthur, Miss [illegible]. The Actors will be employed in this magnificent production. Miss Rebecca Isaacs will also appear in Opera.

MR. CHARLES OKEY'S PARIS, PEOPLE, and EXHIBITION. CARICATURE. PIANO, ROUGH SKETCHES, EVERY EVENING, except Saturdays, at 8. TUESDAY and SATURDAY MORNINGS at 3. Admission, 1s.; Stalls, 1s. 6d.—REGENT GALLERY, Quadrant, Regent-street

LOVE, the first Dramatic VENTRILOQUIST in Europe, EVERY EVENING at EIGHT o'clock, except Saturday, at Three. Stalls, 2s.; Area, 1s.; Gallery, 6d. Tickets at Mitchell's, Royal Library, 33, Old Bond-street; and the Box-office, from Eleven to Three. Piano, Miss J. Warman. Regent Gallery, 69, Quadrant, Upper Hall.

DR. KAHN'S ANATOMICAL MUSEUM, consisting of 1000 highly-interesting Models, representing every part of the Human Frame in health and disease, also Wax-work Faces of Men, &c. LAUNCH OF THREE IRON SCREW STEAM-VESSELS, AT NEWCASTLE-ON-TYNE.—(SEE PAGE 312.)

# EXHIBITION OF THE BRITISH INSTITUTION.

SECOND NOTICE.

The present Exhibition at the British Institution may be divided into two classes—one a very small class, the other a very large one. The small class comprehends some twenty artists who have either already sold the pictures they exhibit at good prices to purchasers of taste, or who rely on the intrinsic value of the works they contribute and the market value of their names for the sale of what they send at the printed prices to be seen in the Catalogue. The other class consists of artists somewhat out of favour with the dealers—artists perhaps a little too prolific—artists whose works are somewhat of a drug, whose pictures stick to easels and walls, and won't go off, and therefore must be changed; and of that struggling class of young men eager for reputation, who court distinction, who gain or defy criticism, and who acquire patrons, or do without them. Many a young man has risen into reputation through that pleasant Exhibition the British Institution—many a young man has added to his present comforts through it, and many an old artist has sensibly increased (by the opportunities it affords) the little funded property he has acquired, with a prudence not too common, we fear, among artists.

We resume this week our criticisms, purposely restricting our observations to the pictures we engrave.

These pictures are five in number, viz. —

"Severe Weather," by G. R. Ansdell.
"Little Gretchen," by H. Le Jeune.
"A Scene suggested by the Death of Pompey," by T. Danby.
"From Our Own Correspondent," by W. Hemsley.
"Lynmouth, North Devon," by J. Holland.

Mr. Ansdell supplies that place in the annual Exhibition of the Institution which Sir Edwin Landseer was wont to fill. He is to Landseer what Lover, in song-writing, is to Moore;—or, as some suggest, what, in the same winning art, Robert Burns is to Allan Ramsay. There can be no doubt that Mr. Ansdell has acquired much of that art which makes him so deservedly popular from a careful study of the works of Sir Edwin Landseer. There can be as little doubt that, without the advantage of such a predecessor, he would have been a great painter, for he looks on Nature for himself, and studies her with an observant eye and a careful hand. Could Morland have had the advantages of Landseer and Ansdell, he would have been a greater painter than even his many admirers so ardently assume he is.

"LITTLE GRETCHEN."—PAINTED BY H. LE JEUNE.

Artists, collectors, and dealers occasionally differ with respect to the superior excellence of those joint pictures in which Mr. Ansdell works with Mr. Creswick, or of those in which he courts renewed public approbation by his own hand alone. There is, no doubt, an extra enchantment of distance and a poetic freshness in the landscapes which Mr. Creswick contributes to their joint efforts; so is there, on the other hand, an additional advantage in the animal life (from its size and importance) in those pictures which Mr. Ansdell paints without the avowed assistance of his friend When Mr. Ansdell aids Mr. Creswick, animal life is lost a little in poetic landscape; when Mr. Creswick calls in Mr. Ansdell to his assistance, poetic landscape is lost a little in animal life. Horses, and asses, and cows, and deer, and dogs, give way to trees, and streams, and hedgerows, and pools, and village stiles, and church spires, and picturesque mills; so, on the other hand, do Early English spires and picturesque village stiles give way to well-trained dogs and the rest of the brute creation already enumerated. Without pretending to decide on so-much-canvassed a question, we will express the pleasure we feel in continuing to observe that Mr. Ansdell and Mr. Creswick sometimes paint together, and that sometimes they paint alone.

In the picture of "Severe Weather," Mr. Ansdell's masterpiece in the present Exhibition (and engraved in our present number), he has not called in or required the assistance of Mr. Creswick. Very fine and truthful it is. The shepherd and his dogs are equally cowering from the cold, bitter, biting blast that blows so pinchingly on the stones which serve (but indifferently) to protect them from a Scottish north-east wind. Very life-like is the entire scene. True to Highland characteristics and Highland nature. As true to the Highlands as Mr. Macaulay's marvellous description of the Pass of Glencoe in the recently-published volumes of his History. Mr. Ansdell's "Severe Weather" reminds us of a picture by Gainsborough, representing a shepherd boy sheltering himself from a pelting storm. He is behind a hedge, looking up poetically and imploringly, as it were, to the heavens to protect him from so raging a tempest. The picture itself we have never seen (we have inquired after it in vain); but in the noble engraving of it by Richard Earlom (the engraver of Claude's "Liber Veritatis") the poetic shepherd boy is put on the wrong side of the hedge. The rain is blowing most bitterly upon him. The mistake was, no doubt, made by the engraver, who [neglected to reverse the picture. Gainsborough, a Suffolk lad, with a fine eye for nature, would scarcely have committed so grave a mistake.

Our second Engraving from the Institution—"Little Gretchen," by Le Jeune—is one of those happy elaborations that will entitle it to be ranked with some of the best cabinet specimens of the Dutch school. Ex-

"A SCENE SUGGESTED BY THE DEATH OF POMPEY."—PAINTED BY T. DANBY.

## ART REFORM.—No. III.

### THE NATIONAL GALLERY, ITS DESIDERATA AND DEFICIENCIES.

BEFORE we break ground on this interesting subject we cannot avoid expression of our regret at the dispersion of the great and unequalled collection of Charles I.; and that a Monarch with so high a sense of beauty should have so deplorably mistaken the depth in which liberty, personal, religious, and municipal, was rooted in the Saxon race. This grave, splendid, and ill-fated Prince lived just at the period when the great school was coming to a close, when naturalness and individuality of character and expression were still conjoined with the ideal, and before the embodiment of beauty had in the latter part of the *sei-cento* been diffused into a vapid generalisation. He lived in the century that followed Raphael and Michael Angelo in the generation that followed the eclectic revival by the Carracci, and his reign was contemporary with the schools of Bologna and Antwerp during the period of the greatest activity of Guido, of Domenichino, of Rubens, and of Vandyke; all these four great artists having died within about a year of the commencement of the civil wars with which the golden age of British art patronage on the grand scale may be said to terminate.*

To the productions of these truly great men succeeded the pleasing works of the Marattas, Cignanis, and Dolces; followed in turn by the soulless academical erudition and mechanical skill of the Mengses and Battonis. But, when the latter conveyed his pallet to Louis David by a testamentary disposition a new era was at hand, and from the school of this classico-republican dates the glorious revival of art by modern France. From his frigid and unaluring, but chaste and severely conscientious, style and tuition arose a Gerard, a Girodet Trioson, an Isabey, a Gros, a Leopold Robert, and an Ingres; while Guerin, his imitator, and in some respects his rival, had for pupils a Gericault, a Paul de la Roche, an Ary Scheffer, and a Eugene Delacroix. It is, therefore, with some regret, but with no envious feeling, that we remember our brilliant commencement, and note the superiority of our neighbours in the acquisition of the works of the great masters for public exhibition and in modern productions, belonging to the highest walks of art, notwithstanding the confessed superiority of our pecuniary resources.†

But individuals in England have done wonders. The school of Reynolds and his contemporaries, and his beautiful literary compositions, elevated English taste from the slough into which it had fallen in the middle of the eighteenth century, and then came the revolutions of the Continent, with the dispersion of its private collections, at a period when our own wealth was flowing in from the discoveries in mechanical industry, from the monopoly of the commerce of the world during the French war, and the consequent rapid rise in the value of land and in the revenues of the classes having leisure to cultivate the arts.

In all the countries that, since the French Revolution of 1789, have abolished the law of primogeniture, it has become almost impossible to secure collections remaining in the family from generation to generation; family portraits are, of course, excepted in the compulsory division that often takes place. For instance, in the late interesting exhibition of pictures from the private collections in Belgium, for the charity of St. Vincent de Paul, the chief gems were not gallery pictures, but some wonderful portraits by Rubens and other artists, which had never gone out of the possession of the families. With the exception, therefore, of about a score of highest class gallery pictures in half a dozen public galleries which never were or could be in the market, we believe that there are now as many good pictures in England as in all the rest of Europe.

But our public collection, in extent and variety, leaves much to be desired. With regard to its establishment we may say better late than never; and with the original Government grant of £60,000 for the Angerstein pictures, and the bequests and presentations of the Rev. Mr. Holwell Carr, Sir George Beaumont, Lords Farnborough, Northwick, and other munificent individuals, we have one of the choicest and most charming collections in Europe. We are promised an historical arrangement, and we have full confidence in this being done in an efficient manner, and with a skilful juxtaposition of tones under the accomplished direction of Sir Charles Eastlake. We are also promised a new edifice which can accommodate the additions desired by persons who wish to see the collection acquire a comprehensive and encyclical character so as to include at least one fair specimen of every considerable master. Even now so crowded is the space disposable, that many interesting pictures are put so high out of sight, or shoved so sharply into the corners, that a direct view, or one within a natural and pleasant compass of the eyeball, is impossible.

The present edifice having been generally disapproved from the first, and finally condemned, we content ourselves with indicating on æsthetic grounds the peculiar cause of its failure as a piece of street architecture. We do not quarrel with the cardinal conception that of a colonnade echoed faintly towards the wings—*for*, if you will faint colonnades converging to a central climax—a principle that has been often carried out with success: it is in the composition or putting together that the architect has failed so miserably. To us the chief eyesore is not the much-bequizzed pepper-boxes, but the violation of the first rule of beauty in architecture, which is, that the eye should at once perceive the relation of parts of a façade to the whole. The great space of dead wall between the colonnades so diffuses the original conception that the result is chaotic. Even if some enchanter were to cut thick slices out of the intervening spaces and relate the colonnades contiguously and intelligibly to each other, we should still be puzzled to say whether the Venetian magnificence of Pall-mall, or the sumptuous interiors of the Louvre present the more disagreeable contrast to the ill-favoured baldness of the architecture of our National Gallery, without as well as within.

The Gallery in its present state is rich in pictures of the Venetian school; in Guidos (school of Bologna), and in the Italianised Frenchmen of the seventeenth century—Claude, Poussin, and Dughet; and contains many valuable and interesting specimens of the schools of Spain and the Netherlands. In a succeeding article we will point out in detail what is requisite to give it a more comprehensive and encyclical character—not in a spirit of mere idle dilettanteism, but from the conviction that no public exhibition is so universally instructive as a comprehensive picture gallery none that gives more profound lessons to the historian and the philosopher. For instance, the science of race is to the politician and the physiologist the great science of this epoch; but few have the opportunities to acquaint themselves by travel with the fitness or unfitness of national character for political institutions; few can read the various literatures of Europe in their original language; few can compare the fervid, impassioned, subjective Dante with Shakspeare—the greatest master of objective literary power. But in a picture gallery we see at once the contrast between the genius of the North and the genius of the South. When we look into the works of the early German artists, with their erudition, their ingenuity, their persevering observation of Nature, their literal manner of translating her, and their Shakspearean juxtaposition of the sublime and vulgar, and compare them with the earlier and middle Italians, we see that they differ not only in the degree but in the nature of their genius. That fire divine that in the glowing South idealises form, and systematically rejects the grotesque, however true, to the letter of nature, was not from the mere adventitious circumstance of Italy being the land of the discovery and exhumation of the antique, as superficial fine art scribblers have been telling us these two centuries, but from the Francias, Raphaels, and Garofalos being made of the stuff from which the antique was itself produced.

But, without going into recondite speculations which can interest only the few, there is surely in the Picture Gallery enough of the obviously pleasing and instructive to interest the great mass of the general public. In our next we shall proceed with the schools in detail.

* Rubens, ob. May 3, 1640; Domenichino, ob. April 15, 1641; Vandyke, ob. Dec. 9, 1641; Guido, ob Aug. 18, 1642

† We are now speaking of the nineteenth century, and not of the present crisis, when every spare sovereign should be devoted to the great objects, political and military, which we have in hand

## ST. JAMES'S PARK.

THE "right of way" through St. James's-park and its beautiful inclosure has been for many a generation the subject of active controversy between the Royal Lords of the soil and the metropolitan public. Up to a very recent period the great point of dispute turned upon the question whether the liege had any title to traverse, or even to enter, the demesne for any purpose or in any direction. Their presence there at all times was considered merely permissive. They were supposed to visit those sacred precincts at the special invitation of the reigning Sovereign, who could confer, enlarge, or withdraw the privilege of access or transit at his good pleasure. Almost the first mention which gossipy Pepys makes of the Park—where he afterwards so often lounged with curious mind, distracted between the hydraulic operations going on in the centre, and conversations proceeding between the King and "Mistress Nellie" at its northern border—refers to the impermeability of the enceinte. At that time a canal, or wet ditch, divided the Whitehall Tilt-yard, which is now the Horse Guards' parade, from the central inclosure of the Park; and his Journal records how the park-keepers "hunted" certain wretches who carried trespassing citizens across the aforesaid ditch. Since then the privilege of entrance, first at one gate, and then at another—first to one class of pedestrians, then to all—has been conceded and enjoyed so long that it has become a matter of prescription. It is nearly a century since Walpole made his famous estimate of the probable cost ("only three crowns!") attending the Royal scheme for inclosing the Park, and converting it into pleasure-gardens for the palace. Yet the privilege of entrance and exit is even still surrounded with certain formalities, and granted with such restrictions, as prove that after all it is derived from Royal favour, not of public right

Within a comparatively recent period the gate was barred to servants in livery, even to soldiers in uniform. Persons in working attire or carrying burdens are still denied entrance at the discretion of the gate-keepers, who have sometimes turned away studious members of our own craft, merely because they were conveying home a few just-purchased volumes under their arms. Dogs, also—to the sorrow of children—must obtain a permit from the janitors before they can be allowed to enter the domain of green turf and tame water-fowl.

Yet, in justice to the Sovereigns, it must be confessed that the ground which for so many generations they treated as their own property was really acquired, planted, improved, and beautified by themselves. The history of St. James's park presents little more than a constant series of Royal purchases and patronage up to within a very few years ago. About five centuries since this site consisted of fields belonging to the hospital, where, from a very early period, the piety of "certain citizens" had provided an asylum for "fourteen poor sisters, maidens, who were leprous." In addition there was latterly provision made for eight brethren, who assisted in the performance of Divine service. In the year 1532, or thereabouts, King Henry VIII., coveting the locality, exchanged the estate for some land at Chertsham, in Suffolk. He had not then reached the climax of confiscation in his reformatory dealings with ecclesiastical properties. The poor diseased inmates of the hospital were then dismissed and provided for by small pensions. When possession was thus obtained and the ground cleared, the old hospital was pulled down, and a big edifice, the nucleus of the present palace, but for a long while called only the St. James's Manor-house, erected in its place, after designs which Holbein is said to have furnished. The adjacent fields were at the same time inclosed into a park. Thus, for the first time, was St. James's-park created and became a Royal pleasance and demesne. Neither in outline nor surface could the new Park present much resemblance to its modern condition. A huge slice of the present enceinte, on the west, until long after wards constituted the Tilt yard and other appurtenances to the Whitehall Palace. In other directions the Park stretched considerably beyond its present boundaries, including much ground in Pimlico, and the site subsequently converted into the celebrated Mulberry-garden, and now forming part of the private ground belonging to Buckingham Palace. The surface of the soil also, at this time, was irregular and hilly, interspersed with a rough growth of underwood and trees, where herds of Royal deer were nurtured, and occasionally hunted. There were several lakes and pools of water in the hollows; one of which, called Rosamond's-pond, was long considered an eligible spot for sentimental suicides. By the immediate successors of Henry VIII. the Park was much improved in many respects. But, of all our Kings, the name of Charles II. will be chiefly connected with St. James's-park. Practically he did more for its improvement and embellishment than any other. He levelled the surface, planted avenues of trees, turned the series of ponds into a handsome canal (all but the Rosamond's-pond), substituted broad gravel walks for the former paths, formed a decoy for ducks at one end, and inclosed a space in the interior for ornamental gardens. Before his time the area presented no-thing but an open green park. Personally, also, his Majesty haunted the place, continually making it the scene of daily promenades, of playing at the pall-mall, and of love-talk with Nell Gwyn over her garden wall.

During the next century and a half there were few changes of importance effected within the Park, although many transformations took place around it. In 1826 and two following years a more picturesque outline was given to the canal; and the grounds within the inclosure were remodelled and planted out. The Park then assumed its present aspect; the only subsequent alterations comprising some trifling retrenchment of the inclosure opposite Marlborough-house, a new façade of Buckingham Palace—which, insignificant as it was, gave occasion for some vivacious remonstrances in Parliament at the time

But the world outside had undergone most miraculous changes during this period. London had embraced St. James's-park in its ample folds. The thin fringe of mansions along Piccadilly formed the earliest deposit of buildings, which finally increased by successive strata of squares and streets, until the mass stretched two or three miles in breadth towards the north. On the west Grosvenor-place arose—and then arose a new city behind it, and this, expanding southwards, in course of time met Westminster, expanding westward; and between them filled up the whole space between the Park and the Thames, and along the banks of the river right up to Chelsea, and further than that. With new populations growing up on every side, the right of way across the Park assumed a far more important character than heretofore. Nevertheless, the privilege of transit remained—and still remains in law merely permissive. The Crown is absolute landlord and owner in fee simple; and if the subject enjoys access it is solely under favour of the Sovereign. The dates at which different gateways and entrances were opened are set forth in the "Curiosities of London." In Charles II.'s time it appears that the northern boundary of Pall-mall was ill-defined, and coaches passed along it until his Majesty, finding the dust inconvenient while playing at his favourite game, diverted the vehicular traffic into a new street bearing a similar name, limiting the Park route to pedestrians. On the opposite side, during his reign, lived Storey, keeper of the Royal aviaries in the Park, who bequeathed his name to a gate opened at that point, and still called Storey's-gate. Dutch William, in 1699, opened the entrance from Spring-gardens, and made it free to the public. The gateway leading into Queen-square, when adjoined Milton a old house in Petty France, was opened at a much later epoch, namely, in 1770, when Rosamond's pond was filled up. Down to 1828 the carriage-road skirting the Birdcage-walk and debouching by Buckingham-gate was practicable only for members of the Royal family and the Duke of St. Albans as Hereditary Grand Falconer. The routes along the Mall and up Constitution-hill, though less jealously guarded, are even still reserved for a privileged few.

Recent changes in the management of the Crown properties have been accompanied by no alteration in the legal tenure or technical control over the Royal parks. The Board of Woods and Forests is intrusted with certain administrative functions, and the House of Commons is asked for an annual vote for maintenance; but the Crown is still owner of the property; and its selected officer, the Ranger, continues to exercise a paramount and indisputable authority over the demesne. At various recent interviews with deputations, Sir B. Hall has confessed his official inability even to "divert a pathway" without instruction from the Crown; and has drawn a somewhat indiscreet contrast between the "Royal parks" ancient proprietorship and the "People's parks"—such as the Regent's or Victoria—whose establishment was solely due to Parliamentary patriotism and public money. At present, no doubt, both are equally maintained in decent order at the public expense; but the practical control of the public purse-keepers, the House of Commons, over the two descriptions of property is very different.

Just now the "right-of-way question" presents itself under an inverted aspect. The public are interested not in establishing their title to enter and traverse the Park, but to prevent the quiet and repose of their pleasant garden being disturbed by the rush and throng of general traffic. This calamity has been threatened under the same authority which erewhile asserted its title to forbid entrance altogether at any point to a Royal domain. The Chief Commissioner of Woods, &c., repudiates all responsibility in the matter except that of a mere executive functionary. He has been ordered, as he stated the other day, to prepare plans for a road and bridge across the inclosure and ornamental water, leading in a direct line from Queen-square to the end of Pall mall. These plans he has had prepared, as in duty bound; but knew nothing further about them. Their future history rested not in his department. The Home Secretary, when subsequently appealed to, also passed on the responsibility: his department had nothing to do with the scheme. But Sir George Grey held out consolation to the public, that not a sod could be turned or pile driven in execution of the project without applying to Parliament for leave and money—either or both of which of which the representatives of the public might think proper to withhold. This security would be valid enough, if we did not know the circumstances under which the Miscellaneous Estimates are generally carried through Committee. At a late hour, with a scanty attendance of members, and eased over any casual obstruction by a glib "explanation" from some well-primed under secretary, the most questionable votes are affirmed Session after Session. If the vote, as in this case, involves only a small outlay, so as not to alarm Mr. Williams, and can be represented as an actual surrender of aristocratic privilege to public convenience, by as much the more likely is it to pass without demur.

Yet the real damage which the accomplishment of this design would inflict on the public is indisputable. The whole area of the Park is only 87 acres, and that of the intended portion little more than half that extent. If fenced by a road, the two severed moieties would be deprived of all value as a place of public recreation. Between the noise, the whirl, and dust accompanying the stream of vehicles, the danger to children, and the disturbance of every body, the proposed thoroughfare would utterly destroy the unity, and obliterate the beauties, of St. James's-park. And the ostensible motive is so slight. From end to end in a straight line the inclosed area measures barely 600 yards. Literally, it is hardly so long as the Exhibition Building of 1851. If the route were thrown open around the western skirt of the railing, the distance to be traversed by vehicles would not, at the utmost, be lengthened more than half a mile. By this brief extension of the journey to be accomplished, when Pimlico, or rather Westminster, wishes to visit Piccadilly, the only real people's gardens accessible to the London public, will be saved from destruction.

The chief difficulty lies in the anomalous condition under which the Royal estates are now administered. When the first Monarch of the Hanoverian dynasty took his first day in Buckingham House, he had an opportunity of discovering this perplexing inconsistency. "I was shown," said George I., "in the morning, a park and lake, which I was told were mine. In the course of the day a brace of carp were brought to me by the ranger, and I was told that I must pay five guineas to my own servants for my own fish caught in my own canal." The public seem in like manner perplexed by the various propositions for treating the property which in their turn they had be-lieved to be "their own." At the last moment, however, and after London had suffered anxiety and Sir Benjamin Hall fallen into unpopularity for many months—as it now turns out quite gratuitously—the enigma was referred to that Constitutional Œdipus, a Parliamentary Committee. The report from this tribunal was presented on Friday week, and quite sets our mind at rest respecting the safety of St. James's-park. The plan which the Chief Commissioner of Works was "instructed to perform" is summarily rejected, together with some other rival schemes; and the mode in which the Committee recommend the accomplishment of the desired object viz., readier communication between Pall-mall and Pimlico comprises the following changes:—1. A carriage entrance at Marlborough House and roadway, thence along the north side of the Mall, nearly to the end, whence it diverges southward in front of the Palace to Buckingham gate. 2. A roadway from the bottom of Waterloo-place across the Parade-ground to Storey's-gate—involving, of course, the removal of the York Column and steps, and the artificial mounds whereon they stand. 3. A carriage entrance to the Park from Trafalgar-square. And 4. The Committee suggest that a light foot-bridge should be thrown across the ornamental water about its centre would be very useful to pedestrians to or from Westminster, and unobjectionable to every one else.

The items of this scheme are obviously independent of one another. Parliament may accede to all or reject each of them. It remains but to add that for the execution of roadway and entrance No. 1 about £25,000 will be wanted, and £30,000 for No. 2, including the estimated cost of rebuilding the Duke of York's column elsewhere.

THE MONEY-ORDER OFFICE IN THE CRIMEA.—During the first four weeks that money-orders have been issued in the Crimea, more than £7000 has been transmitted to England. But for the facility afforded by the Post-office, there can be no doubt that by far the larger part of this considerable sum would have been squandered here in vicious indulgence, instead of contributing to the comfort of many a humble home. Credit is certainly due to the Post-office abroad, as well as the Post-office at home in England, by whom, as I understand, the innovation was first proposed, with the certainty of its occasioning them no small additional labour and responsibility. One can but regret that the plan was not adopted in the commencement of the war, when it assuredly would have greatly diminished drunkenness, and have had a beneficial effect upon the army. It is to be observed that hitherto the demand for orders has progressively increased, and as yet shows no symptoms of slackening. £7000 in four weeks is at the rate of £91,000 a year; and, as the money received is paid to the Commissariat it would have been so much less to remit from England for the wants of the army. And this gain to the public purse would have been rescued from the usurers and Greek venders of abominable spirits, who, up to a month ago, have benefited by the sad sufferers' own case.—*Letter from the Camp, Feb* 29.

CIVILISATION AND DEPOPULATION.—The Hawaiian nation, which, seventy years ago, was estimated variously at from 200,000 to 400,000, now only counts 72,000, a decrease within this period of at least two-thirds. Vast tracts of land do not harbour a human soul; fertile kalo lands, once under cultivation, are left to the rule of grass and weeds. The island of Kauai, remarkable for the productiveness of its soil and capable of sustaining a population of at least 100,000, contains only 6000. It is not to cruel and devastating wars that we have to attribute this unparalleled falling off in so short a time. The wars of Kamehameha I., however energetically they were carried on, cannot in the remotest degree be compared, so far as waste of life is concerned, with those of modern civilised nations. And it is after those wars, moreover, after the blessings of civilisation were transferred hither, that the blight falls most mercilessly on this doomed people. The cause of the evil is an internal one, not caused, but increased, by external influences. Its investigation resolves itself naturally into these two questions—the scarcity of births and the frequency of deaths.—*Polynesian.*

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"*A little chink may let in much light.*"—OLD PROVERB.

### NOTES.

REPORTS OF PARLIAMENTARY DEBATES IN THE "GENTLEMAN'S MAGAZINE."—Boswell tells us that Dr. Johnson, in 1740, succeeded Guthrie the historian, as reporter, or rather composer of the speeches in Parliament; and in an entertaining account of a conversation which took place at Foote's table (when Dr. Johnson, Dr. Francis, Mr. Wedderburne, and Boswell were in company), on the subject of a debate which occurred during Sir Robert Walpole's administration, the Doctor relates how the speeches were made up:—"Cave had interest with the doorkeepers; he and the persons employed under him gained admittance; they brought away the subject of discussion, the names of the speakers, the side they took, and the order in which they rose, together with notes of the arguments advanced in the course of the debate. The whole was afterwards communicated to me, and I composed the speeches in the form which they now bear in the Parliamentary debates." So far as Dr. Johnson was concerned, this account is, perhaps, literally true. With his towering abilities, the meagre outline thus supplied was amply sufficient groundwork for the debates he composed, but it would appear by the following letter from Cave to Dr. Birch, found in the Birch correspondence, that "Sylvanus" was not always dependent on the inventive genuses of his staff, but that in those days, as now, our Parliamentary and other orators adopted the sage precaution of writing out their speeches and transmitting them to the public organs themselves:—

Good Sir,—You will see what stupid, low, abominable stuff is put upon your noble and learned friend's character.* Such as I shou d quite reject, and endeavour something better towards doing justice to ye character. But as I cannot expect to attain my desire in that respect, it would be a great satisfaction to me, as well as an Honour to our Work to have the favour of ye genuine Speech. It is a method that several have been pleased to take, as I could shew, but think myself under no Restraint, I shall say so for that I have had some by a third hand, wch I understood well enough to come from ye first, otherwise by Penny Post, and others by ye speakers themselves, who have been pleased to visit St. John's Gate, and on particular names of their being pleased. With regard to Secresy, I have been too scrupulous, as in Dr. Broome's Case. As to ye service of ye Public, I think it an unquestionable Point, and as ye case now is ye price of Justice due to themselves, to secure their Reputation from a load wch if it should have no effect in this age, may in some f ture.

You very well know which will be a most proper way to prevent this consequence, wch, when I had ye favour of your Company, you indeed seemed to approbend, and I need now only repeat that I shall be extremely ready and glad to be ye instrument.

I am, revd. Sir, your most obedient humble servt.

St. John's Gate, July 3, 1744. EDW. CAVE.

* "In ye *London Magazine*." This refers to some speech reported in what was called Journal of the Proceedings and Debates in the Political Club, in the *London Magazine* of that time. By "Political Club" being meant the House of Commons

CHRISTMAS TREES.—The presentation of the Christmas Tree at the season of good will and joy belongs peculiarly to our long native neighbours the Germans, where it has been a custom from almost time immemorial. It is but a recent introduction into this country, where it has this year been more than usually taken up for the benefit of their poorer neighbours by the wealthy and the warm-hearted. After all, it is but a more sensible and elegant variation of a custom prevalent in Merry England from the earliest period, the decay of which the amiable Bishop Corbet so feelingly lamented nearly three hundred years since, in a beautiful verses beginning—

Farewell rewards and fairies, &c.,

when it was the practice of all good housewives to put a silver penny, &c., in one of the shoes of good children and careful servants, on the advent evenings of the Holy Season, innocently supposed when found to have been left during the night by the beloved fairies, as a reward for good behaviour—an instructive which often had the happiest results, though the advance of knowledge and spread of rationality have now necessarily robbed it of much of its former belief and potency. Let the utilitarian, the cynosure, and the cold of soul carp at the waste of sixpence and only consequent on so harmless and commendable a practice; all right-thinking minds will admire a devotion of talent and means to so praiseworthy an end. The Lines which follow these remarks owe their birth to the writer having been a visitor at one of these presentations. The tree in question was perhaps a model of the kind: it was nearly ten feet in height, and had hung on its branches more than three thousand Christmanikchen, consisting of fanciful baskets of sweetmeats, and *bonbons* of every variety, &c., for the good little folk. The tree generally selected for the subordinature of the Christmas Tree is a sapling of the fir species.

LINES

*On witnessing the presentation of Mr. and Mrs. W——of their Christmas Tree to the children of the Rev. Bay Ancient Schools in the Drummond Assembly Rooms, January 1st, 1856.*

Let the lone monk muse o'er that wond'rous rose
Which on the thorn of Glastonbury blows
Over each Christmas morn with scent sweet,
Chasing dark doubt and bidding all rejoice!
No stretch of faith, no miracle, need we
To wake our hearts—our human *Christmas Tree*,
With Hope's fond light, still banishes sunny,
Bringing to all tidings of coming joy,
Of Love still sympathy. On every bough
Hangs some bright gift, urged by no votive vow,
But kindness, to those to whom when given
The simplest meed will speak aweh o'erflowing heaven,
O not in vain the Saviour of the Earth,
To ransom man, became of meria birth—
Died for our sakes! O thought of love and glee!
Then ever let us raise the Christmas Tree
Bidding as now all strife and discord cease,
Wishing good will to man, to Earth sweet PEACE

W. T. M., *Charter House.*

* See Home, Brand, Hone, &c. &c.

THE GUNNINGS.—Your correspondent "Octogenarian" is scarcely accurate in speaking of Elizabeth Gunning, who first married James, the sixth Duke of Hamilton, and secondly the Duke of Argyll, as having transmitted any claims to the Derby family on the Dukedom of Hamilton. By her first husband, the Duke of Hamilton, she had two sons, who successively inherited as Dukes, and died without issue, when the Dukedom devolved to a collateral branch, of which the present Duke is the lineal representative; and an only daughter ("the Maid of the Oaks"), married to the Earl of Derby, by whom she had one son, the father of the present Earl; and two daughters, Lady Charlotte Hornby and Lady Elizabeth Cole, who still living. Lady Elizabeth, therefore, could only transmit to her descendants any patents belonging to the Hamilton family which ran in the female line, and it does not appear that there were any except as will hereafter be seen. She was simply heiress-at-law to her two brothers the Dukes of any unentailed or intestable property, and the Derby family acquired through her no additional honours. Argyll, on the death of her first husband, the Duke of Hamilton, Elizabeth Gunning married John, the fifth Duke of Argyll, by whom she had two sons who successively became Dukes of Argyll (one by the mother of four Dukes), and two daughters, Lady Augusta Clavering and the celebrated Lady Charlotte Bury, who still survives. In 1776 she (Elizabeth Gunning) was created Baroness of Hamilton in her own right; and in a title, owing to the death of her two eldest sons, the seventh and eighth Dukes of Hamilton, was inherited by her next two sons, the Dukes of Argyll, and is at present enjoyed by the present Duke of that ilk. All the portraits represent her as a woman of exceeding beauty: and I therefore do compliment "Octogenarian" on his good understanding as was not undeserved; and if we turn to her immediate representatives, the Derbys and Argylls, I think you will allow they do her no discredit.—SENAGENARIAN.

A TAME WOLF.—"A lady near Geneva had a tame wolf, which seemed to have as much attachment to its mistress as a spaniel." She had occasion to leave home for some weeks. The wolf evinced the greatest distress after her departure, and at first refused to take food. During the whole time she was absent he remained much dejected. On her return, as soon as the animal heard her footsteps, he bounded into the room in an ecstasy of delight: springing up, he placed one paw on each of her shoulders; but the next moment he fell backward, and instantly expired. M. Decandolle, Lecturer on Nat ral History, of Geneva, related this story."—*O'Brien's Round Towers of Ireland*

SIR FRANCIS DRAKE AND HIS SPOUSE.—There is a wild tradition of Sir Francis Drake current in Somersetshire, that when he set out on his voyage he told his wife if he was away ten years she might then marry again. Ten years elapsed, during which Madam Duck was as true as Penelope, but when they were over she accepted the offer of a sailor. On her way to the church a huge round stone fell through the air close by her, and fixed upon the train of her gown: and she turned back, for she said she knew it came from her husband. It was not long before he returned, and in the shape of a beggar asked alms of her at his own door; in the midst of his feigned tale a smile escaped him, and she recognised him, and led him in joyfully. The stone still remains where it fell. It is used as a weight upon the harrow of the farm, and if it be removed from the estate always returns.

### QUERIES.

WOULD YOU, OR any of your numerous correspondents, oblige by informing me of the author of the piece of poetry from which the following verse is take:—

The earth is not thy home,
I hear that cry in early path and way of life;
I see it in Affection's tear,
Wrung from the heart with misery rife;
Where'er I go, where er I roam,
A voice still whispers in my ear
The earth is not thy home.

—J. G. K., Honeybourne Vicarage.

TOOTHPICKS.—Are toothpicks of modern invention?—M. P.

Toothpicks are very ancient. Fosbroke says they occur of silver; but pieces of wood, or of feathers even, with a red end, the *rudentes pennæ* of Martial, were most usual. The toothpick is the Anglo-Saxon *toth-gare*. To pick the teeth was, in the time of Elizabeth, the mark of a man affecting foreign fashions. In a judicious order in "Nicho.'s Progresses," we find it said "Item: No Knight of this order shall be armed for the safeguard of his countenance with a pike in his mouth, in the nature of a toothpick." Nares tells us it was a fashion imported by travellers from Italy and France, and that using it in public was deemed a mark of gentility. The toothpicks were not only carried in cases, but sometimes worn in the hat. Magnetic toothpicks were made at the end of the seventeenth century.]

MOTHERING SUNDAY.—Why is the fourth Sunday in Lent called Mothering Sunday?—CURIOSITY.

[Because, according to Brand, in former days of superstition it was the custom of people to visit their Mother Church on Mid Lent Sunday, and to make their offerings on the high altar. From hence is said to have arisen a good old custom of children visiting their parents on this day, and making them presents. In Herrick's "Hesperides" we have an allusion to this practice.—

TO DIANEME.—A CEREMONIE IN GLOUCESTER.

I'll be with thee a minute i' Lent
Unlust thou go'st a mothering,
So that, when ass blesseth thee,
Half that blesses g thou't give me.]

COSTUME OF THE BAR.—I was once told that the Barwore bluerobes until the death of Queen Mary; but that, as mourning for her, they changed them to black, which they have ever since retained. Mr. Macnally, though himself a barrister, has not noticed this incident. I should be very glad if any of your correspondents can confirm it.—A TEMPLAR.

SHAKSPEARE READINGS.—In your remarks upon a passage in "Coriolanus," which appears in the last Number, the parenthesis "(former, y spelt tong, tounge, tung, and tonge)" has slipped out of place; it should evidently follow the word tongue, not throug. H. B

[True; the words apply to tongue, and have been inadvertently transposed.]

### ANSWERS TO QUERIES.

VALUE OF A BAD EAR.—The following, which I extract from Leigh Hunt's *Tatler*, No 239, Oct 4, 1831, may perhaps be satisfactory to your correspondent "T." The book from whence the quotation is taken I suspect to be "Dr. Priestley's Memoirs of Himself."—R. C. "*Advantage of a Bad Ear.*—I would recommend the knowledge and practice of music to all studious persons; and it will be better for them if, like myself, they should have no very fine ear, or exquisite taste, as by this means they will be more easily pleased, and less apt to be offended, when the performances they hear are but indifferent."

FAMILIES OF FFRANCE AND FFARINGTON.—The families of ffrance, ffarington, ffulhurst, &c., do not use the small double f; but the large single F of the old black-letter alphabet, which looks exactly like the small double f of our present alphabet.—M. P.

FAMILIES OF FFRANCE AND FFARINGTON.—The ff does not really mean a double, but a capital F, and was used as such in old MSS I have seen it in a MS as modern as 1750. A. QUEEN OF OLD MSS.

LIABILITY OF AN OLD PUBLISHER.—BURNS AND CREECH.—"Inquirer" is not correct in calling the letter addressed by the Poet to a friend in Edinburgh (Mr. P. H.), and part of which, relating to Creech, he quotes, an unpublished one. It is to be found in vol. iii., page 184, of Chambers's edition of "Burns' Life and Works" (Edinburgh, 1854.)—H. S.

ANECDOTE OF PRINCE GEORGE OF DENMARK.—Having seen an inquiry respecting the authenticity of the anecdote of the artisan of Bristol and Prince George of Denmark, I send you the particulars extracted from the "English Baronets," printed for Thomas Wotton, at the Three Daggers and Queen's Head, against St. Dunstan's Church in Fleet-street, 1727:—"The first Baronet of this family was Sir John Duddleston, an eminent tobacco-merchant in Bristol, who, on Prince George of Denmark's arrival to see that city, was the first person who invited him to his house, whereupon, when that Prince came to London, he got him first knighted, and afterwards a Baronet's patent (dated Jan. 11, 1691); but Sir John losing about twenty thousand pounds by the great storm at sea in Nov. 1704, it ru ned the family. He had a son, who died before him, leaving issue, Sir John Duddleston, the present Baronet, successor to his grandfather, who was in minority under post in the Customs at Bristol, and is now in a very low condition. N B There are no arms belonging to this family in the Herald's Office, neither does the present Sir John know of any that his grandfather gave." Perhaps some of your Bristol readers may know something about the descendants (if any) of this unfortunate, or whether there be at the present time any re.dents of this singular name in the city among the poorer classes.—F. L. R.

The ancestors of Prince George of Denmark mentioned in your Memorabilia of March 8th, occurred to an Alderman of Leeds, William Milner, who, observing one day some strangers on Change, invited them to partake of a merchant's plain fare; the invitation was accepted. Soon afterwards the merchant was sent for to Court, and knighted: he created a full-sized mantle statue to the Queen, which is still on the Corn Exchange of Leeds. Sir William was a son of Marmaduke Milner, Esq., of Calvert-house, in Swaledale, a younger branch of the ancient family of Milner, of Pudsey and Leeds. The above incident occurred about 1709; and may, I think, be found in Thoresby's "History of Leeds".—T. D. MILLNER, Bulford.

WIFE-SELLING.—In your columns of Memorabilia, Mr. George Baillie of Glasgow, wishes to know on the subject of "Wife-selling" "if it was ever countenanced by the law of England?" When I was in practice in the law, now many years ago, I was seriously asked if such was the law; and never having had the point before propounded, I for the first time consulted the question; and the conclusion I came to, on inquiry, was this:—that after such an overt-market act, the quasi purchaser might safely enter into possession, without any apprehension of a criminal prosecution being instituted; but that to any such action, if brought against him, he might plead "leave and license," or give the shameful transaction in evidence towards a "nonsuit," or merely "nominal damages." The matter was, in all probability, merely indicative that the article offered for sale was, if not worthless, at least not warranted as good for much. You may rely that such a transaction actually took place, and it was the brother of the vendor who asked me as to the legal efficacy of the open-market transfer. The circumstances attending were indecorous, but with them I will not trouble you.—JOHN ROBB.

### TO CORRESPONDENTS.

Σ. Ἐ. Καρβέλιος.—The work in question we never heard of, but there is a book called "Ἑλληνικὰ—Specimen hoc principio. Exempla e Græcis. Scripsit A. Person, Græcæ et Latinæ Literaturæ," which was published in 1665. You can also bring Anacreon Dianeus [illegible] four books of which was therefore, no doubt, one of considerable dimensions.

LAWLEY.—"A Threefold Remembrance of God's Mercies, &c., is probably a translation from the Latin of some contemporary or other poet of Erasmus.

PUER.—"some scholars derive *succor* from *sub* and *curro*, a supplying hasty *without its* want; but *curro*, we are a Greek word, in which no language *Spectred* would mean *such* sort, and in a sense contrary that *succro* is derived from it, because the only honey of an infected place is that contained in its native wax. *Sub* is very seldom used as a compound, and rarely in that contained in its native wax. *Sub* is very seldom used as a compound, and rarely in that contained in its native wax. *Sub* is very seldom used as a compound, and both the above analyses may be of questionable value.

PURPUREATRICE.—Asbestos is a production termed Salamis of Magnesia. Its component parts are silica, magnesia, oxide of iron, alumina, and water.

A CONSTANT READER.—In "Mander & Soleau's Geographical and Literary Treasury" it is stated that the Russians annexed the kingdom of the New Sea in 1859.—[This is an error. The Russians still use no Gregorian, and their dates differ from ours as much as 12 days, while in the New, which is now twelve days, and as such should be until Feb. 29, 1860.]

W. F. Chiswick Mall.—HOGARTH'S BURIAL-PLACE.—We have always considered the fact of Hogarth being buried in Chiswick Churchyard a settled point, and it is news to us to hear that it has been long "a moot question, whether he, or only some members of his family lie there."

RECEIVER.—Alpha, Dublin, An Occasional Contributor, F. L. B. John Kettle, T. D. Miller, Light, R. S., Common Juror, Exmouth, Anthon Frager, Jas. Hopkinson, Liber, A Copier of Old MSS., Tweedie, M. A., Cantab, A Subscriber, H. W. Y., Pere Ingenu, C. B., A constant Subscriber, J. Molyneux de C., W. J., Curiosity, Jasmin, R. G. Patterson, W. Stirbuck, W. Garrett, T. J., Maggie, W. P., near Somerton, Hamilton Rogers, J. M. Lact, Herm, Octogenar, A. S. N.

BET.—(1) Is a shilling of James I. of England of his first coinage. (2) a groat of Charles I. of England, struck at the Aberystwith mint.

H. E. S., Malines, is thanked for the obliging offer. The print in question is, however, not uncommon, and may be found in the collection at the British Museum. It is, no doubt, meant to represent the fleets of Holland and Spain, as they lay at anchor, in the Downs, before the engagement described by Taylor in the tongue annexed to the mentioned.

A MUSICAL.—The glee, "Ah sing, sad song, of "Oh, Bold Robin Hood," is published by Cramer, Beale, and Wood.

LANCASTER.—Apply to any good bookseller.

MARSHAL SCHOMBERG'S BURIAL-PLACE.—Mr. Blundell's letter on this subject is unavoidably deferred.

### A FEW WORDS ABOUT COVENT-GARDEN THEATRE.

THE late disastrous accident at Covent Garden Theatre having recalled to our memory a forenoon passed in the company of the machinist of that establishment—who acted as our guide in an explanatory expedition through every nook of its intricacies, from the subterranean rubbish vaults to the airy regions that were first ignited at Mr. Anderson's saturnalia—we imagine that a few reminiscences of what Covent Garden was behind as well as before the curtain, is not malaprops. Our private journal of that period informs us that we saw in the green-room an eight-day clock, on the dial of which was visible the following inscription, "After the dreadful fire of Covent-garden Theatre, on the morning of September the 21st, 1808, this clock was dug out of the ruins by John Saul, Master Carpenter of the Theatre, and repaired and set to work." This Salamandrine timepiece has migrated a second time. But after what a revolution in British theatrical politics? The dynasty of Kemble and Siddons has long been extinct. The strength of the authors and actors of the great rival houses are no longer discussed by the wags, wits, and prophets of the Piazza coffee-houses at the beginning of every winter. But after a fashion we have our consolation; if Covent Garden ceased to be English, it became European; for if Rossini and Meyerbeer wanted to see their choice works done in perfection, it was to Covent Garden they must go, rather than to the Scala or San Carlo; we will not except even the Academie Imperiale de Musique.

Preceded by the machinist with a large bunch of keys as an open-sesame for so many mysterious and cavernous recesses, we examined those very localities that are now under discussion. A Newcastle miner in a gaseous pit was not more cautious in having a thoroughly-closed lantern in preference to any open light than was our machinist in leading us breathless up so many sharp-angled flights of steps, then up ladder, as in a gymnastic feat, through most luxuriant ramifications of flies and battens, until we arrived at the great water-tank at the roof of the establishment, which was large enough to hold water for six engines for half an hour, to which were attached long hose, so that the water could be directed either to the scenery below, or to the audience department. We left this part of the house in the firm belief that, like a ship well supplied with life-boats, a fatal catastrophe could be arrested; but "l'homme propose et Dieu dispose."

We then walked over the roof of the audience part, in the middle of which was, as it were, a wide and deep well with a parapet encircling it nearly breast high. Looking down we saw, at a depth of ten or twelve feet, the chandelier; the unsightly aperture being closed to the vision of the audience by an arabesque framework, through the apertures of which it was lighted by a long rod, having at the end a wire, to which was affixed a piece of sponge saturated with spirits of wine (as recently stated in the newspapers). A strange, unpleasant feeling came over one in these dark and lofty regions, as if the roof would some day tumble down into the pit, or the fire of the lustre ascend to the roof; and, in spite of all the tanks and hose, a feeling of precariousness came over one at the sight of so much juxtaposition of flame, wood, paint, and greased ropes. No wonder that, after many hours of gas burning, these upper timber yards must have been in a most dry and heated condition.

The width of the stage between the so called fly rails was fifty feet, while the depth from the footlights to the wall at the back was eighty feet. This, however, was only a part of the space disposable for the *mise en scène* of pieces that mimic the larger transactions of history, and require full verge for the triumphal procession, the combat, or the religious solemnity; a high archway pierced the back wall, so that thirty-six feet more intervened between it and the ultimate shell of the building. Thus, when a triumphal arch, or some other architectural device is introduced, a clear space of 100 feet was attainable.

Beneath the stage was the "property-room of the night," a sort of retail of odds and ends as contrasted with the great reserve dépôt of properties for all the pieces—a large stock, when nearly thirty operas are mounted. In this room were merely the properties of the open, or sessions of operas, for the night—from the guitar of the serenading *Lindoro* to the flower-pot of the garden of *Count Almaviva*. Behind and beside other parts of the stage were the various devices of representation: the pierced and wider which, revolving with light in its centre, produces the appearance of a fall of water, in the "Somnambula;" and the fine organ used in the "Prophète" and "Huguenots," the player of which received his tune by a fixed *bâton* of lime-tree, with which Mr. Costa gave the signal for the commencement and continuance of the stage.

No less than eighty fine apartments surrounded the stage, and were used as dressing-rooms, store-rooms, offices of all descriptions for the various persons in the different departments—for, if all the world's a stage, the theatre itself is a little world of governments. Covent Garden had its Tragedy Queen, its Downing-street and Treasury, and division of departments; its responsible heads with loaves and fishes, and the reverse of all that at the other extremity; the boudoir of the prima donna, with jewel-casket, and the "seeing machine" in the semptress-shop, where we found eighteen assistants at work; the directress, like a keeper of heraldic archives, full of correct etiquette and precedent in pageant; for books of the costumes of all times—Crusading, Renaissance, and Revolutionary—and of all countries honoured by the labours of the librettist were kept with accuracy. Scene-painting was done on a corresponding scale: in a large and light apartment at the top of the house was the painting-room of Messrs. grieve. A coloured miniature of each scene was made on Bristol board; and from this a larger miniature was adopted to a model of the stage, as in the toy stages sold for ingenious youth; from these the real scenes were painted. Near this was the working property-room, in which were employed a variety of artificers, all the works being done by their own people within doors; so that the bills payable to tradespeople outside were for materials, not for the manufactured article.

In visiting the region below the stage, we found it not to be unlike a ship of war, with upper deck, lower decks, and hold. The stage was, of course, the upper deck, covered all over with traps of various sorts and sizes, to suit all parties comfortably. *Fenus*, in a mythological ballet, ascending from her shell; or *Don Juan* let gently down to be grilled. There is a pleasing anxiety, that sometimes house it was the original intention to make a corpulent performer pass up through a trap as *Caliban*. But the carpenter declared that making so enlarged an aperture would endanger the stability of the stage, so the idea was given up. In the floor immediately below are the rope of the musical instruments, and the pass-room of the performers, who were thus mustered on entering. Below this was the ground-floor; and, lowest of all, the rubbish catacombs, the repulchre of "shelved." pasteboard, fat of faded flowers, shabby cotton velvet, and gilded calico.

Covent Garden used to make its own gas until an explosion took place which suffocated several men; the civil machinist pointed out to me a long gallery where they attempted to escape, until they were stopped by a wall of fire. Ever since this period the theatre was supplied by company mains. Near the gasometer was the hydraulic machine for forcing water up to the tank at the top of the house. Those who pass by Her Majesty's Theatre in the Haymarket must have noticed the large square stack, like a flue, placed at the back of that establishment. Mr. Lumley's watercare was raised on him by a water company, and to make himself independent, he dug a well under the theatre, and supplied himself. These aids and appliances do not appear capable of arresting the periodical burning of an old large theatre, every one of which we may call "Faure." No doubt, if promptly discovered, something may be done. But fire in a theatre, having only a five minutes' start of the discovery appears to render all efforts unavailing with such dried-up and combustible material.

The only security of individuals against loss is for all the theatres of London or England to effect by union one joint insurance with say twelve of the largest insurance companies, at an adequate premium. A large deduction from the rents received is surely better than a total loss recurring at longer or shorter periods, thus involving many families in a lamentable ruin.

We say little of the audience department. The Queen's suite of rooms, comprising dressing rooms, grand drawing-room, boudoir in Louis Quinze, in fine satin damask, were sumptuous. The conservatory, with one sheet of plate-glass, was done in such a way that unseen gas-lights illuminated the flowers. The freehold boxes of the Duke of Bedford and Miss Burdett Coutts had also separate entrances, and private drawing-rooms behind.

THE FRENCH HOSPITALS IN THE EAST.—About 10,000 patients are said to be at present in these hospitals, among whom one-fifth have typhus fever. O. COOPER, in the absence of official information, should not venture to numbers about the deaths, but they must be very high, if one may judge by the number of coffins which are daily brought up on mules from Gallipoli, and from various other spots. Thus, in riding the other day over the pastoral near Maslak, I passed near one of the graveyards where some sappers were working at a row of graves, seventeen in number, on one spot. The medical men do their duty in this fearful trial, but their means fall short. Most of the sick come down from the Crimea in such a weakened state that they cannot resist the influence of the climate. General Storks has offered us every assistance which he could give, either in medical men or stores, but his offer was not accepted.—*Letter from Constantinople, March 3.*

"STORMY WEATHER."—PAINTED BY E. ANSDELL.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION.

"THE MONK" [illegible] A PHOTOGRAPH BY MR. LAKE PRICE—FROM THE EXHIBITION OF THE PHOTOGRAPHIC SOCIETY

## PHOTOGRAPHIC SOCIETY

### THE MONK,' BY MR. LAKE PRICE.

AMONGST the many admirable pictures that figure prominently on the walls of the Photographic Society's Exhibition none have commanded more surprise and admiration than the studies of Mr. Lake Price. By them photography has taken an immense stride in the direction in which its future must find most room for development, namely—the artistic. Without in the least disparaging other works executed with aims similar to those which have inspired the productions of Mr. Price, we may venture to say that his form a distinct and marked feature of the Exhibition. Distinguished by careful study, happy choice of subject, and, for the most part by judicious treatment, we recognise a desire on the part of the artist not only to make photography a valuable auxiliary to art but to raise it to the rank of a fine art itself. In this respect his productions claim more than ordinary attention. In a former number of this journal we have spoken of his works in general terms, we have now to particularise one of the most remarkable, "The Monk" (No. 150). The title sufficiently indicates the subject, who is in a devotional attitude. The *pose* is admirable, the accessories are complete: it reminds us of the productions of the Spanish school, particularly of Zurbaran. There is the same breadth and striking chiaroscuro that distinguish the productions of that master; while, from the nature of the subject, the absence of colour is not felt. The texture of the materials of the drapery, the [illegible] and crucifix, are rendered with most wonderful reality.

There are some ardent imaginations who discover in photography a powerful rival to painting. Such views are, to say the least, intemperate and unsound. Photography will be found a most valuable auxiliary to painting; but rival it can never be. There can be no rivalry where the arts, each has its chosen material its special means of accomplishing its aims without in any degree encroaching upon the limits assigned to others. If among the arts any one has cause to view with apprehension the progress photography is making, it is the art of engraving; but the [illegible] even in this field, must necessarily be exceedingly limited. Engraving is limited to the copying of pictures: except in etchings, it is never

original. Photography goes direct to Nature, of which it gives us a mirror-like transcript, and in this respect possesses an immeasurable superiority over engraving, which is but a translation of a translation, similar to those which, until very recently, we obtained from German authors through a French medium.

Coming first in the season, photography is calculated to exercise a most wholesome influence upon public taste in art. Free from the meretricious attractions of colour, it educates the eye in form, and in this speciality must gradually exercise a wholesome influence upon art generally. It will, however, lead to a necessity for more patient study on the part of artists, especially from those who now seek to hide their ignorance of drawing, perspective, and chiaroscuro under a veil of gaudy colouring. At the recent Exposition of the Beaux Arts in Paris many of the productions of our artists excited smiles of derision, from the ignorance of drawing displayed, no less than by other vital defects.

## THE AMERICAN DIFFICULTIES.

### OFFICIAL CORRESPONDENCE.

The New York newspapers received by the *Atlantic*, of which we announced the arrival in part of our last week's impression, was chiefly occupied with the correspondence between the United States and English Governments on the enlistment difficulty and the Clayton-Bulwer treaty, presented to the Senate by the President on the 28th ult. Upon the enlistment question the correspondence consists of twenty-two letters and documents, and fills thirteen columns of small type in the New York journals. The despatch from Mr. Marcy to Mr. Buchanan, December 28th, is, of itself, upwards of six columns in length. After showing how "the law and rights" of the United States have been infringed by British subjects, in carrying out the scheme of recruitment in New York and elsewhere, Mr. Marcy complains that our Government did not make sufficient amends

When the President presented the case to the consideration of her Majesty's Government, with the assurance that he had such information on the subject as compelled him to believe that British officers, in eminent stations, were implicated in a scheme which had resulted in an infringement of the rights of the United States, and a violation of their law, and asked for some satisfaction for the wrong, he certainly did not expect that the conduct of these officers would be justified upon principles which impair the sovereignty of the United States as an independent nation, and by an interpretation of their law which makes it entirely ineffective for the purposes intended. Some satisfaction for the injury was confidently expected. But nothing that can be regarded in that light has been offered, and this Government is compelled, in vindication of its rights and laws, to take a course which it sincerely hoped her Majesty's Government would have rendered unnecessary

Her Majesty's Minister to this Government (Mr. Crampton) has taken a conspicuous part in organising and executing the scheme of constructing the British army within the United States. Were it possible, with due regard to the evidence and disclosures in the case, to assign a subordinate part in that scheme, even that would not allow the President to change the course which he is obliged, under the circumstances, to pursue towards him. Any participation in the project, as it has been disclosed, in raising recruits in this country for the British service was incompatible with his official relations to this Government. His connection with that affair has rendered him an unacceptable representative of her Majesty near this Government, and you are directed by the President to ask her Majesty's Government to recall him.

Mr. Rowcroft, the British Consul at Cincinnati; Mr. Matthew, British Consul at Philadelphia, and Mr. Barclay, British Consul at New York, are also placed under the same condemnation—Mr. Buchanan being directed to ask for their removal for a similar offence.

The correspondence on the Clayton Bulwer treaty does not reach so great a length. The first letter is from Mr. Buchanan to Mr. Marcy, bearing date Nov. 25, in which Mr. Buchanan says that in the course of a conversation which he had with Lord Clarendon he stated to him that the most serious difficulties between the two Governments might arise out of the Central American question. Lord Clarendon replied that when two Governments disagreed about the construction of a treaty the best and most natural mode was to refer the question to a third Power. At an early period of the negotiations Lord Clarendon made the suggestion, but Mr. Buchanan found no disposition in Mr. Marcy, who was the only one sufficiently independent to act as an umpire in the case, and England had gone to war against him. Another letter from Mr. Buchanan to Mr. Massey, dated Nov. 26, after giving a conversation similar to the above, adds, "I urged on Lord Clarendon as strongly as I could reasons which I thought ought to induce the British Government to relinquish the Bay Islands to Honduras. Lord Clarendon replied that these islands are not of the least value to the state, and that the only question was whether the national honour did not forbid this course. Mr. Buchanan, in a further letter to Mr. Marcy, dated Nov. 28th, says: — "I had an interview yesterday with Lord Clarendon by appointment. He said the best method to settle the question is by arbitration. I replied that there was nothing to arbitrate. He said the true construction of the treaty was a proper subject for arbitration." Then came the statement of Lord Clarendon on the 31st of January, in which he led the House of Peers to understand that the offer of arbitration made by us was still under consideration by the United States' Government. On that point Mr. Buchanan gives the following explanation to **Mr. Marcy**, in a letter dated February 3, 1856 :—

On Wednesday last, the 6th inst., I had an interview with Lord Clarendon at the Foreign Office. I told him I desired to ascertain whether the statement he made in the House of Lords on the evening of Thursday, the 31st ult., that the British Government had made to the American Government an offer, which has been recently renewed, to arbitrate concerning the Central American question, was founded on what had passed between him and myself in conversation, or whether he had instructed Mr. Crampton to make to you in writing a formal proposal to arbitrate. He replied that his statement was founded on different conversations, and that in these he had several times proposed to me the reference of these questions to arbitration, and he expressed the hope that I had communicated his propositions to my Government. I informed him I had faithfully reported to you all conversations we had held in reference to an arbitration. But I had not believed that what he said on these occasions amounted to such an offer as could be recognised by our Government as a foundation for pacific action on so grave a matter. I did not doubt you were of the same opinion, as I had never received a line from you on this subject. He observed that before holding these conversations with me he had consulted his Cabinet, and spoke their sentiments as well as his own. I remarked that it is fact had now for the first time been communicated to me, as he had informed me of it at the time that would have given his conversation a more serious character, and caused it to make a deeper impression on my mind. He said he had thought as a matter of course that I would consider what he said as he had been authorised to do by the Cabinet. In reply, I observed I had thought that when one nation desired to propose to another the submission of an international dispute to arbitration, it was done by writing, and in due form. Such had been their own course when they proposed to arbitrate the Oregon question. Then the Executive Government, if he thought proper, consult the Senate on the question; and what would be thought by that body if such propositions were presented there in the loose form of various conversations between him and myself, which, after all, I might, through mistake or inadvertence, not have reported correctly. He said, what he had done he considered a preliminary step; and if our Government had indicated any satisfaction with it they would have been prepared to proceed further, but from what I had said to him he did not think they had received much encouragement.

That Lord Clarendon had attached rather more importance to the offer of arbitration than Mr. Buchanan did is evident from the following passage in a letter to Mr. Crampton, dated Nov. 10 :—

Mr. Buchanan having in course of conversation a few days ago, adverted to the impression that would be created in the United States by the non-settlement of the Central American question, I again assured him that England had no wish to extend her influence, or to obtain any territory, in that part of the world, and reminded him that, as the difference between those country and the United States turned upon the interpretation of the Treaty of 1850, I had offered, on the part of her Majesty's Government, to submit the case to the arbitration of a third Power, but that he had declined the offer. Her Majesty's Government, I said, would still be able by that offer, and I thought that would be the fairest and most amicable manner of arriving at a settlement of the question. Mr Buchanan said he would make it known to his Government, and give instructions to communicate this despatch to Mr. Marcy.

It turns out that Mr. Crampton did not communicate this despatch to Mr. Marcy till after he had read the debate in the House of Lords. He then learned to the despatch received several months previously, and finds that he had overlooked the last paragraph of it, which instructed him to make known the proposal of arbitration to Mr. Marcy. Here the correspondence ends in a very unsatisfactory manner.

## *LITERATURE.*

CONFIDENTIAL CORRESPONDENCE OF NAPOLEON BONAPARTE WITH HIS BROTHER JOSEPH, SOME TIME KING OF SPAIN Selected and translated, with Explanatory Notes, from the "Mémoires du Roi Joseph." Two vols. John Murray

These letters embrace Napoleon's whole career, and their effect is to give us a portrait of him painted by himself. They have been for some years known in France; and our wonder is, that no translation of them should have appeared in this country till now. The memoirs of King Joseph contain the most important subjects in the destinies of the most extraordinary man who has figured in profane history since the coming of our Lord. A portion of these priceless memoirs, judiciously selected, is here rendered into English. We will dismiss the translation in two words, as our Allies say; it is pretty nearly as perfect a translation as can be, and we imagine Napoleon writing the mother-tongue of the people who brought his meteoric course to an end. But the version is secondary, or, rather, it is nothing—the letters are the interest. Another equally subordinate consideration we will make haste to put aside; we mean the appearance and accoutrement of these two volumes. Nothing could be more excellent. They do credit to the publisher. The English editor and translator is anonymous; but, to judge by his notes, as well as by the general execution of his task, which is accomplished with admirable flow, facility, and judgment, Mr. Murray has found no vulgar or ill-prepared contributor to add this important and instructive book to the luxury with which he and his forerunners have enriched the public. He has taken pains to make the accessories worthy of the design. There are two octavo volumes, printed with evidently careful corrections in large clear type on good paper, bound in green, and emblazoned on the cover with the arms of Napoleon and an Emperor's crown.

We are glad of the time at which this work comes before the public. The state of Europe makes the profound lessons (as profound, in the way of example, where the writer would have hidden them from posterity, as they are in positive direct instruction, where he did not) without reserve to convey them) peculiarly opportune; while the appearance of Mr. Macaulay's long promised continuation of English history gives us in all simultaneous publications a sort of virtual challenge accepted. Here it is not accepted in vain.

If William be English in his struggles, so were the Governments of the third and fourth Georges. If William wears remarkable man, Napoleon was much more so. If Louis XIV. excite interest by his authority, his abilities, and his aims, how much more Napoleon! And if William were the coping-stone to the arch, the seal to the "fiat" of one insular revolution; Napoleon was no cope-stone, nor seal, but he was architect, and contriver, in designs of far greater magnitude—affecting all the nations of Europe, and probably every region of the habitable world. One difference there is—William has now his Tacitus in Mr. Macaulay; but, putting the Thersanite, Napoleon comes before us in this publication as his own commentator. A mere annalist we did not want in his regard. Altogether, we have no hesitation in saying that, even in the presence of the monster publication of the day (we speak of separate and isolated works), this book may well hold its own. However, we do not, for a moment, wish to insinuate that the kind of qualities which give to Mr. Macaulay's production its main interest are to be looked for in such a collection of letters as we have here from Napoleon. The interest of these documents is not literary so much as political and business-like. Literature has two values: the one arising from the topics of which it is the repertory, the other from the mere execution which the author lavishes upon the writing as writing. The first is incidental, as that of the casket; the other is artistic, as that of the workmanship of the casket. But it is hardly possible that any art could render the receptacle so precious as are a thousand objects which may be put in it. Now, the thoughts, opinions, designs, and plans of such a man as the first Napoleon in emergencies affecting the fate of the whole modern world, possess claims to attention and elements to record it far more general and more profound than the mere finish with which an author's genius may impart to a regular literary undertaking. As a practical lesson this last is useful only to the votaries of the same limited class-writers: to the rest of the world it is indeed a source of pleasure, but comparatively not a matter of serious importance. We deny not indeed, the refining influence of such productions, nor do we deny that they are *sere perennius*. The delight they impart ensures their preservation

Such is the difference between the values of coin and bullion in art and literature. It is the necessity of mankind to pay immediate attention to ever-recurring pressures of business, competition, struggling which if men neglect, woe to them. On the other hand, it is their inclination and their enjoyment in seasons of repose to indulge in literature, and bathe their exhausted energies, in the refreshments of intellectual recreation and improvement. These survive, for they have an inherent though less prominent character attaching to them alike, wherever any lessons can be found it. In the torrent of affairs, meantime, always from cataract to cataract; and all feel that it is immeasurably more important, more urgent to be able to shoot the rapids in safety, than to pass the quieter interval in the most refined enjoyments. And in this respect that works like this collection of lessons from the views of a man who showed himself able to convulse the whole of human society, may, indeed, yield in refined attractiveness to the masterpiece of some great writer, but in the meaning of the rules of practice it has a plain of incalculable advantage to study, for the warnings they contain, and the insight they afford into the means by which men and nations are shaken from their spheres or controlled in their despite.

The letters are in chronological order, from the time when, the Thermidorians having succeeded in upsetting the Reign of Terror, —the Constitution of Year Three (1795) led to the foundation of the Directorial Government, and afterwards to revolt of the sections, and Napoleon's real rise into importance—from that epoch, we say, the letters succeed each other in regular order of time, down to the 16th of June, 1815, two days before the battle of Waterloo. On that day, after writing the last of these letters to his brother, the Emperor defeated the Prussian army at Ligny; Soult announced the victory. After which the crushing disaster which followed, terminated the Emperor's share in the correspondence. Bertrand wrote to the ex-King to communicate the parley with the Captain of the *Bellerophon*, on the 16th of the following July.

Two more letters there are in the collection—one again from Bertrand to Joseph, September 16, 1821, describing with great emotion the last moments of the modern Alexander; and the other, in an appendix, from the present Emperor of the French, sixteen years after, to his uncle, dated from New York, and inclosing an account of his release from the prison of Strasbourg, and of the motives which had induced him to make the attempt ending in his incarceration. The inherent interest of this last letter is not very great; but, as the editor justly says, subsequent events and the position of the writer entitle it to a fitting consideration for this admirable repertory. The attempt was, of course, made by one who was then not the representative of the Napoleon house, and, therefore, not made in his own interest by Prince Louis. Joseph disapproved of the whole transaction; and the calculation which the aspiring Prince declares to have actuated him is highly remarkable, and, we think, highly characteristic also. He says that "even after his fall certain, would have advanced the cause of the family," and resuscitate their ascendancy in France. Truly, this is not impossible; the execution would have been a great shock to the memories and feelings of the nation. But, be the calculation wrong or right, there is a singular directness shown in making it the basis of such an undertaking. There is another point of interest in this document that we learn from it that "Louis Napoleon" forgot not, in departing, the companions in misfortune whom he left behind to undergo their trial. He sent money from Brest to Louis Philippe's Government, exonerating them from all blame, and taking the entire responsibility upon himself.

But it is with the correspondence of his marvellous predecessor on the throne that we are concerned at present. Having described the general character of this selection from it, we may take another occasion to examine some of its more salient peculiarities more in detail, and to illustrate them by samples. Perhaps, after all, there are few monuments of Napoleon's genius and there is none which more clearly reveals the feelings and guiding principles in the conduct of great political and military business—no such monument, we say, more calculated to enable the intelligent reader to understand intimately the workings of that extraordinary brain, while it lived, inscrutable heart. These sequence, moreover, of the epistolary dates gives the book the interest of regular narrative. Through all parts of Europe we trace him by this light, controlling, planning, acting, and the mighty spirit which most people judge by the outward signs of a career, we can here study in its inmost labours. Nothing escaped his pervading interference: from the rations of biscuit required by a detached corps, thousands of miles away, to the most enduring arrangements intended by him to remain in force for centuries; from the movements of a few opera dancers to those of immense armies; from the safe custody or watch and ward to be adopted by one of his new Kings in his sleeping apartment, to the condition of nations and the defence of empires.

LA NORMANDIE SOUTERRAINE; ou, Notices sur des Cimetières Romains et des Cimetieres Francs explorés en Normandie. Par M. l'Abbé COCHET, Inspecteur des Monuments Historiques de la Seine-Inférieure, &c Second Edition. 8vo. Paris.

We have no hesitation in recommending this book to our readers in general as one of the most remarkable and valuable antiquarian publications of the day, distinguished equally by the novelty of the discoveries described in it, by the care with which the investigations were conducted, and by the learning and judgment with which the results have been brought before the public. The Abbé Cochet, whose name is well known to antiquaries on both sides the Channel, holds the responsible position, under the French Government, of Inspector of Historical Monuments in the Department of the Seine-Inférieure; and in that character money is placed at his disposal whenever any remarkable antiquities within his department want exploring or preserving. Alas! the Government of our country has not yet been able to discover that the antiquities of Old England deserve any such care. Fortunately, the department thus intrusted to the care of the Abbé Cochet is rich in ancient remains, and among those which deserved especial attention were numerous cemeteries of the Roman and Frankish period, most of which were unknown or had never been examined. As, during the last few years, these cemeteries became known, or at least generally, most frequently by accident, to the learned Inspector of Monuments, he immediately repaired to the spot, and, with the expenses defrayed by the Government, and the permission of the proprietors of the land, obtained without difficulty, he set the pick and the spade to work under his own eyes, and caused every grave he could trace to be opened—amounting in some cases to a hundred or to a hundred and fifty, or even in one case to as many as four hundred, interments. The quantity of articles thus collected, throwing new light on the manners and condition of the earlier inhabitants of the country, was very great, and the results were in every respect of the most satisfactory kind. These were published by the Abbé Cochet in the year 1854, in an octavo volume of great interest, which indeed was considered by the Académie des Inscriptions to possess so much merit and importance, that they awarded to it one of its gold medals. This mark of just appreciation, joined with the interest generally excited by the publication, encouraged the Abbé Cochet to revise his work, and to enlarge it considerably with new remarks and the results of further excavations made in the interval during the two editions. It is this second edition, published in the course of the autumn of last year, which we now introduce to our readers as a rich treasury of information on all the subjects it embraces—subjects which have no less interest for the English than for the French antiquary.

The Abbé Cochet's book is divided into two parts, devoted severally to the monuments of the Roman and to those of the Frankish period. Roman cemeteries of considerable extent were found and explored at Cany, a little town in the valley of the Durdent; at Neuville-le-Pollet, near Dieppe; at the wood of Loges, near Etretat; at Fécamp; at Lillebonne, the ancient Juliobona; and in some other localities. That of Lillebonne is especially remarkable for its sepulchral inscriptions. An interesting characteristic of one or two of the Roman cemeteries was the discovery of a quantity of remains of children under the age at which corpses were burnt before burial, according to an old custom of the Romans, which is poetically described by Juvenal:—

> Naturæ imperio gemimus, cum funus adultæ
> Virginis occurrit, vel tera claudit infans
> Et minor igne rogi.

In some places there appeared to be a corner of the cemetery appropriated especially to the interment of unburnt children. In most other respects the Roman cemeteries present a uniformity of character with those found in other parts of the empire, and they confirm and illustrate the knowledge we already possess, rather than add much to our stores. Their interest, in fact, may perhaps be considered as being more local than general. Not so with the Frankish places of the Franks, the knowledge of which is comparatively new, and full of import for a people and a period with which we are otherwise very imperfectly acquainted.

Most of our readers are now aware that within a few years the cemeteries of the Frankish forefathers in this island have been identified, and that they have already furnished an extraordinary mass of materials illustrative of that of which we were previously almost ignorant—the condition and manners of the Anglo-Saxons of the fifth, sixth, and part of the seventh centuries. The contents of the Frankish graves answer exactly to those of our Anglo-Saxon graves, which they resemble very closely; and, singular enough, they had previously been overlooked by antiquaries to a greater degree in France even than in England. Their value arises from the extraordinary variety of articles found in them; for, instead of depositing with the dead a uniform series of articles, as the Romans did, the Franks and the Saxons, like the other branches of the German race, buried all sorts of implements from the arms of the warrior and the personal ornaments of either sex, to articles of household furniture, implements of trade, curiosities (such as we should call chimneypiece ornaments), and even the dice of the gambler. The principle, no doubt, which led to this practice was founded on a belief that when the deceased rose from the grave they would possess all these things and find them serviceable on their entrance into the other world. However we may despise a superstition so gross, we cannot but congratulate ourselves on a custom which has handed down to us so many truthful memorials of ages which would otherwise be unknown. When we open these graves, we find the warrior fully dressed and fully armed, with various articles which he used while alive, even to the vessels out of which he ate and drank, and sometimes those which were used in preparing and serving his meals. The lady was buried in all her finery, with her scissors, bodkin, needles, pins, and other instruments of her work, as well as of her toilet, the keys of her coffers and her cupboards, her cosmetics, and even her articles of amusement; sometimes even her purse and her money. The latter frequently consists of Roman coins; but, in some instances, as we find early Anglo-Saxon coins in the graves in this country, so in the Frankish graves are found the coins of the Merovingians. If other evidence were not conclusive, these would identify the people to whom the graves belonged. From this variety of articles we are enabled to form a notion of the costume and riches of the Frankish people, of their forms of life, of their domestic economy, and even of their intellectual development. We can, by comparison, identify and distinguish races. In fact, their value is so great, that we are only yet beginning to appreciate it.

The merit of the Abbé Cochet as a learned and careful investigator is generally acknowledged on both sides of the Channel. Yet, strange to say, there are persons in France—and persons who lay claim to superior archæological knowledge who appear not to understand them. M. Lenormant, an eminent antiquary himself, in a Report to the Académie des Inscriptions on the interesting discovery of the Abbé Cochet's appropriation of these cemeteries to the Franks, a doubt which was unworthy of that gentleman's reputation, because it showed that he had given an opinion without first making himself fully acquainted with the facts. It showed that he did not know what had been done in England with regard to the analogous antiquities of the Anglo Saxons. Since the publication of the Abbé Cochet's book, a writer of far less reputation and character than M. Lenormant, M. Léon Fallue, has undertaken to prove that the worthy Abbé is entirely wrong; and that the sepulchres he had explored were not Frankish at all, but early Gallo Roman. M. Fallue's paper, which was printed in the *Revue Archéologique*, is distinguished by much that may be considered plain and jealousy, as well as by an amount of archæological ignorance which does no credit to the pages of the *Revue*. Entirely misunderstanding the real grounds for appropriating these articles to the Franks, and ignorant of their analogy with the similar articles found in the Anglo-Saxon and German cemeteries of the same age,—M. Fallue meets the overwhelming evidence of the Merovingian coins by an unworthy insinuation that the coins may have been surreptitiously inundated into the graves by the Abbé Cochet himself, in order to support his opinion. But the accuracy of the Abbé's statements have been so well testified that they can admit of no doubt of this kind, and the paper of M. Fallue is really not worthy of consideration. Yet it has made a noise in France, although it has ended by being generally passed as it deserves.

The cemetery of the Frankish period, explored by the Abbé Cochet, lie chiefly along the valley of the Eaulne, a wild and solitary district in modern times, but which was evidently well inhabited in the times of the Franks. The interments at Londinières, at Lucy, at Parfondeval, at Envermeu, at Douvreud, at Etretat, and at other places in this valley and its neighbourhood, proved equally rich in remarkable antiquities, and make no little show in the Abbé's numerous plates.

We call attention to this volume because all English antiquaries and all who take an interest in Anglo-Saxon antiquities ought to possess it, for the light it throws on the early remains belonging to our own island, and because it is a cheap as well as a good book. We hope that it may soon reach a third edition, for it is well known that the author has continued his researches with great success since the publication of the second edition. We will only add that the Emperor has just marked his opinion of the Abbé Cochet's labours and learning by presenting him with the Cross of the Legion of Honour.

## NEW BOOKS, &c

Now ready at all the Libraries, in Three Vols.,

**OUR OWN STORY.** By SELINA DUNBURY.

"A beautiful story of love, sorrow, and patience."—Britannia

"A work of thrilling and enchaining interest."—Observer

**MADELINE CLARE.** By COLBURN MAYNE, Esq.

**MARGARET and HER BRIDESMAIDS.** By the Author of "Women's Devotion." 3 vols.

HURST and BLACKETT, Publishers (successors to Henry Colburn).

This day is published in one volume, 10s. 6d.

**GLEANINGS AFTER "GRAND TOUR."** 1818. London: HOSWORTH and HARRISON, 215, Regent-street.

Third Edition, fcp. 8vo, 2s. 6d.

**SIR JAMES EYRE on the STOMACH and its DIFFICULTIES.**

London: JOHN CHURCHILL, New Burlington-street.

8vo. cloth, 9s.

**DR. BUDD on the ORGANIC DISEASES and FUNCTIONAL DISORDERS of the STOMACH.**

London: JOHN CHURCHILL, New Burlington-street.

Second Edition, post 8vo, cloth, 7s. 6d.

**DR. JAMES BRIGHT on DISEASES of the LUNGS and AIR-PASSAGES:** with a Review of the several Climates recommended in these Affections

London: JOHN CHURCHILL, New Burlington-street.

Fcap. 8vo. cloth, 12s. 6d.,

**DR. BARLOW'S MANUAL of the PRACTICE of MEDICINE**

London: JOHN CHURCHILL, New Burlington-street

Third edition, 8vo, cloth, 12s. 6d.,

**DR. BENNET'S PRACTICAL TREATISE on the DISEASES of the UTERUS.**

London: JOHN CHURCHILL, Princes-street, Soho.

Fcap. 8vo, cloth, 12s. 6d.,

CAUTION.—Each bottle is sealed with a stamped medallic capsule, and bears beneath the pink outside wrapper a label with Dr. De Jongh's stamp and signature. All Oils offered as Dr. De Jongh's, or of the same kind, without such marks are fraudulent imposition

# EXHIBITION OF THE BRITISH INSTITUTION.

(*Continued from page 305.*)

quisite in point of expression, and marvellous in point of execution, this is a picture which will materially add to Mr. Le Jeune's reputation. It is a cabinet picture, and was, of course, sold before it was sent. Really good things are soon picked up. What cabinet will contain ro choice an example of existing English art?

Our third Illustration—"A Scene, suggested by the Death of Pompey"—is from the prolific and poetic pencil of Mr. T. Danby. Truly poetic is it in many parts, and very careful in point of execution. Of the same high (nay, higher) quality is another picture by the same artist in the present Exhibition. We allude to No. 48, "A Part of the Lake of the Four Cantons, Switzerland." The absence of human life (even in the shape of a child an inch high) from so still, so striking a scene was a happy conception.

Our fourth Illustration, "From Our Own Correspondent," is a picture suggested by the Crimean news, and by the far-famed "Chelsea Pensioners" of Wilkie, now at Apsley House. An old Peninsular veteran is seen eagerly listening (in spite of his deafness) to the thrilling news which is read to him of the battles of Inkerman and Balaclava. It is by Mr. W. Hemsley, and exhibits in very happy union the contrasts of age and youth. The veteran is evidently thinking, at the same time, of other battles in which he had his part, and seems secretly, with all his admiration for what he hears, to prefer some of his own hairbreadth escapes to those thrilling ones which he is hearing read to him. The accessories throughout are painstakingly rendered.

Our fifth Illustration, an English Landscape, is by Mr. J. Holland. It is a view of "Lynmouth, North Devon," long a favourite locality with all who are in any way gifted with a sense of the beautiful in nature. That Mr. Holland is so gifted we have an undoubted illustration in the picture before us. May we say it?—we almost prefer this English landscape to some of those Venetian scenes which have made Mr. Holland so deservedly popular. He inherited a love of English landscape while he acquired his love for foreign landscapes, by a kind of artistic inoculation. Will he forgive us for such a criticism?

"FROM OUR OWN CORRESPONDENT."—PAINTED BY W. HEMSLEY.

## MR. ROGERS'S PICTURES.

WE quote the following interesting information respecting Mr. Rogers's collection from the *Inverness Courier*:—We are glad to observe that the National Gallery is to receive three of the late Samuel Rogers's collection of pictures. The Titian he considered the most valuable in his possession. It was for merly in the Orleans Gallery, and when that princely collection was broken up it was sold for four hundred guineas. Mr. Rogers, however, gave more than double that sum for it at Christie's, in 18—. The subject is Christ appearing to Mary Magdalene in the garden; and the popular name of the picture ("Noli me Tangere") is taken from the action of the piece, and the words—"Touch me not, for I am not yet ascended to my Father." Barry said of this choice production of the great master, that it displayed a mellow and glorious union of history and landscape, the most complete that he had ever seen. The other two pictures bequeathed by the poet—a Giorgione and Guido—were purchased by him from West's collection, and are excellent specimens of those masters; that by Guido has often been engraved. But as Mr. Rogers's classic mansion abounded with interesting objects of art and antiquity, and as these are to be brought to the hammer, we hope the Trustees of the National Gallery will secure some of the most valuable—especially Reynolds's inimitable pictures, which are identified with the history and glory of British art. Many will recollect the pride with which the aged poet used to exhibit, and the eloquence with which he descanted on, those long-hoarded treasures. Each had its legend or story—some bit of Italian romance or scene of English life. The frames were supplied with hinges, so that each picture could be brought forward and adjusted to the proper degree of light for unfolding its hidden beauties: and the sunshine streaming in from the long garden, with its thick laurels, and from the Green Park, was always kept subdued to the requisite medium. This gave occasion to Sydney Smith's remark, when the shade was too powerful for the dinner party, that there was "nothing but darkness and gnashing of teeth." The fine old poet had looked so long on these pictures and had shown them to so many generations of admirers, that he applied to himself a touching remark which, in one of his notes to his poem of "Italy," he ascribes to a Dominican Father at Padua, who had a painting of the Last Supper in the refectory of his convent—"I have sat at my meals before the pictures for seven-and-fifty years; and such are the changes that have taken place among us—so many have come and gone in the time—that when I look upon the company there, silent as they are—I am sometimes inclined to think that we and not they are the shadows." With all Rogers's sarcasms and shortcomings—of which the papers are saying quite enough—we may affirm that he realised the beautiful lines with which he took leave of the public as a poet thirty-three years since—

Nature denied him much,
But gave him at his birth what most he valued—
A passionate love for music, sculpture, painting,
For poetry, the language of the gods,
For all things here, or grand or beautiful—
A setting sun, a lake among the mountains,
The light of an ingenuous countenance;
And, what transcends them all, a noble action

"LYNMOUTH, NORTH DEVON."—PAINTED BY J. HOLLAND.

LONDON: Printed and Published at the Offices, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, MARCH 22, 1856

# THE ILLUSTRATED LONDON NEWS

No. 791.—VOL. XXVIII.] SATURDAY, MARCH 29, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## EUROPE—AT THE END OF THE WAR.

IF the States of Europe, for want of management and honesty, drifted into War, they have certainly not been allowed to drift into Peace. The peace—stable or unstable, dignified or undignified—which is to result from the Conferences of Paris, springs from no want of purpose or of will. Peace was a foregone conclusion when the Austrian propositions were first submitted to Russia. The Conferences have but confirmed principles of pacification previously formulated. There has been no uncertainty in the business from the first. All has been prearranged and pre-agreed. The diplomatic ship has not drifted, but has been coolly steered and steamed into the indicated harbour.

On the reassembling of Parliament the world will be more fully informed, and will be better enabled to judge, of the peace that has been thus concluded. Looking upon it as an accomplished fact, without being in possession of its details, let us consider in what position it finds the leading Powers of Europe; and calculate, if we can, the gains and losses of each, during the short struggle so suddenly brought to a close. The summary may be rapid, but may, perhaps, be found instructive.

Russia, whose ambition provoked and whose obstinacy embittered the war, demands the first mention. During the two years which hostilities have lasted she has suffered every kind of loss and humiliation. As a naval Power she has virtually ceased to exist. The ships of the Czar have slunk behind stone walls, or been buried, by the orders of his own Admirals and Generals, at the bottom of a sea that it was once his pretence to dominate and overawe. His maritime commerce has been annihilated. His harbours have been blockaded and insulted. His capital has been menaced. He has seen from his palace windows the fleets of a daring and an invincible foe. He has heard the thunder of their guns from the privacy of his council chamber. His coasts have been ravaged, his accumulated stores have been destroyed, and his strongest fortress—the pride and glory of his empire—his standing menace against Turkey has been captured after one of the most desperate and gallant defences recorded in history. He has been defeated in every battle, nay, in every skirmish, which his forces have attempted; and, as the sole set-off to so much disaster, has to show nothing but the capture of an Asiatic city, which yielded to irresistible and hopeless famine, rather than to the courage of his troops or the excellence of his strategy. Of the money loss which he has suffered it is utterly impossible to form an approximative estimate. Of the loss in more precious human life—whether it occurred in the dreary march over inhospitable steppes and dreary swamps—whether it were inflicted by typhus and cholera, more fearful destroyers than the sword—or whether it occurred in the sanguinary battles of the Crimea—it cannot be called an exaggeration to state that at least one million of his subjects have miserably perished.

BARON VON MANTEUFFEL, PRUSSIAN PLENIPOTENTIARY AT THE PEACE CONFERENCE.—(SEE NEXT PAGE.)

And what has Russia gained? Let us hope that, at least, she has gained wisdom and learned justice. To the Emperor Alexander himself no one can deny the merit of generosity and magnanimity. He inherited the war, and did not create it; and, when he found it necessary to yield, he yielded like a gentleman, a hero, and a Christian. If the result have shown him the true position of his empire with regard to Europe—if it have taught him to civilise the dominions which he possesses, instead of hankering after territory which belongs to his neighbours—if it make him

H.M. NEW DISPATCH GUN-BOAT "WANDERER."—(SEE NEXT PAGE.)

earnestly and wisely strive to develop the internal resources of the mighty empire committed to his charge—and if it have thoroughly weaned him from those aspirations of conquest bequeathed to him by his predecessors, the lessons of adversity will not have been administered in vain. All Europe will be the gainer, and Russia far more than any other portion of it.

Turkey next demands notice. An apparently effete and moribund empire has shown unexpected vitality. At the commencement of the war her case appeared hopeless even to her friends. At the end of the war there are none left to despise her. She has learned her value in the European system; she has discovered her strength and capabilities, and feels that she, too, contains within herself the germs of progress. She may yet require some tutelage from the Powers which so generously came to her rescue, when, without their aid, the Czars might have been throned in Constantinople; but the tutelage must not be obtrusive, or it will affront her dignity and retard the work which it desires to expedite. She has suffered no diminution of military renown; and no impoverishing or undue strain upon her resources either in men or money. Her trade, instead of being diminished has increased; and a large influx of Western capital has enriched the shores of the Bosphorus, and prepared the way for a still further extension of commerce and wealth. The elevation of the Christian population to the full dignity and responsibilities of citizenship has already developed a new source of power and greatness. All that the Allies ask from Turkey in return for what they have done for her is that she should be strong. The last two years have at least shown that if she were "sick" the sickness was not mortal.

Germany—next in proximity to the immediate belligerents, and having the largest interest at stake has suffered during the war a loss of character which it will take her years to recover. The conduct of Prussia has been contemptible, and has made many a true-hearted Prussian exclaim with the poet Platen, in bitterness of shame that whatever he was, he could be nothing worse than a German:—

Nichts schlechtres als ein Deutscher seyn.

With the peace will commence the real troubles of the well-meaning but weak and mischievous King of Prussia. In the hour of his calamity he will have few friends. There is rottenness all about and around him, and the signs of approaching catastrophe are visible on every hand.

Austria has conducted herself with greater honesty of purpose; and the young Emperor, whatever may be his new relationship towards Russia, will have no account to settle with his subjects for conduct which they have approved. As the immediate instrument by which the peace was brought about, Austria deserves thanks. It is too late to reproach her statesmen for their want of boldness. It is sufficient to consider that they had to administer the affairs of a very heterogeneous empire, which had scarcely emerged from a series of sanguinary revolutions when the war broke out; and that they were interrupted in wise and beneficent projects of internal reform and improvements by its complications and perplexities. They have now the opportunity of resuming their labours. They might have made their country greater by taking a share in the duties which Great Britain and France so magnanimously assumed. They missed the opportunity; but Austria is still a great and a leading Power, and stands in favourable contrast with all the rest of Germany.

France needed no glory in the war; but she has acquired it. She made sacrifices; but she made them cheerfully. To have fought side by side with her ancient rival and foe in the cause of European order, and in furtherance of a wise policy, utterly devoid of selfish interest, and to have been successful at the end of two years in accomplishing a work that might well have tasked the energies and the resources of twenty, is a result worth all the sacrifices she has made, were they ten times as onerous. Not even when the first Napoleon dazzled the world by the brilliancy and the rapidity of his triumphs did France stand so high in the estimation of the world as she does at the present moment. The glory that Russia and Germany have lost has gathered around her. Long may it last, for her own advantage and that of all Europe!

Sardinia—the gallant little kingdom—shares the triumph as she did the hardships of the struggle. Whatever may be the difficulties in store for the continental nations, and especially for Italy;—whatever may be the changes in the European system which may result from peace no less than from war—Sardinia has established for herself a high name and a growing influence. She is the hope of Italy. She could not have remained its hope if she had acted otherwise than she has done. Her reward may be postponed, but it will come; and all Italy, we hope, will be the better for it.

And Great Britain—what of her? Is she damaged? Has she suffered loss of credit?—of honour?—of prestige?—of influence?—of consideration?—of power? Is she the only one of the Allies that has nothing of which to vaunt? There are none but Englishmen who dare to say so; and these are but the growlers who exercise the Englishman's peculiar privilege, and would growl in the Garden of Eden itself, much more in a world where there are ups and downs for all things. It is true that England was unprepared for war; that her statesmen were slow and, perhaps, stupid; that there was mismanagement in the Crimea, as well as at home; that Napier did not take Cronstadt, or Simpson the Malakoff; and that many sore places in our administration, civil as well as military, have been exposed to the gaping crowd, both at home and abroad. But it is equally true that neither the sailors nor the soldiers of Great Britain have failed in their duty, or been foiled by the foe; that they have taken their full share of all the work that has been done; and that, if a few Englishmen grumble, Frenchmen, Sardinians, Turks, Austrians, Prussians, and Russians, render England due honour, and either fear or love her more than they did before. It is not on the Continent that men refuse to acknowledge that this country, like France, is greater after the war than she was before it; that the people have displayed the noblest spirit and the most invincible energy; that we have at this moment the finest army and the noblest fleet in Europe; that we have accomplished all this with so little sacrifice that the burden of the war has been scarcely felt among us, and that, if need were, we could without much difficulty double, treble, or quadruple our exertions and not break down, or run the risk of collapse to our trade or our institutions. No European potentate, great or small, has learned from the war to make light of the name and power of England. The only malcontents are at home; and their name is not Legion, but Affectation. Never was England so strong as now; and if there be any difficulties, either in the East or in the West, her friends as well as her foes know that her hands are free, and that she is ready for all emergencies.

## BARON VON MANTEUFFEL, AND PRUSSIA'S POLICY.

At the eleventh hour Prussia has been invited to join the Peace Congress at Paris, and has accepted the invitation. Not being one of the belligerent Powers, or a party to the treaty of the 2nd of December, she has been invited—we quote the words of Lord Palmerston*—"not to negotiate the treaty of peace, but to accede to the result of the negotiations of those who were more directly interested in the matter." As representatives she has selected her Ambassador at Paris, Count Hatzfeldt, and the President of the Council and Minister of Foreign Affairs, Baron von Manteuffel.

Baron Otho Theodore von Manteuffel was born on the 3rd February, 1805, at Lübben, in the province of Brandenburg. He studied at the University of Halle, devoting his attention particularly to law and political economy. In 1829 he was appointed to an office in the Finance Department at Berlin, and was shortly afterwards appointed Councillor at Luckau, where he so distinguished himself that he was elected to represent the Sternberg district at the Brandenburg Diet. In 1841 he was promoted to a Councillorship at Konigsberg. In 1843 he was appointed Vice-President of the regency of Stettin. In 1844 he was attached as reporting councillor to the Prince of Prussia, with the rank of a Privy Councillor. On the following year he was made a member of the Council of State. After the revolution of 1848 Count Brandenburg was intrusted with the formation of a Ministry, and Baron von Manteuffel was given the portfolio of the Ministry of the Interior. On the death of Count Brandenburg the Presidency of the Council of Ministers devolved upon Count Ladenberg, and the portfolio of Foreign Affairs was given to Baron von Manteuffel *ad interim*. On the resignation of Count Ladenberg in 1850, the King, appreciating the firmness displayed by Baron von Manteuffel during the revolutionary period, conferred upon him the Presidency of the Council with the portfolio of Foreign Affairs, both of which high offices he continues to hold. His selection as Plenipotentiary to the Paris Conferences shows the confidence placed in him by the King, and is in keeping with the precedent of the other States represented.

To this notice of the chief Prussian representative we must add a few words respecting the policy of Prussia on the Eastern question. It must be remembered that since 1850 it is Baron von Manteuffel, actually the Prussian representative at Paris, who has been Foreign Minister to King Frederick William. Prussia was a party to the Vienna Conferences: and, as such, was bound in honour to act in common with the Western Powers. On the 18th March, 1854, Baron von Manteuffel declared to the Prussian Chamber that Prussia adhered to the Vienna Note; but that Prussia would preserve an independent attitude, and would resist every attempt that might be made to influence her conduct, come from what quarter it might: the strength and the sword of Germany would only be employed to defend German interests. This was Baron von Manteuffel's first declaration of Prussian neutrality. Now, neutrality, as Lord Clarendon justly foretold, has been more exhausting, more disastrous, more fatal, to the interests of Prussia than a short and decisive conflict would have been. The popular sympathies of Germany have been transferred to her rival, Austria, in whose hands the destinies of Germany now rest. The passive attitude which Prussia assumed was not neutrality. It enabled Russia to withdraw her troops from the Polish-Prussian frontier to employ them in the Crimea against the Allies.

Baron von Manteuffel had a very difficult game to play. On the one hand the King, bound by such close ties to Russia, and the Court, declared themselves for Russia; on the other, the sympathies of the Chambers and people were with the Western Powers. The Committee appointed to discuss the proposal of a loan of thirty millions of dollars for armaments unanimously adopted the resolution in its favour, provided the credits thus granted were not to be applied to the support of Russia; or, to quote the words of the report, "in consideration that his Majesty's Government has declared that it will continue to adhere to the policy hitherto pursued; and, consequently, labour in accord with the Cabinets of Vienna, Paris, and London, and especially in intimate union with Austria, and all other German States, for the speedy restoration of peace on an equitable basis, as proclaimed in the Vienna Conference Protocols, under reservation of full freedom of decision of active interference." This was almost tantamount to a vote of want of confidence. The debate which ensued was a warm one. General Bonin declared that a union with Russia would be tantamount to parricide. Baron von Manteuffel, with a courage which does honour, declared that the Government would consider a conditional vote as a refusal. Despite the exertions of M. de Vincke, supported by the Extreme Left, who proposed to refuse the credits unless guarantees were given that no part of the sum should be applied in favour of Russia, the Government carried its point. In a very remarkable speech in which M de Vincke said that Prussia had become "*the postman of Europe*," he observed, "We, gentlemen, have to look at our interests in a Prussian point of view; if Russia should seize upon the Bosphorus and upon the Sound she becomes invincible, and you have a direct interest in opposing it. If you are a European Power you ought to oppose such projects most energetically; if you are not, you ought the more to join those who can defend your weakness." On the 26th April Baron Manteuffel announced that he had concluded a treaty (on the 20th) with Austria. General Bonin was dismissed from the Ministry of War; and the Prince of Prussia left Berlin in a manner that evinced his disapproval of the Manteuffel policy. Prussia obstinately refused to join the treaty of the 2nd December, and has sunk into the position of a second-rate Power. It is true that Baron von Manteuffel now represents Prussia with the other Powers at Paris, but, as we have already said, not to negotiate, but to accede to, the negotiations, except in so far as the revision of the Treaties of 1840 and 1841 are concerned, touching the navigation of the Bosphorus and Dardanelles, to which treaty Prussia was a party.

* Lord Palmerston's reply to Mr. Darasli, House of Commons, March 14, 1856.

## THE NEW GUN-BOAT "WANDERER."

THIS fine gun-boat, of a new class, has just been fitted out at the Chatham Dockyard. She is one of the new dispatch gun-boats, built at Blackwall, and sister ship to the *Mohawk*. She is a very rakish-looking craft: in fact, from external appearance, she might be taken for a gentleman's yacht. The illusion, however, is soon dispelled on deck, for she carries two heavy Lancaster guns, independently of smaller pieces. There is no doubt, from her great horse-power (300) and extreme length, she will steam very fast. She has a very characteristic figure head, being a sun-burnt traveller with a carpet-bag slung on a stick over his right shoulder. She is the first of her class fitted out. There will be six or eight vessels of the *Wanderer's* class attached to the Baltic squadron this year.

THE "ILLUSTRATED LONDON NEWS" IN SYRIA.—The topics of conversation were essentially the same with all parties: first of all they saluted me, and then congratulated my friends on my arrival. There are no such things as introductions in the country: every one comes in and talks with you. After the preliminary salutations, the topics of conversation were all confined to the war. It was fortunate for me that I had a number of newspapers, among which were many of the ILLUSTRATED LONDON NEWS and *Punch*. The pictures in the former paper they studied—Inkerman—battle-fields of Alma and Inkerman, the ships of war, and the portraits of the various commanders, among whom they recognised Omer Pacha, who had once governed in this country, and therefore was known. The fate of the numbers of the ILLUSTRATED LONDON NEWS deserves to be recorded. After being seen by every man, woman, and child in the village, they were borrowed by the other villages, and now, while I write these lines, they are in a village two hours off. It may be a matter of interest to the reader to know how the natives could understand them, seeing that they did not know English. Well, the thing is thus done: to the villagers here we explained the subjects of the pictures; to those of other villages we explained them to the messenger who was to take them, and who, generally speaking, was an intelligent man, and he accordingly described them to his friends. In this way sundry numbers of the ILLUSTRATED LONDON NEWS, which not long ago left the figs of London, are now going the round of the villages at the foot of Mount Hermon; and I am inclined to believe and affirm that they are the first of their kind which have as yet been seen in these villages.—*Wortabet's Syria and the Syrians, just published.*

## FOREIGN AND COLONIAL NEWS.

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

EASTER has arrived with a brilliant sun and a bitter east wind, which is, however, veering round to the southward a degree, and thus relaxing some of its severity. As usual, Passion Week has been cold, raw, and damp, which, as usual also, has considerably deranged the plans of the men and women who delight in spending money, whether they can or can not afford it, in the highly delectable and intellectual enjoyment of dressing themselves out in summer garments, and, spreading these and their half-frozen persons out with a pitiable semblance of luxurious ease in carriages bought or hired, or done up for this especial occasion, spend some three or four mortal hours in trailing from one end of the Champs Elysées to the other end of the Bois de Boulogne, in pursuance of that custom which, like the *jour des masques* of the Carnival, would be one infinitely more honoured in the breach than in the observance. This year, as the rain, or at least a Scotch mist, fell every one of the three days of Longchamps, the thing was almost wholly a failure: it appears even that, for the first time for fifty years, there have been no police orders issued for the arrangement of the promenade.

A guard is now established about the person of the Prince Imperial, who continues to thrive in the most satisfactory manner. This guard is commanded by a Captain, who is desired to receive orders from no one but Madame de Brust. The Cente-Garde continue to be limited to the service of the Emperor and Empress.

Much alarm was excited last week by the account of a fall of the nurse with the infant in her arms from her foot catching in the carpet; the child, however, wholly escaped, and the nurse suffered no more than the fright caused by the accident.

The Empress is passionately fond of her child. When at its birth she was told it was a boy, she at first could not be brought to believe that the extent of her desires had been so fully accorded, and when it was taken to her she seized it in her arms, covering it with tears and kisses, and so unwilling was she to let it go, that it was only on the Emperor representing to her the absolute necessity of immediately presenting the infant to the Minister of State and the Imperial Princes that she consented to resign it. During the greater portion of her sufferings her Majesty displayed considerable courage; but at one moment, it appears, she was seized with a presentiment that her life was in immediate danger, and earnestly requested that a minister of religion might be called in to attend her. She soon, however, became reassured, and regained her presence of mind

It appears that on the occasion of the late presentations at the Tuileries, in honour of the birth of the Prince, one of the presentees, eager to display his fervent zeal, adopted a singular and, at least, anticipatory mode of doing so, by crying "Vive Napoléon quatre!"

It seems that the project of establishing a viceroyalty for the Prince Napoleon in Algeria has been definitively abandoned; though we may, we believe, assert with certainty that such an intention was at one time seriously contemplated.

There is a talk of the passing of a decree by which the law of conscription will only act on those a year older than the age at present appointed for the drawing, in order to allow more time for the strengthening and developing of the constitutions of the conscripts.

The grand picture of the Battle of the Alma painted by Horace Vernet for the Prince Napoleon has been presented by him to the Prince Jerome. Various motives for this substitution have been given; among others, certain remarks made by the critics on the position given to the cousin of the Emperor in the composition of the picture.

The affluence of verses on the occasion of the birth of the Imperial Infant is something enormous. At many of the theatres pieces referring to the same event are in course of rehearsal.

The first number of the new series of literary recreations, "Les Entretiens Familiers," of M. de Lamartine, opens with a detailed account of the poverty to which he is reduced—a poverty so great that he states he is no longer anything but a literary man, condemned to a *travail à mort* to enable him to procure the means of subsistence. That M. de Lamartine's position is such as he states it to be we do not for a moment call in doubt; but whence comes this excessive poverty? During a life of unremitting literary labour M. de Lamartine has realised such profits as fall to the lot of very few men of similar occupations. This is a known and undisputed fact. Madame de Lamartine brought her husband a certain and not inconsiderable fortune; and, being without children—the only result of the union, a girl of singular beauty and intelligence, having died in her childhood—it seems difficult to account for such a state of affairs. Altogether, the tone of this introduction to what promises to be one of the most valuable and interesting of the works of the great poet, historian, and statesman, is not instinct with melancholy and discouragement as to leave the most painful impression on the mind of the reader, and to cause among the friends and admirers of M. de Lamartine the strongest sensation of regret that it should have been expressed.

M. Victor Cousin is about continuing the extremely interesting series of his historical studies, commenced some four years back. Among the new productions there are notices on Mesdames de Longueville, de Chevreuse, and d'Hautefort, and a most valuable set of articles on the secret notes of Cardinal Mazarin. These appear in the *Journal des Savants*, which unfortunately renders the circulation extremely limited. The notes in question contain all the secret history of the Court of Anne of Austria, and all the private police reports of the time; and of course reveal facts hitherto unknown and unsuspected. M. de Fortoul, incited probably by the appearance of this work, has sent M. Bord d'Hauterive to Civita Vecchia, with instructions to inspect the archives of the country where Cardinal Mazarin was Nuncio.

On Monday the benefit of Grisi, in "Lucrezia Borgia," took place at the Italian Opera, with the most brilliant success. Both La Diva and Mario sung and acted their very best, and called to mind the souvenirs of their ancient glory. Mdme. Borghi-Mamo sang the celebrated drinking-song (in which she was rapturously encored) as few have sang it,—with a skill, a taste, and an expression beyond all praise. Mdme. Biscaccianti the new *débutante*, has excited a considerable sensation in the "Sonnambula."

### THE PEACE CONFERENCES.

The Plenipotentiaries met on Monday, Tuesday, and Wednesday, and it was thought probable that they would continue to meet from day to day till the conclusion. Notwithstanding the assurances in respectable quarters as to the exact date on which the protocols will be signed, nothing positive on the subject has yet transpired. The prevailing impression on Wednesday evening was that everything would be arranged this week.

In the mean time the last day allowed for the armistice is rapidly approaching. It is no doubt expected that the treaty will be signed on or before the 31st, but so serious a matter as the resumption of hostilities cannot be left to chance or exposed to accident. In order to avoid this, and with a humane desire to avoid the unnecessary effusion of blood, a message has been or will be sent by telegraph to the head-quarters in the Crimea not to recommence hostilities without further orders. This is, of course, nothing more or less than a prolongation of the armistice; but, in order to prevent the unpleasant effect on the public mind that would be sure to follow the official announcement of such prolongation, the order will probably be explained by the fear of an accident occurring to the electric cable. Thus, the prolongation of the armistice will be effected without unnecessarily alarming the too susceptible public.

The leading articles of the expected Treaty of Peace are reported from a Russian source to be seven in number, and to the following effect:—1st, the neutralisation of the Black Sea; 2nd, no restoration of Sebastopol as

a fortress; 3rd, reduction of Nicolaieff to a merely commercial port; 4th, Russia to abandon the Protectorate of the Principalities; 5th, the free navigation of the Danube: 6th, the new frontiers to be settled by a Commission; and 7th, the passage of the Pruth by the Russians to be a *casus belli*. These points, with the addition of the last, and with the exception of the second last, which is only matter of detail, are just the preliminary propositions on which the negotiations began.

*Le Nord* of Tuesday has the following:—

Paris, March 32

The eleventh Conference has been held to-day. Upon this occasion all the Plenipotentiaries were present, and the draft of the Treaty of Peace, prepared by the second Plenipotentiaries, was handed in.

Austria has raised new questions concerning the navigation of the Danube. She already informed you that the Prussian Plenipotentiaries have not had an occasion up to this time to praise the proceedings of Austria. In fact, Count Buol, knowing that Baron de Manteuffel and Count Hatzfeldt had arrived, and were awaiting admission, wished to make his new proposition in their absence, and the Prussian Plenipotentiaries were obliged to wait more than an hour. You may imagine the proceeding was not thought very friendly

The Conference has had to regulate the occupation of Turkey by the Allied troops. This appears to have been fixed at the amount of 20,000, partly French and partly English. Its duration it is not possible to predict at present.

The English Government has lowered its tone considerably with regard to Prussia. The possibility of new alliances must be kept in view.

Another correspondent of the same journal, writing on Monday evening, asserts that the sitting above referred to was long and animated. The Prussian Plenipotentiaries wished to take part in the discussion, but this was opposed. Nothing was concluded, and the second Plenipotentiaries were requested to revise the document they had prepared.

## THE ALLIED ARMIES IN THE EAST

By the steamer *Ganges*, which arrived at Marseilles last Wednesday evening, we have advices from Constantinople of the 18th, and from the Crimea of the 14th. General Vivian and thirty-eight French military men had arrived. General Smith had arrived from London on his way to Schumla and Count Zamoyski arrived from Paris to take the command of the Polish Legion. The weather had been very severe, with violent north east winds and snow. The Allies have commenced the demolition of the crenelated wall of the inclosure round Sebastopol. The health of the Allied armies has much improved, in consequence of the hygienic measures that have been adopted. Ismail Pacha is about to increase the army of Anatolia. General Mouravieff is said to have received considerable reinforcements by the Caspian Sea and Tiflis. He has now 15,000 cavalry under his command

A letter from the Banks of the Dnieper, dated the 6th March, announces proceedings at Nicolaieff which remove all doubt as to the sincerity of Russia with regard to that port. A commission had arrived to take an inventory of the material previous to the available portion being removed, and it was stated that the port would be declared free.

Some activity took place at Sebastopol in consequence of the demand of the Allies to embark things in boats from the south side of the harbour—the object being to ship the cannon, anchors, &c., captured in Sebastopol. To this the Russians demurred, saying that the seaboard was their own, and that we could not use it. This is perfectly true, for, although we have got the town, the north forts command it, and not a cock-boat can put off from the shore without imminent danger of being sunk. However, the Allies have agreed to waive the question.

## THE FLYING SQUADRON IN THE BALTIC.

The *Amphion* and the *Samson* quitted Kiel roadstead on Tuesday last to join the English squadron in the Baltic. The *Cæsar* and *Majestic*, ships of the line, have arrived at Kiel to relieve the English squadron. Other vessels are expected. A letter from Hamburg, of the 19th, in the *Independance Belge* says:—

The flying squadron sent into the Baltic by the English Government remains at the Swedish roadstead of Faro Sund. Three vessels, however, have entered the Gulf of Eckenasher, which last year served a long time as a place of refuge to the third division of the fleet under Rear-Admiral Baynes

A great number of Russian vessels continue to pass to and fro upon the coasts of Courland. Hitherto they have been unmolested by the English fleet; and this is to hoped that the vessels of war will remain so peaceably inclined until their return to England

The remark in the latter paragraph will be understood when we mention that the Gulf of Riga, and consequently the Russian ports, were all frozen in up to the latest reports; that they have been so during the winter; that a compact field of ice extends from Dago to the Aland Islands; that the Gulf of Riga is quite inaccessible; and that loose fields of ice, with no navigable open water, were found thirty miles to the westward of the Dager-Ort. The truth is that instead of a brisk trade being carried on between Russia and other countries, as was confidently asserted by various journals at least two months ago, the Russian ports have positively been inaccessible to any sort of vessel whatever.

## AMERICA.

The Royal mail steam-ship *America*, which left New York on the 11th inst., did not arrive at Liverpool till midnight on Thursday week, several days after its usual time.

The Cunard steam-ships *Africa* and *Arabia* had arrived out—the former at New York on the 9th and the latter on the 12th instant. The *America* reports nothing of the missing steamer *Pacific*

In the United States' Senate on the 10th instant, on the consideration of the bill appropriating 3,000,000 dols for increasing the armament of the United States, Mr. Cass made another violent onslaught upon England. He said England had suffered so much in the war with Russia that it was not at all unlikely she might try to retrieve her reputation by a war on the Western Hemisphere. Mr. Cass said he did not see how the Central American convention could be referred to arbitration. It was not a question of boundary or indemnity, but a mere question about the meaning of a word. No arbitrator, whether understanding the English language or not, could tell what the meaning of the word "occupy" meant better than they knew already.

According to documents submitted to the Senate on the 10th inst. the instructions to Commodore M'Canlay, Commander of the United States' home squadron, issued in April last, after the Spanish frigate *Ferrolana* had fired into the United States' steamer *Bidoroda*, were to the effect that, in case of a similar outrage committed on a vessel rightly bearing the United States' flag, he must promptly interpose, and resist the exercise of the assumed right of visitation, and repel the interference by force; the Executive taking the ground that the conduct of the authorities of Cuba, in hailing and searching American vessels, cannot rest on the plea of territorial jurisdiction over the high seas in the vicinity of the island of Cuba, the United States' Government denying the existence of any state of facts to warrant the exercise of belligerent rights.

The State Democratic Convention of Pennsylvania have put forward the name of Mr. Buchanan, lately Minister to Great Britain, as its choice for the next presidential term. There seems to be entire harmony in the final vote; the few advocates of Mr. George M. Dallas readily yielding their personal preference to the overwhelming sentiment in favour of Mr. Buchanan.

Resolutions in favour of a prohibitory liquor law were thrown out of the Canadian House of Assembly on the 6th inst., by a vote of 51 to 50. A stringent license law, however, was adopted by a large majority.

The Legislative Council of Canada has passed to a second reading a bill to permit money to be loaned by all parties, except banks, at any rate of interest which may be agreed upon, the said interest to be recoverable in the courts of law.

Japan dates, *viâ* California, report that the city of Jeddo was destroyed by an earthquake on the 12th of November; 100,000 houses were in ruins, and 30,000 lives lost.

## AUSTRALIA.—REPORTED LOSS OF THE CLIPPER "SCHOMBERG."

By the Black Ball mail-ship *Lightning*, which arrived off Queenstown on the 21st inst., we have Melbourne papers to the 27th of December. The captain of the *Lightning* reports that on the morning of his departure he received information off Port Phillip Heads, from the pilot-boat, that the clipper *Schomberg*, which left Liverpool on the 6th of October last, was lost thirty miles north of Cape Otway. She had on board when leaving port 490 passengers—all of whom are reported to be saved—and 3000 tons of merchandise.

The last gold escort from the Ballarat and Mount Alexander diggings amounted to 46,618 ounces of gold, and £76,600 in sovereigns. The intelligence from the diggings is quite satisfactory. Several large findings have been reported. A letter from Creswick Creek, dated December 20, says:—

The perseverance of some of the diggers in the locality of Long Point is crowned with success at last. The fact that various rich deposits of gold lay in the gullies about Long Point has been long established, but owing to the heavy rains the place has been comparatively deserted. Some few parties, however, knowing the auriferous nature of the locality, stuck to the spot, and succeeded last week in bottoming new shafts in the old worked ground, and are now reaping a good harvest, as the washing stuff yields from 2 to 2½ ounces to the tub.

## NOTES OF THE WEEK.

THE King of the Belgians again honours England with his presence, and though the ostensible business of his Majesty's visit is the accept ng, at the hands of the Archbishop of Canterbury, a release from his sponsorial undertakings on behalf of the Princess Royal, the interesting ceremo y of whose confirmation is elsewhere described, it is not to be doubted that King Leopold's opinions upon the present European crisis have been amply laid before our Court. He may also have had a word for the Princess Royal on another subject; and no man is better qualified than the fortunate wooer of two Princesses to speak upon the merits of an aspiring Prince. This may not be a bad opportunity to add, in justice to the King, a statement for which we have authority, namely, that the allegations touching his enormous receipts from this country, in respect of the settlement made on his marriage here, are utterly unjust and unfounded. Without entering into detail—a hich, however, we possess—we are enabled to state that his Majesty's conduct in this respect is most honourable and disinterested.

Parliament meets next week—the Commons on Monday, the Lords on Tuesday. Whether Government meets the Senate with a treaty or not, there is plenty of work for the latter to do; and it is to be hoped that, the first part of the Session having passed over, the Legislature will now address itself to its duty in something like earnest. An educational measure of some kind is absolutely required at the hands of the Government. With one-half of our children untaught, it is too late to prattle about right of action or sectarian differences. No citizen has a right to bring up nuisances in the Commonwealth; or, if conventionalities have conceded to him such a right, let common sense take it away. No sectarian difference can justify Christian men in leaving every court and alley a nest of crime and debauchery. A Minister who should address himself in thorough earnest to this matter, and make his appeal to the honest men of all parties in the name of our common humanity, would receive the support of the nation. What sort of an estimate of legislative duty have we when a militia bill or a tax squabble can be made a Government question on which a Cabinet will stake its existence, and a measure for elevating nearly three millions of children from vice and ignorance to civilisation is an "open" question, or left to no outsider?

There are several other subjects which must come before the House immediately. The Solicitor-General brought in, at the last moment before the Recess, a bill for taking away the testamentary jurisdiction of the Ecclesiastical Courts, and giving it to a new Court to be called "Her Majesty's Court of Probate." Compensation is secured to all with vested interests, and the new court is to be thrown open to the whole profession. Lord St. Germans has brought in a measure for settling the vexed question touching the legality of marriage with the sister of a deceased wife, and proposes not to have such a marriage solemnised in a church or chapel, but to be performed before a registrar. The Commons affirmed the principle of the bill last year; and this modification of it may enable it to escape the effect of theological and other prejudice. The Chancellor has promised a measure on Divorce, which may be one of the most valuable pieces of legislation conceivable, or may be worth little to the class really and cruelly oppressed by the present system; and to this bill the people will look with great interest. One other question must come up if we have peace. Parliament must settle what kind of a military and naval establishment we are to keep up for the future; and which alternative is to be preferred—the preserving war armaments at an enormous expense, or entering upon any future war half prepared, and certain of blunders and losses.

The Lord Mayor's Easter dinner at the Mansion-house, on Monday, was marked, not only by a brilliant attendance, but by a more serious and earnest tone in the speeches than is usual at such banquets. The Duke of Cambridge spoke with much good feeling, but used a phrase which, had it come from an Administrative Reformer would have brought down upon him the weeping of all the carpet warriors in and out of the House. His Royal Highness intimated his belief that the maintenance of the Army and Navy was one of those necessary "evils" without which a great empire could not maintain its position in Europe. Mr. Gladstone also spoke, and after reading a remarkable recantation of his late tenets touching the wickedness of the Russian war, which he now thinks originated in the purest motives, he urged that the first duty of the House of Commons was to address itself to the re-establishment of the equilibrium of the public finances, and to a thorough reform of the public establishments; and Sir John Pakington was obliged to hint that, gratifying as were such entertainments, there was such a thing as Corporation Reform The Lord Mayor made a graceful allusion to his being in some degree the "emblem of innovation;" and truly it was a suggestive sight to see a Jew, at the head of the first city in the world, rising to offer thanks to a Christian Bishop for his excellent discourse; and the Bishop (Lincoln) courteously accepting the compliment.

One would say that the American "difficulty" was in good course of removal, when we find the statesmen of the Union at Vatiel and Wolfius As Thackeray says of a man under extreme affliction—when he sits down to put his woes into poetry, and to wish there were other rhymes to "sorrow" besides borrow and to-morrow, he is not very much hurt. But Mr. Marcy has invented something, in addition to the laws of his country, which he calls the sovereignty of the nation, and, moreover, urges that we were not only bound to observe all those laws, but to study "the spirit in which they were made;" and this refinement is brought up in entangled despatches, which prove one thing only, namely, that Mr. Marcy wishes to prove to his countrymen that he is the most wonderful diplomatist in the world. Lord Clarendon might make him a present of England's assent to the proposition, and so, as far as we are concerned, help the business to a close. In the American Senate a bill appropriating three millions of dollars for increasing the armament and munitions of war has been ordered to be engrossed for third reading by a majority of 22 to 12.

Meantime Government has very properly dispatched two steamers—the *Desperate* and the *Tartar*—in search of the still missing *Pacific*, and, should no worse casualty have occurred than the breaking her machinery and her having drifted (for she could do little in the way of sailing) far out of her course, she may be rescued; and most fervently do we hope that one of these vessels may have the proud satisfaction of towing her into New York. But it would be affecting a more sanguine feeling than is warranted by the alarming circumstances of the case did we say that we dare give utterance to more than hope. The time which has elapsed since the *Pacific* left Liverpool is a menacing fact in the presence of which the most hopeful grow fainthearted.

The Board that was to rehear the case of Sir Richard Airey, and the other mismanagers in the Crimea, appears to be reluctant to meet, and two of the officers are stated to have begged themselves off, on the plea of sickness. The work will be disagreeable and unthankful; but, if people will bluster out wholesale contradictions to official reports, the latter must be substantiated, or the Executive is stultified. Should the verdict of the Board confirm the M'Neil report, it is difficult to see with what propriety Lord Hardinge, who has pronounced the accused parties to be innocent, can retain his office of Commander-in-Chief. But the constitution of the Board renders such a verdict impossible—it was granted to whitewash the Crimean blunderers, and, if it cannot quite do this, it will, from *esprit de corps*, at least try to make them a decent whitey-brown, and perhaps to splash and spot their assailants a little.

---

Pieces written in commemoration of the restorat on of peace are already in rehearsal at the Paris theatres.

AGRICULTURAL STATISTICS BILL.—On Thursday se'nnight a large number of farmers and others connected with the agricultural interest of the neighbourhood of Loughborough assembled at the Angel Inn, magistrates' room at the Townhall, to consider the details of the above bill, recently introduced into the House of Lords by Lord Stanley of Alderley, President of the Board of Trade. The meeting was convened by C. W. Packe, Esq., M.P., by whom the details of the bill were explained and commented on at considerable length. Mr. Packe strongly denounced the bill as frivolous, unconstitutional, and unworthy of a free country. A petition to Parliament against the measure was in the end carried by acclamation.—*Leicestershire Mercury.*

THE SEAFIELD WOODLANDS.—The Earl of Seafield is one of the most extensive woodland proprietors in the kingdom. For extent and value the Seafield forests equal, if they do not surpass, those even of the Duke of Atholl or the Marquis of Breadalbane. His Lordship's properties are all situated in the north of Scotland, and lie chiefly in the shires of Banff, Moray, and Inverness. The woodlands in the six districts in which they are comprised extend in the whole to 41,371 acres imperial—viz., about 12,215 acres in Strathspey, 10,149 in Glen Urquhart, 10,022 in Banffshire, and 1885 in the county of Moray. Taken at the valuation of £20 per acre overhead—by no means an excessive estimate—the wood on the Seafield estate is worth £1,021,1.0

MR. LAYARD AT ABERDEEN.—On the 20th inst. Mr. Layard, M.P., was reinstated as Lord Rector of Marischal College and University, Aberdeen. In the morning he was entertained at a public breakfast, and had a most flattering reception. On the subject of the war he said:—"There is every probability that by the end of the month we shall have a treaty of peace signed. Very few public men desire war, and peace in the abstract is certainly more to be wished for, but I have no confidence that the present peace will be upon the whole a satisfactory one, and there is scarcely a man to be found from the Land's End to John-o'Groat's but would like another year of war (Great cheering), and for these reasons—first, the political aspect of the question does not warrant us to expect a lasting peace; and, second, because there is a general impression that now we are fully prepared for it, another year's war would show the world that there is that in Englishmen which would conquer every difficulty (Cheers). If we have peace now, matters will be left in the abyss of uncertainty in the same state as that in which we found them (Hear). True, we have protected Turkey against Russian aggression in the Black Sea; but, so far as the great questions of civil and religious liberty are concerned, Europe remains pretty much the same as before the war began, and therefore, I think, the peace will be premature."

THE LONDONDERRY COLLIERIES.—Frances Anne, Marchioness of Londonderry, is the possessor of the most extensive and valuable coalmining district in the northern district. It extends over an area of 12,000 acres, lying between sunderland and Seaham on the coast, and stretching as far inwards as the city of Durham. The yearly wages of the workpeople are entirely of contracts, amount to about £135,000. It is said that Lady Londonderry has resolved upon enlarging the works at Seaham Harbour, at an outlay of £100,000. The produce of the trade of no estate in England but her Ladyship in the Cleveland district is to be brought to Seaham, where blast-furnaces are to be erected.—*Sunderland Times.*

BOTTLEMAKERS' STRIKE.—The bottlemakers employed at four out of the six bottleworks on the Wear struck work last Monday morning. Their present remuneration has hitherto been—finishers, 26s; blowers, 24s; gatherers, 20s; with dwelling-house and fire added. The masters say they cannot cope with the manufacturers in France and Belgium if they continue to pay such wages, considering that coal and materials are at a high figure; and they gave notice of a reduction of the above rates to 24s, 20s., and 16s respectively, which the men decline to accept, and the works of two of them have turned out. The two houses at work continue to pay the same wages as formerly.

COTTON-MILL DESTROYED BY FIRE.—On Monday night last the cotton-mill of Mr. Threlfall, spinner and manufacturer, Regent-road, Salford, was totally destroyed by fire. The loss is estimated at £14,000, covered by insurances in the Sun, West of England, and Royal Exchange fire-offices. About 250 workmen will be thrown out of employ by the unfortunate occurrence.

THE MORMON EXODUS. On Wednesday last an extraordinary scene was witnessed at the New-street railway-station. A fine ship, the *Enoch Train*, having been chartered to convey a cargo of Mormons to the United States, *en route* to their settlement in Utah territory, three hundred men and women, boys and girls, formed the contingent supplied by the Birmingham district. They left by the half-past ten train. All seemed to belong to the working classes, and the proportion of the sexes was about equal. Many hundreds of their relatives and fellow-saints assembled at the station to bid them farewell; and, in spite of the efforts of an instrumental band to cheer the spirits of the females, some very affecting scenes were witnessed. There will be nine hundred on board.—*Birmingham Journal.*

THE UPPER LAHOURN.—An interesting report of the agricultural committee of the Newton Abbot board of guardians has just been published, which shows that paupers in union workhouses may be profitably engaged in the cultivation of the land. The principal crops grown on the Stock Exchange, and the Duke of Bedford were never introduced once, for the purpose of avoiding the inquiry which should precede their admission as a marketable commodity. A curious circumstance relative to the fugeries of Mr. Edmond O'Flaherty was mentioned incidentally at the half-yearly meeting of the Midland Great Western Railway (Ireland) last week, this being the first occasion on which it obtained publicity. Lord Castlemaine, one of the shareholders, asked the chairman to explain an item which appeared in the accounts, under the head of "forged transfers." The chairman, in reply, said that fifteen shares were disposed of under a forged power of attorney, by a gentleman who had left the country. That transfer had all the appearance of being genuine, so much so that he understood that the gentleman whose name appeared as that of the witness was not at all satisfied that he himself had not written it. The party to whom the shares belonged naturally applied to the board to have them reinstated. The matter was carried to a tribunal at tralway, the case was tried, and the company were defeated, and they were obliged to restore the shares that had been fraudulently transferred in his name. Lord Castlemaine: I wish to know who that person was. Chairman: I have no difficulty in saying it was Mr. Edmond O'flaherty. A voice: I was thinking it was. The amount of the forgery was £465.

VISIT OF THE GRAND DIGNITARIES OF STATE TO THE IMPERIAL INFANT.

## THE ONDOIEMENT (HALF-BAPTISM) OF THE IMPERIAL PRINCE.

Last week we gave a description of this ceremony. The Engraving of it in our present Number shows the Aumônier of the Emperor in the act of sprinkling the water on the Imperial infant, which is held by the *gouvernante*, Madame Brunt. On the other side of the small table which has been made to serve as stand for the baptismal font is the Emperor, with his hands folded. Near the altar, on the one side, are Cardinal Dupont, Archbishop of Bourges; Cardinal Gousset, Archbishop of Rheims; Cardinal Donnet, Archbishop of Bordeaux; Cardinal Morlet, Archbishop of Tours; and M. Legrand, the Curé of St. Germain-l'Auxerrois, the parish in which the Palace of the Tuileries is situated. Opposite them stand the Admirals and Marshals of France and other high dignitaries, the Grand Master of the Imperial Household, the Deputy Masters of the Ceremonies, the Princess Mathilde, the Grand Mistress of the Household, and the Ladies of Honour of the Empress.

### VISIT OF THE DAMES DE LA HALLE.

The market-women of Paris, better known by their local and historical designation of "Dames de la Halle," form an important section of the population of the French metropolis. The scene represented by our Artist is that in which the Emperor shows the Imperial infant, in his magnificent cradle, to the loyal "dames." Louis Napoleon spares no pains to gain the good opinion of the working classes, and certainly he never used a more effective plan for that purpose than when he paid such attention to the deputation of market-women. In their way from the Palace the fair deputies are said to have been most enthusiastic in their description of the beauty of the young Prince, and of the gracious manner in which they were received by the Emperor.

### VISIT OF THE DIGNITARIES OF STATE.

It was on Monday that the Dames de la Halle paid their homage to the young Prince; and on the following day the Emperor received the felicitations of the Senate, Legislative Corps, Council of State, Magistracy, the Institute, clergy of different persuasions, the Municipal Corps, and deputations from the National Guard and from the Army and Navy, in the Throne room. The magistrates were in full costume, and the civil and military functionaries in full uniform.

The Presidents of the various bodies, having congratulated the Emperor on the birth of an Imperial heir, to which he made a suitable reply, were successively introduced into the apartments of the Pavilion Flore, when they returned to those occupied on the ground floor by the Prince. This is the moment chosen by our Artist to represent the most striking scene of that day. The chief dignitaries of France are grouped round the cradle of the infant whose birth has called forth so much enthusiasm throughout the empire.

VISIT OF THE DAMES DE LA HALLE TO THE IMPERIAL PRINCE.

ONDOIEMENT OF THE INFANT PRINCE IN THE CHAPEL OF THE TUILERIES.—(SEE PRECEDING PAGE.)

# THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, MARCH 29, 1856.*

In the Session of 1854 various statements were made in the House of Commons asserting that torture was very frequently used in British India to extort taxes and revenue from the natives. These charges were preferred by Mr. Bright, Mr. D. Seymour, and Mr. Phillimore; and their truth was denied by Mr. Mangles and Sir J. W. Hogg. Instructions were sent out by the President of the Board of Control to institute a searching inquiry into these imputed cruelties, and the Governor of Madras appointed Messrs. Elliott, Stokes, and Norton to conduct the investigation in that presidency. These gentlemen publicly notified the powers intrusted to them, and the purpose for which those powers were granted; in consequence of which they received 1959 complaints within a period of three months. The number of personal applicants for redress were 522, the whole of whom were personally examined by the three Commissioners. Out of this total 280 complaints were dismissed, as either groundless or frivolous, or as relating to matters or persons beyond the pale of the prescribed inquiry; the remaining 242 complaints were reduced to writing, and disclose practices of most atrocious cruelty, not, we are happy to say, inflicted by Englishmen, but by native subordinate officers. The reason why the whole 1959 complaints were not heard is thus explained by the Commissioners:—"We thought that it would be in itself a cruel oppression had we compelled the numerous witnesses named by the parties complaining to leave their homes and travel long distances to Madras, there to wait their turn of examination for an indefinite period." Other reasons are assigned which appear to be perfectly legitimate and satisfactory; the main object was to establish the truth or falsehood of the system of torture, and the evidence shows that, with the exception of Canara and Malabar, it prevails in every territorial division of the Madras presidency.

Although we have an army in British India, numbering some 400,000 loyal and disciplined troops, our rule there is not one of physical force, but of opinion; and it behoves us at all times, and under all circumstances, to render our Government not only acceptable to the natives, but gratefully welcome. Directly, or indirectly, our sway extends over 150,000,000 people, and our responsibility is proportionate to the amplitude of our dominion. The last act of Lord Dalhousie has been to annex the kingdom of Oude, as large as Ireland, and containing a population of four millions, to our territory; and the justification is that the King was profligate and cruel. We promise a milder and more generous system than he pursued, and it is to be hoped the promise may be realised; but the proved existence of torture in Madras is a bitter satire on our pretensions. It is painful to extract the following passages from the Report; but the truth must be fearlessly told, to ensure the application of an efficient and immediate remedy. The following is the description of torture used in police cases:—

Twisting a rope tightly round the entire arm or leg, so as to impede circulation; lifting up by the moustaches; suspending by the arms while tied behind the back; searing with hot irons; placing scratching insects, such as the carpenter beetle, on the sensitive parts of the body; dipping in wells and rivers, till the party is half-suffocated; beating with sticks; prevention of sleep; nipping the flesh with pincers; putting pepper or red chilies in the eyes of men and women;—these and other nameless cruelties occasionally persevered in until death sooner or later ensues.

We have suppressed a few words in this extract for the sake of public decency; but the earnest reader will find the whole of the revolting story at the foot of page 34 of the Report.

It may be asked why do not the sufferers complain to the European magistracy and exhibit the marks of violence on their persons? To this it is answered that much cruelty may be inflicted without leaving permanent marks on the body; and, indeed, almost all are obliterated in short periods. It is true that the law requires the police to produce all offenders before the criminal judge of the zillah or village within forty-eight hours after apprehension; but the rule is constantly violated, cases being kept back for weeks and months; while the police screen the police, and the revenue officers their associates. Moreover, the poor, ignorant, and timid ryots, or cultivators of the soil, are afraid to complain. But there is another reason why the torturers escape with impunity. The number of European revenue officers to whom an appeal can be made are few in number, and scattered over immense distances, so that they are practically inaccessible to the poor, who have not the means of travelling. As an illustration we take the district of North Arcot, which, the Report says, may be taken as a fair average representation of the whole of the provinces: —"The district is a little less extensive than the whole of Wales, and is a fourth more populous: Wales contains 7400 squ are miles, and this district 7000; Wales has 1,184,000 inhabitants, and this district 1,486,000." To this large territory and population only four European magistrates are appointed. At page 37 of the Report there is a table of the provinces into which the Madras presidency is divided, giving the extent of each in square miles, the population, and the number of European revenue officers; and the table proves the complete inadequacy of this department of the Government. One instrument of torture used to extort money is called a "kittee." It is thus described.

It is a very simple machine, consisting merely of two sticks tied together at one end, between which the fingers are placed as in a lemon-squeezer, but in our judgment it is of very little importance whether this parliamentary compress on be the one in ordinary use or not, for an equal amount of bodily pain must be produced by that which has superseded the kittee, if anywhere it has gone out of vogue—the compelling a man to unclasp his fingers, the ends being squeezed by the hands of peons, who occasionally introduce the use of send to gain a firmer gripe; or making a man place his hand flat upon the ground, and then pressing downward, at either end, a stick placed horizontally over the back of the sufferer's fingers.

Having pointed out the horrors of this system we shall now refer to some of the more important remedies proposed. The disproportion between the size of the districts and the number of European officers renders a proper supervision and a facility of appeal impossible, and this evil ought to be forthwith corrected. The revenue and police authorities are at present vested in the same body, a system which has led to scandalous abuses. The whole police are underpaid and notoriously corrupt, and will remain so till their salaries are raised to a remunerative scale. "The police establishment," says Mr. Saalfelt, "has become the bane and pest of society, and the origin of half the misery and discontent that exist among the subjects of the Government. Robberies are daily and nightly committed, and not unfrequently with their connivance." "It cannot be doubted," says the Report, "that a better-paid, better-organised police force, separated altogether from ordinary revenue duties, placed under European officers, and commanded by an intelligent superintendent, immediately responsible to Government for the peace of the whole district, would in a very short time interpose an effectual check to the use of torture to elicit confessions."

It is strongly urged by the Commissioners that the collection of revenue and the administration of justice should be severed; and surely every argument that reason suggests is in favour of that recommendation. What security has the cultivator against overassessment, when the same party fixes the rent, and punishes for non-payment? Considering the peculiar character of the ryotwar system, it would be desirable to fix the rent in *kind*, not in *money* thus making it vary with the crop. It is shocking to think that these poor creatures, through no fault of their own, but owing to a bad season, are frequently stripped of their ploughing bullocks, which may be sold for a quarter of their value, or less. It is a disgrace to the East India Company to raise revenue by such cruel means, and pay dividends on their stock by such oppression on a people whom they are bound to protect.

It will be well to remember that the natives of India have been induced to submit to our yoke from the confidence they felt in European justice, and in our honourable performance of all contracts. They remember, or have learned from history, the cruelty of their native Princes in extorting revenue. As an example, we may mention Murshid Ally Khan, Nawab of Bengal in 1718, who compelled defaulters to wear leather long drawers filled with live cats, and to drink buffalo's milk mixed with salt till they were brought to death's door by diarrhœa. Other tyrants tied men to palm-trees, having caused their bodies to be smeared with honey, to attract the red ants by which the sufferers were tortured. By such atrocities money was extorted from the Zemidars. Such barbarity is justly held up to execration; but the disclosures recently made show that we are not guiltless, and the kittee rises before us in stern accusation. The denials formerly given in the House of Commons can no longer screen the guilty persons whose atrocities we have made known. When Parliament opens after the Easter recess, the Earl of Albemarle will bring the subject before the House of Lords and demand justice for the poor ryots of India.

FRENCH capital is beginning to flow into this country. The omnibus speculation was the earliest signal of this new movement. It has been followed by the purchase of eight of the splendid ocean steamers belonging to the General Screw Navigation Company, which will sail the seas under the tricolor, in opposition to, or in competition with, our own mercantile navy. When peace is established this commercial rivalry may assume larger dimensions, and redound to the benefit of both nations, by stimulating their respective activity. But a mode of investment, for some months in contemplation, has now been matured of so delicate a character that it may provoke the interference of our Government, however wedded it may be to the principles of Free-trade. We allude to the establishment of a French Fire Insurance in London, as a branch of an office formed in Paris in 1837. Our Chancellors of the Exchequer, compelled by the pressure of their financial difficulties, have been driven to levy taxes on prudence, both in Life and Fire Insurance. On the latter ordinary risks are charged a duty of three shillings per cent, while the assurers are content with a modest premium of one shilling and sixpence—making a total of four shillings and sixpence annually. The French office is disposed to undertake the same risk for half-a-crown, by evading the Government duty. If this competition is

permitted, those who have confidence in the solvency and the integrity of our neighbours will act upon the principle of buying in the cheapest and selling in the dearest market, in which case the British offices will lose their customers, and the Government be mulcted of their accustomed duty.

A few months since we endeavoured to point out the distinction between value and price, of which the present attempt of French capitalists affords a striking illustration. We then defined value as the labour condensed or embodied in commodities, while we described price as the expression of taxation, and of every act done by Government or society which added to the cost of production without adding to the value of the product. The premium of 1s. 6d. charged by the insurance-offices expresses the risk they incur, or the guarantee against that risk. For that remuneration they would pay the damage incurred by fire, if Government remitted the tax, which adds nothing to the safety of the assured, though it adds two hundred per cent to the cost of assurance. If Government chooses, in the face of this threatened—and, if successful, ruinous—competition, to abolish the duty, the competition itself would cease; but, if it will not give up this portion of revenue, how can it, consistently with Free-trade principles, suppress the French office? Individuals may simply notify to the French agents a desire to insure, and the policy may be transmitted from Paris and the premium be remitted to that capital by post. How can such a transaction be prohibited without interfering with the rights of the subject? It may be taken as a general rule that there are always remedies against injustice, if men have the sense to discover and the moral courage or tact to enforce them. Now, we hold every tax on prudence, one of the most valuable of the virtues in social life, to be rank injustice. It is a common censure on men who lose their all by fire to be unpitied, because they have omitted the precaution of insurance, which the Government does all it possibly can in a fiscal sense to prevent, by making it a luxury of the rich. If the French put an end to this evil we shall owe them many and hearty thanks; if they are expelled from their business in our metropolis, we may fairly ask for a new definition of Free-trade, and demand to know what are the exceptions, on commercial principles, apart from fiscality, to the rule of buying in the cheapest and selling in the dearest market.

## THE COURT.

The King of the Belgians closed his visit to the Queen on Thursday. On Tuesday his Majesty came to town, and paid visits to the Duke of Cambridge and the Duchess of Gloucester, and afterwards called on the Duke and Duchess of Aumale at their residence at Twickenham. On Thursday, at half-past nine o'clock, the King took leave of her Majesty and the Prince Consort, and travelled by the South-Western and South-Eastern lines to Dover, where his Majesty embarked early in the afternoon for Ostend, *en route* to Brussels.

On Saturday last the French Ambassador had an audience of the Queen, to announce officially from the Emperor of the French the birth of the Prince Imperial. His Excellency was introduced by Viscount Palmerston, acting for the Earl of Clarendon, Secretary of State for Foreign Affairs.

On Sunday the Queen and Prince, the Princess Royal and Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the chapel of the Castle. The King of the Belgians and the Duchess of Kent were also at the service. Hon and Very Rev. the Dean of Windsor performed the service and administered the Holy Sacrament.

On Monday the Queen and the Prince walked in the Home-park. Sir Edward Cust arrived on a visit, and had the honour of joining the Royal dinner party.

On Tuesday the Queen and the Prince, with the Princess Alice, rode on horseback in the Great-park. After dinner Mr. Albert Smith had the honour of performing before Her Majesty, the King of the Belgians, the Duchess of Kent, the Royal family, and the party assembled at the Castle.

On Wednesday the Queen and the Prince, with the Princess Royal and the Princess Alice, again enjoyed equestrian exercise.

On Thursday, after the King of the Belgians had taken his departure, the Queen and the Prince walked out in the Home-park.

On Monday next the Court will leave Windsor Castle for Buckingham Palace, to remain there probably not more than a week or ten days; after which time the Marquis of Breadalbane, Princess Alice Albert, and the Royal family, will go to the Isle of Wight.

Lady Macdonald has succeeded the Countess of Desart as Lady in Waiting to her Majesty. Lord Dufferin has succeeded Lord Camoys as Lord in Waiting to her Majesty

Her Majesty will hold Drawingrooms at St. James's Palace on the following days:—Thursday, 10th April next; Tuesday, 29th April next. Levees will be held at St. James's Palace on the following days: Wednesday, 16th April next; Wednesday, 7th May next.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary will remain at Cambridge Cottage, Kew, until the close of the ensuing week, and then return to St. James's Palace for the season.

His Excellency the Ambassador of France and the Countess Persigny will leave town this day (Saturday) for Paris for a short *séjour*.

Lord Alphons Fitzclarence gave a dinner on Saturday last, at his apartments in St. James's Palace. The company consisted of the Duke of Cambridge, Viscount and Viscountess Falkland, Lady William Russell, Mrs Lane Fox, Miss Raikes, Right Hon. Charles Villiers, M.P., General Drummond, and Dr. Quin.

We understand that a matrimonial alliance will shortly take place between the eldest daughter of Sir Norton and Lady Knatchbull and Mr. Charles Dundas, son of Mr. and the Lady Mary Dundas, of Dundas Castle.

Sir Robert Peel, Bart., M.P., and Lady Emily Peel are expected to arrive in town immediately after the holidays, from a tour in Italy.

## CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories*: The Rev. T. A. L. Greaves to Melcombe Regis, near Dorchester; Rev. R. P. Hill to Madresfield, Worcestershire; Rev. J. M. Farrar to Burgh with Winthorpe, near Boston; Rev. C. Dampier to Bishop's Caundle, near Sherborne; Rev. W. Wingfield to Thornford, near Sherborne; Rev. W. Goode to St. Margaret's, Lothbury. *Vicarages*: Rev. W. Walker to Whittlesea St. Mary; Rev. R. Smelt to Wilcot, Wiltshire.

ST. PAUL'S CATHEDRAL.—It is expected that the installation of the Rev. Henry Melvill, Principal of Hallebury College, who has been appointed to a Canonry Residentiary in St. Paul's Cathedral, in the place of the Bishop of Carlisle elect, will take place on Sunday next.

TESTIMONIALS.—The Rev. C. Glynn, Curate of Bromesberrow, Gloucestershire, has been presented with a silver tea-service by his parishioners on his resigning his curacy.—On Monday last the Rev. W. Read, M.A., of the Chapel of Ease, Worthing, was presented with an elegant silver inkstand and a purse of fifty guineas by his congregation, as an expression of their appreciation of his zeal and devotedness, and as a token of esteem and affection. A suit of robes, &c., had been presented to Mr. Read by a portion of his congregation and friends a few days previously.

PRESERVATION OF EGGS.—Mr. Fawcett, chemist, of Gateshead, by experiment has proved that eggs may be preserved for several months (it may be for years) perfectly good and sweet. In September, 1855, he covered with two coats of mucilage of gum arabic (made with equal parts of gum and water), several fresh eggs; and in March, 1856, six months afterwards, the eggs were boiled, and found to be as sweet and as good as when newly laid. By this plan economical housewives may preserve in summer for use in winter; it will also enable captains of vessels to enjoy the luxury of eggs while at sea. It is required that one coat of the gum should be quite dry before the other is applied. A small brush is the best for the purpose of applying it.

On Tuesday afternoon last the Blue Coat Boys, according to annual custom, proceeded to the Mansion-house, where they were regaled with a glass of wine, two buns, and a new sixpence.

## METROPOLITAN NEWS.

THE EASTER BANQUET AT THE MANSION HOUSE.—Last Monday evening, pursuant to annual custom, the Right Hon. the Lord Mayor entertained a large and distinguished party at dinner in the Egyptian-hall, where covers were laid for 260. The fact that not a single Cabinet Minister was present was a subject of general conversation among the guests. On the removal of the cloth the Lord Mayor gave in succession the usual loyal toasts. That of "The Duke of Cambridge and the other members of the Royal family" was responded to by his Royal Highness; and also the toast of "The Army and Navy." After alluding to the [illegible] of peace being concluded, he said we must not fall into the notion that when peace was settled we should at once fall back to the amounts of force maintained previously to the war. On the contrary, we must always keep the Army and Navy—as necessary evils, perhaps, but still we must keep them in such a state of efficiency as would enable us to defend the country's safety and honour. Mr. Gladstone, whose name had been coupled with "The House of Commons," said that House had to discharge a painful function in adding to the burdens of the country; but he trusted that the people were of opinion that the had been justified it voting freely and liberally the large sums for a war undertaken for no purpose of aggrandisement, but in the cause of honesty, humanity, and justice. The events of the past two years would form a retrospect without parallel in the history of countries, whether we regarded the motives from which they took their origin, or the fidelity and honour with which the great alliance had been preserved which was the means of bringing the war to a satisfactory termination. But, in as far as regarded the functions of Parliament and its duties as a taxing body, he felt that a period of returning peace was only second, if second, in difficulty to the period of entering into a war. He trusted, however, that the members of the House of Commons would be sheered and warmed by the interest taken in their proceedings by companies like the present; and, as he had no doubt but that the time for social and internal reform was approaching, he hoped that the members of the House of Commons would devote themselves zealously to such measures as might be necessary for the welfare and progress of the country.

ADMINISTRATIVE REFORM.—A public meeting was held on Tuesday night at St. Martin's-hall, Long-acre, to consider the necessity of a vigorous effort to counteract existing abuses in the administration of the affairs of the country, to expose corrupt influence and favouritism in Government appointments, the consequent inefficiency of the public service, and enormous increase of taxation. The chair was occupied by Mr. F. Smedley, the High Bailiff of Westminster. Mr. Jacob Bell, in moving the first resolution, said he attended as one of a deputation of the Administrative Reform Association, and also as a member of the Westminster Reform Association—the objects of both of which were pretty nearly identical. He believed the present a suitable time for considering the great question of administrative reform, inasmuch as no excitement of any kind existed throughout the country. The association was merely a temporary association which had been called into existence in consequence of the House of Commons not fairly representing the people (Hear). It was necessary, therefore, for the people to do what had not been done by their representatives. Mr. Bell moved a resolution pledging the meeting to assist in carrying certain measures of administrative reform Sir J. Shelley thought the association had put the cart before the horse. To carry out administrative reform it should and it must begin by reforming the House of Commons (Cheers). He would, therefore, add to the resolution moved by Mr. Jacob Bell the following clause:—"That inasmuch as the Commons' House of Parliament does not, except in name, represent the people, no appeal for redress to that House as at present constituted is likely to be attended with a satisfactory result; and that a complete and permanent removal of existing abuses can only be expected as the result of a reform of the House of Commons, including the vote by ballot." There had never been a time when reformers, if united, would have a better chance of carrying a reform of Parliament than at present. After some discussion, in the course of which an amendment in favour of a radical reform of Parliament was proposed and withdrawn, the chairman put Sir John Shelley's amendment, which he declared to have been lost (Cheers, and cries of "No, no"). Great dissatisfaction having been expressed, the chairman again put the amendment with the same result. He then put the original resolution, which was also negatived. The chairman then declared that neither the amendment nor the original resolution had been carried (Great cheering and loud laughter, amidst which the meeting dispersed).

ST. PAUL'S, KNIGHTSBRIDGE—ELECTION OF CHURCHWARDEN.—On Tuesday afternoon a meeting of the inhabitants of the district parish of St. Paul's, Knightsbridge, was held in the parochial school-rooms, Wilton place, for the purpose of electing a churchwarden for the ensuing year. For some days past great excitement has prevailed in the parish in consequence of the opposition offered to the re-election of Mr. Westerton, in the person of Mr. J. H. Tuck, a florist and coal-merchant. By the friends of Mr. Westerton it was alleged that Mr. Tuck's return would virtually put an end to the suit now pending, in which Mr. Westerton and Mr. Beal are the prosecutors, and the Hon. and Rev. Baptist Noel and the Incumbent of St. Paul's and St. Barnabas, is the defendant; and, on the other hand, it was contended by Mr. Tuck's friends that Mr. Westerton was unworthy of the confidence of the parishioners, as he had proved himself disloyal to the Queen, an enemy to the Church of England, and in his private affairs a bankrupt. Such charges, as well as many others of a minor character, were placarded about the district by both parties with the utmost pertinacity. The school-room was crammed to suffocation. The Hon. and Rev. R. Liddell took the chair. A good deal of speechifying took place, but, the Purcyite candidate having been withdrawn, Mr. Westerton was elected without opposition.

MR. KOSSUTH ON THE AUSTRIAN CONCORDAT.—On Wednesday evening M. Kossuth delivered the first of two lectures, at the Spafields School-room, Exmouth-street, Spafields, on the "Universal supremacy, and on the part of the Austrian Emperor, a shameful surrender of the most sacred rights of the crown, the clergy, and the people To Hungary the consequences would be very serious. That country had been chosen as the field for this aggression because she was disarmed and helpless; but he hoped the time would come when Providence would afford her the means of shaking off the fetters of tyranny and oppression. In conclusion, M. Kossuth pointed out the troubles which the triumph of the Concordat in Hungary might in time bring upon England, and quoted a remark made upon the subject by Oliver Cromwell in 1653. The meeting separated with three cheers for the lecturer.

FRENCH AND ENGLISH FIRE ASSURANCE.—Some weeks back it was mentioned in Parliament that the English fire assurance companies were threatened with competition from French offices, which the high rate of duty would prevent them from being able to meet. The Chancellor of the Exchequer replied that he did not apprehend any such competition would be attempted, but that, if this proved to prove erroneous, he would immediately take whatever measures might be requisite. A circular has now been issued by the company La France, established in Paris in 1857, with a capital of £600,000, stating that they have established an agency in London, where policies may be effected with precisely the same conditions as those of the British offices, and at little more than half the annual charge. Thus the ordinary risks which in England are subject to a premium of 1s. 6d. and a duty of 3s., making a total of 4s. 6d. per cent, will be taken by La France at 2s. 6d. per cent. The company, in illustration of the effects of our heavy duties, point to the fact that in France seven-eighths of the owners of house property effect insurances, while in England the proportion is only one-third.

EAST INDIA HOUSE.—Some important changes are in contemplation in the Examiner's office, consequent upon the retirement of Mr. Pescock and Mr. Hill, the chief and deputy examiners, and we under stand that these duties will devolve upon Mr. J. S. Mill and Mr. F. W. Fredrics, while the assistant examiners will be Mr. Hawkins, Mr. Grindlay, Mr. [illegible] Han, and at present secretary to the Indian Law Commission; Mr. Bourdillon, for many years in the examiner's department; Mr W. Thornton, of the marine branch; and Mr. J. W. Kaye, the proprietor of the *Calcutta Review*, who is spoken of as likely to undertake the Public Works department.

CAMDEN LITERARY INSTITUTION.—On Tuesday evening a literary and musical soirée was held at the above institution, to celebrate the anniversary of its opening. M. A. Garvey, Esq., LL.D., occupied the chair. Miss Poole, Mr. George Tedder, and Mr. Frederick Chatterton, the well known harpist, gave their services in the musical part of the entertainment; while the chairman, Mr. Gamgee, and others described the various works of art, optical instruments, and scientific models distributed about the rooms. The Photographic Society lent a most beautiful collection of specimens, as did also the London Stereoscopic Company. The more interesting specimens of photography, however, were those of Mr. Mayall, the eminent artist of Regent-street: they included a most splendid collection portraits of the Duke of Newcastle, Prince Edward of Saxe-Weimar, Lord Palmerston, Lord John Russell, the Earl of Aberdeen, Lord Lyndhurst, Sir Colin Campbell, the present Lord Mayor, and a number of other well-known characters. Most of these portraits have been taken within the last two or three months.

HEALTH OF LONDON DURING THE WEEK.—In the week that [illegible] the total number of deaths registered in London was [illegible] of which 638 were deaths of males, 575 those of females. In the corresponding weeks of the ten years 1846-55 the average number was 1164. This number, if raised by a tenth part for comparison with last week's deaths, which occurred in an increased population, becomes 1280. The present rate of mortality is therefore less than the average. Last week the births of 589 boys and 538 girls, in all 1127 children, were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 1[illegible]

WHITTINGTON CLUB.—The eighth anniversary of this institution will be celebrated by a full-dress ball at the Freemasons' Hall, Great Queen-street, on Thursday evening next, April 3rd, when it is expected there will be a good muster of the former as well as the present members of the institution

THE NEW STREET IN CLERKENWELL.—The extension of the line of street leading northward from Victoria-street to Coppice-row, forming the new street in Clerkenwell, proceeds with considerable rapidity. The filthy and mean habitations which were devoted to the purposes of the most offensive trades have disappeared, and the new line of street has not only been marked out, but the arches have been put in and side rails erected along the graceful sweep from West-street to Coppice-row. It is expected that the new street will be thrown open about the middle of May.

DEATH OF THE SEAL IN THE ZOOLOGICAL SOCIETY'S GARDENS.—Our younger readers will, we dare say, be sorry to hear that "Tom," the well-known seal that has been an inmate of those Gardens since 1851, will no more amuse them with his uncouth though animated gambols. He died after having been for some time in a drooping condition, the cause of which discovered too late—conveys a caution to all who have the charge of piscivorous animals. A *post-mortem* examination showed a considerable number of fishhooks firmly fixed by their barbs in various parts of his intestines, and which had manifestly produced irritation, disease, and, at last, death. It seems that Tom was chiefly fed on whitings, some of which are caught by lines and hooks. When the hook happens to be deeply fixed in the fish the fishermen sever the line Hence the illness and death of poor Tom.

## NAVAL AND MILITARY INTELLIGENCE.

THE Right Hon. Sir Charles Wood, Rear-Admiral Sir M. F. F. Berkeley, and Vice-Admiral Sir George Seymour, embarked at Portsmouth in the Admiralty yacht *Black Eagle*, on Tuesday morning, at half-past ten, to inspect the screw gun-boats lying there. The gun boats, about twenty in number, had their steam up, as also the *Colossus*, 80, the divisional ship of Captain Keppel, and, the latter taking the lead, at half-past three they got under way and proceeded to the westward. They appeared to leave in two columns, and at one o'clock were out of sight. The departure of the the flotilla afforded a very interesting spectacle. The *Fawn*, *Queen*, *Grinder*, and *Cracker* boats went away with the squadron, but those vessels all returned into harbour in the afternoon. Sir George Seymour, having accompanied the squadron to off Cowes, returned in time for dinner o'clock on Tuesday. The Admiralty was to proceed with the above-named Lords to Portland Roads, on a trial of their qualities, there joining the divisions under the orders of Captain Key; and after an inspection there, the whole will proceed to sea with the *Sanspareil*, 72, screw, Captain Key's additional ship, to be ready for the grand review by her Majesty of the arm of the service.

THE following important circular, in reference to the new regulations issued by the War-office for the payment to recruits of the whole of their bounty, has been received by the commanding officers of depôts at the provisional battalion, Chatham:—"Adverting to the Royal warrant of the 22nd of January last, which provides that recruits enlisting on and after the 31st of that month shall be entitled to receive in money the actual sum specified as a bounty, and that they shall be supplied with a complete kit at the public expense, I am directed to acquaint you, with reference to the circular letter from this department, No. 1215, dated the 21st of December, 1855, that the personal part of the bounty admissible for the men of the regular cavalry, artillery, and infantry, who desert before final approval, but who on recovery to the service are pardoned and forwarded to their regiments or depôts as recruits, will in future be limited to the amount actually paid to the man previously to his desertion, whether 5s. on attestation, or 20s., including 15s. on immediate approval.—B. HAWES."

IT was expected that the Military Commission of Inquiry recently appointed by the Royal warrant would commence its sittings at Chelsea Hospital on Tuesday last. Such, in fact, was last week the official arrangement; and orders were issued that every necessary preparation should be made for the commencement of the inquiry each morning by eleven o'clock. On Monday afternoon, however, instructions were received at the hospital to "postpone the final preparations" until "further notice." Nothing is known at the hospital as to the day when the inquiry will actually commence.

A FLEET of screw gun-boats, nearly 100 in number, is now in commission at Motherbank, of which each is of sixty-horse power, and about 100 tons burden, 120 feet keel, 24 feet beam, and 9 feet 6 in. draft, and 32 pounder pivot-guns, and 24-pounder brass howitzers. The three principal divisions belonging to the divisional ships (*Ajax*, 91, Captain Coffin; *Arrogant*, 91, Captain Keppel; and *Brunswick*, 81, Captain Yelverton) have their mastheads respectively painted red, white, and blue. The possession of this terrific force cannot be too highly estimated. Each of these vessels would sell at 4000 yards range, and, owing to their light draught of water (four and six feet), they could force their passage through the most shallow of the enemy's creeks; besides which their 32-pounder shells

## NATIONAL INSTITUTION OF THE FINE ARTS.

WE continue our remarks upon this Exhibition, commencing with two works which we engrave in our present sheet

"The Visit to Bethany," by A. B. Clay, is a sober and judicious rendering of a solemn passage in Scripture. Christ sits in the midst, with his hand resting on the head of Mary, who is seated at the Saviour's feet. There is an air of great simplicity and innocence in her face. That of Martha is not deficient in expression; it bespeaks that the rebuke, "Martha, Martha, thou art careful and troubled about many things," &c., has taken effect, and awakened her to the vanity of earthly cares. The colouring is harmonious and delicate; and the idea of representing the walls as covered with matting after the Eastern fashion is appropriate and successful.

"Summer Time—Crossing the Ford," by T. J. Soper, is a charming landscape, after the real English school; cool and umbrageous; the sky certainly more after the fashion of the present bleak spring-time than of roseate summer; but the rippling brook which meanders through the midst of the landscape, and the deep shade which pervades each leafy recess, are in strict keeping with it, and true to Nature in her soberer aspects. The market waggon in front, with its rustic burden, and the dog trotting on before, invest the composition with life and gaiety

In passing hastily in review the six hundred pictures comprised in the collection we are struck with the almost total absence of subjects of history, and the more ambitious class of poetry and imagination; and this is especially remarkable when recent events have been such as would have, we should fancy, suggested so many striking themes. No; neither the Crimean campaign, nor the Baltic campaign, nor the "big wars" of which they formed incidents, appear to have inspired the artists exhibiting at the National Institution; and, as far as they represent the arts of the country, the gigantic struggle so recently brought to a pause remains as if it had never been. One solitary exception to this remark we notice in a small piece by H. Barraud, "An Incident at Balaclava," representing a horse which is recorded to have stood by the side of its dead master for a full hour after that murderous feat of arms.

"A Storm Gathering on Cader Idris, North Wales," by S. A. Perry, is a bold and powerful study—darkness prevailing over the canvas, but broken artfully with dashes of light. G. A. Williams, in "Sunset—Winter," treats us to one of those clever contrasts of snow and glowing sun-rays of which he is so fond. "In the Marches—Morning," by the same artist, is, on the other hand, remarkable for its cool and subdued tone.

"Shades of Autumn," by A. W Williams—a picture of considerable size and merit—exhibits another phase of atmospheric effect—the broad lurid glow which immediately follows the departure of the setting sun and precedes the gloom of twilight.

Of the *genre* pieces are several which will tickle the fancy of those who are to be taken by the elaboration of small events of homely life and the minutiæ of furniture and decoration. Of this prolific class are "The Music Lesson—a Preparatory Exercise," by J. Collinson; "Washing Day," by N. Stacey Marks, "Children's Party—Friends Dropping In," by A. Blaikley; "Bird's eye View of Baby," by Frank Williams, "An Interior at Sandon, Staffordshire"—a perfect broker's warehouse—by Bell Smith, &c. It is to be added that productions of this description appear to find ready purchasers.

"THE VISIT TO BETHANY"—PAINTED BY A. B. CLAY. FROM THE EXHIBITION OF THE NATIONAL INSTITUTION.

## CONFIRMATION OF HER ROYAL HIGHNESS THE PRINCESS ROYAL.

THIS impressive ceremony (of which we give an Engraving in our present Number) took place on the 20th instant in the private chapel of Windsor Castle. The Archbishop of Canterbury; the Bishop of Oxford, Lord High Almoner; the Bishop of Chester, Clerk of the Closet; the Dean of Windsor, Resident Chaplain to the Queen; the Rev. Lord Wriothesley Russell, Deputy Clerk of the Closet in Waiting; and the Rev. H. J. Ellison, Vicar of Windsor, took their seats within the rails of the communion-table shortly before twelve o'clock. The ministers and other company invited to witness the ceremony assembled in the Green Drawing-room at a quarter before twelve o'clock, the Ladies and Gentlemen in Waiting on the Queen and the Royal family assembling in the Corridor. The company were then conducted to their seats in the chapel.

About twelve o'clock her Royal Highness the Princess Royal entered the chapel with her father, the Prince Consort, who placed her in a chair in front of the communion-table. Her Majesty the Queen and his Majesty the King of the Belgians followed, together with the rest of the Royal and illustrious personages. His Majesty the King of the Belgians, the godfather of the Princess Royal, was conducted to a seat near the Princess under the pulpit; and in a line with the King were her Royal Highness the Duchess of Kent, godmother of the Princess Royal; her Royal Highness the Duchess of Cambridge, her Royal Highness the Princess Mary of Cambridge, his Royal Highness the Duke of Cambridge, his Serene Highness Prince Edward of Saxe-Weimar, his Serene Highness Prince

SUMMER TIME.—CROSSING THE FORD."—PAINTED BY T. J. SOPER.—FROM THE EXHIBITION OF THE NATIONAL INSTITUTION.

CONFIRMATION OF HER ROYAL HIGHNESS THE PRINCESS ROYAL IN THE PRIVATE CHAPEL, WINDSOR CASTLE.

Ernest of Leiningen, and his Serene Highness Prince Victor of Hohenlohe. Her Majesty the Queen was seated opposite the King of the Belgians, while his Royal Highness Prince Albert, his Royal Highness the Prince of Wales, her Royal Highness the Princess Alice, his Royal Highness Prince Alfred, her Royal Highness the Princess Helena, and her Royal Highness the Princess Louisa, occupied seats opposite to the other members of the Royal family. The great officers of State and the Ladies and Gentlemen in Waiting took their places immediately behind the Royal family. The remainder of the company invited were placed in pews on each side of the chapel.

The Prince as Royal wore a rich white silk glacé gown, with five flounces pinked, the body and skirt trimmed with white ribbon and Mechlin lace. The King of the Belgians, the Prince Consort, and the Duke of Cambridge appeared in the Windsor uniform, and each wore the riband, badge and star of the most noble order of the Garter. The gentlemen of the Queen's and the Prince Consort's household wore the Windsor uniform: the members of orders of knighthood wearing their respective insignia. The ceremony commenced by a hymn, sung by the gentlemen and boys of the Royal Chapel of St George; Mr. W. G. Cusins, the organist of her Majesty's private chapel, presiding at the organ. The Bishop of Oxford read the preface, and his Grace the Archbishop of Canterbury performed the ceremony, and concluded the service—the Princess kneeling before his Grace. The Archbishop, at the close, delivered an exhortation, and part of the 98th Hymn was then sung by the choir.

The ceremony being ended, the Queen and the King of the Belgians, the Prince Royal and the Prince Consort, with the Royal family, quitted the chapel and entered the Green Drawing-room, where her Majesty received the congratulations of the distinguished company present. Luncheon was served to the Royal family in the White-room, and to the general company in the dining-room. Their Royal Highnesses the Duchess of Cambridge, the Princess Mary, and the Duke of Cambridge, took leave of the Queen and the Prince in the afternoon, the Duchess and the Princess Mary proceeding to Kew, and the Duke returning to London. Their Serene Highnesses Prince Edward of Saxe-Weimar and Prince Victor of Hohenlohe also took leave and quitted the Castle. The Ministers, officers of State, and other visitors invited to attend the ceremony took their departure.

## *MUSIC.*

DRURY LANE was opened on Easter Monday with an English Opera Company, whose performances, we believe, will be carried on for a considerable part of the season. The undertaking has started under favourable auspices and with a good prospect of success. The establishment is on a more extensive scale than any thing of the kind that has been set on foot for a good many years back. The company contains several performers of some eminence, and is effective as a whole. The orchestra is really admirable, the chorus is of respectable strength and quality, and the whole is under the able direction of Mr. Tully, a musician of distinguished talent and great experience. The opera produced on Easter Monday was an English version, by Mr. Jefferys, of Verdi's grand opera, "Il Trovatore." Of this work, which was performed at the Royal Italian Opera last season, we have already said so much, both in describing its performance and in reviewing it as a musical publication, that we shall only say now that while it is justly regarded as the best of Verdi's compositions, yet the pleasure derived from the music is alloyed by the demerits of the libretto; the subject being not only revolting in itself, but confused and obscure in its treatment. It contains, however, many charming melodies, concerted pieces, and choruses written with vigour and power, and beautiful orchestral effects. The dramatic portion, too, contains several scenes, including the catastrophe, which are really tragic. And the whole work, though very open to criticism, cannot be regarded with indifference. The manner in which this opera has been produced in its English dress has much surpassed our expectation, and does great honour to the theatre. The English version is well executed. The work is not maimed by mutilations; the only departure from the original being the conversion of a portion of the recitative into dialogue spoken wit out music. This is a kind of alteration of which we have always highly approved for distinctively lyrical works in other languages than the Italian. In English it is generally monotonous sing-song, often mean and ridiculous in its effect. The translation is faithful, and the words are as well adapted as English words can be adapted to Italian music.

The principal female characters were well performed. *Azucena*, the gipsy, whose horrible vengeance is the subject of the story, was personated by Miss Fanny Huddart with a degree of tragic power little inferior to that which has been displayed by Madame Viardot. This lady, moreover, has one of the finest contralto voices we have ever heard, and is a pure and expressive singer. Miss Lucy Escott (already a favourite of the public), in the part of *Leonora*, full of course for such a character as Jenny Ney. In the tragic scenes she was somewhat weak; but she sang with great brilliancy and sweetness, and was altogether pleasing and interesting. Mr. Augustus Braham's singing, in the principal male character, was much better than his acting. We fancy we did not point out to him the absurdity of his costume. Mr. Drayton acted with considerable force, and sang (as he always does) like an accomplished musician. The *ensemble* of the performance was good. There was beautiful scenery, and the spectacle (an essential feature in a grand opera) got up with no small splendour. The opera was followed by a musical afterpiece called "Marguerite," a burlesque of the principal scenes of Goethe's "Faust." It was got up with greater care than it deserved; while the music, composed by Mr. Tully, contained several beautiful things, and was in a great measure thrown away on so trivial a subject. The theatre was as full as possible. The audience, though it was Easter Monday, were perfectly quiet and attentive, and showed their satisfaction by very hearty applause. We trust that some of our best English operas (not versions from the Italian or German), such as Barnett's "Mountain Sylph," Balfe's "Bohemian Girl," Wallace's "Maritana," &c., will be given. This would really be English opera.

THE first meeting for this season of the REUNION DES ARTS took place on Wednesday evening, at the society's rooms in Harley-street. The Réunion des Arts, though chiefly (as its name denotes) not exclusively, devoted to music. It was established about five years ago by some members of the musical profession, with the object of affording to the professors and lovers of the fine arts a suitable place of meeting, with a view to their mutual benefit and gratification. In pursuance of this plan its meetings have sometimes been literary and artistic *conversazioni*, but most frequently musical performances. Some improvements have now been made in the management of the society which promise to continue to its increased prosperity. The rooms have been enlarged and redecorated with much taste and elegance, and judicious arrangements have been made for the comfortable accommodation of the company. The meeting of Wednesday evening consisted of a concert of classical music, well selected and admirably performed. The programme included Beethoven's Quartet in A for two violins tenor and violoncello; Spohr's Quintet for piano and stringed instruments; solos on the violin and violoncello; and vocal pieces. The instrumentalists were Messrs. Molique and Ries, violins; Herr Tedesco, pianoforte; Mr. Hill, tenor; and M. Paque, violoncello. The singers were Miss Dolby, and Mr. and Mrs. Drayton. The performances were conducted by Mr. Benedict and Mr. Goltmick. The rooms were completely filled by a fashionable assemblage, among whom we observed a number of our most distinguished musicians and amateurs.

We are informed, on the best authority, that Her Majesty's Theatre will certainly be opened this season. Mr. Lumley, having at length succeeded in overcoming the obstacles which threatened to put off on Sunday last for Paris, in order to make engagements with performers, and the other necessary arrangements for commencing his campaign. It is a common mistake to suppose that all (or almost all) the great Italian singers have been monopolised by our Royal Italian Opera. There are, at this time, many fine performers who have never been, and whose names have scarcely been mentioned, in England. Among these are Madame Albertini (an Englishwoman) and Madame Piccolomini, both of whom are exciting the utmost enthusiasm in Italy; while they are also several male performers of high dramatic and vocal reputation who have not yet crossed the Alps. Mr. Lumley, with his well-known energy, cannot fail to assemble a powerful company; and in Mr. Balfe he will find (as before) an able musical director. The house itself is by no means in the dilapidated state which has been represented.

Two Grand Vocal and Instrumental Concerts were given at the Royal Pantheon, Lingham, on Saturday and Monday last. The first, a Ball-ad concert, at which all the aristocracy of "Little London" were assembled, consisted of the "Dead March in Saul," selections from the "Stabat Mater" of Rossini, the overture to "Fidelio," Meyerbeer's "Benedicton des Poignards," selections from the "Traviata," and the songs of "Bel Raggio" and "I love the lilies." The instrumental music was tastefully and in many instances brilliantly performed, and gave much satisfaction. It was evident, however, from the impatience of the audience during the performance of the concerted pieces, that they were not the chief attraction. Towards the close of the second portion of the entertainment Miss Louisa Vinning appeared. She sang both songs with extreme power and feeling, and awakened on the part of the audience a sentiment of admiration which found vent in noisy applause and calls for encores. In the second concert the overture to "Don Giovanni," a selection from the "Barbiere," a solo on the pianoforte, by Signor Li Calsi, were performed. Miss Vinning repeated Horn's song, "I love the lilies:" and sang, in addition, "Natalie," by Walter Maynard; "Robert, toi que j'aime;" and a national Scotch ballad. She was encored in every performance, and retired amidst prolonged applause. The concert terminated with "God Save the Queen" and "Partant pour la Syrie."

PICCO will commence giving a series of concerts at the St. James's Theatre on Thursday evening next, April 3.

## *THE THEATRES, &c.*

### EASTER PIECES.

A MORNING contemporary has devoted a leader to the extraordinary circumstance that the leading theatres this year have not produced a proper Easter drama—that is, some monstrous burlesque or extravaganza, relying rather on its spectacle than its literary merit. This the writer ascribes to a theatrical decline, and moralises on the want of accommodation in the audience part of the houses as a sufficient reason for the alleged public neglect. A broad thing as we do the expediency of improvement in the particulars mentioned, we cannot concur in the theory of decline and neglect; for, in fact, neither exists. It is true that spectacular burlesque has hitherto been overworked, and that managers accordingly have, as by common consent, avoided it this season; but this in most cases has happened from the specific stimulus being no longer required, and the happy accident of certain establishments being so successful (such as the Olympic, for instance) that they can depend upon the continued run of their old pieces.

At the HAYMARKET, however, Mr. Buckstone has something in the shape of a spectacle; but this is in connection with the Spanish ballet, Senora Perea Nena, and the troupe of brilliant dancers, who have been re-engaged. The new piece is called "El Gamlindo; or, the Goldseeker," and has a story attached somewhat resembling that of Dr. Mackay's excellent poem, "The Lump of Gold." Three magnificent scenes have been painted for the ballet in question by Mr. Calleott, representing the luxuriance of Mexican nature, with the richest of pencils—rocks and sunset landscapes, and pastoral roads, and handsome villas on the margin of picturesque lakes, are all displayed in the happiest manner. The plot introduces us early to the goldseeker, who, on finding a nugget, has to contend for its possession with a stranger, who shoots him. Presently the stranger appears as a rich suitor for the hand of a vine-dresser's daughter, *Pequita* (Senora Perea Nena), and would dance himself effectually into her good graces, but that her true lover timely appears, healed of his wounds and gaily attired, to denounce the thief and assassin who had usurped his place. The feelings and emotions proper to the situations just indicated are demons rated very grotesquely by these foreign *artistes*, yet very powerfully also, for indeed the gestures are only too fiercely expressive. But the glitter and nobility cover all extravagances, and the new ballet will prove, no doubt, immensely popular.

PRINCESS'.—At this house it may be fairly considered that the management had produced their Easter drama a week or two beforehand in "The First Night," which was acted again on Tuesday. Nevertheless, Mr. Keen has produced his holiday folk not only with a revival of the beautiful melodrama of "Faust and Marguerite," but with two new pieces —viz., a new farce by Mr. Morton, entitled "A Prince for an Hour," and a new comedietta by Mr. D. Dance, called "The Victor Vanquished." The first is a clever little piece, supported by Miss Carlotta Leclercq, Miss Desborough, and Mr. Harley. The first-named lady, as a young gouthern, is mistaken for the princely *Lorenzo di Medicis* (Miss Desborough), and thereby secures the escape of the latter from his pursuers. This rustic has a rival in the *Babiola*, to whose drolleries Mr. Harley lent the aid of those personal peculiarities that constitute the humour of his assumptions. The situations, it must be confessed, are somewhat arbitrary, but they are skilfully introduced. The second piece is much simpler in character and construction, and is one of the numerous class devoted to the private life of Charles XII. of Sweden. Miss C. Leclercq plays the part of a Tartar Princess, with whom the stern Monarch falls in love; and she takes advantage of the passion to procure the pardon of her lover for disobedience of orders at the battle of Saltowa. Mr. F. Matthews played the King admirably; and the whole was decidedly successful. Both pieces are placed on the stage with new scenery.

OLYMPIC.—We have already mentioned this theatre, in our introductory remarks, as enabled to present on its old stock pieces. The Machiavelic genius of Mr. Robson continues to give vitality to "The Discreet Princess;" and Mr. Wigan's excellent acting still satisfies the fashionable audiences of this house with the repetition of "Still Waters Run Deep." Never was the prosperity of a management more identified with so little effort as that of this extraordinarily successful management.

ADELPHI. No change has taken place at this theatre; Mr. Wright's reappearance being sufficient to preserve the two farces of "Domestic Economy" and "Urgent Private Affairs" on the board. These, with the pantomimic burlesque of "Jack and the Bean-stalk," attracted, on Monday, a numerous audience.

SADLER'S WELLS. The new manager, Mr. G. A. Webster, commenced his reign on Monday, and trusted his fortunes to the rather heavy drama of "The Marble Heart," in which Mr. Leigh Murray performed the character of the sculptor who was seduced by a *lorette* from the pursuit of an honourable profession, and perished of his infatuation. The performance was an efficient one; though it was evident that the audience were strangers to the particular style of acting, and did not always sympathise with the too domestic sorrows of the hero. Mr. Murray, however, has gained and deserves great praise for the natural manner in which he has embodied this dramatic conception. The female parts were respectably filled. Miss J. Marston was very judicious in her representation of *Marco*; and Miss Oliver, in *Marie*, acted with the same simplicity which gives such interest to the portraiture of this innocent girl. It is a pity that a drama so good in its design and moral in its application should be deficient in the coherence necessary to a perfect composition. It was nevertheless received with favour. The performance concluded with Planché's burlesque of "The Invisible Prince," in which Miss Harriet Gordon was announced as the principal attraction; and, indeed, she supported the interest of the piece by her incessant vivacity and unwearied energy.

THE STANDARD.—This theatre has commenced its Easter season with the especial engagement of Miss Glyn and Mr. Henry Marston, who accordingly appeared on Monday in Shakspeare's tragedy of "King John." The house was excessively crowded; but the utmost attention was paid by the audience to the performance. Mr. Marston's impersonation of the British King was marked by many original points from the general interpretation. He is evidently anxious to indicate the prevailing indecision of the Royal mind, even when boldest in conduct and in speech; and, in this way, produced some original readings which may hereafter serve as a text for future remark. Miss Glyn's *Constance* was, as formerly, a majestic and powerful series of scenes, exhausting the scales of passionate vehemence and pathetic tenderness. Her dignified bearing and personal advantages render her embodiment of this part remarkably complete, and remind us of those palmy days of the drama when the bounds of the patent theatres commanded genius of the loftiest type as the only fitting representative of high poetic creations. The tragedy is well appointed, and its production cannot fail to be of great help to the cause of popular education.

SURREY.—The management of this theatre has undertaken to dramatise Mr. Henry Mayhew's "London Labour and the London Poor," and produced on Monday a piece entitled "How We Live in the World of London," in which the characters are costermongers, street-patterers, and other respectabilities of that class. Reality is placed on the stage without shrinking, and the sympathies of course are painfully excited. The effect is assisted by some well-painted scenery, which, for the most part, does more than ordinary credit to the pencil of Mr. Dalby.

ASTLEY'S.—The Easter spectacle at this house is devoted to the representation of a "Great Spring Meeting and National Steeplechase." The picture of rural sports was accurate in detail, and the illustrations were abundant. Two Irish reapers—acted by Messrs. Jackson and Palmer —were particularly distinguished for a certain racy reality. There were also the "Scenes in the Circle," and a new piece, entitled "The Postman's Knock."

STRAND.—This little theatre has ventured on a burlesque. It is entitled "Good Queen Bess; or, ye Merrie Days of Olde England," and has been compiled for the occasion by Mr. C. J. Collins. *Her Majesty* is personated by Mr. Rogers, and the *Earl of Leicester* by Miss A. Bennett, thus reversing the sexes—a principle which is further carried out by *Sir Walter Raleigh* being acted by Miss Somers. The old palace at Bridewell, Greenwich Park, and Kenilworth Castle furnish the principal scenes; and, with the aid of some capital songs, the performance proved eminently successful.

EASTER ENTERTAINMENTS.—There has not been any great novelty in the holiday amusements of the season, which stand very much as they did last year, with the exception of EMMA STANLEY'S "Seven Ages of Woman." Even this, however, has now been several months before the public, and commanded, what is has deserved, the highest amount of success. This brilliant entertainment still continues to attract large audiences at St. Martin's Hall. Mr. Love is as attractive as ever at Regent Gallery, Quadrant; and his ventriloquism, various in its subjects and astonishing in its effects, is now a unique art in which the professor has no competitor.—Mr. W. S. WOODIN, at the Polygraphic Hall, King William-street, exhibits with undiminished effect his "Olio of Oddities," the humour of which is so admirably chastened by its elegance as a literary composition. His impersonation of Mdlle. Rachel as *Camille* is an admirable imitation, prefaced in harmony with the general tone of the entertainment.—Miss P. HORTON, also, may still be found at the Gallery of Illustration, abounding in musical and characteristic details, as an interpreter of real life under its most amusing aspects. Nor must we forget that Mr. ALBERT SMITH'S Mont Blanc is now open every evening except Saturday, and that there are morning representations three times a week—Tuesday, Thursday, and Saturday.—The POLYTECHNIC presents a new romantic and musical entertainment, entitled "Kenilworth," written by G. MOORE, Esq., and personated by T. L. HORNE, Esq., every morning and evening, assisted by the Misses Mascall. A dioramic picture of the conflagration of Covent garden Theatre is also added to the attractions.—The GREAT GLOBE in Leicester-square opened on Easter Monday with "a dioramic tour from Blackwall to Balaclava through the principal cities of Europe." The models of the Siege of Sebastopol, Cronstadt, the Baltic, and Sveaborg and Helsingfors, are still exhibited, and, with the collection of Russian arms, pictures, and trophies, are highly interesting.—BURFORD'S Panorama of the Fall and Interior of Sebastopol, with the Battle of the Alma and the Bersaz Alps, also well deserves a visit from those who desire instruction as well as amusement. All these entertainments are of a high moral and intellectual cast, and in this respect most honourably distinguish the present age, and testify to the general spread of intelligence and taste. The finness of the weather has been most encouraging; and we find that all the places we have mentioned have been most numerously attended.—The same good fortune has also befallen the PANOPTICON, where the lectures were, on Monday, listened to by large audiences, and the Museum frequently visited.—Madame TUSSAUD'S, likewise, was singularly crowded, so that it was difficult to penetrate the dense masses of people who thronged the rooms

CREMORNE GARDENS have been open throughout the week, and, notwithstanding the unequenal state of the weather, have been well attended. Among the novelties in progress is a pictorial representation of Berne and the surrounding district, which will extend upwards of three hundred feet by fifty feet.

## THE NIGHTINGALE FUND.

*(From a Correspondent.)*

IT has been recently asserted that the true heroism of the deeds of Miss Nightingale in the Crimea, and the generosity of Madame Goldschmidt in support of Miss Nightingale's cause, are proofs that the chivalry of England has changed sexes. Whether this be so or not, let us give honour to whom honour is due; and certainly numbers of the fair sex have been so patiently and earnestly devoted to the discharge not only of their natural but self-imposed "duties," that it becomes the lawgivers, in common gratitude, to grant them all the "rights" which Christian women can desire. There can be no question that this war has called forth woman's heroism and woman's devotion, in the cottage as well as in the camp; and the peasant's wife who received her usual allowance of old linen, and interested the donor "to send it to the soldiers—she could tear up her apron for her husband's leg"—was as earnest in her way, and gave as much, as those who have so nobly "freighted argosies" for our suffering country men.

And heartily have the soldiers—for whose sake Miss Nightingale became a nurse, and for whose health of mind and body she has now organised classes and promoted various games, and with such good effect that the canteen is deserted for the soldiers' reading-room—heartily have our line fellows responded to the home movement in Miss Nightingale's honour.

Colonel Blane writes from the Crimea that "the subscription to the Nightingale Fund has been the result of voluntary individual offerings and the spontaneous feeling of the whole people, and has already received plainly indicates the universal feeling of gratitude which exists among the troops engaged in the Crimea, for the care bestowed upon and the relief administered to themselves and their comrades, at the period of their greatest sufferings, by the skilful arrangements, the unwearying, constant, personal attention of Miss Nightingale and the other ladies associated with her." This cheering information was communicated by the direction of General Sir William Codrington to the Committee of the Nightingale Fund, and proves that at all events we have fellow-countrymen who have to acknowledge the "chivalry of woman." One of the most singular characteristics in a mind so happily constructed as that of Miss Nightingale is the manner in which she unites the firmness of the oak with the pliability of the woodbine. Taking advantage of any circumstance occurring in her purpose, she has grooved fully bent her mind to the education and amusement of we had almost written it, "the troops committed to her care;" but more properly—the "sons of her adoption." She writes to be furnished with maps, with books, with writing materials, with games of all kinds—but especially foot-balls, cricket-balls, and all balls, except cannon-balls; nor would she shrink from seeing them again in play, though thoroughly experienced, as no woman ever was before, in the horrors of war. Such an honour call for their fearful thunder. No greater proof could have been given of the sympathy of one woman for another than that which produced such glorious fruitage on the 11th of March at Exeter Hall. Mr. and Mdme. Goldschmidt's Concert yielded to the Nightingale Fund the sum of £1372 6s., those liberal strangers paying the whole of the expenses of the concert out of their own funds, and these expenses much exceeded £500! Mr. and Mdme. Goldschmidt were intreated to permit a portion of the proceeds to liquidate this debt which they had so nobly entailed from their generous intention, and even persisted in discharging the printer's bill for the books of the concert, which, at Mr. Mitchell's suggestion, were circulated in the Hall. Truly does Mdme. Goldschmidt realise the fable of the fairy tale—dropping diamonds and pearls from her lips—for the benefit of others, even more than for her own.

In this, as in all other good deeds of love and charity, these distinguished artistes walk hand in hand; but we would intreat the women of England to look Goldschmidt's exertions in this matter, and see how they, born on the soil, can "go and do likewise" in honour of the heroine of the Crimea, and for what she has resolved should be of lasting value to the "*hereafter*" of her country. The magnificence of Mdme. Goldschmidt's offering should be an incentive: though the glory of the sun illuminates our hemisphere, we no less prize the farthing rushlight which brightens the cottage room when the watcher seeks to cheer and save the peasant's life.

We most earnestly desire to see the subscriptions to the Nightingale Fund wound up by a subscription from the *women of England*, commencing at each a penny, and not exceeding a shilling: this would indeed be following in the footsteps of Mdme. Goldschmidt.

THE DISCOVERER OF BASS'S STRAITS.—It is proposed to erect in Boston, Lincolnshire, a monument to Mr. George Bass, the discoverer of the straits which separate Australia from Tasmania, and which bears his name. As he is a native of that town, it is not unlikely that the scheme will meet with favourable attention. The probable site would be some spot at the entrance of the harbour.

VICTORIA REGIA LILY.—We are requested to state, in correction of the article on "Floriculture" in the ILLUSTRATED LONDON NEWS for March 15th, that the gigantic African water-lily (Victoria Regia) was introduced into England, in the year 1847, by the late Mr. J. Carter (predecessor of the firm of Carter and Co., of High Holborn); Mr. Carter having supplied the Botanic Gardens, Kew, with the seed.

PHOTOGRAPHIC VIEWS OF SEBASTOPOL, TAKEN AFTER THE RETREAT OF OUR RUSSIAN VISITORS, BY G. SHAW LEFEVRE. (J. HOGARTH.)—This interesting series of Photographic Views comprises twelve plates, illustrating some of the principal sites and objects in the destroyed Russian fortress. The "Carenage" Battery flanking the Dock of the Redan," displaying a body of sappers, looking for electric wires, and the celebrated "Whistling Dick" mortar in the Malakoff, are particularly well executed. Indeed, with the exception of one or two trifling defects, the whole of the views are remarkably clear and well defined; and can scarcely fail to elicit that patronage which they deserve. The proceeds are to be devoted to the Nightingale Fund; and it is to be hoped on this account, if for no other, that the work will realise a handsome profit.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE two statues of Tragedy and Comedy by Flaxman, and the two fine bas-reliefs by the same artist, on the Bow-street front of Covent-garden Theatre, have happily escaped uninjured from the fire. As there is but little likelihood that a new theatre will arise on this classic site, managers are anxious to secure these classic memorials of the drama in "the Garden." Mr. Douglass wants them for Sadler's Wells, Mr. Simpson covets them for Cremorne. We shall be curious to learn their fate.

There is some talk of forming in the Crystal Palace a collection of pictures illustrative of English art; but people (and those the most knowing) justly doubt if the scheme is at all likely to succeed. Men, it is said, will not lend their pictures to joint-stock companies; they will lend them for a public purpose, but not for private profit. In the mean time the company is forming a gallery for the sale of pictures. They have space, they have light. A scheme like this was tried at the Pantheon, in Oxford-street, but without success. In Mr. Mogford's hands the plan at the Crystal Palace may prove successful, as we trust it will.

The pension of twenty-five pounds a year granted to Mr. Haydn, the author of the "Dictionary of Dates"—which, however, he did not live to receive—has been assigned to his widow. Last year's vote of £1200 for pensions is now exhausted. The votes of the present year will include a like sum and lead, we trust, to a larger sympathy with the necessities of men who have been benefactors to the public.

Chief Justice Jervis, we are glad to observe, is unwilling to see good old customs discontinued that are harmless in themselves, while, at the same time, they support justice. Hitherto it has been the invariable custom for the Sheriff to attend the Judges of the land with those picturesque personages called javelin-men. These the new High Sheriff for Suffolk has this year supplanted by policemen. The Chief Justice is offended; and, after an appropriate remonstrance, dismisses the "peelers;" demands the "javelin-men;" and fines the Sheriff for his remissness in one hundred pounds. We are surprised that the Sheriff, who is fond of theatricals, and is himself a good amateur actor, should have dismissed such fine old property personages as javelin-men for such Bow street myrmidons as the new police; and this, too, was done in the old town of Bury St. Edmunds.

That excellent artist, Mr John Gilbert, is busy finishing a large water-colour drawing—a truly historical picture—representing her Majesty reviewing (shall we call it?) the wounded Coldstream veterans on their return from the Crimea. The scene is laid in the Park of Buckingham Palace. On the right of the composition are variously grouped the wounded soldiers, some are seated, and some are passing before her Majesty. All are portraits; and very characteristic, indeed, they are. On the left is her Majesty, attended by Prince Albert, the Prince of Wales, and the rest of the Royal family. Mr. Gilbert has caught a very happy likeness of the Queen, with that generous expression of sincere sympathy in her face that conveys at once more than syllables can convey. The contrast is very striking between the wounded and rough coated veterans on one side, and Royalty, aided by female beauty and youth, on the other. This attractive and admirably-executed picture will form a part of the approaching exhibition at the Old Society of Painters in Water Colours.

Mr. Henry Cole has published a fact this week in favour of liberal grants of public money for public purposes. Of the £50 000 granted by Parliament in aid of the English portion of the Paris Exhibition, he has returned with £10,000; and yet the work was done well. All that was really necessary to be done was done.

Antiquaries are alarmed, we hope unnecessarily, at the power vested in Mr. Thwaites and his fellow-representatives at the Metropolitan Board of Works. They have the power not only of directing the names of new streets in London, but the more important power of altering the old ones. The constant recurrence of the same names is puzzling even to Mr. Mayhew. The numerous Victoria-roads, Victoria-squares, and Victoria-streets, with Albert-roads, Albert-terraces, and Albert places, puzzle the residents and confound foreigners. To reduce the number of these perplexing names is a work of absolute necessity. Here Mr. Thwaites and his fellow-members may do good; but they must not rob us of Piccadilly and Pall-mall; of the Piazzas and Playhouse-yard; of names to places enriched by historical and personal associations.

Mr. Albert Smith was commanded to Windsor on Tuesday last, to give his "Mont Blanc" entertainment at the Castle before the King of the Belgians. The Queen and the Prince listened with interest for a third time to the story. The King was delighted, and everybody pleased.

There is a notorious nobleman resident at present in the Royal hamlet of Kensington. Mr. Macaulay has bought a garden-house on Campden-hill, and joining the Duke of Argyll's. The reason of the selection, as told in Kensington, is that he has bought it to be near to young M'Callum More, whose education he has undertaken to conduct! Conceive the brilliant essayist and grand historian quitting the calm deep studies of his life for the career of a Dr. Busby—the philosopher of fifty-six dedicating six hours a day to a Campbell of ten. Of course there is no truth whatever in the story. Mr. Macaulay has left the Albany for the more healthy region of Campden-hill, Kensington, for no other reason than that Campden-hill is healthier than Piccadilly.

---

THE MINUTES OF THE CONFERENCE.—According to a correspondent of the *Independance Belge*, the minutes of the Plenipotentiaries at Paris are lithographed, twenty-five copies being taken of each sheet. The process takes place at the Foreign Ministry, the two printers employed being under the rigid surveillance of a trustworthy and venerable employé.

ALUMINIUM.—On Tuesday evening week Mr. G. F. Ansell, of the Panopticon, delivered the first of a course of lectures at the Russell Institution in Great Coram-street; and, as the subject is of general interest, we will just allude to some of the leading facts. The lecturer confined himself to Sir Humphry Davy's discoveries of the alkali metals and alkalinity, and after experimentally illustrating the processes used by Sir H. Davy in eliminating the alkali metals, and briefly describing their leading properties, entered at some length upon the affinities of these metals for oxygen, showing that they seized it with avidity from water and carbonic acid, setting free the hydrogen and carbon from each compound, thus demonstrating the force with which sodium combines with chlorine (by burning soda in chlorine gas), with a view to describing Mr Deville's process of eliminating aluminium from substances containing it. The experiment, as repeated by Mr. Ansell, was this:—Hydrogen was generated by the usual means and dried very carefully, and then carried into a glass tube, upon which two bulbs had been blown. Into the first bulb he placed some resquichloride of aluminium; into the second, some clean and bright sodium. Now the hydrogen was kept continually passing over both these substances throughout the whole operation. Everything being ready, the lecturer heated the bulb containing the sodium; and when the metal began to volatilise he commenced warming the second (or rather first) bulb, containing the chloride of aluminium, which caused it to vaporise very readily, and was swept forward by the current of dry hydrogen over the melted sodium, which immediately took fire, and burned at the expense of the chlorine of the chloride of aluminium; and the aluminium now robbed of its chlorine, was left in the bulb in the place of the sodium in small globules, which were shown to the audience. Upon the table were some remarkably beautiful specimens of aluminium and sodium; also a fine piece of cryolite, from which Dr. Percy has so successfully prepared aluminium. Among the most elegant properties of this new metal are its lightness and beauty of its metallic note, which well call to mind bells, when the metal is cheaper, bring it into general use for bells, either for churches or houses. The lecture excited very general interest, and was well attended.

THE following is the amount of subvention to theatres decreed in the French Budget of 1856:—320,000 fr. to the Opera, 240,000 fr. to the Comédie Française, 240,000 fr. to the Opéra Comique, 160,000 fr. to the Italian Opera, 160,000 fr. to the Odéon, &c.

A bill was introduced in the United States' Senate on the 6th inst. for the construction of a railroad and telegraph line to the Pacific at San Francisco from some point on the Mississippi River south of lat. 37 deg.

Ten deputies of the German duchies, in Representative Council, have proposed an application to the King of Denmark to get the Grand Cuarter revised by the Diet.

The *Gazette du Midi* announces that in digging the foundations for the cathedral at Marseilles the workmen came on the ruins of a Temple of Diana.

## OBITUARY OF EMINENT PERSONS.

### SIR HENRY POTTINGER, G.C.B.

LIEUTENANT-GENERAL THE RIGHT HON. SIR HENRY POTTINGER, G.C.B., died at Malta on the 18th inst. Sir Henry commenced his brilliant career by going to India, as a Cadet, in 1804; and at an early age he attracted the attention of the civil and military authorities there, by his captivity, information, and ready administrative ability. During his long sojourn in that country he was employed in almost every branch of the public service. Having risen to the rank of Major-General, Pottinger was, in 1839, created a Baronet. He returned to England in 1840, when the war with China brought him prominently forward. In 1841 Sir Henry Pottinger proceeded to China, as Envoy Extraordinary and Minister Plenipotentiary, for the purpose of settling the matters in dispute. He arrived off Canton in the Cleopatra at the end of July, 1841, having been further appointed as Superintendent of the British Trade in China. The result of Sir Henry's diplomatic operations was to throw open the commerce with China. The terms of the treaty which were the war was concluded in 1842 were such as to give universal satisfaction. Sir Henry Pottinger was, in reward, made a G.C.B. He subsequently, in 1843, was appointed Governor and Commander-in-Chief of the Island of Hong-Kong, which post he held to the spring of the following year, when he returned to England. In May, 1844, he was sworn a member of the Privy Council; and a pension of £1500 a year was settled upon him by a vote of the House of Commons. From September, 1846, to September, 1847, he was Governor of the Cape of Good Hope. His address and energy in the discharge of the office there at that troubled period proved of infinite service. In 1847 Sir Henry Pottinger went again to India as Governor and Commander-in-Chief of the Presidency of Madras. He finally retired in 1854, having, in 1851, been promoted to the local rank of Lieutenant-General in India. Sir Henry Pottinger, the son of an ancient Irish family, was the fifth son of E. C. Pottinger, Esq., of Mount Pottinger, county Down, Ireland. He leaves a widow and three children, two sons and a daughter, now Mrs. Stephens.

### JOSEPH NEELD, ESQ., M.P., OF GRITTLETON HOUSE, WILTS.

THIS respected gentleman died at his residence in Grosvenor-square on Monday. He had represented Chippenham in Parliament, on the Conservative interest, since 1830; and, though never seeking to obtrude himself upon the public eye, or to take any prominent position in the Parliamentary struggles of the day, he yet, we believe, conferred no trivial service on his fellow-citizens by his administration of the brilliant fortune which he inherited; and we shall be much mistaken if the memory of Mr. Neeld's good deeds be permitted to fade away for many a long year among the inhabitants of the borough which he so long and so faithfully represented in Parliament, or of a large surrounding district. The deceased gentleman's political career was simply that of an honest and disinterested Conservative, seeking nothing for himself or his connections while lending his constant and powerful support to that party which he believed to be identified with the true interests of his country. Mr. Neeld devoted himself unceasingly and unsparingly to employ the large means placed at his disposal for the benefit and advancement of that district in which he mainly resided. Those who know the condition in which the late Mr. Neeld found Chippenham and its vicinity a quarter of a century ago, will require no better eulogy of this gentleman—none certainly would have been more grateful to himself—than a comparison with the vastly-improved state in which he left it. It may suffice to mention as an instance, the large and commodious Market-house and Townhall, erected at his sole expense, to which may be added the cheese-market of Chippenham, a few years since. These advantages are felt throughout a large surrounding district. Upon Mr. Neeld's own estates the benefits have been more striking; they include churches, rebuilt or restored; great improvement in town buildings, with comfortable and airy cottages for the labourers;—all tending to improve the conditions of those who lived within the circle of Mr. Neeld's influence.

### THE HON. GEORGE O'CALLAGHAN.

THE Hon George O'Callaghan, third son of Cornelius, late Baron Lismore, and brother of Cornelius, present Viscount Lismore, died at his residence in London, on the 13th inst. The Hon. George O'Callaghan was a man of considerable literary attainments, a poet and a musician, and for many years a distinguished member of the *beau monde*; he was an especial favourite, and deservedly popular in society. He was born the 9th Sept., 1787, and has died unmarried.

### ARCHDEACON JOHN BANKS HOLLINGWORTH, D.D.

THIS highly-estimable clergyman, whose death occurred recently, was a fine instance of self-advancement. The scion of a family old and honourable, but reduced in circumstances, Archdeacon Hollingworth had to struggle hard to contend against poverty and privation. His father had not the means to send him to College; he used himself, from the age of fifteen to twenty, to work at a business, and continue at it after-hours, to provide the funds to get to the University. His savings at last enabled him to effect his object, and he became eventually a Fellow of Peterhouse, D.D., Norrisian Professor of Divinity, Rector of St. Margaret's, Lothbury, and Archdeacon of Huntingdon. The Ven. Archdeacon married twice—first a Miss Ampthill, daughter of Richard Ampthill, Esq., of Hadsor, Worcestershire, by whom he had an only daughter: and secondly a Miss Tabor, daughter of J. Tabor, Esq., by whom he had two sons and a daughter. These sons, educated at first entirely by himself, both gained scholarships at Rugby. Archdeacon Hollingworth was a botanist and gardener of some pretension; he devoted his leisure hours to the cultivation of his beautiful garden at Chapel-hill House, Isle of Thanet. He enjoyed the intimacy and friendship of many noblemen and gentlemen of distinction, and was universally respected.

### THOMAS ATTWOOD, ESQ.

THE death of this respected gentleman and, at one time, ardent and conspicuous politician—the "King Tom" of "Cobbett's Register"—took place at Great Malvern, Worcestershire, on the 6th inst. Mr Attwood first became publicly known by his vigorous opposition to the Orders in Council of 1819. Subsequently he took a leading part, with the late Sir John Sinclair, against Mr. Peel's Currency Bill of 1819; and for years after was constant, in season and out of season, in his endeavours to accomplish the repeal of that measure. He established the Birmingham Political Union, at the latter part of the year 1829; and he obtained deserved credit for his prudent management of a body, which was supposed to have considerably influenced the passing of the Reform Bill. Mr. Attwood's considerate conduct was rewarded with the freedom of the city of London. Mr. Attwood represented Birmingham during the first seven years of the Reformed Parliament, but in consequence of family affliction and disappointments he retired from public life, and was succeeded in Parliament by his friend and associate in the union, Mr. Muntz. For many years prior to his death Mr. Attwood was the victim of a severe and distressing attack of paralysis, but in the midst of his suffering and general prostration of mind and body he was remarkable, as in the early period of his life, for his amiability and generosity, and his social disposition. In Birmingham his decease will be regretted by all parties, and more especially by those who shared his private intimacy. Mr. Attwood was a partner in the bank of Messrs. Spooner and Attwoods. His elder brother, Matthias, for some years represented the borough of Whitehaven in Parliament.

---

We regret to announce the death of Sir Hyde Parker, on Friday week, at Government House, Devonport, shortly after his arrival from Lisbon in H.M.S. *St. George*.

WILLS.—The will of the Right Hon. Sir William Molesworth, Bart., M.P., F.R.S., of Eaton-place, and Pencarrow, Cornwall, was proved under £80,000 personalty; Sir William Davy, K.C.B., of Stracy Park, Bath, £100,000; the Hon. James Georgiana Alicia Hope, £30,000; Thomas Beard, Esq., of Bath, £25 000; John Parnell, of Waltham Cross, £20,000; James Stares, of Hamphadon, Southampton, £20,000; Mrs. Elizabeth R. Palmer, of Bromley, £20,000; Lieut.-Col. Hugh Piper, late 58th Foot, £6000; Captain Thomas Sykes, R.N., Hampstead, £1000 for keeping the same in repair, and £19 19s. to be distributed among the poor attending there.

---

TEMPEST AND LOSS OF LIFE IN THE BLACK SEA.—A telegraphic despatch, dated Constantinople, March 24, was posted yesterday at Lloyd's, briefly announcing another terrible storm in the Black Sea, which appears to have been severely felt in the vicinity of Kustendjeh, between Varna and the mouth of the Danube. It broke out on the morning of the 14th inst., and continued with fearful violence for forty-eight hours, in the course of which no less than six English barques and five brigs, chiefly employed in the Transport Stores service, and ten foreign ships were wholly wrecked.

An eruption of ashes from the volcano Antigua, in Guatemala, took place on the 9th and 10th of January, the ashes falling in great quantity, covering La Guatemala, and reaching as far as New Guatemala, a distance of about thirty miles.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

The Queen will hold the first drawingroom this season on the 10th of April at St. James's Palace.

The French Emperor has received an autograph letter from the King of Prussia with congratulations on the birth of an heir.

A marriage is spoken of as likely to take place between one of the King of Naples' children and a member of the Grand Duke of Tuscany's family.

The Duke of Wellington has consented to preside at the eighty-second anniversary festival of the Royal Humane Society on the 16th of April.

A letter from Genoa of the 13th inst. announces the arrival at Nervi of the ex Queen Marie Amelie, accompanied by the Duchess of Orleans.

The Grand Duke of Saxe-Weimar is seriously, though, it is hoped, not dangerously, ill. His complaint appears to be rheumatic fever.

The Irish Academy of Music is about to present an address to the Marchioness of Downshire, thanking her for her exertions and benevolence in successfully managing the amateur opera for the benefit of that institution.

On Maundey Thursday the ceremony of "the washing of feet" took place in the chapel which is attached to the Imperial Palace, Vienna. The Emperor, after having served them at table, poured water over and wiped the feet of twelve of the oldest poor citizens in the city.

The Earl of Bandon has been pleased to confer the commission of the peace for the county of Cork on Lieutenant-General Sir Joseph Thackwell, G.C.B., of Aghada Hall.

There was a grand reception at the Court of St. Petersburg on the 9th inst., on the occasion of the anniversary of the birth of the Hereditary Grand Duke. This young Prince has now attained his eleventh year.

Mr. Buchanan, ex-Minister of the United States to the Court of St. James's, left London last week, for Paris, where it is the intention of Mr. Buchanan to pass a few days before visiting the Hague, previously to his departure for the United States.

Prince Gortschakoff left Vienna on the morning of the 15th for St. Petersburg.

The Duke of Modena has pardoned several persons imprisoned many years for political offences. A former colonel of artillery, who took an active part in the events of 1848, has been permitted to reside a year in the Duchy.

General Count de Sonnaz, Chevalier of the Supreme Order of the Annunciation, has arrived in Paris on a mission from the King of Sardinia, to congratulate the Emperor on the birth of a son. He is the bearer of an autograph letter from Victor Emmanuel.

Letters have been received from Rome appointing the Right Rev. Dr. Walshe as Roman Catholic Bishop of Kildare and Leighlin, and the consecration will take place on the 30th inst.

The *Journal de Constantinople*, in announcing the arrival of Omer Pacha, states that leave of absence was only granted him on account of the state of his health.

Mr. Walter Savage Landor in a letter to the *Times* asks for a public subscription for M. Kossuth, who is, he states, in straitened circumstances.

It is said that Prussia desires to effect a complete reconciliation between the Courts of Vienna and St. Petersburg, and that, with that object, there will be an interview between the Emperors of Austria and Russia and the King of Prussia, in some town near the borders of the three countries.

Mr. Kershaw, M.P. for Stockport, has given £500 to the building fund of the Mechanics' Institution in that town.

The reported death of the Count de Canitz, of Berlin, is believed to be a fiction. There are several of the name, but inquiry does not ascertain the death of either of them.

The *Vienna Gazette* says Count Colloredo, Minister of Austria in London, will proceed in the same capacity to Rome; Count Rudolphe Appony, Minister in Munich, succeeds to the London Embassy, and Count Hartig, the Envoy of Austria in Copenhagen, is named Minister to the Court of Bavaria.

Mr. H. S. Selfe, of the Oxford Circuit, has been appointed metropolitan police magistrate, in the place of Mr. Hardwicke, resigned. Mr. Peaden is transferred from Hammersmith to Marlborough-street. Mr. Ingham, from the Thames Police Court, goes to Hammersmith. Mr. Selfe takes the Thames Court.

It is said to be the intention of Mr. David Waddington, the chairman of the Eastern Counties Railway Company, to become a candidate for the borough of Cambridge at the next general election.

Senor Enrique, a member of the provincial deputation of the province of Ciudad Real, was carried off, when on a shooting expedition, by three men on horseback, who demand 3000 dols. for his ransom.

Captain Eldridge, of the missing *Pacific* steamer, was the Commander of Commodore Vanderbilt's yacht, the *North Star*, which visited almost every part of Europe a few years ago.

A rumour is current in Berlin that the Emperor of Russia has given an assurance that in the event of peace being concluded he will visit Paris before his coronation.

It has been determined to invite Mr. Charles Gavan Duffy to a public entertainment in Sydney on his arrival. Mr. Duffy left Melbourne in the *Chusan* on the 6th of November.

The subscription opened for the family of the late M. de Hinckeldey, Director of Police at Berlin, amounted on the 18th to about 60,000f.

Captain Brown, of Glasgow, has applied for and obtained a patent for the manufacture of paper from the fern known throughout the Highlands generally as the brecken.

The *Austrian Gazette* announces the death and burial at Warsaw of General Popoff, Hetman of the Don Cossacks.

Mr. Godkin, formerly the Danubian and more recently the Crimean correspondent of the *Daily News*, has been delivering lectures on the war in Belfast.

The Duchess Regent of Parma and her children returned to their capital on the 17th inst., from Venice.

The Manchester League Land Society has resolved upon winding up, after sustaining losses amounting to £30,000.

A grand mass was celebrated on the 17th inst. in the Church of St. Augustin, at Vienna, to render thanks for the safe delivery of the Empress Eugenie.

Not only was the well-known chestnut-tree in the garden of the Tuileries in leaf this year on the 20th March, but a number of other trees, principally cherry, peach, and apricot, were in flower.

The customary notices for "eighty-five" attorneys to be admitted in Easter Term have been given, they having passed their examination.

The railway from Sydney to Parramatta had succeeded beyond the most sanguine expectations; and it has been resolved to continue the line on to Liverpool without delay.

A war-steamer of 200-horse power, and carrying six guns, was launched at Venice on the 12th inst. She has received the name of *Prince Eugène of Savoy*.

Thomas Jones, the murderer of Dr. Hope, the convict surgeon at Portsmouth, was executed at Winchester on Saturday last.

The success of the omnibus companies of London and Paris has led to the formation of an omnibus company in Liverpool, who have issued a prospectus announcing that the capital will consist of 1000 shares of £10 each.

The next meeting of the British Association for the Advancement of Science has been fixed for Wednesday, August 6, at Cheltenham. Dr. Daubeny will preside.

The *Nouvelliste de Hamburg* has a rumour that after the closing of the Paris Conferences Turkey will be represented by a Minister Plenipotentiary at the German Diet.

The Toxophilite Society have granted the use of their grounds in the Regent's Park (adjoining the Botanical Gardens) for the purpose of a grand bazaar in aid of the Hospital for Consumption at Brompton.

Accounts from Russia mention that the Emperor has permitted a wealthy capitalist at Odessa to establish a new commercial banking-house there.

The French Minister of War is at present engaged in effecting a complete codification of all the military and naval laws and regulations.

The triennial meeting of the three choirs of Worcester, Hereford, and Gloucester will be held this year at Gloucester, and arrangements are now being actively entered upon in that city for ensuring complete success to the festival.

The Russian Government has appointed two recently-organised corps of Cossacks to form the permanent garrison of the coasts of the Sea of Azoff.

At the Antrim Assizes three men of the Orange party have been convicted of stabbing two persons in some riotous proceedings in Belfast, in which the prisoners formed part of a mob who shouted "To hell with the Pope!" One of them was sentenced to two years' imprisonment.

LAUNCH OF H.M. GUN-BOAT "THE HARDY," AT BRISTOL.

## LAUNCH OF H.M STEAM GUN-VESSEL "HARDY."

THIS fine vessel was launched from the Albion Dockyard of Messrs Charles Hill and Sons, at Bristol, on the 1st inst.; the event deriving additional interest from this being the first war-vessel built in Bristol since the last war. During that time Messrs. Hilhouse and Co., the predecessors of the present firm, launched thirteen frigates amongst the most noted of which were the *Melemmus* and *Arethusa*—immortalised in the song of Dibdin. In those days some current the nautical saying of "Ship-shape and Bristol fashion;" and, although the old city may for a time have allowed it to become in some measure obsolete, she has of late done much to again maintain its appropriateness

Messrs Charles Hill and Sons have lately contracted with the Admiralty for three gun-vessels, which they are building under very large sheds, which are lighted in every direction with gas, thus enabling their people to work at night and day ever since the receipt of the order; besides this advantage their operations are not impeded by rain, and the vessels are rendered more durable, being built in the dry

On the day of the launch the floating harbour presented a spectacle of unusual gaiety: flags floated in all directions, both on the vessels and adjacent buildings; while on the sheds under which the vessel lay were hoisted the flags of all the principal nations, surmounted by the ensigns of the Allies Before the appointed hour (four o'clock) an immense concourse of people assembled to witness the operation, and every available place was crowded. At the dockyard clock commencing striking four, a gun fired. Miss Stewart named the *Hardy*, the dog-shores were knocked away, the band struck up "God Save the Queen," and the beautiful vessel glided majestically into the water, amidst the shouts of the vast multitude. Shortly afterwards a large party of naval officers and friends retired to the mould-loft, to wish the newly-launched ship success and honour

The *Hardy* belongs to that class of gun-vessels of which so many are now in course of construction, and of which so much is expected in the event of another campaign. The following are the dimensions of the vessel:—Length, 106 feet; breadth, 22 feet; depth, 8 feet; tonnage, 233; draught of water 6 ft. 6 in. Her engines are by Messrs. Maudslay, Sons, and Field, of London; and of the collective power of sixty horses. She is to carry two 68 pounders and two brass 24s which are arranged to be moved to various parts of the deck, so as to be available where most required We understand that the authorities are much pleased with the remarkably fine quality of the timbers and plank of the *Hardy*, as also with the workmanship; so smoothly have her sides been finished that it is difficult to distinguish them from iron. The second gun-boat will be named *Havoc*, and the third *Highlander*.

## COLLISION IN KINGSTOWN HARBOUR.

THIS catastrophe occurred on the 15th inst., and was witnessed by the Artist who sketched the accompanying Illustration.

It appears that the transport screw-steam-ship *Resolute*, 214 arrived in Kingstown harbour at four o'clock in the afternoon of the above day from Liverpool, having on board a detachment of the Royal Artillery for Limerick As she was making for the jetty, owing to the strong south-easterly wind which was blowing at the time, coupled with some mismanagement on board, she ran against the brigantine *Virtue*, from Cardiff bound to Drogheda, having on board 50 tons iron and 43 tons coal, and sunk her. She also ran against the coastal steamer *St Columba*, and damaged her slightly. The value of the brigantine's cargo was about £540. Immediately after the catastrophe the topmasts of the brigantine only were visible above the water.

Our Correspondent's account of the collision is as follows:—The *Resolute*, on entering, made straight for the jetty, instead of going round the usual course by the eastern pier; so that but for the brigantine she would have cut down the mail boat which was moored close to the *Virtue* The brigantine was supported by the *Resolute* for a few minutes after being struck, and dragged about 150 yards from the jetty.

THE RUNNING DOWN OF THE BRIGANTINE "VIRTUE" BY THE "RESOLUTE" TRANSPORT, IN KINGSTOWN HARBOUR.

## PARIS FASHIONS FOR APRIL.

Longchamps has this year been a dull carnival of fashion. It was only on Saturday, the last day, that a few carriages were to be seen in the Bois de Boulogne; the other days were too wet for display of any kind. There were no new carriages beyond a show of hackney-coaches of La Ville de Paris, which have nothing in common with the private equipages that generally shine at this fête. It seems that the backwardness of the season reacts upon the production of novelties, artificial as well as natural. The Lent preachers have not failed to raise their voice vigorously against luxury, and principally against that of ladies' dresses. But Lent is over, and with Easter comes an influx of new toilets as great as ever. There are at present no particular changes in the general fashions. Bonnets remain nearly the same, except that we see very few with flat crowns; they are almost all round and *à forme molle*; curtains, large and ornamented with long ribbons, fall over the shoulders. The ribbons for tying under the chin are rather wide, and almost always of a light colour, to set off the face. The last fêtes given at the Tuileries were, on account of the absence of the Empress, composed exclusively of gentlemen; and were, consequently, so far at least as regards our present subject, very bare of interest. With reference to head-dresses we have already alluded to one called *perles d'amour*; which the flower-makers mount on bunches of grapes, and do in with vine-leaves of autumnal tints—green, yellow, or red, according to the shade of the hair and the disposition of the toilet. These ornaments are also used to finish the toilet by putting them into the trimming of the corsage and the sleeves. It is hoped that straw flowers will ornament bonnets for the ensuing season, which would be a very pretty innovation. Laces will be disposed in various ways; and, although they were in high favour last winter, they will be a ill more so in the coming season; for nothing is richer than a light-coloured robe covered with flounces, or with a rich pattern *scarf*, which stands out gracefully upon the fresh robe or *mauve* shade of a rich robe of *taffetas d'Italie*. Lady Cowley, at one of the late receptions at the Palais Royale, wore a robe of pearl-grey velvet; the skirt had five flounces of English point lace, upon the tops of which was placed a trellis of *perles de Venise*; the corsage was ornamented in the same way. The head-dress was *en cœdus, roses à cœur de diamant*. The sleeves and the corsage had *agraffes* of flowers to match.

PARIS FASHIONS FOR APRIL.

### THE ILLUSTRATIONS.

*Chapeau de Taffetas*, rose, trimmed with ribbons and little May-roses in the cap; the shape is much the same. The crowns are nearly all rounded. Robe: stripes of colour on colour, and *à Grecques decoupées*, four flounces to the skirt. In the front is a knot of ribbon of the clearest shade at the upper part of each flounce, with a *filet* upon the darker edge. *Corsage à pointe*, ornamented with *braces decoupées*. The sleeves have four flounces of similar pattern, only smaller. Under-sleeves of English point lace. Chapeau of white crape, *brodé* round crown, and very large curtain. On the edge of the front is a lace fall, to be worn upon the hair, or turn over. Flowers: Forget-me-not in the cap. Lace *scarf*, rounded off behind. Robe of *taffetas d'Italie mauve*, with a little border woven in the material on the extremity of each flounce; corsage *à pointe*, and without basques; sleeves open, and held in by three wristbands for the whole length of the arms; cuffs of fancy lace. *Chapeau de taffetas*, trimmed with a row of ribbons on each side of the front, and with a *demi-voilette* of white lace, falling at pleasure over the front or behind. Robe of gros de Tours, with flounces, the first formed by a wide round basquine, and covering, turn by turn, the skirt; one bow behind, and another at the peak of the front of the corset *à tretelles*, and three flounces to the sleeves. The edges of these flounces, as well as the trimmings of the robe, are ornamented with a plain velvet braid; and below is another braid, deeper, and indented, which finishes the trimming.

Chapeau of rose velvet. Robe of plain taffetas, rather light shade: the bracos of the corsage trimmed with an embroidered edge. The front of the corsage has transverse bars; and the sleeves are finished at the shoulder by an embroidered jockey. Beneath the corsage is another of white muslin, alternated with rows of Valenciennes lace confined to the arms by three bands trimmed with *entre deux* of Valenciennes. The sleeves below these three bouillons are finished by a close wristband trimmed with lace cuffs. Bonnet of tulle, flowers, and ribbons. Robe of *reps de soie, à volants*, with wide and deep scollops, trimmed with a little *effilé Tom-pouce*. The corsage is trimmed the same as well as the sleeves, which form a single flounce covering the lace cuffs. The three figures represent the newest forms of sleeves and corsages which have appeared this season.

ST. JOHN'S, DEPTFORD, NEW SCHOOLS, UPPER LEWISHAM ROAD.—(SEE NEXT PAGE.)

## NEW SCHOOLS AT DEPTFORD.

DEPTFORD, with its rapidly-increasing population, has long been regarded as a place much in need of additional church accommodation, and increased provision for the education of the young.

By the munificence just of £10,000, placed at the disposal of Archdeacon Sinclair, by Miss Coutts, a noble church has been erected on the Lewisham road, in the parish of Deptford, which was opened last year. The site for the church, the parsonage-house and grounds, with £1000 for the endowment fund, were given by Mr. James J. S. S. Lucas; and a district with a population of seven thousand was assigned to the Incumbent, the Rev. C. F. S. Money. A temporary school-room, which had been opened at the beginning of last year, was immediately filled to overflowing; and Mr. Lucas having again liberally offered a site and a donation of £100 or new schools, a committee was formed, and a grant obtained from Government for carrying out the undertaking. The schools—which are singularly beautiful in outline, and the internal arrangements admirably adapted for the purposes of education for 300 boys, 120 girls, and 90 infants, with residences—have been built by Messrs. Thompson, from the designs of Mr Joseph Peacock. The work has been accomplished by the exertions of the committee; and is due largely to the zeal and energy displayed by the Incumbent, the Rev. C. F. S. Money, and the assistance given them by their treasurer, T. J. Allen.

The committee have still a considerable sum to raise to complete the whole; and, as the greater portion of the district is inhabited by poor, and in densely populated, it is their anxious desire to perfect the whole establishment, for which there is so great need. As yet they have been able to finish but two of the schools, which were opened by Lord Haddo, on the 12th inst.

## EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

THE thirty-third Annual Exhibition of the Incorporated Society of British Artists, in Suffolk-street, Pall-mall East, is, on the whole, a pleasing and creditable display of native talent. The President, Mr. Hurlstone, is seen in his best Italian peasant-boy and Murillo mood; we miss, it is true, Mr. Pyne, whose fine genius for landscape is this year but imperfectly exhibited; but then we have Mr. Baxter in full force (not an improved force), but with all the former acknowledged skill in rendering female beauty. Mr. Boddington excels as of old in carrying the eye into the heart of an English landscape; Mr. J. J. Hill follows his master, Mulready, closer than we have before seen him; Mr. Buckner catches a likeness with great felicity, and in his small full-length of Captain Morgan, of the 17th Lancers, evinces a skill in manly portraiture that he has not succeeded in before obtaining; Mr. J. R. Swinton paints after the manner of Mr. Frank Grant, and of a greater still, Sir Joshua; Mr. Woolmer, in his Scriptural subjects, is as impotent as ever; Mr. Inskipp is stationary (he has been so for years, and yet he was full of promise); Mr. Gosling understands a "Wild Wood" (witness No. 151), and can carry the spectator into the very heart of it; Mr. Pidding has an Isaak Walton and Bibleground eye for a fine salmon (see No. 178, "The First of the season"); Mr. E. J. Cobb.it has an eye exquisitely alive to English cottage life—what a pleasing group, happily rendered, is (No. 178) "Welsh Children Wool-picking" Mr. G. Cole has studied "Loch Long" (No. 186), with a painter's feeling; Mr. J. J. Wilson carries the spectator to the coast of Normandy, in a small but admirable picture (No. 206), "Fishing Boats off the Coast of Etretat;" Mr. T. F. Wainwright, in a large and clever picture (marked sold and at the insignificant price of eight pounds), has caught Cuyp's golden tone and a masterly hand; that "View in Dovedale, Derbyshire" (No. 230), by J. C. Ward, has, in spite of its hardness of touch, some excellent stuff in it; those "Lias Caves in South Wales" (No. 244), by Mr. West, are truthfully set before one, that "Shepherds" (No 231), by Mr. J. J. Hill, and "Welsh Children" (No. 178), by Mr. Cobbett, are full of promise; and that "Autumn" (No. 317), by C. Baxter, deserves to have the crowd we see before it; an observing eye and hand have been at work in that "Welsh Glen—Moonlight" (246), by J. D. Tuffin; Mr. Clarke, while "Youthful Gambols" (261), is, we are glad to see, warmer in colour than in anything which we can call to mind from his hand; those "Farm Buildingsat Red-hill, Surrey," by J. J. Wilson, are rendered with a Patrick Nasmyth exactness and finish; Mr. Woolmer has worked well (467 "Windsor from the Bridge"); Mr. Bunnett "here is Mr. Cobbett in one of his "rural rides," seen to advantage in "Home through the Heaths" (479); that "Essex Haymaking" (490) has an Essex air and atmosphere about it which shows in what country it was painted; "The Unanswered Question" (629)—a sort of unthought-through—reminds one not unhappily of Frank Stone; while, in the Water-colour Room, Mr. S. Read in "Interior of St. Paul's, Antwerp" (662), and in "Abbeville" (786), has worked with equal spirit and success in the manner of David Roberts and Samuel Prout.

We shall return to this Exhibition, and illustrate what further remarks we have to offer by a few engravings from the principal works. The sculpture is small in quantity, and, as usual, poor.

## *NATIONAL SPORTS.*

RACING has begun in right down earnest at last, and we are beginning to get some insight into the long-hoped-for form of the year. Dapper, Nottingham winner was cleverly vanquished at Coventry by Oakhall, who promises, along with Matilda, to revive the somewhat drooping fame of old Melbourne. This filly made very short work of Lord Zetland's splendid-looking Derby colt Skirmisher (the first Voltigeur that has ever shown in public) for the Oran Stakes at Catterick, in which he was backed at even against the field, and only ran fifth out of the six! Luck was equally against his Lordship in the Craven Handicap with Hospodar, who, although the first and second horses had immensely the advantage of him at the weights, ran the mile in anything but his old form. Augur's sister Augury was also much liked by the Yorkshiremen, and the two-year-olds were considered of "a varra good cut" generally, as indeed they are both in the north and south of the country. Sir Tatton Sykes's Francisco, for which twenty guineas, went to a horse: Sliding, against whom 50 to 1 was obtainable, and Freddy, who ran up second, ought to be very near winning the Doncaster one next week. Mr. "Howard's" splendid colt Chevalier d'Industrie, by Cotherstone, out of Coburg, and bought for 250 gs. at Mr. Greville's sale, out down Amorous Boy, Hurdle, and Tricolor—all three of them winners in the Whittlebury Stakes; and Sancebox seems determined to follow in Ratcplan's footsteps, as regards Queen's Plates, though he has not yet met with the opponent of any name.

The racing of the winning week commences on Tuesday at Doncaster, which, although it lacks its usual steeplechases, in deference to the great dislike which the owners of race horses entertain to them, has a very strong two-day list. The Rous Stakes for the bona-fonds of the first day: and Will an Crawford and Amorous Boy, each with 4 lb. extra as winners, as well as Augury and Lambourne, figure among its sixty-three. The Doncaster Handicap, on Wednesday, has had a full acceptance of 44 out of 60, b t the Betting-room Stakes will not furnish a test of any more than a second-rate. Thirsk will be the second racing scene of the week, and bids fair, although this is only its second anniversary, to take a good rank among the second-class York-hire meetings. The steeplechasers will, in the mean time, be neither few nor far between, and the Cheltenham Meeting this year has been so wretchedly low that there does not seem to be one out to whom Vyvian, Lottery, Grimaldi, those giants of other days, could not give three stone. The Pytchley Hunt steeplechases will be held near Brixworth on Monday, and those at "Wolverhampton and Brewood" on the same day. Beckford, or rather the Warwickshire, Hunt hold theirs on Tuesday; and the Atherstone also wind up their season by a festival of this kind at Nuneaton. Grantham stands for Wednesday; the Monmouthshire Hunt, with a strong intermixture of flat-racing, at Abergavenny, for Wednesday and Thursday; while the Southdown Hunt will have two steeplechases on the latter day near Lewes—"gentlemen or their grooms to ride."

Cricket is finished in every part of the United Kingdom except Ireland, and boating and cricket are once more setting in for the season. Commodores and coxswainers are awaking from their winter's trance, and the Prince of Wales Yacht Club weighs anchor for its opening trip on Saturday.

The admirers of Skye terriers have had a strong warning at Warwick Assizes this week, where £60 damages was given against a clergyman for the conduct of his wife's "pepper" and "Mustard," who, after getting "a furious character" in the village, were "howling like lions" as people, at last attacked a poor gardener flank and rear, and bit him most severely. The heavy damages were, however, more owing to the fact that the clergyman would not see the poor man when he called to complain, and simply sent him half-a-crown. A hint word, and a guinea in season, might have saved this £60 and heavy costs. The dogs were remarkably fine ones, and their counsel in vain pointed attention to the fact, that they wagged their tails peacefully on the table of the court.

Mr. Richard Sutton's ninety couples of hounds are to be brought to the hammer at the Quorn Kennels, by Messrs. Tattersall, on Friday. The old hounds will be sold in four-couple, and the young ones in five-couple lots; and the horses will be brought to "the Corner" some time during May. Twenty-four couple of hounds from the North Devonshire country are also in the market. It is thought that Mr. Lugy will become the master of the Warwickshire hounds on the retirement of Lord Willoughby, who has promised a £500 subscription towards them. The Albrighton will most probably once more become a subscription pack, under a committee of management; and we hear that it is Mr. Wilfred Lawson's intent on to hunt Cumberland, or at least a great part of it, without a subscription, if arrangements can be made with the owners of the large coverts to encourage the breed of foxes, which has, except on the fells, become almost extinct. The Southdown foxhounds have had a most pleasant festival at Lewes, at which the very popular master, Mr. Donovan, remarked that they had had only one blank day this season; and that "if a man wanted to find out what real good nature was, he need only be a master of foxhounds for twelve months."

### COVENTRY MEETING.—MONDAY.

Handicap Plate.—Twin Sloe Castl, 1. Vestige, 2.
Handi ap of 2 sovs. each.—Dotcom, 1. Rowing Be'sy, 2.
Sweepstakes of 2 sovs. each.—Gerez, 1. Dolphin, 2.
Handicap Hurdle Race.—Royalty, 1. British Sailor, 2.

### TUESDAY.

Coventry Handicap.—Bellona, 1. Omer Pacha, 2.
Two-year-old Stakes.—Oak Ball, 1. Companion, 2.
Handicap Plate.—Eyebeam, 1. Miss Hatch, 2
Craven Steeplechase Handicap.—Escape, 1. Tom Gurney, 2

### NORTHAMPTON RACES.—WEDNESDAY.

Trial Stakes. Fisherman, 1. Tame Deer, 2.
Bush Plate.—Omer Pacha, 1. —, 2.
Great Northamptonshire Stakes.—Bolt, 1. Freddy, 2
Handicap Stakes.—The Rebel, 1. Gerez, 2
Welter Plate.—Sunshine, 1. Bobby Tefs, 2
Her Majesty's Plate.—Sauceboy, 1. Idmon, 2.
Nursery Stakes.—King of Trumps, 1. Master Slender, 2.

### THURSDAY.

All-ages Park Stakes.—Madame Chiquot, 1. Nougat, 2.
Park Hunters' Plate.—Harrow, 1. Berezina, 2.
Delapre Handicap.—Lottie Gerard, 1. Lottie Lorraine, 2.
Selling Plate.—Weathercock, 1. Sacrifice fly, 2.
Racing Stakes.—Stock, 1. Queen's Head, 2.
Cup.—Middleton, 1. Bobby Tefs, 2
St. Liz Handicap.—Alonzo, 1. Coal Black Rose, 2

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

NOTWITHSTANDING that the amount of money business transacted in the Consol Market in a week has been moderate, the fluctuations in prices have not been excessive: indeed, on the whole, a degree of quietude observation has taken place in the quotations. For the Account sales have been very limited, and many of the leading jobbers are still of opinion that Consols are not likely to advance much above their present value for some time. As the 4th of the month is now pretty near at hand, the demand for money has increased, and the rates of interest, though unaltered, have ruled high. The payment of £2,140,000 on Saturday next on account of the New Loan, and the trading Exchequer Bills, have tended to increase the scarcity of money; but, as the dividend payments upon the New Three per Cents, the Reduced, and other securities will commence in about ten days, most of the money now being withdrawn from the market will be shortly returned to it.

Several vessels, with £355,000 in gold on board, have come in from Australia; and we have had an import of 320,000 dollars from New York, besides about £22,000 from France and Belgium. Of the above quantity the Bank of France has purchased about £160,000, and the remainder has been sent to the Bank of England. There is reason to be an active demand for silver, evidently for shipment to India by the next packet, and bar silver has been disposed of at 5s 1d. per ounce, being ½ per ounce over the price realised at the last sale.

There was very little doing in the English market on Monday, as follows — Three per Cent Consols, for Money, 92⅝ ⅜; Ditto, for the Account, 92⅝ ½; India Bonds, 1½ dis.; Consols Scrip, 2⅝ prem.; Exchequer Bills March, 5s to 2s prem.; June, 1s dis.; Ditto 1854, 2s to 4s prem.; Japan, 1s dis. The market on Tuesday was very inactive, at drooping prices.—Bank Stock for Account, 213; Three per Cent Consols, 92⅝ ⅜; Ditto, for Account, 92⅝ ½; New Two-and-a-Half per Cents, 92⅝ ⅜; India Bonds, 2s dis. for Account, 227; Consols Scrip, 2⅝ ½ prem.; Exchequer Scrip, 2½ ¾ prem.; Exchequer Bills, 2s prem. to par; Exchequer Bonds, 98¼. On Wednesday matters were much the same, Bank Stock, 213; Three per Cents, 92⅝ at 31; Three per Cent Consols were 92⅝ ⅜ for Money, and 92⅝ ½ ⅜ for Account; Consols Scrip, 2⅝ prem.; India Bonds, 10s. to 1½ dis.; Exchequer Bills, 1s. dis. to 4s. prem.; Exchequer Bonds, 98¼ ½. On Thursday the dealings were limited, and scarcely any change in prices took place throughout the day — The Three per Cents, for Money, were 92⅝ ⅜, and for the Account, 92⅝ ½. The New Scrip was 2⅝ ½ prem.—New Two-and-a-Half per Cents, 92⅝ at 31—Exchequer Bills, 2s. to 4s. prem.; the Bonds, 98¼ to 99½. India Bonds, under £10 00, 10s to 0s. dis.

We have had fewer sales in the Foreign market than for some time past; nevertheless, very little change can be noticed in the quotations. Transactions have been reported in Brazilian Five per Cents at 101⅞; in the Small, 102; Grenada One-and-a-Half per Cents, New Series, 24; Mexican, 20⅝; Ditto New Deferred per Cents, 20¼; Russian Four-and-a-Half per Cents, 89¾; Russian Five per Cents, 104 ex div.; Sardinian Five per Cents, 95; Spanish New Deferred, 24½; Ditto, Three per Cents, 44⅞; Ditto, Passive, 5⅞; Ditto, Four per Cents, 100¾; Equador, 5½; Venezuelan Ope-a-d-a-Half per Cents Deferred, 12¾; Dutch Four per Cents, 96; Ditto, Two-and-a-Half per Cents, 64, Buenos Ayres Six per Cents, 86; Peruvian, Three per Cents, 57; Portuguese Four per Cents, 46¾.

Nearly all Joint-stock Bank Shares have been very steady, at full quotations. Australasia have realised 93½ ex div.; Colonial, 104; Commercial of London, 104½; London Chartered of Australia, New, 19; London and County, 34; London and Paris, 7½; New South Wales, 38½; Oriental, 43½; Union of Australia, 72; Western Bank of London, 9¾.

The market for Miscellaneous Securities has ruled inactive, and prices have shown a tendency to give way:—Canada Government Six per Cents, 109½; Crystal Palace, 2½; General Screw Steam Shipping Company, 1½; London General Omnibus, 5½; Mexican and South American, 5½; Peel River Land and Mineral, 2½; Van Diemen's Land, 15½; Ashton and Oldham Canal, 145; Loughborough, 850; Stourbridge, 290; Stafford and Worcester, 420; Leeds and Liverpool, 485½. Berlin Waterworks have been 6½; West Middlesex, 95; Grand Junction, 70½; Kent, 78½; Southwark and Vauxhall, 89½. Hungerford-bridge, 12; Waterloo, New £7, 26; and Vauxhall, 20½.

The market for Railway Shares has been devoid of animation. In prices, however, we have no material change to notice. The "calls" for April are heavy, viz., £2,171,592; but the amounts fall chiefly upon Foreign lines, for instance, the call upon the Eastern of France shares will absorb £1,50 0,000; and upon those of the Lyons and Mediterranean Company, £1,80 0,000. There is, also, to be a new issue of Bonds by the Great Western Railway of France, amounting to £1,105,600. The following are the official closing prices on Thursday.

ORDINARY SHARES AND STOCKS—Ambergate, Nottingham, and Boston Junction, 4½; Caledonian, 80½; Dundee, Perth, and Aberdeen Junction, 104½; Eastern Counties, 8¾ ex div.; Eastern Union, 8 Stock, 24½ ex div.; Edinburgh, Perth, and Dundee, 25¾ ex div.; Great Northern, 94½; Great Western, 68½; Lancashire and Yorkshire, 104 ex div.; Lancashire Union, 12½; Great North of Scotland, 16¾ ex div.; London and Blackwall, 7½; London and Brighton, 101; London and North-Western, 130½; Ditto, Fifths, 15½; London and South-Western, 94½; Manchester, Sheffield, and Lincolnshire, 47½; Midland, 72½; Midland Birmingham and Derby, 43; North British, 31¾; North-Eastern, Berwick, 77. Ditto, York, 55; Shropshire Union, 4¾; South Devon, 13¾ ex div.; South-Eastern, 70; South Wales, 92; Vale of Neath, 61½; East Coast, 9.

LINES LEASED AT FIXED RENTALS.—London, Tilbury, and Southend, 112¾; Preston and Wyre Half-shares, 22 ex div.; Shrewsbury and Hereford, 22¾; West Valley, 32.

PREFERENCE SHARES.—Aberdeen, 120; Ditto, No. 2, Seven per Cent, 118; East Anglian, Class C, 8½; Eastern Counties, No. 2, 4 prem.; Edinburgh, Perth, and Dundee, 69 ex div.; Great Northern Four-and-a-Half per Cent, 103; Great Western Four-and-a-Half per Cent, 94; Ditto, Five per Cent, 98½; Ditto, Birmingham Stock, 73; London and Brighton Six per Cent, 137; Ditto Five per Cent, 116; Manchester, Sheffield, and Lincolnshire, 8; Midland Consolidated, 133.

FOREIGN.—Antwerp and Rotterdam, 8¾; Buffalo and Lake Huron, 8¾; Eastern of France, 19; Great Indian Peninsula, New, 61; Great Luxembourg Shares, 6½; Ditto, Obligations, 3¾; Great Western of Canada, 22¾; new; Ditto, New, 4 prem.; Madras, 10½; Namur and Liege, with interest, 7¾; Sambre and Meuse, 13¾; Scinde, 6¾; West Flanders, 4¾.

Mining Shares have been flat. On Thursday Brazilian Imperial were 2¾; Santiago de Cuba, 9¾; Sortridge Mining Company, 3; Tamar, 2¾; Fortuna, 1.

*Friday Afternoon.*

We have had a very steady market for Consols to-day, but prices are a shade higher than yesterday. The Three per Cents for Money are 92⅝ ⅜; and for the Account, 92⅝ ½. Exchequer Bills and India Bonds are flat, owing to the scarcity of money; but Foreign Bonds and Railway Shares are tolerably firm.

## *THE MARKETS.*

CORN EXCHANGE (Friday). There has been a slight increase in the arrivals of English wheat up to our market this week, sometimes but the show of samples here to-day was very moderate; nevertheless, the demand for all kinds was in a sluggish state, as Monday's decline in the quotations. Over 23,000 quarters of foreign wheat having come in, that article was very dull, and, to have found sales, lower rates must have been submitted to. Floating cargoes of grain were heavy. Fine barley sold at full prices; but inferior kinds were very dull. We had rather a slow sale for malt, yet the quotations were supported. Oats, beans, and peas changed hands slowly, at barely late rates. Flour was dull, and for ign qualities were easier to purchase.

*Arrivals this Week.*—English: wheat, 3440; barley, 2190; malt, 6370; oats, 1010; flour, 3630. Irish: oats, 6110. Foreign: wheat, 23,360; barley, 980; oats, 19,900; flour, 11,170 sacks.

*English.* Wheat, Essex and Kent red, 66s. to 72s.; ditto white, 68s. to 74s.; Norfolk and Suffolk, red, 60s. to 70s.; ditto white, 72s. to 76s.; grinding barley, 34s. to 36s.; distilling ditto, 36s. to 39s.; malting ditto, 40s. to 43s.; Lincoln and Norfolk malt, 70s. to 76s.; brown ditto, 60s. to 65s. Kingston and Ware, 70s. to 75s.; Chevalier, 75s. to 76s.; Yorkshire and Lincolnshire feed oats, 22s. to 23s.; potato ditto, 23s. to 25s.; Youghal and Cork, black, 19s. to 21s.; ditto, white, 20s. to 23s.; tick beans, 32s. to 34s.; old ditto, 36s. to 38s.; maple, 42s. to 44s.; white, 40s. to 42s.; Harlsbro. 42s. to 44s. per quarter. Town-made flour, 42s. to 45s.; Suffolk, 37s. to 40s.; Stockton and Yorkshire, 40s. to 50s. per 280 lbs. American flour 34s. to 36s. per barrel.

*Seeds.*—All agricultural seeds continue in good request at very full prices. Linseed and cakes are firmly held, but not dearer. Rumsey's mixed, 6l.; Calcutta, 6l. 10s. per quarter. Linseed, English, crushing, 61s. to 63s.; Mediterranean, 0s. to 0s.; hempseed, 38s. to 40s. per quarter. Cake, 6l. 15s. to 8l. per cwt. Brown mustard-seed, 14s. to 16s.; white, 10s. to 12s.; tares, 7s. 0d. to 0s. 0d. per bushel. English rapeseed, 38s. to 40s. per quarter. Linseed cakes, English, 13l. 0s. to 13l. 10s.; Baltic, 12l. 0s. to 12l. 10s. Rape cakes, 5l. 15s. to 5l. 17s. per ton. Canary, 50s. to 52s. per quarter; red clover seed, 75s. to 0s.; white, 0s. to 0s.; trefoil, 0s. to 30s. per cwt.

*Bread.*—The prices of wheaten bread in the metropolis are from 9d. to 9½d.; of household ditto, 8d. to 8½d. per 4lbs. loaf.

*Imperial Average Averages.*—Wheat, 67s. 8d.; barley, 37s. 3d.; oats, 23s. 2d.; rye, 42s. 5d.; beans, 42s. 7d.; peas, 42s. 2d.

*The Six Weeks' Averages.*—Wheat, 68s. 3d.; barley, 36s. 3d.; oats, 23s. 7d.; rye, 46s. 0d.; beans, 41s. 6d.; peas, 42s. 2d.

*English Cattle Sold last Week.*—Wheat, 77,410; barley, 87,730; oats, 23,310; rye, 180; beans, 850; peas, 1,040.

*Beef.*—[illegible] the middling and inferior breeds of beasts have been in very moderate demand, and late rates are with difficulty supported. [illegible] to 5d. per lb.

*Mutton.*—All kinds of raw sheep continue in steady request, at a further improvement in prices of from 2d. to 4d. per 8lbs. The best Downs and half-bred sorts have realised 4s. 6d. to 5s. per cwt. Prime Scots, 4s. 8d. to 5s.; and Kents and Sussex, 4s. 8d. to 5s. per cwt.

*Veal.*—The supply of calves has been tolerably good, and the demand for them has ruled very active, at full prices. Prime calves, 5s. 4d. to 5s. 8d.; middling, 4s. 8d. to 5s. per 8lbs.

*Pork.*—Fine pigs are in moderate request, at full prices; but all other hogs continue very dull to sale, at barely late rates. Prime lots of foreign have realised 4s. 2d. per 8lbs. Middling ditto, 3s. 8d. to 4s. per 8lbs.

*Lambs.*—Most kinds of lambs have been in fair demand, at full quotations; but all other kinds are very slow of sale, at barely late rates. The stock is very large.

*Provisions.*—We have to report a fair demand for Irish butter, at full sale rates. The best parcels of foreign continue previous quotations; but other kinds are dull. In the value of English we have no change to report, the highest figure for best being 112s. per cwt. Bacon has been in better demand, and prices are rather higher. In other provisions very little is doing.

*Tallow.*—Since our last report one hot fall has taken place in prices, and P.Y.C., on the spot, is now to buy at 47s. to 47s. 6d. per cwt. Rough fat, 2s. 6d. per 8lbs. About 2000 casks have changed hands this week.

*Oils.*—Linseed oil is steady at 32s. to 34s. 6d. per cwt. on the spot. In the value of other oils very little change has taken place. Turpentine has been in better terms: spot, 34s. to 34s. 6d.; and rough, 2s. 6d. to 0s. per cwt.

*Spirits.*—There is only a limited demand for rum—the stock of which is heavy—on easier terms. Proof Leewards, 2s. to 2s. 2d.; best Barbadoes, 2s. 3d. to 2s. 4d. per gallon. Brandy commands former terms. Malt spirit, 10s. 7d. proof. Geneva, 2s. 10d. to 2s. 8d. per gallon. *Hops.*—Since our last report the market is firm, at extreme quotations. In other provisions very little is doing.

*Tallow.*—Since our last report one hot fall has taken place in prices, and P.Y.C., on the spot, is now to buy at 47s. to 47s. 6d. per cwt. Rough fat, 2s. 6d. per 8lbs. About 2000 casks have changed hands this week.

*Oils.*—Linseed oil is steady at 32s. to 34s. 6d. per cwt. on the spot. In the value of other oils very little change has taken place. Turpentine has been in better terms: spot, 34s. to 34s. 6d.; and rough, 2s. 6d. to 0s. per cwt.

*Spirits.*—There is only a limited demand for rum—the stock of which is heavy—on easier terms. Proof Leewards, 2s. to 2s. 2d.; best Barbadoes, 2s. 3d. to 2s. 4d. per gallon. Brandy commands former terms. Malt spirit, 10s. 7d. proof. Geneva, 2s. 10d. to 2s. 8d. per gallon.

*Hops.*—Since our last report the market is firm, at extreme quotations. In other provisions very little is doing.

*Potatoes.*—Large supplies still coming to hand, and the trade is heavy, at from 35s. to 85s. per ton.

*Wool.*—[illegible] at full prices; but all other kinds continue very dull to sale, at barely late rates. [illegible] of foreign have changed hands to the extent of 2000 bales. Middling Kent fleeces, 2s. 10d. to 3s. Weald of Kent 2s. 3d. to 2s. 6d.; Sussex, 2s. 10d. to 3s. per stone.

*Coals.*—Tees, 15s. per 20½. Hartlepool, 15s.; Lambton, 17s.; South Hetton, 17s.; Stewart's, 17s. 6d.; Caradoc, 18s.; Northpool, 17s. 3d.; Hough Hall, 15s.; South Kelton, 16s. 3d.; Tees, 15s. 6d. per ton.

*Metropolitan Cattle Market* (Friday). The supply [illegible] days in was moderate, and not a breeds marked off steadily. Many quotations [illegible] the stock is in bad handling. With sales that were slow, the trade ruled [illegible] rate further improvement in value of the best. The best Downs, in the [illegible] per 8lbs. Leading sales were from 4s. 4d. to 4s. 6d.; and heavy ditto, at 4s. per 8lbs. Calves sold slowly and prices gave way [illegible] were very dull, but not cheaper. Milch cows were very heavy, at from £18 0s. to £21 each, including their small calf.

Pigs have sold the [illegible] Coarse and inferior beasts, 3s. 10d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime large [illegible] to 4s. 4d.; prime small ditto, 4s. 4d. to 4s. 6d.; small pigs, 4s. 6d. to 4s. 8d.; suckling calves (sold [illegible] per cwt.; sheep, 4s. 4d. to 5s. 8d.; prime Scots, 5s. 4d. to 5s. 8d.; and Kents and Sussex, 5s. 4d. to 5s. 8d.; prime small ditto, 4s. 6d. to 5s. 10d.; large lambs, 6s. to 6s. 8d.; and quarter old store pigs 18s. to 27s. each. Total supply beasts, 803; cows, 135; sheep, 4,050; calves, 91; pigs 370. Foreign: beasts, 1,200; sheep, 6,600.

*Newcastle and Leadenhall* (Friday). We had a moderate trade here to day as follows — Per 8lbs. by the carcase: Aldertree beef, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 4d. to 3s. 6d.; prime large ditto, 3s. 8d. to 4s. 0d.; ditto small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 4s. to 3s. 6d.; small ditto, 3s. 8d. to 4s. 0d.; veal, 3s. 10d. to 4s. 0d.; small pork, 4s. 2d. to 4s. 4d.; lamb 5s. 6d. to 6s. 0d.

ROBERT HERBERT.

CREED and CUMBERLAND, RIDING-HABIT and PALETOT MAKERS to the Empress of the French, the Duchess of Kent, the Queen of Holland, and Court from Bond-street. Cloth Dresses, Pelisses, Children's Highland Dresses. Habits for Secret Service, as worn at the Chase Imperiale.

SHIRTS.—RODGERS' IMPROVED CORAZZA SHIRTS, 38s. 6d. each by the half-dozen. For ease, elegance, and durability they have no rival. Book of patterns, with directions for self-measure, free.—RODGERS and BOURNE, 59, St. Martin's-lane, Charing-cross.—Established 1792.

WHAT NEXT? and NEXT?—CLOTHING and GENTLEMEN'S OUTFITS ready made or to measure. Machinery of the most approved kind made use of in the manufacture of garments. The public will find it to their advantage to visit a better mode, equal in style to the leading houses of London or Paris, and at less than half the usual charges. Fixed prices. Patterns, and T. MILLS and CO., Tailors, Outfitters, &c., No. 1 and 7, Aldgate; and 154, Regent-street.—Observe the numbers.

CITY JUVENILE DEPOT and LADIES' UNDER-CLOTHING WAREHOUSE.—Ladies' Night-dresses, work warranted, 6 for 12s. 6d. Ladies' Chemises, 6 for 8s. 6d. Ladies' Drawers, 6 for 8s. 6d. Long cloth Slips, with bandsome needle-work, at 1l. Higher class goods proportionately cheap, with the largest stock in London to select from. Infants' Circular Cashmere Cloaks, lined silk, and richly braided, 21s. 6d. Infants' Cashmere Hoods, elegantly braided, 7s. 6d. Paris wove Stays, 3s. 11d. The new Corset, to fasten in front, 3s. 11d. An Illustrated price-list free on application. Orders receiving a remittance promptly attended to.—W. H. TURNER, 67, 68, 69, and 70, Bishopsgate-street (corner of Union-street, London).

DECLARATION OF BONUS.
ROYAL EXCHANGE ASSURANCE OFFICE, London, January, 1856.
The Governors and Directors have to announce to the holders of Life Policies effected on the system of Participation in Profits, that a Second Bonus has been declared in respect of the surplus then ascertained. Such Bonus attaches to all Policies—Second subsequently to 1841 for the whole term of life—and in proportion to the sum of premium—which were subsisting on the 31st day of December, 1855 and on which three or more annual Premiums had then been paid.
The following Table shows the amount of Reversionary Bonus added to British Policies of fourteen years standing for the sum of £100 assured:—

| Age when Assured | Addition to Sum Assured in 1841 | Further Addition in 1855 | Total Addition | Premium paid |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| 30 | 102 | 119 | 214 | 53 |
| 35 | 102 | 119 | 221 | 58 |
| 40 | 113 | 132 | 234 | 67 |
| 45 | 127 | 148 | 248 | 78 |
| 50 | 135 | 160 | 273 | 96 |
| 55 | 151 | 184 | 303 | 119 |
| 60 | 166 | 174 | 340 | 142 |

Prospectuses, Reductions have been made in the Annual Premiums payable by those persons who prefer that form of discharge.
The future advantages of policies will, as heretofore, be
A minimum of £25,000 may be insured in the same life.
This Corporation affords to the assured the security of a large Capital, with exemption from the liabilities of Partnership; a body of Bonus equal to the average returned by Mutual Societies, the guarantee of a large invested Capital Stock, and the advantage of modern practice, with the security of an Office which, for nearly a century and a half, has been the source of public confidence.
Tables of rates, forms of proposal, and other particulars may be obtained at the Chief Office, No. 28 Pall-Mall; or from the Secretaries at the Branch Offices, No. 29 Parliament-street, Westminster, and 10, Cornhill; and other Agencies in the Royal Exchange; London; and in the principal Towns in the United Kingdom.
JOHN A. HOLLAM, Actuary and Secretary.

THE LONDON and WESTMINSTER BANK (LIMITED), with a CAPITAL of £10 each, payable at any time on demand, and they are ready to grant Deposit Receipts at interest, and to issue Drafts on their Branches and Agents, and LETTERS OF CREDIT on all the principal Cities and Towns in Europe.
Circular Notes are issued only at the head office in Lothbury.
Bills for collection may be obtained at the head office, in Lothbury, and at the following Branches:—
Westminster Branch—St. James's-square.
Bloomsbury Branch—214, High Holborn.
Finsbury Branch—Finsbury-circus, Borough Branch—Wellington-street, Borough
Farringdon Branch—57, High-street, Whitechapel
Hampstead Branch—Belsize-terrace, Hampstead.
Kensington Branch—Kensington-gore, Brompton Branch—3, Brompton-row.
In the principal Towns in the United Kingdom.
JOHN A. HOLLAM, Actuary and Secretary.

ST. MARK'S HOSPITAL for FISTULA and other DISEASES of the RECTUM, City-road, London.
Patron—The Right Hon. the LORD MAYOR.
Treasurer—Richard Hartley Kennedy, Esq., Alderman, } Sheriffs of London
Deputy—David Henry Stone, Esq., } Under-Sheriffs.
Bevan, Hugh, Esq.
Duke, Sir James, Bart., M.P.
Farebrother, Clement, Esq.
Grocott, Alderman
Hodgson, Alderman, Lord Mayor.

## COMMENCEMENT OF THE PUGLIA RAILWAY.

*(From our own Correspondent)*

A GREAT fact has just been completed at Naples. The first stone of the great Puglia line of railway was laid on the 11th inst., and a beginning, at all events, made of a project calculated to develop the resources of the country to a vast extent From west to east it is intended thus to traverse the whole width of the peninsula from Naples to Bari, and then coastwise down to Brindisi. As regards its immediate influence on the kingdom itself, it cannot be spoken of in exaggerated terms. It passes through a country which may be considered as one of the granaries of Italy. The sunny plains of Apulia have long been celebrated for their fertility, and will now become doubly productive that this long channel of communication is opened between them and the ports of the Mediterranean and the Adriatic. By two royal rescripts his Majesty, on the 8th of January and the 5th March, 1856, gave his sanction to the inauguration of the works of the Puglia Railway, and this was fixed at length to come off on the 11th inst. A portion of ground on the road of Arenaccia had been inclosed, and a solid wooden structure built, surmounted by Royal banners. The interior was carpeted with crimson cloth, and covered in with red and white drapery; whilst the façade was inscribed with the names of the principal places through which the road will pass. From this semicircular edifice a carpeted and elevated platform led to the centre, where an altar was erected, and on each side a staircase conducted to a still higher elevation, when, surrounded by a balustrade, a large opening was perceptible. In front of the balustrade, upon a table covered with velvet, was placed the foundation-stone—that is, a marble cube—on the different sides of which were cut the inscriptions.

On the same table were laid, too, the metal case which was to contain the stone and the box with the various coins—gold, silver, and copper—of the reigning monarch. The tribune opposite the altar was occupied in the centre by his Excellency the Minister of Public Works, Signor Commendatore Mineu, as the representative of the King. All the forms of Court etiquette were observed, and every precaution taken to guard against an impression that his Majesty did not regard this grand undertaking otherwise than with a favourable eye.

The Royal Delegate, on his arrival, was conducted to his seat by the Central Committee and the Concessionaire. The same formalities were observed towards the Bishop who was deputed by the Cardinal to act for him; and, Mass having been said by this Prelate, assisted by a large body of ecclesiastics, the round of the platform was made by the ecclesiastical procession, and the clerical benediction bestowed on the assembled spectators. At the conclusion of the benediction the Bishop and his attendants mounted to the upper platform; the stone and the coins were placed in the metal box by the Concessionaire; the case was locked by the Royal Delegate, who had been conducted to this elevation; and then, having been attached to a windlass, was lowered into its final resting-place.

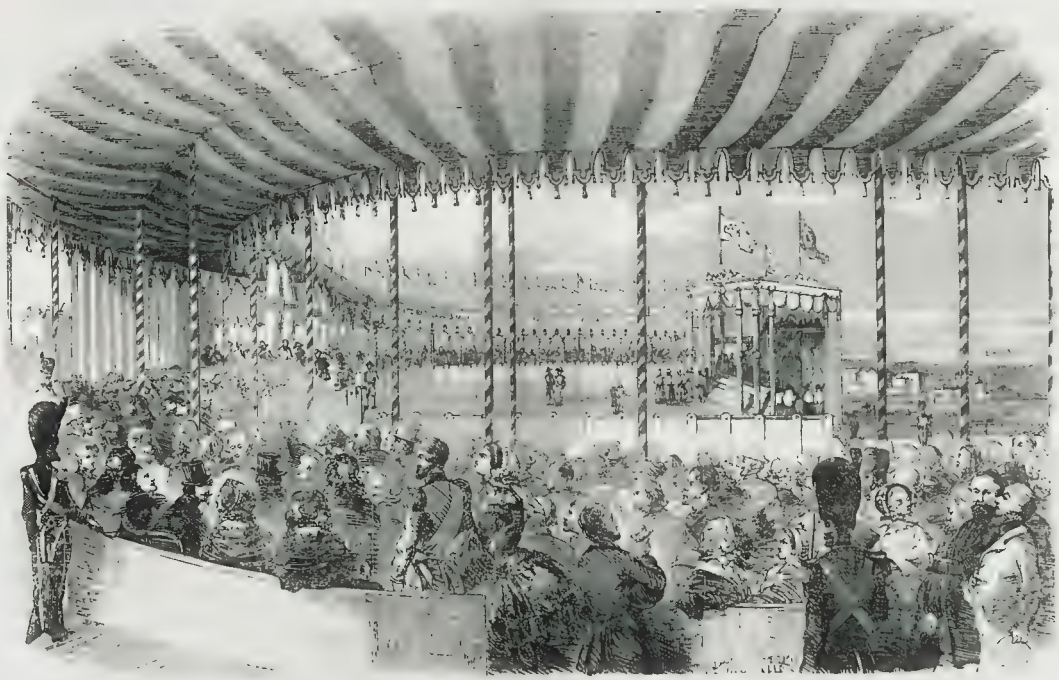
Thus concluded a ceremony which, if it inaugurates a successful undertaking, will mark one of the most important events in the modern history of the Two Sicilies. It is to be regretted that his Majesty and the Cardinal of Naples did their duties both by delegates. Amongst the most distinguished and influential persons present may be mentioned Baron Rothschild, the banker of the Committee, the Syndic of Naples, the Count Monte St. Angelo, the Dukes Pagnanico, St. Teodoro, Ottaiano, and St. Aspino; the Prince Trecase, Signor Melisurgo, the Concessionaire; Mr. Condor, civil engineer; and the heads of principal public bodies in Naples. His Majesty has expressed himself most favourably to the undertaking, and their Royal Highnesses the Count of Syracuse and the Count of Aquila—the former in a more especial manner, had taken, and still take, a deep and enlightened interest in the promotion of this great enterprise. The View gives on the right the altar, and above it the platform, on which rested the foundation-stone; opposite it, on the left, is the centre tribune, where sate the King's delegate. On the right and left were the visitors. The view from the elevated platform was most lovely, extending over the rich plain between the capital and the distant mountains, with Vesuvius and the bright blue sea in the distance.

MEMORIAL WINDOW ERECTED IN ST. MARY'S CHURCH, CHESTER, TO HEROES OF THE 23RD ROYAL WELSH FUSILIERS.

## MEMORIAL WINDOW.

AMONG the memorials to the brave who fell in the war, painted windows are prominent, from the great advances made of late years in this branch of art. The specimen here engraved has just been placed at the east end of the north aisle of St. Mary's Church, Chester, in memory of the heroes of the 23rd Royal Welsh Fusiliers who fell in the Crimea from the victory of the Alma to the capture of Sebastopol. The principal subject represents Aaron and Hur holding up the hands of Moses during the battle between Israel and Amalek, as thus recorded in Exodus xvii.—"Then came Amalek, and fought with Israel in Rephidim. And Moses said unto Joshua, choose us out men, and go out, fight with Amalek: to morrow I will stand on the top of the hill with the rod of God in mine hand So Joshua did as Moses had said to him, and fought with Amalek; and Moses, Aaron, and Hur went up to the top of the hill. And it came to pass when Moses held up his hand, that Israel prevailed: and when he let down his hand, Amalek prevailed. But Moses' hands were heavy; and they took a stone, and put it under him, and he sat thereon; and Aaron and Hur stayed up his hands, the one on the one side, and the other on the other side; and his hands were steady until the going down of the sun. And Joshua discomfited Amalek and his people with the edge of the sword" The subject has been skilfully treated by the artist, who has unquestionably produced one of the finest windows in Chester. It is intended to place under the window an engraved tablet, on which are to be inscribed the names of the fallen heroes

This fine window has been designed and executed by Mr. George Hedgeland, of Grove-place, Lisson-grove. The subject—Hur, Aaron, and Moses—occupies three of the five lights; the other two bear scrolls, with the mottoes "Ich dien," and "Nec Aspera terrent," from the colours of the regiment; from which also are taken the Prince of Wales' feathers, which are placed in the upper part of the window. The emblems of England and France—the rose and fleur de-lis—are repeated, alternately, in various parts of the window. The whole has been executed in the old style, no enamelled glass being employed.



CEREMONY OF THE COMMENCEMENT OF THE GREAT PUGLIA RAILWAY, BY THE NEAPOLITAN MINISTER OF PUBLIC WORKS.

## "GASTON DE FOIX."

THE smallest of the three pictures bequeathed to the National Gallery by the poet Rogers, is a picture on panel, measuring fifteen inches by eleven inches, attributed by the best judges to Giorgione, and called "Gaston de Foix." It is a portrait of a young knight in armour—the head bare, the face seen in front, and full of melancholy sentiment. "Very noble in the figure and expression," says Mrs. Jameson, "and painted with great force and richness; it is apparently a study of armour, and has been attributed to Raphael."

On the back of the picture is the following inscription:—"Figure tirée d'un tableau du Giorgione d'une Ste. Vierge assise sur les ruées, avec St. Francois, et la presente qu'on pretend être Gaston de Foix; le tableau est à Castel Franco, dans le Trevisane. Cette note est de Mons. Mariette." Castel-Franco was the birthplace of Giorgione. If this figure represent Gaston de Foix, it must be in the character of St. George or St. Maurice, or some other warlike Saint.

"GASTON DE FOIX." PAINTED BY GIORGIONE. BEQUEATHED TO THE NATIONAL GALLERY BY MR. SAMUEL ROGERS.

## BAIÆ, AND ITS VICINITY.

*(From our own Correspondent.)*

OUR Sketch represents a site over which nature and classic history throw a peculiar degree of interest. Misenum, Baiæ, Avernus, Lucrinus—names which we lisp with our earliest breath almost—are here brought before the eye at a glance. The traveller from a distant land who has dreamed of these spots from boyhood, visits them with that intensity of delight which it is not often given in a man's life to feel, and almost rejoices in the malaria which seems to have doomed them to the sanctity of silence and solitude. We have heard lately, however, rumours of an intention to reclaim these lands—to form a naval port of Lucrinus and Avernus, and thus to destroy all those poetical associations which have clung to the neighbourhood for eighteen hundred years. As the Sketch plainly shows, the harbingers of modern destructiveness are already visible—the flags of the land-surveyors are erected, and measurements are being made with a view to ascertain the practicability of the project, and the value of the land to be purchased. However painful may be the conviction, in this as in any other case, that the illusions of poetry must give way to utility, still we are of opinion that such illusions ought not to be tampered with unless the useful and practicable are clearly made out. It is just this point which is doubted by many engineers, of course by all our antiquaries, and perhaps their opinions derive some confirmation from history. This is by no means the first time that such a project has been entertained.

Agrippa conceived the idea of converting Avernus and Lucrinus into a port, and by command of Augustus carried it into immediate effect. It was called Portus Julius: a fleet of galleys equipped with 20,000 men, floated on its waters for an entire winter, and then sailed out to do battle with Sextus Pompeius, who was signally defeated near Melazzo, in Sicily. It was then the wonder of the age, and our Horace sings its praise as a "regis opus," and Virgil exultingly says—

An memorem portus. Lucrinoque addita claustra
Atque indignatum magnis stridoribus æquor
Julia qua ponto longe sonat unda refuso
Tyrrhenusque fretis immittitur æstus Avernus.

Historians, however, make no farther mention of it after this period; and that, which was a most significant fact, Augustus removed his fleet from the Portus Julius to Misenum. It was said of this extraordinary work, "Navos admittit leves stationi inutilis." Strong natural obstacles existed even then to its success. The sea, when it was agitated, brought up here, as at Ostia, an immense quantity of sand, which closed the entrance and raised the bottom of the lakes. That action of the sea still exists. Other difficulties are now superadded. On the night of the 29th September, 1538, after repeated shocks of earthquake, a conical mountain, now known as Monte Nuovo, rose from out the eastern side of the valley. It measures 500 palms in height, and 10,000 palms in circumference. By this appalling phenomenon the village of Tripergole was buried, and a portion of Lucrinus destroyed. No modern port, therefore, on this site could have even the same capacity as the Portus Julius. Again, to unite the two lakes, as is evident from the Sketch, a considerable cutting would be necessary; and when all is done the deposit from the surrounding mountains, as also from the sea, will ever tend to raise the bottom of the lakes, and make it "Stationi inutilis." We must not pursue the matter more in detail at present. No commencement of the works is to be made until the estimated value of the land has been paid to the proprietors, and before that is done, the real difficulties of the undertaking may be brought more clearly out to view than they even are at present. The chief engineer is Signor Import, a military engineer of much experience, and the comptroller of expenditure is Signor Quaranta, a brother of our eminent antiquary and "literato." With one or two exceptions, all the antiquarians are full of grief at a project which, if carried out, will destroy all their pleasant places—endanger the grotto of the Sibyl, the Temple of Apollo, and turn into a bivouac for dirty Neapolitan sailors spots which have ever been sacred to the Muse.

It only remains for us to point out and explain the different parts of the Sketch. In the distance, the first promontory is the Cape of Misenum—the low coast adjoining once formed the gardens of Lucullus. To these succeeds Baiæ and its Castle; in the port of Baiæ are seen many small vessels. Immediately in the background are Monte Procida and the Island of Ischia. On the plain is Lake Lucrinus, by the peasants called Mariocllo; and separated from it by a considerable space of ground is Lake Avernus. It is surrounded by mountains, at the foot of which is the Temple of Apollo. The flags are signals placed at different points to regulate the operations of the engineers.

THE PORT AND CASTLE OF BAIÆ: THE CAPE OF MISENUM: SITE OF THE GARDEN OF LUCULLUS; MONTE PROCIDA AND THE ISLAND OF ISCHIA; AND THE LAKES LUCRINUS AND AVERNUS.

## SANITARY REPORT ON ST. PANCRAS WORKHOUSE.

TWELVE years have elapsed since the first Report of the Commissioners appointed to investigate the health of towns was published. The valuable information it contained, and the additional knowledge communicated to the public in subsequent volumes, warned society against the evils of overcrowding, a want of ventilation, and defective sewerage and drainage. Much benefit resulted from these admirable publications. Baths and wash-houses were erected, to which the humblest classes had easy and cheap access; habits of personal cleanliness were adopted by many, and they who visited the modest households of the working classes saw with pleasure a marked improvement in domestic economy. That sanitary reform was voluntarily carried out to a great extent, both in the metropolis and in the provinces, and that it is on the increase, none can doubt, and indeed it is proved by the concurring testimony of those medical practitioners who exercise their noble profession in the humbler abodes of industry. It may well, therefore, excite surprise that negligence should prevail in one of the largest and most opulent parishes of the metropolis, and that the ordinary rules for sustaining health should be violated in St. Pancras Workhouse; yet such is the fact, if we are to credit the able and searching report of Dr. Henry Bence Jones, recently presented to both Houses of Parliament by command of her Majesty. Before noticing the details of that Report it is desirable to notice certain facts relative to the eternal laws of pure atmosphere and healthy breathing, by which we shall better understand that the Infirmary of St. Pancras Workhouse is more calculated to aggravate than to remove disease.

The Inspectors of Prisons in England have recommended not less than 1000 cubic feet for every prisoner as being essential to health and ventilation; and a less space may be considered as evidences of overcrowding. Writing on consumption, Sir James Clark states that "the respiration of a deteriorated atmosphere is one of the most powerful causes of tuberculous cachexia," that is, the constitutional affection which precedes the appearance of consumption. He says "if an infant, born in perfect health, and of the healthiest parents, be kept in close rooms, in which free ventilation and cleanliness are neglected, a few months will often suffice to induce tuberculous cachexia." He adds, and it is most pertinent to our present subject, "children reared in the workhouses of this country, and in similar establishments abroad, almost all become scrofulous; and the more, we believe, from the confined impure atmosphere in which they live, and the want of exercise, than from defective nourishment."

In the Report of Dr. Jones we have painful evidence of overcrowding and the absence of free ventilation. We have mentioned the rule laid down by the Inspectors of Prisons, and Dr. Jones observes that the College of Surgeons have refused to recognise as medical schools the hospitals which give less than 800 cubic feet to each patient, on the ground that less space, even with good ventilation, is injurious to the sick; but it is proper here to add, in the very words of Dr. Jones, "I consider that neither this standard nor any other can be correct." Nevertheless, he, of course, objects to overcrowding, as will presently appear. We now proceed to some of his facts, requesting the reader to bear in mind how much pure air, in the estimate of other authorities, is deemed requisite for health.

"In the three principal wards of the men's infirmary there are now (3rd January, 1856) 121 cases, with from 573 to 648 cubic feet per person. In the six principal women's wards there are 152 cases, with from 612 to 656 cubic feet per person." He states that, from want of accommodation in the infirmaries, on one of the days of his visit, ten men and two women were on the floor; and declares that Mr. Coster, the senior medical officer, informed him that he considered certain forms of disease, "ulcerative stomatitis and dysentery," causing death in some instances, had resulted in part from overcrowding. On this point Dr. Jones says, "in all the infirmary wards I consider the present crowding too great;" and he might well come to that conclusion, especially as he observed in some instances, where the beds were as close as possible, ten people with only 252 cubic feet each. In another department, where he found huddled together seventy women and ten children, the average space was reduced to 164 cubic feet per person. The vicious state of the air was tested chemically. In the last room to which we have referred, it contained considerably more than one per cent of carbonic acid, 1·14. In another dormitory there appeared two and three quarters per cent of carbonic acid, and in a third rather more than two per cent. Under such circumstances it is not surprising that the patients complained of sickness, headache, and loss of appetite, and that many had fainting fits.

In many cases the sleeping accommodation is most wretched. According to the testimony of Phillips, the assistant nurse, many in the lower rooms have no beds or even ticks to lie on, but they sleep on the floor, on the table, on forms, or wherever they can find room to lie down." Dr. Jones himself says, "In the men's casual ward I saw in the evening, along the greater part of each side of the room, a wooden straining-frame, on which was placed some cocoa-nut fibre bags, some blankets, and rugs. About twenty-five adult men were expected to sleep that night on these frames." What is still more shocking, Mr. Waldegrave, one of the medical officers, told Dr. Jones that he had seen "ten men lying massed as close as possible on one of the frames." In the children's dormitory eighty-three children sleep, and there have been ninety, their ages being from seven to sixteen. Credit seems to be taken where only four children sleep in one room; but in the adjoining room "there have been eight children, between one and seven years old, in one bed, four feet six inches broad and five feet six inches long;" and it is stated that the result of this proximity is the spread of cutaneous disease.

In the mens' day-room, redolent of tobacco, where from 50 to 150 are sometimes collected, Dr. Jones collected the air and detected one and a half per cent of carbonic acid. Here, as might be expected, there were constant complaints of headaches; and the man who had charge of it declared that, "if the door and windows were kept closed for an hour or two, they would be suffocated." In a cellar underground fifteen persons slept; there was no chimney, and the scanty ventilation was admitted through the door. On the same level, also underground, there is a low long room, seven feet two inches high, containing thirty-two sleepers. In two wards, called separation wards, also underground, thirteen women and five children lived night and day. Some of the rooms even for the insane are underground, and for these unhappy creatures the drainage and ventilation are shown to be most objectionable.

The waiting-rooms for the out-door poor are severely condemned. Before eight o'clock on a wet morning Dr. Jones counted thirty people standing in the street before a locked gate, none being allowed to find shelter before nine. They have to pass through three pens, stepping over filth. Here the crowding is occasionally excessive, the number of applicants ranging from 300 to 900. Here several faint from offensive smells; relief is postponed sometimes till half-past five, sometimes till eight o'clock in the evening. Such is the fatigue arising from delay, and the suffering from standing so long in foul air, that too poor often give up their tickets of admission, and go away without relief. Some improvement in ventilation has taken place of late years, but it is still most defective, and the last relieving officer died from the effects of the polluted atmosphere, as Dr. Jones thinks, of typhus.

Such is the sad picture drawn of St. Pancras Workhouse by this honest and fearless physician. The facts he has disclosed are a disgrace to the local authority. St. Pancras is surely opulent enough to build additional accommodation, and we are certain that it contains a host of humane and generous inhabitants who are yet ignorant of the evils inflicted. Without doubt the publicity given to the case in these columns will speedily lead to action.

## A FEW WORDS ABOUT BUTTER, DAIRIES, DAIRYMAIDS, AND FARMERS' WIVES.

WE do not share the intense admiration of everything foreign that it is at present the fashion to avow. We do not believe in the foreign system of railroads, paid for by Government; in a close monopoly of omnibuses; in street-building, where fifty men are set to work to do what ten do here; in houses, magnificent in decoration and design, without the ordinary decencies of a Cockney cottage; in cheap dinners, composed of flesh without nourishment, and savoury sauces, extracted from unimaginable things;—although we do believe that the railroad management, the omnibus, the street improvements, the architecture of houses, and the cookery of England are susceptible of material amendment in details; for which we must look to an improvement of public general education and opinion, and not to the interference of that incomparably most inefficient and corrupt manager, the "Government official." But there is one particular—*speciality* is the fashionable word—in which the foreigner does excel us, and that is BUTTER!

Go to France—in any department where goat's milk has not superseded cow's—go to Belgium, to Holland, to Switzerland, and you will find morning after morning on your breakfast-table delicious butter—bright coloured, firm, sweet—a real luxury—with your roll, be it of white wheat or black rye.

Even in Paris—where the meat is so vile that nothing but the genius of the cooks could disguise its want of flavour, and stone, if that were possible, for its toughness—the butter is always worthy of the admirable *café au lait* and faultless *petit pain* which the *concierge* of a second-rate hotel contrives to bring up to you. How different is our condition in England, with a climate specially adapted for growing butter—mild and moist, and the land covered with rich pastures. Why, in almost all the hotels and dining-houses, in ninety per cent of private houses in the best towns of England, you find at best a white, hard, tasteless substance, in which suet artfully "reduced" occupies at least half the place of what ought to be the genuine produce of a well-fed cow. But this is a favourable case; it constantly happens, even in respectable houses, that butter is a vile rancid compound, only to be endured when manufactured into one of the few principles of English cookery, "buttered toast;" and if Pater-Familias grumbles, he is then told the actual truth that in most shops there is no such thing as genuine butter to be had, that the public taste has become degraded. Just as George IV. could not bear native oysters in natural freshness, so there are West-end customers who must have their butter hardened and whitened with suet to bring it to their taste. While in those few establishments where genuine Epping, Cambridge, and Dorset butter is sold, the price is enormous—seldom under 1s. 8d. a pound. And yet this is the same country where a great light of agriculture, Mr. William Miles, M.P., a Councillor of the Royal Agricultural Society, pleaded earnestly for a mixture of tar with the grease imported for machinery, at a low duty, lest some unhappy carter or stoker should use it with his loaf, to the grievous injury of the true British dairyman. There is still a heavy duty on butter; and as soon as the Chancellor of the Exchequer can spare the money, the rising generation, headed by Pater Familias, must combine in an anti-Butter-law League.

But that will not be enough. We have an immense importation of foreign butter now—good, bad, and abominable. The difficulty lies deeper than the foreign market—it rests at home, where the absurd education of portionless ladies teaches them everything but what is useful, and leads them to despise or neglect the knowledge that would make their husbands prosperous and themselves happy. We have not one word to say against the piano or the embroidery-needle. Fancy work has its uses; and, as for music, we should like to hear it from every cottage in the kingdom. But accomplishments and usefulness are not incompatible. We do not ask our farmers' wives and daughters to bare their arms, rise at four a.m., and plunge into the hard work of butter-making, any more than we expect our middle-class wives to burn their faces and black their hands over the kitchen fire and the pots and pans. But we know that those wives who have mastered the principles and practice of good cookery, and who have accomplished themselves in pastry and jellies, keep learned cooks in better order, save wages in unlearned girls whom they teach, and enable the struggling barrister or M.D., or hard-working professionalist to entertain his friends now and then, without the infliction and endless expense of a hired "professed cook," or contributions from the stale stores of the pastrycook.

At the Edinburgh confectioners' you often see a notice that "A young ladies' class is held here." We think that in all country schools a class on the chemical principles and practice that leads to producing good butter and cheese might take the place of a good deal of superficial stuff. There is at present an all but unlimited demand for good butter in every large town. Good butter depends on good cows, good feeding, and good manufacture. There are plenty of dairywomen who make first-rate butter by the rule of thumb; they cannot tell you how or why they succeed or fail. But the principles are perfectly well known, and the process is as certain in its results as the manufacture of a plum-pudding. A lady who understands these principles—and they are simple enough—who has a talent for making her servants orderly and neat—can make a dairywoman of any willing, healthy, industrious girl. She is not at the mercy of any rule-of-thumb vixen; she need not be robbed or put off with inferior quality. She can make sure of a first-rate article every week, saleable wholesale by contract at from 1s. to 1s. 2d. a pound in the London market.

A lady with knowledge need not work, but her knowledge keeps her little army at work, and she trusts to her subaltern officers, with the help of occasional visits. And then, what is the result? Why, in our extensive agricultural towns, when we ask, in the face of admirable pastures on slopes well suited for Italian ryegrass, why there is no dairy? it is a common answer, "my wife does not understand it, and it is so difficult to get a good dairymaid."

Yet there are few modes in which an active, intelligent lady can lay out £500, that brings less than £20 a year in the funds, more profitably than in fifty acres of dairy land; while in an established farm a dozen well-managed dairy cows would in as many years portion a couple daughters.

Let us recommend to the attention of the Ladies' College the advantage of a Class on Dairy Management. There are very competent professors to be found round Charing-cross—one the author of an admirable paper, which still lies buried under bundles of idle speeches at the great house in Hanover-square.

As for the book which has formed the subject of this discourse—"Dairy Farming," by Agricola—it is beautifully got up, and well suited, to use the common phrase, "to adorn the shelves of an agricultural library;" and that is all we can say in its favour, for it is perfectly commonplace—not up in the latest information, as for instance in the last papers on "Butter," read at the Royal Agricultural Meeting by Mr. Dixon, Mr. Thomas Scott, and Professor May; and much of the more important statements are either half told or incorrect. We have not yet seen a better work on the management of the dairy than the shilling volume of Richardson's "Rural Handbooks," edited by the late Mr. Milburne. Agricola's account of Italian rye-grass—decidedly the most valuable addition of food for dairy farms that had been made since the introduction of drilled mangold, is extremely meagre; although a very able paper on the subject, read by Mr. Morton before the Central Farmers' Club, last year, has appeared in the *Agricultural Gazette*. He makes no reference to Mr. Dickenson (formerly of Willesden, now of New Park, Hants), to whom we are indebted for the best quality and best mode of cultivating this admirable perennial.

The chapter on manures is as remarkable for its mistakes as its omissions. In speaking of guano, he forgets the special circumstance required to make it of the least value, viz., that it should be gathered in a region where rain rarely—or, as in Peru, never—falls. According to Agricola's account the islands of Scotland would yield valuable guano. Of superphosphate and the other concentrated manures, founded on fresh bones or on fossils—the most valuable agricultural discovery of the day—Agricola says not one word. His observations about "sewage manure being wasted" are merely a repetition of an old failure of the late Board of Health. Sewage manure is at present little used in England, because guano, nitrate of soda, superphosphate and the other concentrated powerful manures, are found more effective, more portable, and therefore cheaper. We should be curious to hear what a first-rate Norfolk farmer would think of using dried sewage manure, with crushed bones, to turnips, in preference to the turnip manures of Lawes or Ramsay, or to Peruvian guano and home-made foldyard dung. The statements as to the superior value of liquid manure (except for mown grass) are totally incorrect. The Mr. Lee quoted is a town surveyor and no authority. Those curious on the subject will do well to consul "A Chapter on the Value of Town Sewage," in a volume ("Sanitary Reform") recently published by Stamford, Charing-cross, in which all the evidence on the comparative value of manures is condensed. "Agricola" promises a second edition. He cannot commence it too soon; there is plenty of room for a valuable book on the subject he has chosen. At present even his article on "Churns" is most imperfect. He seems not to have seen the best churns, and says not one word on steam-driven churns, or the use of steam to produce an even temperature in the dairy—the essential for certainty in butter manufacture.

## AUSTRALIA.

*(Extracts from the Private Correspondence of a Lady.)*

OCT. 16th.—You inquire about the native Australians, but in the towns they rarely make their appearance. However, last week, at St. Kilda, I saw a party of aborigines enter an omnibus, in which were several well-dressed persons. The men had on English clothing, but the women only the blanket. I should think they must have been rather surprised at this mode of locomotion. Generally, they are very intelligent-looking, far more so than the negro race; and they all have very glo-sy, wavy, black hair, of which they are remarkably proud. They are shrewd, and not easily imposed on. Before they commence a drinking bout they always deposit everything of value they have about them in a place of safety. A friend of ours—a squatter—is now staying in Melbourne, and has with him his groom, a native of the Murray district. He is a remarkably well-formed and intelligent young man, and, I hear, is a great favourite with all the servants at the hotel where they are staying. Mr. —— tells me he has four native servants, and he finds them quite as good and useful servants as Europeans: one always insists on being called by his native name, and another will answer to no other name than Mr. Latrobe, indeed they usually assume some fine or celebrated name. Mr. —— is, I hear, very much respected by the blacks, and all in the neighbourhood of his stations regard him as their master. He says if they commit any great crime he banishes them to one of his distant stations, and gives them another name.

Oct. 20th.—Last night we went for the first time to the theatre. It is about the same size as Drury Lane, and it most elaborately decorated, much too fine for my taste. The fronts of the two tiers of boxes are white, covered with an arabesque pattern in gold, and in the centre of the panels are groups of flowers, and below the panels wreaths of bright-coloured flowers. This part looked very well, but the box curtains are dark blue, with blue fringe, while the boxes are lined with bright crimson. Bright colours are very much indulged in here, and many of the ladies vie with the birds in the brilliancy of their attire. It is no new thing to tell you of the trouble I have with servants, and I have again had to seek a new one. A lady informed me that she had been most fortunate in those she had obtained from the Government dépôt, so I determined to try my luck there, and to-day have been. It is a formidable business, I assure you, to go there; but a friend, who had frequently been, kindly accompanied me. It is a very large establishment. We had first to go to an office, where a clerk inquired name, residence, calling, &c. We then received a paper containing most of these particulars, and were directed to another part of the building, which had a very high fence, and gates being locked, and guarded by police. One of them examined the paper, and we were then allowed to enter the court in front of the single women's department. The matron, a very venerable and rather lady-like person, came to meet us, and conducted us to a verandah, where there were perhaps fifty young women. I was anxious to obtain an English or Scotch servant, but I was the only one at all suitable was Irish, so I decided on engaging her. To-morrow I shall have to go to sign an agreement, take a dray with me for the boxes, and bring the lady away.

Oct. 24th.—Our friend Mr. ——, who went to Ballarat, has, for a time, abandoned gold-digging, as he says there are about ten chances to one of making even a living, and a thousand to one of making a fortune; he and his mate obtained four ounces of gold from one hole, and sunk seventeen others, which are deep pits, on which there is no gold to be found. I am often very sorry for those gentlemanly youths, who come out here direct from school or college, and find all their golden dreams dispelled on their arrival; but who are determined not to despair, and take any employment, however menial it may be. The majority of new arrivals give gold-digging or quartz-crushing a trial, but very few succeed; and "new chums" frequently find themselves reduced to their last penny, and are then obliged to earn their bread as they can. The most successful appear to be those with some amount of combined experience.

WEALTH, LEARNING, AND HUNGER.—A native of Connaught named Tinon, about forty years of age, was found dead in his lodgings in Mary-street, Phœnix-park, on Monday last week; and on examination it transpired, extraordinary to relate, that he had literally died of hunger. He was, it appeared, possessed of a good fortune, but was so passionately addicted to learning that he entirely neglected himself, and passed whole days amongst his books and manuscripts without thinking of taking food. His apartment was in a state of indescribable filth; his person was, if possible, still worse, as, for two years, he had changed neither his linen nor clothes, and he was dreadfully emaciated. His attainments were very great, and he spoke not fewer than twelve languages with fluidity, and knew others. At one time, too, he held high official dignities in his own country, and was even an ambassador, but he abandoned everything for study. His lodgings were encumbered with piles of books and manuscripts, in almost every language; and, in addition to them, he possessed a great number of rare and curious objects, such as Esterhazy arms of all kinds, Damascus blades, antiquities, autographs of celebrated personages, &c. By his will he leaves six manuscripts, supposed to be extremely precious, to the Mazarine Library, and his fortune partly to the poor, and partly to the church des Petits Pères.—*Galignani.*

JESUITISM IN VIENNA.—The so-called "Missions" of the followers of Ignatius Loyola (Jesuits) and Liguorius (Redemptorists) are now in vogue at Vienna. Not long since Count Condenhoven, a Ligourian or Redemptorist priest, while preaching in a church in the suburb of Josephstadt, averred that the crucified Saviour made a mistake when, after having taken the cup, he said, "It is finished." "By your wickedness," said the preacher, elevating the crucifix, "the sufferings of the Saviour are prolonged, and they will only cease when you cease to sin. Now, here on the spot, make a solemn vow never to sin again." A part of the congregation, which was almost exclusively composed of women, repeated aloud after the priest, "We solemnly vow to sin no more;" but many persons left the sacred edifice in disgust.

THE POPE AND HIS IMPERIAL GODSON.—A complete and magnificently-adorned set of baby clothes, with all the requisite apparatus suited to the first wants of his Imperial godson or goddaughter, are now being prepared, by the Pope's orders, with all possible dispatch; and, after much discussion, he eminent Cardinal has been fixed upon who is to have the honour of representing the person of the Pontiff at the baptismal ceremony at Paris. It has been decided that, next to going in person, the most complete duty-ing for his Holiness can would be to send his *alter ego*, Cardinal Patrizzi, who in his character of Vicar-General is he usually considered to be acting for and representing the Pope. *Letter from Rome, March 15.*

## LITERATURE.

THE MODERN SCOTTISH MINSTREL. Edited by Dr. ROGERS. Adam and Charles Black, Edinburgh. Vols. I. and II.

The poetic genius of Scotland is generally considered as peculiarly lyric, and it has become a matter for congratulation, if not a national boast, that few countries of the same extent and with the same number of population can show such a variety of song as Scotland. It has certainly been fortunate for what has been called the "untutored muse," that it has always found some patriotic individual willing to collect and arrange in a permanent form compositions that in other countries might have floated for a season in newspapers and periodicals, and then disappeared for ever.

The design of the editor of the present work is to bring together the best songs of the best writers of the last half century, to arrange them chronologally, and preceding the composition of each writer will appear a short biographical sketch, giving the leading events in the life of the author. This will in all probability become a very interesting portion of the work. So far as the editor has progressed the sketches are written with great fairness and considerable tact, and we like them none the less because of a certain bias in favour of the author who, for the time being, is the editor's hero.

It is not a little remarkable that many of the most popular Scottish songs, whether pathetic or humorous, are from the pens of women. Joanna Baillie gives us "Saw ye Johnnie comin'," "Wood'd and married and a'," and "Poverty parts good company." From Lady Anne Barnard we have the inimitable "Auld Robin Gray," which for sweet simplicity has never been excelled; but we have never been able to understand why for more than fifty years she should have declined to acknowledge the authorship. For the first time we learn something of the varied talents of Carolina Baroness Nairne, whose deathless "Land o' the leal" follows the clever song of "Caller Herrin'." Here also is "The Laird o' Cockpen," her song of the attainted Scottish nobles, which induced King George IV. to sanction the restitution of the forfeited title of Baron to her husband. The first volume has a portrait and memoir of Sir Walter Scott; and, in addition to the names already mentioned, selections from the works of James Montgomery, Hector Macneil, John Skinner, and others whose names have hitherto remained unattached to song, of high reputation.

The second volume contains sketches and selections from the works of Tannahill, Sir Alexander Boswell, Campbell, Richard Gall, Wm. Laidlaw, and some half score of others whose names we were unfamiliar with as writers of song. We were not prepared to find among the unknown poets of Scotland that of Dr. Henry Duncan, the founder of savings-banks. Commencing life as a banker's clerk, he found its duties unengenial, and resolved to enter the Church of Scotland. At Edinburgh he was the associate of Brougham, Horner, and Henry Petty (now the Marquis of Lansdowne); and by the Earl of Mansfield he was made the minister of Rothwell, in Dumfriesshire, where his first savings bank was established; and a few years afterwards he originated the *Dumfries and Galloway Courier*, one of the most successful provincial papers in the kingdom. A quotation from his song entitled the "Roof of Straw," will enable the reader to estimate the general character of his verse:—

> I ask no lordling's titled name,
> Nor miser's hoarded store,
> I ask to live with those I love—
> Contented, though I'm poor
> From joyless pomp and heartless mirth
> I gladly will withdraw,
> And hide me in this lowly vale,
> Beneath my roof of straw.

The most attractive portion of the second volume, apart from the poetry, is the carefully-written and characteristic sketch of the "Life of James Hogg," whose likeness is the frontispiece. The following extract, from a letter of Professor Wilson, is not very favourable to a high sense of self-respect:—

> Without asking either you or Mr. Blackwood, I have written a "Noctes" in which my dear shepherd again appears. I hope you will think I have done right. I intend to write six within the year; and it is just, and no more than just, that you should receive five guineas a sheet. Enclosed is that sum for No. I. of the New Series.

In plain language, he received five guineas a sheet for the use of his name, without knowing anything of the articles to be written, beyond the assurance that he (Wilson) would for the future do all he could to prevent anything happening disagreeable to Hogg's feelings.

The sketch is enriched by letters from Mrs. Tennant, William Howitt, Thomas Pringle, Allan Cunningham, and others, desiring to aid in sundry literary works; but the raciest of all is a letter from Southey replying to one of Hogg's, in which he had expressed some anxiety that Southey should be less hostile to Jeffrey, and so secure a more favourable reception of his forthcoming poem of "Kodeida:"—

> * * * You little know me if you imagine that my thoughts of fear or favour would make me abstain from speaking publicly of Jeffrey as I think, and as he deserves. I despise his commendation, and defy his malice. * * * For myself, *popularity* is not the mark I shoot at; if it were, I should not write such a poem as "Roderick," but should frame my verse in such a way to fame than Tom Thumb could stand in my way in the street. He knows that he dealt unfairly and maliciously by me. * * * Nothing (a word of Hogg's) is a gentle term for which he has to undergo. In due season he shall be *scanned and rattlesnaked*. When I take him in hand it shall be to dissect him alive, and make a preparation of him to be exhibited *in terrorem*, an example to all future pretenders to criticism. He has a forehead of native brass, and I will write upon it with aquafortis. I will serve him up to the public like a turkey's giblet—minced, scored, peppered, salted, cayenned, grilled, and bedevilled. I will bring him to justice: he shall be executed in prose, and gibbeted in verse.

And this from the amiable and ever-charitable Southey!

To the lovers of Scottish song we commend these volumes, although the editor has not quite come up to the promise of his introduction. He has admitted songs that might have been excluded, and excluded many that ought to have been introduced. Without detracting from the merits of the productions of the Baroness Nairn, we can see no just reason for publishing *thirty-nine* of her songs, and only *two* of Campbell's, and those not his five best. To future editions of Scottish song the collection of Dr. Rogers will supply abundant material for a due appreciation of the genius of the time to which his attention has been directed.

DISTINGUISHED GENERALS DURING THE PENINSULAR WAR. By J. W. COLE, H.P. 21st Fusiliers. Bentley.

The late glorious achievements of the British and French armies in the Crimea have added new lustre to the military profession. Other men there are—philosophers, historians, poets, musicians, artists—who in their several ways are doing services to their country and to humanity; but the brave hearts who, at the call of duty went forth from happy homes to suffer disease and wounds and death for our sakes deserve our first thanks. Writers and persons in authority have occasionally had cause to complain of the diplomatic and strategical management of the war; but never have they had reason to find fault with the conduct of the soldiers. Honours and shouts of welcome await those who return; and those who remain behind ennobling the Russian soil with their graves will assuredly not be forgotten. The survivors of the bloody fields of Alma, Inkermau, Balaclava, and Sebastopol, by noting the pride with which England cherishes the memory of those good heroes who served her in times gone by, make judge of the glory that awaits themselves. Contemporaries may be ungrateful—posterity never is. Raglan, so cruelly abused and misunderstood in his old age, will shine out gloriously in his true colors when party feelings and petty spites are forgotten, and many another name at present eclipsed will assert its claim to attention when a right-minded and impartial biographer, such as the author of the present "Memoirs of Peninsular Generals," shall arise to record the Crimean campaign.

Mr. Cole, in a sensible and well-written preface, prepares his readers for the painful scenes which he, in his duty of historian, is compelled to recall when sister-nations like England and France waged unnatural war against each other. "But history," says the author, "must not be falsified. * * * During the last general war the English arms achieved great successes, and we value doubly the friendship of the gallant enemy who fought us so fairly and so openly on all occasions, gave us such an affinity of trouble, and established a mutual esteem so so many desperately-contested fields." This is written in the true spirit of a biographer and a soldier, and augurs well for the work it introduces. Let none of our readers imagine that they have here a dry statement of births and deaths—victories and defeats. Nothing of the sort. Here is a chronicle of one of the most interesting of modern campaigns, written after the style of Plutarch's Lives, and bearing a resemblance in many important features to those renowned essays. Each memoir is a little story in itself—having its own hero, its own plot, and its own denouement—each at the same time forming part of a great scheme of which the plot is the subjugation of the French influence in the Peninsula, and the hero the Duke of Wellington. Among others of those distinguished generals whose attributes and achievements Mr Cole has recorded, we discover the names of Marshal Beresford, the Marquis of Anglesey, Lord Hill, the Earl of Hopetoun, Sir Thomas Picton, and Sir John Moore—a name which is endeared by those touching lines of Wolfe in which his burial is described. As a specimen of the strong simple, language in which the book is written, we cannot do better than quote the passage relating to the death of Moore:—

> Sir John Moore received his mortal wound soon after the action commenced (Battle of Corunna, Jan. 17th, 1809). A cannon-shot lacerated his left shoulder and broke while he was in the earnest conversation with Captain (now Lord) Hardinge, and struck him to the ground. With the help of some Highlanders and Guardsmen, he was placed in a blanket, and moved slowly to the rear. While being lifted his sword became entangled, and Hardinge endeavoured to disengage the belt to take it off, but Moore stopped him, and said, with true soldier-like feelings, "It is as well as it is; I had rather it should go out of the field with me." He was then conveyed to his quarters in Corunna, where he lingered for several hours in intense agony, but still retaining his habitual calmness and presence of mind: he spoke kindly to all who approached, declared his satisfaction at the defeat of the enemy, and yielded up his spirit with the firmness of a hero and a patriot. As he had expressed a wish to be laid where he fell, the ramparts of the citadel of Corunna was chosen for his resting-place. A working party of the 9th Regiment turned up the earth, and before dawn his remains, wrapped in a military cloak, were consigned to the grave by the officers of his staff. The burial service was read by torchlight, and the distant guns of the enemy formed an appropriate accompaniment.

The sketches of character are throughout admirably portrayed, and the groupings are managed with an artistic nicety which would do honour to some of our novelists. In this age, when the great persons of literature, the ladies, encourage with so much exclusiveness the circulating libraries, or, as they have been denominated, the "literary sweet-stuff shops," it is difficult for matter-of-fact books to find a purchaser. But we do not think such will be the fate of the present work, which, from its records events that have actually taken place—is as interesting as a romance.

A FOREIGNER'S JUDGMENT OF LONDON. AUS LONDON DISSOLVING VIEWS. By EMMA NIENDORF. Berlin. 1855.

Ever since the Great Exhibition of 1851 there has been an increased demand in Germany for books about England and the English people. After the German revolution of 1848 and 1849 the old penchant of the German mind towards England, English literature, English habits, and English institutions, revived, and supplanted those sympathies with France which in part occasioned the revolution. To this source may be traced the increase of German books relative to England and her metropolis. One of the most interesting and characteristic of these is Emma Niendorf's "Aus London. Dissolving Views." It belongs to that light class of literature upon which severe criticism is ungracious, for it is intended, as it were, only for the hour, and attains the end its author contemplated if it succeeds in enlivening a monotonous railway journey, or a dull evening at the fireside. It must also be borne in mind that Mdme. Niendorf does not undertake to give a complete account of London, her stay having been limited to four weeks during the autumn of the year 1854. The book is nothing more nor less than it pretends to be—a month's residence in London. She makes many happy—but also, we are sorry to say, many very unhappy—remarks both about the English metropolis and the English people. The writer being a lady and an accomplished one too, we feel it almost to be a matter of critical gallantry to speak first of the bright side of her work. And, indeed, there are many pleasant chapters in it, many lively and attractive descriptions. Women invariably write best about things they like or admire. Schiller says:—"Wherever woman do not love, there they have given admittance their verdict." In the contrary case, they are almost invariably in the wrong when they indulge in genuine criticism—which, with them, is often identical with finding fault. When, therefore, Madame Niendorf endeavours to convey favourable impressions, be it of persons or things, she is more likely to be in the right. When she really admires, whether the object of her admiration be the "summer fog," enwrapping the green fields of Hampstead and Hornsey, or a literary "lion," or a stage favourite of London, there it is that she displays her descriptive talents to most advantage. The following is a summary of her impressions of London:—"A protracted residence in London," she says, "has the effect of making people pensive and earnest. London is, as it were, a struggle, a burden to be borne with vigour, a sea to be swum through with boldness. London presents itself to the eye of the observer the most strongly expressed and the most extensive type of present and future social life; you see history and humanity in it as in a focus. A journey to London forms an epoch in one's life. A stay in Paris in the spring and summer is the following. Paris signifies only the present and the past, London, massive and iron-like, the future. The English capital will endure and flourish."

In turning to the weaker portions of the work we confess to feeling somewhat offended with some of her statements. When speaking unfavourably she takes refuge in that well-known trick or mannerism with which "our own correspondents" choose to clothe their political mysteries; she throws the responsibility of the assertion on her companions whom she met at London. Those persons, we must suppose, are made to say ill-natured things about English morality and English ladies—which, however erroneous they may be, she is all the while, though covertly, approving of. Now the case stands thus. Either the persons introduced into the story were incompetent judges of English manners; on being competent, spoke in jest or ill humour, or spoke only of a particular class; or perhaps we come nearer to the truth of the matter when we hazard the conjecture that the informants were fictitious persons having an exclusive existence in the imagination of the authoress.

Madame Niendorf's style of writing reminds us somewhat of the style of Prince Pückler Muskau. Every true-born German aristocrat—and Madame Niendorf may boast that her coat of arms is as spotless as that of brave old Count Pappenheim, who fell fighting against Gustavus Adolphus at the famous battle of Lützen—must feel somewhat disappointed, when arriving at London, because he will not find here his beloved "Fremdenblätter," which in the towns of his fatherland supply him with the comfort of seeing his arrival duly and faithfully recorded; and there are, besides, other regions to get entrance into which, alas! something more (however vulgar that "more" may be) is required at London than an ancient coat of arms. But we must say that the authoress, when she experienced these disappointments, has often most admirably succeeded in conquering them. And, besides, it must have been consoling to her to find that she was enabled to be present at a prorogation of Parliament, and to find herself there in the same brilliant room with the two *Germans* Prince Albert as handsome as one of the knights of De la Motte Fouque!" Pückler, even had he seen her Majesty herself, surrounded by the beautiful nobility of England, would have been less enthusiastic in his praise. But, on the other hand, this vein of reserve renders the style of Madame Niendorf infinitely more alluring than that of Pückler Muskau; for we find in it very often the true thought in dishabille.

THE PEERAGE AND BAROMETAGE OF THE BRITISH EMPIRE. By Sir BERNARD BURKE, Ulster King of Arms. Eighteenth edition, 18 Hurst and Blackett.

This is the eighteenth edition of a standard work so universally known that little more need be said than to announce its appearance, and to affirm that it fully bears out its high reputation. The book has evidently undergone a thorough revision, and has been brought down to the present time with due care and attention. The articles at the end of the volume, peculiar to this Peerage, on "Foreign Titles borne by British Subjects," and on "Peerages recently Extinct," are particularly interesting.

THE CONFERENCES.—The Austrian Member of Committee of Conference charged with the task of drawing up the articles of the treaty of peace is Baron Hubner, and not Count Buol, as an English paper has asserted. Neither is M. Cavour a member of the committee. Piedmont is represented by M. de Villamarina. Prussia, whose position is still a most delicate one, is not represented in the special committee. It is affirmed that the treaties of 1840, and all the other questions directly raised by the war in the East, will not exclusively engage the attention of the Congress after the signing of the treaty of peace properly so called. The state of Italy will also, it is thought, form the subject of at least an investigation on the part of the plenipotentiaries assembled. Austria must, which has a right to expect a just compensation for the sacrifices she has imposed on herself, and which France and England must wish to see arranged to her satisfaction, insists strenuously on Austria receiving unconditionally her sequestrations on the property of the Lombard emigrants who have become Sardinian subjects. The occupation of the Roman States will also be discussed; it is contrary to treaties, and, sooner or later, will have to be solved by the energetic measure of departure both of the Austrian and French troops. It remains to be seen whether the Pope, as soon as the support of foreign bayonets has been withdrawn, will be able to prevent the revolution from breaking out among the people, ever ready to rise against the incapable Government that assumes to rule them. A change in the organisation of this Government seems to be the only remedy adapted to the situation; and, if the question comes to be moved on this ground, it is doubtful, if we except Austria, whether the Holy See will find any champions among the members of the Conference.—*Independance Belge.*

## EXHIBITION OF THE BRITISH INSTITUTION.

### "THE MARTYRDOM OF RIDLEY AND LATIMER."—PAINTED BY SIR GEORGE HAYTER.

WITH this impressive picture we close our Illustrations from the Exhibition of the British Institution. In the Catalogue appears the following epigraph:—

> This scene took place on the 16th of October, 1555, close to the city ditch, outside the north gate and Bocardo, in front of Balliol College, Oxford, when the Martyrs, Nicholas Ridley, Bishop of London, and Hugh Latimer, Bishop of Worcester, were taken from their prison, the Bocardo, to the place of suffering. Lord Williams of Tame arrived from London with the commission for the execution: he was accompanied by the Mayor and Sheriffs of Oxford. They had been tried by an Ecclesiastic Commission, consisting of the Bishops of Lincoln, Ely, Bristol and Gloucester, and Dr. Brooke, who was also head of Balliol College. The sister of Bp Ridley, and his brother-in-law, the humane keeper of his prison, and his wife, with Sir Henry Lea, Sir George Barnes, Sir — Dobs, Kt. and Alderman of London, the officers of the Guard, and many friends followed them. Ridley arrived first at the place, earnestly looking towards heaven, and upon seeing Latimer near him ran to him, embraced, and kindly kissed him: and they who stood near reported that they comforted each other; Ridley saying, "Be of good cheer, brother, for God will assuage the fury of the flame, or else strengthen us to abide it." After this Dr. Smith preached the sermon, to which Ridley was prevented from replying, his mouth having been violently stopped.—*Vide Foxe's History of the Sufferings of the Martyrs.*

This picture possesses the twofold merit of making the spectator feel and understand the whole story at a single glance, while its attention is gradually directed to the various incidents in the scene. In the middle distance stand the Bishop-Martyrs, with hands outstretched imploringly, not towards their persecutors, but heavenward. On the extreme right are ranged the persecuting band, variously grouped, some sitting, others standing, beneath the gloomy walls of Balliol College. On the extreme left of the picture are grouped the friends of the Martyrs, backed by the city walls, the Bocardo, the chief entrance into Oxford, and the tower of St. Michael's Church. Glancing between these two adverse groups, and as the past the actors in the middle scene, who are condemned to immediate suffering, the eye rests on the open country. The moment chosen is that when Ridley, who was the first to arrive on the scene of torture, embraces and comforts Latimer, by saying, "Be of good cheer, brother, for God will either assuage the fury of the flames, or else strengthen us to abide it."

Conspicuous in his scarlet robes, and occupying the centre of the group on the right, is seen Lord Williams of Tame, seated, holding, and apparently reading aloud, the commission from the Crown for the execution, with orders for arming the citizens in case of opposition to the diabolical decree. The three Bishops who tried "the martyrs," the Mayor and Sheriffs of Oxford, and numerous monks and friars, among whom were fourteen or more reverend doctors, also form part of the group. The window from which Dr. Brooks, head master of Balliol, viewed the terrible scene, is shown to this day; nor has the painter forgotten Dr. Brooks. More immediately in the foreground below is Dr. Smith, mounted in a pulpit, preparing to preach the jaggot sermon.

Among the group of friends on the left hand are Mrs. Shipside, Ridley's sister, who sinks at the sight of what is going forward, and falls into the arms of a stranger. The keeper of the prison and his wife, who had been kind friendly to the Martyrs, shuddering turn away. Other notable persons here are Sir Henry Lea, Sir George Barnes, Sir — Debs, Knight and Alderman of London, with officers of the Guard, to whom the condemned Bishops had left portions of their garments as relics.

Although the imaginative powers of the painter will be greatly admired in the composition of this picture, the fidelity of the accessories greatly enhances its value as a representation of the terrible event. The architecture and general scenery are, as nearly as may be, those which existed at the time, the painter having, in addition to a careful study of this spot, availed himself of a view taken by Rudolfo Aagas in the year 1578, or only twenty-three years after the tragedy.

PALMA DECLARED IN A STATE OF SIEGE.—The city of PARMA and the surrounding country has again been laid under the state of siege. It has arisen from the renewed attempts at assassination. The Auditor of the War Department, Gaetano Sordi, was stabbed in the back by an assassin the other evening, when walking with another officer. He died in the greatest agony. The assassin has escaped. The consequence after the murder is the proclamation of the Inspector of Prisons, has caused the state of siege.

WINTER IN THE CRIMEA.—Since I last wrote the frost has continued severe, but the boisterous weather which prevailed during the greater part of the month has never ceased for a single day. We have been comparatively calm and serene. The cold was very intense on the 8th, the day on which the last mail left, and it was the more severely felt on account of a sharp north wind which never ceased the whole day. The highest temperature in the shade was at noon, and then the thermometer indicated seven degrees below the freezing point. At seven a.m. and seven p.m. the mercury stood at 18 deg. F., and at 4 p.m. an hour it fell considerably lower. Towards night a slight fall of snow occurred. The following day the wind, though blowing from the same quarter and sufficiently cutting, was less strong, and the temperature gradually rose under the sun's influence, and became as much as four or five degrees below the freezing point. It was too cold for the usual church parades to take place in the open air. Yesterday, the 10th, there was scarcely any wind, and the atmosphere was clear, bright, and cheerful. The sun did not appear so powerful that the hardened surface became dissolved into the usual mud, and nearly all the patches of drifted snow gradually disappeared. The hills and mountains to the eastward, however, retain their white aspect, and appear as if still deeply covered. At present there is every indication of settled fine weather. The continued succession of storms greatly discouraged and delayed the arrivals and departures of the mails last week. The mail due on Thursday last, the 6th, was not delivered till the morning of the 9th instant, and the mail due yesterday has not yet come to hand. Our latest London dates are at present up to February 23. The mail for England, which should have left the Crimea on the 8th inst., was detained, the mail-boat not venturing to sea until the 9th, when another mail was made up in due course.—*Letter from the Camp, March* 11.

## STATUES FOR THE EGYPTIAN HALL IN THE MANSION HOUSE.

SOME few years ago the Lord Mayor, Aldermen, and Common Councilmen of the City of London were most unexpectedly induced to evince an interest in the Fine Arts, and to express a sympathy with rising genius, which had the *Mars Wood* barge, swan-upping to Staines, or steaming to Yantlet Creek. How this was brought about we have never distinctly heard. Mr. Bennoch, then an active and influential member of the Court of Common Council, had a firm share in this enlargement of the sphere of operations of Temple-bar; and the result of his ceaseless labours was that certain commissions were given to English sculptors for poetic statues in marble to decorate the Mansion House of the Lord Mayor of London.

The artists called in by the Court of Common Council were Mr. Baily, R.A., the pupil of Flaxman, and the celebrated sculptor of "Eve at the Fountain;" Mr. Marshall, R.A., who studied under Chantrey, and gave us what Chantrey could not have given us—his exquisite figure of "Ariadne;" Mr. McDowell, R.A., to whose fine sense of what is beautiful in art we owe that charming figure of "the Girl Reading," together with Mr. Lough, and Mr. Thrupp, sculptors with a poetic feeling for what is pure and noble in the art, they cultivate and adorn.

When the commissions were first announced the feeling of surprise west of Temple-bar was something wonderful. The subjects selected were maliciously announced as "Whittington and his Cat," "Wordsworth and Wat Tyler," "Bloodworth putting out the Fire of London," "Beckford at Court," and "Sir William Curtis in his Highland Costume," one and all in the Gog and Magog fashion very big and very beastly. Still greater was the surprise when the real subjects were announced. And it was found that the commissioners had liberally given had nothing to do with custards or turtle—with the City or the citizens—but were commissions such as Lord Lansdowne might give for the decoration of Bowood, or Sir Charles Eastlake might order for the apartments of the Royal Academy.

The room for which the commissions were designed is the great Banqueting-room in the Mansion House of the Lord Mayor. This celebrated room was built by Dance, the City Architect, on the scale of an Egyptian hall, as described by Vitruvius, and in this way obtained the name it still bears of the Egyptian Hall. It is in many respects a fine room, but barren of that kind of classical decoration which the Statues (engraved in our present Number) are designed to supply. They will add materially to the architectural beauty of Dance's building.

The architectural requirements of the Hall rendered it necessary that the statues should be standing statues. The selection is not to be found fault with. Two are male figures, four are female. The male figures represent "Timon" and "Comus"—the former by Mr. Thrupp, the latter by Mr. Lough. The four female figures are called "Griselda," "Leah," "Morning Star," and "Egeria." "Griselda," a statue of exquisite delicacy, is from the chisel of Mr. Marshall, R.A. "Leah," a figure of great natural beauty, is the work of Mr. Patrick McDowell, R.A.

## STATUES FOR THE EGYPTIAN HALL IN THE MANSION HOUSE.

"GRISELDA."—BY W. C. MARSHALL, R.A.

"EGERIA."—BY J. H. FOLEY, R.A.

"TIMON."—BY F. THRUPP.

"Morning Star," will add to the well-earned reputation of Mr. E. H. Baily, R.A.; and "Egeria" will not diminish the fame which Mr. Foley, A.R.A., has acquired for poetic beauty of conception, grace of outline, and care in execution.

When the six additional statues are erected for which commissions were given last year, the Egyptian Hall in the Mansion House of the Lord Mayor will, in point of [illegible] London. Let us hope that the good taste which prompted this wise expenditure will not be suffered to die out with the twelve statues for the Egyptian Hall. A new roof to the Guildhall—a roof in harmony with the existing portions of the old building—is sadly wanted.

COMUS."—BY J. G. LOUGH.

LEAH."—BY P. MACDOWELL, R.A.

"MORNING STAR."—BY E. H. BAILY, R.A.

"THE MARTYRDOM OF RIZZIO AND DARNLEY," PAINTED BY SIR GEORGE HAYTER, WAS EXHIBITED AT THE BRITISH INSTITUTION—(See page 331.)

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

### NOTES.

THEATRICAL REPRESENTATIONS IN THE REIGN OF ELIZABETH WITHIN THE CITY.—It is well known that the Mayor and Corporation of London discountenanced, by all the means in their power, the representation of plays with in the City, and resisted and obstructed theatrical performances even after a patent had been granted by the Crown (in 1574) to authorise the Earl of Leicester's players to act "within the City of London and liberties of the same." Among the Cottonian Charters is preserved an original letter from the Mayor and Aldermen to the Earl of Sussex, Lord Chamberlain, dated 2nd March, 1573, refusing to their consent to his Lordship's request in favour of a Mr. Holmes, that he should be allowed to appoint places for plays and interludes within the City; and intimating that some previous applications of the same kind had met with similar refusal. As this letter has not been noticed by Mr. Collier in his "Annals of the Stage," it seems worthy of being rescued from oblivion.—F. MADDEN, British Museum.

*To the right honorable our singular good Lord the Erle of Sussex, Lord Chamberlain of the Quenes Matres most honorable household.*

(1 rt. Cott. xxvi. 41.)

Our dutie to yor good L. humbly done, where yor L. hath made request in favor of Mr. Holmes, for our assent that he might have the appointment of places for playes and exhibicions within the cite. It may please yor L. to receive undoubted assurance of or redinesse to gratifie in any thing that we reasonably may, any persone whome yor L. shal favor and comend. Howbeit this case is such and so nere touching the government of this cite in one of the greatest matters therof, namely the assemblies of multitudes of the Quenes people; and in regard to be had to sondry inconveniences wherof the peril is continually upon severe occasion to be foreseen by the rulers of this cite, that we cannot well with our duties, hynde the perdicion farr speeding to the hart of our liberties, well assure that the sayd apoyntement of places be comitted to any private persone. For which and other reasonable considerasons, it hath long since pleased yor good L., among the rest of her Maties most honorable counsell, to rest satisfied with our not granting of like case to such persone as by their most honorable lettres was heretofore in like case comended unto us. Byside that if it might with reasonable convenience be graunted, great offres have ben and be made for the same to the relefe of the poore in the hospitalles, which we hold us assured that yor L. will well allow that we preserre before the benefit of any private persone. And so we comitt yor L. to the tuition of Almighty God. At London, the second of March, 1573.

Yor L. humble a

YORKSHIRE.—Mr Worsaae, in his work "Danes and Northmen," [illegible] the [illegible] of the present English nobility of the Trent (if I may so call it) [illegible] "the eyes and hair are of a lighter colour, and even deeper [illegible] than in the Danish nobility. The people are not very tall in stature. [illegible] At least one constantly hears in England when *refractory* (!) compact-built men are spoken of, 'They must certainly be from Yorkshire.'" Now, in a work of authority I am surprised to read so erroneous a statement, and should advise Mr Worsaae to have regular demonstration before he gives us a second edition of his work. Yorkshiremen have generally brown hair and eyes, and I further take leave to say no county has so few inhabitants with red hair as Yorkshire, and where you do meet with it you will generally find it is a descent of mixed marriages, especially with the Scottish Celts who have immigrated from "Aberdeen awa'" and the North. Yorkshiremen are proverbially tall, as well as the men of Cumberland, Westmoreland, and Northumberland. See the pitmen and the agriculturists; or, if any one could see the register of soldiers of either of the two regiments of Life Guards or of the Horse Guards Blue (corps that profess to take no man under six feet), they would find those soldiers have been raised from those counties, chiefly on account of the general high stature of their inhabitants. I believe all borderers to be the tallest men from mixed marriages, then the north countrymen, and then those of purely agricultural districts; whilst the small men are alone to be found in our manufacturing cities.—A YORKSHIREMAN.

### QUERIES.

THE ISLE OF MAN—WHY IS THIS ISLAND SO CALLED?—I was recently pondering over the name of that interesting little island, situate in the Irish Sea, between latitude 45 deg. 4 min. and 54. deg. 7 min. N., and longitude 4 deg. 17 min. and 4 deg. 24 min. W., and over which in former times the Stanleys exercised regal sway. My desire to visit more of this interesting spot of land has been rewarded by a Runic legend which I discovered in Kirk Braddyn. *Dreyfyh*, high priest of the Druids (A.C. 316), left a tradition which was issued on marble by *Shonnyckyh* the bard. It relates that the island was in very long, long ago inhabited by monkeys, twelve in number. These were the noblest of the Simian race. Their progeny increased and multiplied; but it was found that the fruits of the island worked a wondrous change in the physical structure of those bipeds. The heel contracted; the hair of the body and face, especially of the females, became less and less with each new generation; and the caudal appendage contracted more and more, until at length each joint of the tail had shrunk into mere scales, and no trace of this prehensile organ could be discovered in the animal exteriorly. This new race assumed thereforth the name of MAN; and although so recently as the time of Cæsar the island was called *Mona* (the Manan or modern Spanish for monkey), yet, as the birthplace of the human race, the Teutons, subsequently named it the *Isle of Heroes*. As the Scandinavian inscription attributes the foundation of tails suffered by the original inhabitants of Mona's Isle to the fruits of the earth, I am curious to know what fruits they can be which possess wonderful quality. From the fact that the cats and some of the poultry there [illegible] have also lost their tails, it may be perceived that Darwinian and Miln[illegible] Parteiet have likewise eaten of this mythical fruit. Can any of your readers inform me if there be any fruit *peculiar* to the islands on which the investigations of science may be executed with the view to the discovery of the marvellous plant!—MANCKEY HALL, Whalley Range, near Manchester.

SHAKSPEARE AND HIS WIFE.—In reference to the item of Shakspeare's will "cutting off (according to Malone) his wife with an old bed," [illegible] in the judgment of Mr Knight, fortified by the proofs of unbarred dower, giving his best token of affection to the woman he had already amply provided for, has any one noticed the will of Edward the Black Prince, given, with a translation, by Mr. Stanley, at the end of his "Memorials of Canterbury"? From the latter will its plain that at its date a bed was a testator's special token of personal regard, just as a mourning-ring was a few years since, and as men now send a particular book or picture. The Black Prince leaves one bed, specified by the hangings, to his wife, another to his son; and a third, if I remember, to some companion in arms and counsels. No doubt a bed was, in those times, one of the few things which were suitable for a "present," or a legacy, and though movable objects were not so scarce in Shakspeare's time, the custom may have well continued till then, of considering a bed the proper thing to leave as a token of affection. If the matter has not been already investigated, I hope some learned student of Shakspeare will think it worth looking further into.—E. S.

OLIVER GOLDSMITH'S BIRTHPLACE.—I shall feel obliged if any one would tell me truly when and where Oliver Goldsmith was born. The following authorities disagree so much that one cannot know which of them to believe.—

Oliver Goldsmith was born on the 29th of November, 1728, at Lishoy, near Elphin, county of Roscommon, Ireland. His (father's) family consisted of five sons and two daughters. Oliver was the second son, born after an interval of seven years.—*Life of Goldsmith, by George Gilfillan, prefixed to Nicol's Edition of the "British Poets."*

Goldsmith was born at Roscommon, in Ireland, in 1729. His father had nine sons, of whom Oliver was the third.—*London Encyclopædia.*

At Pallas Oliver Goldsmith was born, in November, 1728. *Macaulay, in the Encyclopædia Britannica.*

Oliver Goldsmith was born on the 10th of November, 1728, at the hamlet of Pallas, in Pallasmore, county of Longford, in Ireland. The family consisted of five sons and three daughters.—*Life of Goldsmith, by Washington Irving.*

He was the fifth of the seven children of the Rev. Charles Goldsmith.—*National Cyclopædia, by Charles Knight.*

Elphin, a village, birthplace of Oliver Goldsmith.—*Complete System of Geography, by the Scottish Schoolbook Association.*—ALEXANDER WHAMOND.

### ANSWERS TO QUERIES.

BURIAL-PLACE OF MARSHAL SCHOMBERG.—Lest "H. A.'s" rather peremptory mis-statements in the ILLUSTRATED LONDON NEWS of the 16th instant should mislead any or your readers, permit me to inform them that he writes under the influence of some extraordinary delusion. In the whole range of Irish history there is no fact more certain and unquestionable than that Marshal Schomberg was buried in the Cathedral of St. Patrick, Dublin. He was killed at the Battle of the Boyne, on the 1st July, 1690, and on the 10th of the same month his remains were deposited under the altar of St. Patrick's. There they still rest. During forty years the spot was unmarked by epitaph or mausoleum. At length, after having in vain solicited the Marshal's grandnephew, Lady Holderness, and her husband Mr. Mildmay, afterwards Lord Fitzwalter, to erect a monument to the memory of her distinguished ancestor, Dean Swift, deeming it (to use his own expression) "a Whiggish action to honour Duke Schomberg, who was so instrumental in the Revolution," desired Lord Carteret to intimate to them, "that if they would not send fifty pounds to make a monument for the old Duke, he (Swift) and the Chapter, would erect a small one for themselves for ten pounds, wherein it should be expressed that the posterity of the latter, naming particularly Lady Holderness and Mr. Mildmay, not having the generosity to erect a monument, the Dean and Chapter had done it for themselves. And if," continued Jonathan, "for an excuse they pretend that they will send for his body; let them know that it is mine, and rather than send it, I will take up the bones, and make of it a skeleton, and put it in my register office to be a memorial of their baseness to all posterity." Threats and expostulations being alike disregarded, the Dean set to work, erected the monument, and composed for it the following inscription:—"Hic infra situm est, corpus Frederici Ducis de Schomberg, ad Rubindam oppidum, A.D. 1690. Decanus et Capitulum maximopere, etiam atque etiam petierunt, ut heredes Ducis monumentum in memoriam parentis erigendum curarent, sed postquam per epistolas, per amicos, diu ac sepe quando nil profecere, hunc demum lapidem statuerunt, saltem ut ossa hospes, ubinam terrarum Schombergensis cineres delitescant. Pius potuit fama virtutis apud alienos, quam sanguinis proximitas apud suos. A.D. 1731." Swift, at this time, believed that generous motives deterred Lady Holderness and her husband from paying due honour to the memory of Schomberg; averring, on the authority of Sir Conyers D'Arcy, "that Mildmay was so avaricious a wretch, that he would let his own father be buried without a coffin, to save charges." Unfortunately, for more probable than their strange neglect was prompted by political intriguers. In a letter to Pope, dated 29th July, 1731, the Dean tells his correspondent, "I am taught, and have reason to believe, that I am under the Queen's displeasure on many accounts, and am very late, for having fixed up a stone over the burying-place of the Duke of Schomberg in my cathedral. * * * I am told assuredly that the King, not long ago, on the representation and complaint of the Prussian envoy (with a hard name) who has married a granddaughter of the Duke, said publicly in the drawing-room, that 'I had put up that stone out of malice to raise a quarrel between his Majesty and the King of Prussia.' This, perhaps, may be false, because it is absurd, &c." Swift's indignant epitaph was, as might be easily written, still more terribly severe. Instead of "Saltem ut ossa hospes," &c., the first draught ran thus—"Saltem ut sciat viator indignabundus, quali in cellula, tanti ductoris cineres delitescunt." (See Monck Mason's "History and Antiquities of the Collegiate and Cathedral Church of St. Patrick." Dublin, 4to. 1819. Notes, pp. 1 and 2. And "Swift's Works," by Sir Walter Scott, vol. xvii., pp. 219, 412, 449).—B. BLUNDELL, F.S.A., Temple.

ORIGIN OF COMMON PHRASES.—SHAMMING ABRAHAM.—I find in your impression, under the head of the "Origin of some Common Phrases" (*inter alia*), that of "He shammed Abraham." Permit me to call your attention to the following extract on this subject from a volume just published by Mr. John Timbs, F.S.A., called "Things not Generally Known." At page 127 you will find:—"Shamming Abram. When Bethlem Hospital was first built in Moorfields, there was a ward of it named 'Abram's;' and hence the poor idiots confined therein were called 'Abram's men.' They wore the dress of the hospital, and on the 1st of April such as were incapacitated had a holiday, and visited their friends, or begged about the streets. This induced vagrants to imitate the Bethlem dress, and pretend idiotcy, till the governors of the hospital ordered that if any person should 'sham an Abram,' he should be whipped, and set in the stocks, whence came the saying, 'He is shamming Abram.' In Dekker's 'English Villanies' these impostors are described. An Abram was a ragged fellow; and an 'Abram man' often personated a poor lunatic called 'Tom of Bedlam,' which Shakspeare describes in 'King Lear,' act ii., scene 3, as 'Bedlam Beggars.' Among sailors, 'an Abram' is being unwell; and to 'shamm Abram' is to feign illness. When Abraham Newland was cashier of the Bank of England arose the song,—

I have heard people say
That sham Abram you may,
But you must not sham Abram Newland,

meaning thereby that you must not imitate or forge a bank-note—a crime then punished with death."—H. B. Y.

BANBURY APES.—There are two copies of this pamphlet now in Banbury, (one of which is for sale). It relates to a visit paid to Banbury by Dr. Sacheverell, who was ardently supported by the people of that town. The following is a more particular description than that given by "Dunstan." It is from "Beesley's History of Banbury":—"The Bash—y Apes; or The Monkeys Chattering to the Magpye. In a Letter to a Friend in London." The titlepage is ornamented with some very curious woodcuts representing apes appointing a mayor (who has the appearance of a wolf), and monkeys holding converse with a magpie; and on the back of the title is a large woodcut representing the procession which accompanied the Doctor into Banbury on the 3rd June, among the figures of which the Mayor of Banbury (as a wolf), and the Aldermen (as apes), are conspicuous figures. Dr. Sacheverell himself appears on horseback, followed by a crowd of people strewing branches or bearing crosses and rosaries. The accompanying letter describes this procession as being distinguished by "kettle drums beating on their kettles, and a "vast mob, hallowing, hooping, and playing the devil." On the next morning Sacheverell is mentioned as having departed for Warwick. Mr. Beesley adds in a note:—Mr. Reader says, "were all Dissenters, and the Hopkinses were intimately connected with them, it is possible that this tract was written by one of the family."—*Banbury Guardian.*

BULLY.—The word "bully" is *not*, I believe, derived from the French word "boullayes." This last word I should trace to "bouleau," birch-tree; "boulaie," a ground planted with birch-trees, the twigs of which serve to make the common French "balai" (broom). The original word "buveur" was formerly spelt "boullayeur." The word "bully" (to bully) is much more likely to come from "bull," which gives an idea of roughness, and independent and selfish manners.—I. B-r.

SLEEPING WITH THE HEAD TO THE NORTH.—In the very remarkable work of Baron von Reichenbach on "Magnetism," and on the newly-discovered magnetic powers, he gives some extraordinary instances of persons much disturbed in their slumbers who were only enabled to overcome the apparently causeless difficulty of sleeping when they turned the head of their beds to the north. He gives at least one, if not more, instances of persons who found themselves in the morning lying across their bed, or at the bottom of it, and their heads to the north, having moved unconsciously. The Baron ascribes this to a magnetic influence, but how it acts I am unable to describe. I shall myself be greatly obliged if any of your correspondents can give me the conclusion of the following old rhyme:—

Monday for health,
Tuesday for wealth,
Wednesday for a good fortune;
Thursday for crosses,
Friday for crosses,
Saturday—

And, also, if any one can furnish me, either in English or in German, with the rhymes used at the departure of the stork in North Germany, of which one begins,—

When the rye is ripe,
And when the frog is mute.

But I lack the conclusion, and shall consider it a great favour if any one can complete it in for me.—HERMITE.

GODFREY MEDALS.—Your correspondent "Spes," it is evident, has little practical knowledge of medals: there is neither obliteration nor mistake on the medal in question. The negative is purposely omitted from the Virginian quotation, in order to make it applicable to a circumstance connected with Godfrey's death. The three (supposed) murderers were convicted and executed solely on the evidence of an accomplice, who was subsequently pilloried for perjury. The trial, printed at the time and by order of the Judge who presided, is before me. According to that evidence, Sir Edmund Godfrey was strangled in the Somerset House garden by Green, Berry, and Hill, having placed the scarf round Godfrey's neck, the other two aiding. The corpse was concealed in an apartment in Somerset House four days; then conveyed by night in a sedan to Soho, from whence Hill carried it on horseback to Primrose-hill, *the body being held upright on the horse and the legs astride.* When found next day it was transplanted with Godfrey's own sword. Two surgeons proved that he could not have committed self-murder. This is all that is related, and it was then popularly believed: hence the various medals on the occasion. As to the variation in the word "Tenens," it may have been the artist's ignorance or taste that led him to prefer "Tuens." Our business in describing a medal is to record what actually is upon it, and not what might, or should be. FIDES.

## CORRESPONDENTS.

C. M. S.—I. Callcott's gloss is "Few gentlemen of England," not *ye*. The first stanza is by Martin Parker, a celebrated ballad-writer of the reigns of James I. and Charles I. 2. The word "level" must be pronounced as in "grove."

D. B.—Jones' Welsh and Poetical Relics of the Welsh Bards" are principally in English. The work is out of print.

N. N.—[illegible] Jones—Jones describe, by John Taylor, is a reprint merely of the original, [illegible] of no literary value.

[illegible] F. S. T., R. R. Y., R. N., Fairbairn Bede, T. S., C. W. S., J. P. W., Pierre, W. W., J. H., Preston; George ——, James-street, Covent-garden (signature unreadable); Jas. B., Ridgedunn, G. E., S. W., H., R. E., Ernestus, K. M., G., T. E., Lover pool; A. Fraser, T. Sendall, Inquirer A., John Nunn, Agnosamus, Robt. Cole, J. M. Harr, Nova, A. S., Arfon, H. G. Baron Beard, W. M. V., Yarg, W. S., V. W. S., R. B. G., F. M., Inner Temple.

## CHESS.

### TO CORRESPONDENTS.

FLORENT ETONA.—The Chess Tournament at Cambridge has commenced—the successful competitors being Messrs. A. B. [illegible] and [illegible]. We have not received the games. If they [illegible] we shall probably select two or three of the best for publication.

MATCH BY CHESS BY ELECTRIC TELEGRAPH BETWEEN MANCHESTER AND LIVERPOOL.—The terms of the match between these clubs, to be played through the medium of the electric telegraph, were finally arranged last week, and the games are appointed to commence on the 28th. We hope to be enabled to give full particulars of this interesting tourney next week.

*Φιλιστορος*.—1. A problem is worthless if it can possibly be solved in less than a stipulated number of moves. Nats must be effected in exactly the best *defence* that can be made. 2. In Problem No. 628 the Queen cannot be moved to Q Kt 6th, as you suggest, there being a Pawn in the road.

J. A.—Look again, and you will see in Problem No. 628 that when the King takes the Queen, discovering check, the White Knight, by being placed to Q 6th, not only covers that check, but gives checkmate. This is so very obvious that it is surprising any one could overlook it.

CHESS IN BOULOGNE.—Amateurs en route for the [illegible] may be staying in Boulogne, will be pleased to hear that a Chess Association is [illegible] every [illegible] and Friday evening, at No. 11, Place du Marché, Upper Town. Apply to M. [illegible].

J. T.—Your Variation on the Bishop's Gambit shall be reported on in our next.

C. G., Whitby.—It seems you are the Northern [illegible].

ORITA.—Your explanation is [illegible] was not as to the [illegible] of the *Problem*, but of our [illegible] for Problems [illegible] solutions; but that fact does not invalidate the solution we gave [illegible] suggestion was to answer its purpose very well. If [illegible] are sometimes [illegible] on steadily.

ARGUSTARUM.—We are [illegible] cil, and shall endeavour ere long to open the eyes of [illegible].

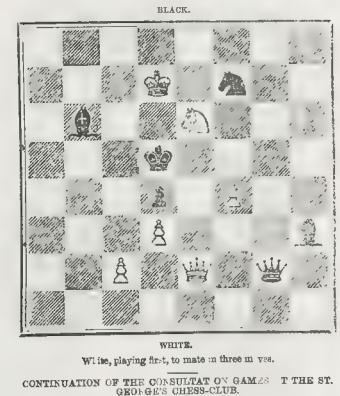
S. W., Osborne, Drawn Game: J. H. Monteith, E. T. Derby; E. F. Norwood; I. M. Inglis, T. J. of Hawarth; F. R., G. Newport.—We have received and thank the author of Problem No. 631 has [illegible] ently overlooked the fact that his stratagem consists of a second solution in one move less, too, than the one [illegible] published on the condition.

T. F. C., Chudleigh.—It seems now to be generally admitted that the operation of Cast ing in a Problem is hardly legitimate.

*** The greater portion of our answers to Chess Correspondents are this week deferred unavoidably, from want of room.

### PROBLEM No. 632
By C. W., of Sunbury.

BLACK.



WHITE.

White, playing first, to mate in three moves.

### CONTINUATION OF THE CONSULTATION GAMES BETWEEN THE ST. GEORGE'S AND CHESS-CLUB.

*Parties between the same competitors as before.*

| 40. Q R to Q B 5th | K R to Q 2nd | 78. K to B 2nd | P to K 4th |
| 41. Q to K 2nd | Q R to K sq | 79. R to Q B 8th | |

And Black resigned.

(a) Black meditated long over this move, believing they might advantageously take the Pawn. They did well not to venture the experiment, since it would certainly have cost them the loss of two minor pieces for the Rook, &c.

| | | | |
|---|---|---|---|
| 15 P takes P | B takes P (best) | 16. K to R sq | Kt takes R |
| 15 It takes B | Q to K Kt 4th (ch) | 17. Q to K B 3rd, &c. | |

(b) Very fine and objective. It must be admitted, however, that in Black's present position a good move would be difficult to find. It is clear they could not Castle on either side without losing a Pawn.

(c) White reproached themselves (as they well might, for their hasty and inconsiderate play at this point, when the game was in their favour. They should now have advanced the Q K Pawn, leaving Black to capture at their peril the Q Pawn.

(d) It is not easy to say which party is most to blame—Black for such an egregious oversight as the taking the Pawn, or White for omitting to avail themselves of its consequences.

(e) Had they simply taken off the Rook at once, no skill on Black's side could have saved the game; for example—

| | | | |
|---|---|---|---|
| 71. R takes Q | P takes R (ch) | 46 P to Q R 6th | R takes Q P |
| 72 Q takes Q | R takes Q (ch) | 47. P to Q R 8th | P takes P |
| 73 K to K 3rd | R to Q R 4th, &c. | | |

(It is indifferent whether they take the Pawn or not.)

| | | | |
|---|---|---|---|
| 48 P to Q Kt 7th | R to Q sq | 49. R takes Q B P and wins | |
| 46. K to K 5th | K to B 2nd | 47. R to K 7th (ch) | And win easily |
| 46. R to K 5th | R to Q R 5th | | |

(f) Animated by their unexpected escape from a position which for hours was hopeless Black now [illegible] to play their King [illegible] to play their Knight [illegible] all Black could possibly do was to draw by perpetual checks, but hitherto White [illegible] play for nothing less than to win, and their [illegible] ought to have cost them the game.

*NEW BOOKS, &c.*

PIANOFORTES for SALE or for HIRE, with option of purchase, of every description and price, warranted fifty of London Manufactory and Show-rooms (by appointment to the Queen).—G. PEACHEY, 73, Bishopsgate-street Within.

TOLKIEN'S 25-GUINEA Royal MINUTO PIANOS.—It is the opinion of Musical Professors that Tolkien has by far the best Pianoforte in London for the money. Every description of the manufacture and materials employed in the construction of the instrument undergoes the severest and most careful scrutiny and test, to ensure the greatest amount of power, and to stand perfectly in tune. The extreme purity of the tone description, the ease of touch, and the power equal to that of a full-sized Grand. For each of the most elegant construction, in rosewood, with the touch elastic, and the repetition very rapid. Every possible precaution has been taken to ensure its standing well in tune. All Orders will respectfully receive the attention of the public, the profession, and merchants to the Patentee and Sole Manufacturer, 27, 28, and 29, Newman-street, Oxford-street.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, Price Fifty Guineas.—This instrument has (unlike the ordinary Cottage Pianoforte) the check action, and the full Grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in tune. The extreme purity of the tone description, the ease of touch, and the power equal to that of a full-sized Grand. For each of the most elegant construction, in rosewood, with the touch elastic, and the repetition very rapid. Every possible precaution has been taken to ensure its standing well in tune. All Orders will respectfully receive the attention of the public, the profession, and merchants to the Patentee and Sole Manufacturer, 50, New Bond-street, London.

No. 792.—VOL. XXVIII.] SATURDAY, APRIL 5, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE PEACE.

THE Peace which has been concluded, and announced, by the thunder of cannon and the ringing of joy-bells, to the multitudes of London and Paris, and with various forms of rejoicings to all the minor cities, towns, and villages of Europe, may or may not prove satisfactory to the British nation. Until its terms are more positively known, it is fitting that it should be considered worthy of the great Powers whose plenipotentiaries have signed it. We on our part shall certainly not join the ranks of those who have already begun to denounce it. There is but one greater national evil than war, and that is the callousness which would rather endure a present oppression than resist it. The English are not the people to be afflicted with so foul and fatal a disease as such apathy; as by their willingness to incur all the risks and penalties of a state of warfare in a cause which they believe to be rightful, they have testified a thousand times, and at no time more emphatically than in their collision with Russia. Under its most favourable aspect, war is a calamity that may often be inevitable, but is never otherwise than deplorable; and, when it has been honourably brought to a close, every good man must rejoice.

The British Government has as yet said but little to enlighten the public mind on the subject of the terms that have been made with, or imposed upon, Russia. Lord Palmerston, in the midst of a desultory conversation on the palings and footpaths of Hyde-park, and on the pettiest details of the national expenditure, managed to tell the assembled representatives of the people that he had nothing to add to the information already conveyed through the newspapers; and that nothing more would be, or ought to be, stated until after the exchange of the ratifications, in three weeks or a month from the signature of the treaty. The Emperor of the French has been a little, but very little, more explicit; and has expressed to the Plenipotentiaries who announced to him the result of their labours, that the Peace was one which carried with it no humiliation to Russia, and which did not compromise the dignity or the independence of any one; that it was, in fact, "a Peace such as a great nation might propose or accept without degradation; that it had, therefore, all the elements of solidity and durability; and that this favourable result was owing in a great measure to the conciliatory spirit and moderation which marked the policy of England." The world will know hereafter the exact meaning of the Emperor's words. It will learn to what extent England was conciliatory—whether the moderation of her Government was wise or unwise—well or ill founded—and whether the confidence of her statesmen partook of credulity, and their generosity to the vanquished, of culpable indifference to the rights of other nations. Yet whilst we are prepared to hope and to believe that the Peace is worthy of the high eulogium of Napoleon III., and of the satisfaction which the diplomatists at Paris have felt and expressed in their great handiwork, we should not honestly perform our part as historians, if we did not place upon record that the people of Great Britain have not as yet received the

READING THE NEWS OF THE PEACE, AT THE MANSION-HOUSE.—(SEE PAGE 326.)

announcement with any extraordinary degree of satisfaction. So far from there being any enthusiasm, there has been considerable misgiving among all classes that the peace is premature, and therefore temporary; and that it has left unsettled many great and vital questions which are certain, at no distant day, to force themselves upon consideration, and to trouble the repose not only of the States and Empires which have been parties to the war, but of many others not directly involved in it. This feeling of the people may be unfounded; but it would be folly to deny that it exists. Perhaps at the exchange of the ratifications, when the facts are more fully made known, this instinctive uneasiness may be removed. The peace will be worth all that it has cost, if Russia have yielded in good faith, and been cured of her hereditary mania for the conquest of Turkey.

In the mean time there is peace upon the lips of all Europe; and those who "cried peace when there was no peace" would do well to ask themselves whether, if their counsels had been followed, we should not at this moment have been at war? If they do not ask themselves the question the public will ask it for them. In its gratitude for peace it will have no thanks to bestow upon the cowardly men who would have allowed the late Czar Nicholas to domineer over all Europe; and who would have opposed no resistance to the strong aggressor but that resistance of fair words which he contemned, and of that moral force which he despised, if it thwarted his inclinations or impeded his ambition.

The more stable and honourable the peace which has resulted from the Conferences, the greater will be the gratitude of the nations to the brave men who fought for it with their strong right hands, who cemented it with their blood, and who wrested it at the cannon's mouth and at the bayonet's point from the unwilling grasp of a semi-barbarous and utterly selfish Power. To our Army and our Navy, and to the brave people who cheerfully paid the cost—and not to peacemongers do we owe the peace which we enjoy. That it may be worthy of the sacrifices made to obtain it must be the wish of every honest Englishman.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE

*(From our own Correspondent)*

PARIS, Thursday.

NOTHING but rejoicings are, as may be supposed, the order of the day; fêtes and illuminations succeed without intermission; on Tuesday took place the most magnificent review that has been seen for many a day in this country, where military spectacles are so much in the habits and tastes of all classes. Upwards of 150,000 men took part in this review; besides all the troops in garrison in Paris, nearly all those within some days' march of the capital were called upon to attend, and all the villages, as far as the department of Seine and Oise, were disposed so as to receive the arrivals, during at least four days. A brilliant sunshine, a cloudless sky, and a temperature greatly softened from the rigour of the keen east winds, that prevailed nearly all last month, gave everything that was requisite to complete the splendour and effect of the spectacle, which afforded to the many foreigners present on the occasion a good idea of the resources of a nation which, without having had breathing-time allowed it from the termination of such a campaign, could produce a similar spectacle.

It is said that a great camp is to be established at Châlons sur-Marne

The announcement of their new dignities to the Marshals Bosquet and Canrobert by the Emperor, on the occasion of a dinner at the Tuileries, was a subject of general interest and emotion. His Imperial Majesty added to the effect by the association of the act with the event that had so lately fulfilled his most earnest desires, by proclaiming the appointments, with the addition of the most flattering recommendation to them of the safety and interests of the Prince:—"*Au Maréchal* Canrobert! *Au Maréchal* Bosquet! I confide to their valiant swords the child which Providence has given me!" The Maréchal Bosquet announced by telegraph to his mother, at Pau, the dignity conferred on him, in the following terms:—"Le Maréchal Bosquet à sa mère; priez pour l'Empereur!"

The Plenipotentiaries employed in the Conferences had, it appears, the intention each to sign the Peace with a pen which he purposed keeping as a *souvenir* of an event so important in his own life, and in the history of Europe; but the Empress, desiring to connect this great occasion with the birth of her son, having expressed a desire to possess so valuable and interesting a relic, the members naturally hastened to comply with her Majesty's wishes, and for this purpose prepared an eagle's quill which, being richly mounted with gold and jewels, was employed by all for the signature, and afterwards presented to the Empress. It is reported that her Majesty has made it a personal request to the Emperor Alexander to be present at the baptism of the Prince Imperial, and that the invitation will be accepted.

On Sunday, Monday, and Tuesday Paris was illuminated; on the last-named day especially were displayed everywhere the most brilliant emblems and decorations, accompanied by the national flags of all the Powers included in the interest of the occasion. The fêtes given by MM. Magne, de Morny, &c., have been as splendid as the occasion demanded. A variety of fresh ones, both private and official, are in preparation to *filer* the great occasion which gives rise to them. There have been hunting parties in the forest of St. Germain nearly every day, at which have assisted the sides-de-camp of the Count Orloff, in company with other foreign officers and the members of the Imperial household.

On the 10th inst. will take place the grand ball given by Aali Pasha, in imitation of that of M. de Thouvenel at Constantinople, at which the Sultan appeared: here the Emperor will be present.

Abd-el-Kader has just been named member of the Zoological Society of Acclimation. Having learnt, when at Brousss, that the society desired to introduce a number of Angora goats into France, the Emir purchased a flock, which he presented to it. The study of zoology is one in which he has shown much interest, and some treatises on the horse and the camel have emanated from his pen.

Last week took place the sale of the effects of Madame Allan, of the Théâtre Français, consisting of furniture, wardrobe, jewels, &c. Among these properties were several objects of great value and beauty, presented to the eminent actress as testimonials of the admiration her talents excited in Russia.

On Monday took place at the Oratoire, the principal temple of the Reformed Church of France, the marriage of M. André-Cottier with Mdlle. de Montrieux. The bridegroom comes of one of the wealthiest and most respectable Protestant families in the country, and is himself possessed of a large fortune; and the bride, who is no less remarkable for her beauty than for her personal worth, is the descendant of an ancient race which, from the birth of Protestantism in France, has never ceased to be among its most resolute and constant bulwarks. The circumstances of the union, and the interest attached to the persons of the young couple, have given much éclat to this marriage. The gifts presented to the bride, in jewels more especially, were extremely magnificent. Among them was a bracelet which displayed, in its first aspect, a certain number of extremely large pearls, surrounded with diamonds. By a most ingenious mechanism the pearls slid off, and displayed beneath emeralds of equal size and beauty. In this way it completed a *parure* of emeralds and diamonds presented by another member of the family.

It appears probable that the long-disputed, long-desired, long-necessary dog-tax, carried with so much opposition, put into execution with so much trouble and difficulty, will be abandoned, and the streets of Paris become again infested with hundreds of the half-starved, worthless, noisy curs that have for so long proved, at all times, a nuisance, and in hot seasons a source of serious danger. Various reasons are put forward for this change of ideas; among others the smallness of the sum the tax brings into the Treasury, and a remonstrance of M. de Lamartine in favour of the canine ratepayers.

It is reported that the amount of subscriptions to the new serial of M de Lamartine is so far from supplying the means necessary to relieve his position, that the illustrious poet and historian entertains the idea of retiring to the United States. One of the causes of his embarrassment is said to lie in the grant of territory accorded him by the Sultan, and since withdrawn by the Ottoman Government, which has proved a source of immense and fruitless expense. We give this merely as a rumour.

The Commission charged to collect the letters of the first Emperor has already disinterred upwards of four thousand, the publication of which will, ere long, take place.

The Italian Opera has closed with great brilliancy, with the last representations of Grisi and Mario. The Ambigu contents itself with nothing less than an arrangement of "Paradise Lost," effective in certain parts, but unequal, and in many portions grotesque, and of proportions absurdly at variance with the grandeur of such a subject.

### PROCLAMATION OF PEACE IN ST. PETERSBURG.

An Imperial manifesto was issued at St. Petersburg on the 1st instant relative to the conclusion of peace. It says that, though the war was not sought by Russia, it had been waged with great energy by the Russian people. The rights of the Christians in the East were assured; thus the object of the war had been attained. Special arrangements had been made to prevent collisions between Turkish and Russian vessels in the Black Sea, and a new line of frontier in Bessarabia had been conceded, "to avoid future collision."

The accounts from Warsaw of the 26th ult mention that the greatest distress exists there among the poorer classes. The Emperor had been under the necessity, from official reports sent to him, to order funds from the Imperial treasury to be applied for the immediate relief of the existing distress.

The navigable Pinster Canal, which has been in course of construction for many years, and is executed for account of the Russian Government, is at length completed, and has just been opened. This canal promises to be of great importance for the internal commerce of Russia, as it allows of uninterrupted communication between the Bug and Dnieper. The blockade of the Russian ports has had the effect of proving the value of this internal communication, by means of which we have already received from the south of Russia and through this canal and the river Vistula 10,000 quarters of the finest linseed, 12,000 cwt. of tallow, and 15,000 cwt. of hemp, a great part of which has been already shipped to England. For the greater facilitation of this trade, a service of steam-tugs is being organised by the Russian Government, which will be completed in the course of this summer.

### THE ALLIES IN THE EAST.

The accounts from the Crimea by the *Borysthène* steam-packet, which arrived at Marseilles on Wednesday, say that the sanitary state of the army continued to improve. General Della Marmora arrived at Balaclava on the 16th ult. Letters from Eupatoria of the 16th ult. mention that, a review of the Allied troops had just taken place. Several wrecks are mentioned as having occurred at Kustendjeh. Accounts from Kertch, of the 17th, state that the expedition which had been in contemplation against the Spit of Arabat was postponed, and that the terms of the negotiations at Paris should be known. Letters from the Danubian Principalities state that the Russians had allowed 162 vessels which had been detained in the Danube to leave.

The *Smaï*, which brought the previous mail from Constantinople, left at Tenedos several French line of-battle ships and frigates, waiting for a fair wind to proceed on their voyage to Constantinople. Two French steam-corvettes, the *Thisbone* and *Eurnenide*, were preparing to leave Gallipoli to take them in tow. A grand Ball was to be given at the residence of the French Consul at Smyrna, on the 23rd, on the occasion of the birth of the Prince Imperial, at which the Pacha and all the foreign consular agents were to be present. The news of the birth was welcomed at Malta by a salvo of 101 guns from the screw-liner *Prince Jerome*, which was afterwards taken up by the forts and the ships in the roadstead. In the evening the town was illuminated.

In Constantinople the dates from which come down to the 25th ult., the news of the birth of an Imperial Prince had caused great rejoicing. The whole of the diplomatic corps were present at a "Te Deum" sung on the occasion. On the evening of the day the news arrived there was a grand dinner at the French Embassy, at which Lord Stratford de Redcliffe delivered a speech suitable to the occasion. The quarter of Pera was illuminated at night.

### RUSSIA, PERSIA, AND CABUL.

The Cabul correspondent of the *Delhi Gazette* writes, on the 29th of January:—

An exchange of Ambassadors had taken place between the King of Persia and the Emperor of Russia, accompanied by valuable presents and most friendly communications. This had caused a great change in the influence of the British Envoy in Teheran, and who, on being slighted, departed from the capital of Persia. His Majesty had sent a large park of artillery to Bushear, and other seaports, to show a threatening attitude to the English on the side of India.

The Ameer at Candahar was in great want of money, which he had already spent in support of his force. Sirdar Sooltan Khan receives about forty rupees per day from his brother to feed himself, otherwise he would have starved, as the people say. The Ameer looks upon the British Government for the pecuniary aid, and says without it he will be utterly ruined by his increasing expenses since he left Cabul.

One of the Sirdar Mahomed Afzul Khan's servants, while at Balkh, had heard that the Russians had made iron reservoirs in the sandy deserts on the road to Bokhara, and travellers derive great comfort from the plentiful supply of water in those arid deserts, and bless the Russians for their justice and attention. He adds that in Hoorgun the Persians and Russians are seen in great number and influence.

The *Lahore Chronicle* states that Dost Mahomed has gained golden opinions from the merchants of Candahar by lowering the duties on merchandise. A late arrival from Candahar reports that the Dost was about to send an army of 24,000 men for the reconquest of Herat.

The *Sindian* learns from a correspondent at Muscat that:—

The departure of the British Embassy from the Persian Court took place in consequence of the intrigues and instigations of the Russian Government, which, as I learn, has offered to restore to the Persians all those provinces which it had usurped during the reign of the father of the present Shah. Moreover, as an additional bribe, the Russians had offered to repay the seven crores of tumaunns which were taken possession of at the same period. Under the influence of these bribes, the line of conduct was pursued by the Iranian Court that has led to the present unfortunate fracas.

### THE ANNEXATION OF OUDE.

The arrangements for the administration of the affairs of Oude proceed as tranquilly and peaceably as if the kingdom annexed a fortnight since had been one of the old provinces of the empire, undergoing a slight transformation in its organisation. The selection of the new officials are said to be judicious, but in many cases not quite such as were expected. The Calcutta *Citizen* states that the number of soldiers whose arrears have to be paid up amount to 70,000, and the sum due to Rs. 48,00,000. The sums found in the various treasuries of the Oude kingdom amount to Rs. 28,00,000, which, according to the balances as entered in the treasurer's books, shows a defalcation of Rs. 39,00,000. This alludes only to the current year. It is suspected that the King, Minister, and servants, have made away with the amount, and buried it in secret vaults. A very large treasure, said to amount to Rs. 150,00,000, is reported to have been buried between the 19th and 27th of January, under some plum-trees in the Dill-Kosh Palace. General Outram, it is asserted, has taken the bold step of arresting Wajid Alli Shah Padashah as an accomplice in the sanction of the State frauds. The King's ladies buried almost all their jewels three weeks before the annexation.

The Santhals continue to wander about in the jungles, still alarming the villagers, but abstaining from deeds of violence; and it will probably take some time before they finally settle down.

### MARTIAL LAW IN PARMA.

This small State still continues in the same condition of alarm on the part of the people, and strict watchfulness on the part of the Government. All letters from Piedmont are opened by the authorities, and are afterwards sent to their addresses closed with the seal of the military commandant. Arrests still continue; among them may be mentioned those of Count Belardi, a merchant of the name of Gambaro, and Dr. Febaldi. It is rumoured that the military commission has discovered a general plot against the Government; that several of the persons arrested were provided with forged passports, and that the place were such passports were prepared has been discovered.

### AMERICA.

The Royal mail steam-ship *Africa*, which left New York on the 19th ult., arrived at Liverpool on Monday. Neither the *Quaker City* nor the *Persia* had arrived. Nothing had been heard of the *Pacific*. Captain Hartstein, who some weeks ago obtained permission from the American Government to go out in the naval propeller the *Arctic* in search of the *Pacific*, made a short cruise over a certain district of the sea, and, touching at Halifax for a larger supply of coal, pushed his way into the region where he thought it most probable the *Pacific* might be found. He was amply furnished with the means he required, and his experience in the Polar regions had specially qualified him for this cruise. His ship was built for such a service. Rigged as a brig, he said before he started that he could probably remain at sea at least two months and still retain a stock of coal sufficient to bring him to the coast after the search was over.

In the United States' Senate, on the 17th ult., Mr. Douglas reported a bill authorising the people of Kansas to form a State Government. Mr. Clayton made a speech on the Clayton-Bulwer treaty, the course of Great Britain in regard to it, the proposed Pacific railroad, the importance of an interoceanic canal across the Isthmus of Panama, the Transit Company's difficulty, filibustering, and General Walker, whom he stigmatised as a ruffian, buccaneer, and pirate. Mr. Weller intimated his intention of giving his views with regard to the General's character on some future occasion.

A Washington correspondent states, upon good authority, that Mr. Crampton, the British Minister, will positively be recalled. It was intimated that he had incurred the censure of his Government by his course in the enlistment affair.

A spirited meeting, attended by over 200 British residents of New York, was held on the 18th ult., at the Astor House, to memorialise the Queen of England for the unconditional pardon of John Frost—who, it will be remembered, was transported, in connection with others, by the English Government, in 1840, for high life, for having espoused and advocated the cause of the English Chartists, and was conditionally pardoned in 1854. Mr. Frost was present, and gave a very interesting account of his trial at a Court of Special Commission held at Monmouth, and the sufferings and privations to which he was subjected at Van Diemen's Land during his banishment. Mr. Frost's reception by the meeting was warm and enthusiastic. A memorial urging upon the English Government his full pardon was presented, and received the signatures of all present. Speeches ensued by several in attendance.

A fearful accident occurred on the Delaware river on the 15th ult. One of the Camden and Philadelphia ferry-boats took fire when in the middle of the stream; the flames spread with great rapidity, the boat became unmanageable, the passengers, about 100 in number, panic stricken, leaped into the water to escape a terrible death by burning. Many of them were picked up, but some thirty were drowned. Up to four o'clock on the 18th nineteen of the bodies of the victims had been recovered. It is conceded that this awful sacrifice of human life is attributable to the fact that the ferry-boat was entirely destitute of small boats and life-preservers; and it appears, moreover, that the laws of the United States do not require such vessels to carry them.

A report by telegraph from New Orleans, that General Walker had seized the boats of the Nicaragua Transit Company, annulled their charter, and granted a new charter to a new company, caused a special panic on 'Change, and the stock of that company went down from twenty-two to eighteen. It was confirmed by other despatches, and by the arrival of the *Northern Light* steamer, with the additional news that Costa Rica had refused to receive the envoy, and that there were signs of hostility against the government of General Walker in several of the Central American States. This confirmation of the news drove the stocks down to thirteen yesterday. It was the common impression that General Walker had resorted to some *coup d'état* that would be likely to prove fatal to the property of the Transit Company, that communicates with the Pacific via Nicaragua; and that the same cause would have a tendency to inflame popular opinion against him, and most likely induce the intervention of United States war-vessels for the protection of the rights of their citizens. Commodore Vanderbilt notifies to the American public that the steamers of the Accessory Transit Company will be withdrawn until the United States' Government can inquire into the late proceedings of the Nicaraguan authorities in seizing the property of the company, and annulling their charter.

In our publication of the 22nd ult. we stated that the Filibuster Government of Nicaragua had annexed the Mosquito territory. The following is the decree by which it makes its claim:

The Supreme Executive Power to the People.—The title of Nicaragua to the territory called Mosquito, including the port of San Juan del Norte, being notorious and incontestable; and whereas H. L. Kenny pretends, in virtue of a purchase from Sheppard and Haley, to be owner of the said territories, the property of this Republic; in the exercise of its faculties decrees the rights which the said Kenney pretends to claim in and upon the said territory are null, void, and of no effect, the same being the property of the Republic of Nicaragua; and, consequently, every alienation made by the said Kenney is also void. Art. 2. The said Sheppard, Haley, and Kenney, and all other persons claiming this unlawful acquisition, are declared guilty of an attempt against the integrity of Central America. Art. 3. The Minister of Relations and the Interior is charged with the publication, execution, and fulfilment of this decree.

PATRICIO RIVAS.

Granada, Feb. 8, 1856.

The Kansas correspondent of the *St. Louis Democrat*, writing from Topeka, March 8th, says that, in joint session of the Legislature on that day, Governor Reeder was elected United States' Senator on the first ballot (six years), and General Lane on the second (three years). Each candidate received 38 votes—56 members being present.

The steamer *Columbus* had made a trip from Panama to several of the Central American States, in order to make arrangements, on the part of the railroad company, for a communication between New Granada and those republics. The mission was successful, and a good feeling was evinced towards the deputation on board in all the ports at which the vessel touched.

On the return of the *Columbus* she reported from Guatemala that General Carrera had returned to the capital after a tour in the interior provinces. The Legislative Assembly had dissolved, and the carnival was being observed. A general uneasiness existed in the public mind with regard to the prospect of a Walker invasion.

Advices from Havannah of the 10th ult. state that the British ship-of-war *Powerful* had arrived with orders to unite there all the English and French naval forces in the Mexican Gulf, and to start immediately for Nicaragua.

VIOLATION OF AN ANCIENT SEPULCHRE.—On the farm of Easter Golford, on the Cawdor estate, there was lately an ancient cairn or tumulus of stones raised over the graves of some aboriginal warriors. The cairn was 150 to 180 feet in circumference. In the centre were stone coffins containing bones and clay urns. We regret to say that, in order to turn the place to some account for agricultural purposes, the whole of the stones have been removed, the builders surrounding them blasted with gunpowder, and the ashes of the dead scattered like bone-dust on the field!—*Borres Gazette.*

SENTENCE ON A GOVERNMENT COLLECTOR.—At Chester, on Monday last, John Moah, receiver of inland revenue, convicted at last assizes of embezzling £5000, the property of the Crown, was sentenced to transportation for fourteen years.

TENANT-LEAGUE AGITATION.—The *Tablet*, nothing daunted by the displeasure of Dr. Cullen, announces that the long-threatened grand provincial meeting to petition for tenant-right will be held on the 9th instant. A mighty phalanx of priests is pledged to appear on the platform. If the meeting succeed, there will be a series of similar meetings.

AURORA.—A Correspondent, writing from Bridgwater, describes a fine aurora, which appeared in a dark, hazy cloud about ten o'clock in the evening of April 1, and lasted, during our Correspondent's observation of it, about a quarter of an hour, stretching up to the zenith, and springing from about 25 degrees from the horizon due north. It did not at all obscure the stars, and did not occupy any great extent of the heavens.

GILLIG, RICHMOND, YORKSHIRE.—Mr. Stanwick, who has been master of the National School of this village for upwards of fifteen years, has just been presented by some of his former and present pupils, as well as by some of his friends, with a valuable gold watch, as a mark of their high regard for Mr. Stanwick's long and faithful services, as described in a Latin inscription. The watch was furnished by Mr. Tarelle, of Newcastle.

## NOTES OF THE WEEK.

Lord Palmerston's announcement, on the re assembling of the House of Commons on Monday, that nothing would be known upon the subject of the Treaty of Paris, except that peace had been made, of course keeps both friendly and factious natures dumb for the present. He pronounced a very high compliment upon the mode in which Lord Clarendon and Lord Cowley had performed their work, and declared his conviction that the treaty would be both satisfactory and efficacious. A Premier could hardly say less. A Paris rumour goes that the first-mentioned nobleman displayed ill-temper during the whole of the Conferences; but those who sanguinely augur from this that Lord Clarendon resolutely set himself against the claims of Russia, and the insidiousness of her "friends in council," should remember that, though the alleged manifestation may have been rigid patriotism, it may also have been the result of the lat e horrible east winds. However, we have nothing more substantial to speculate upon. One thing is certain—namely, that people who talk about illuminations are in a most unjustifiable and ridiculous hurry. There is no particular reason for lighting up at all; but at least let us remain quiet until we hear what has been done. The authorities could wait long enough when Sebastopol fell, and would order no thanksgiving on the faith of the telegraph, nor until a regular messenger arrived with the despatch. Let us imitate their forbearance—perhaps we shall save gas and lamp-glass.

Sir George Grey has introduced a bill for the reform of the Corporation of the City of London. In some vaudeville, Mr. Charles Mathews, who finds a husband in his way, declares he will kill him; but, in answer to the wife's remonstrances, promises to kill him so pleasantly that he won't mind it—will rather like it than not. This is certainly the mode in which Sir George Grey kills the Corporation. The bill is framed, he says, in a spirit of "sincere respect" for the institution. The governing body is to be left as at present, but the number of wards is to be reduced, the electoral numbers are to be regulated, and the Council is to consist of 96 members instead of 232. Aldermen are to be elected for six years instead of for life—their life-peerage to be brought, therefore, more into affinity with the consular honour of their Mayor. The Common Council is to be elected yearly, and any person who is eligible to it is to be eligible as Lord Mayor. The Court of Aldermen is to be abolished, except in regard of its magisterial functions (which are henceforth to be civil only, the criminal jurisdiction being given to stipendiary magistrates), and its duties are to be transferred to the Common Council. The Lord Mayor's and Sheriffs' Courts are to be consolidated, and the Recorder to be sole Judge in the new Lord Mayor's Court; and the farce of a Mayor and Aldermen in the Central Criminal Court is to be done away. The restriction on trade within the City and the street tolls will be got rid of. The Coal-duties remain as now; and the Conservancy of the Thames is handed to a Government board. The Police system is not to be altered. There is no doubt that the above changes are reforms and improvements; but Colbrand did not fall on his face in Guildhall, nor Brandemore burst asunder like Bel and the Dragon, when the Home Secretary made his speech. On the contrary, the City members, in the name of the Corporation, promised to discuss the bill dispassionately. The second reading is fixed for Monday fortnight. In further reference to the Parliamentary proceedings of the week, it is worth noticing that on Wednesday the House of Commons, though desirous of proceeding to a decision on the Factory Machinery Bill, was actually prevented from doing so by a rule of its own making, and which even the Speaker could not relax.

The interesting letter from a correspondent which we inserted last week has shown how earnestly the women of England have striven to do their part in the duty which we impose upon a nation. It will be no less interesting to add that the women of the Colonies have not been wanting in the same good work. Their sympathy with the mother country in her need has been most touching, and shows how strong are the ties which bind the Anglo-Saxon race together amid such widely-different circumstances. Two proofs of this are not so well known as they deserve to be; £1684 sent to her Majesty the Queen by the ladies of Launceston, Van Diemen's Land, for the use of the soldiers, and paid by her to Miss Nightingale; and £1000, chiefly from the ladies of New Zealand, sent through Mr. Sidney Herbert to Miss Nightingale (at their desire), for the use of the sick and wounded. Through our columns these ladies will perhaps be made aware how kindly their generous sympathy has been felt, not by those whom it has benefited, but by the nation at large.

Some correspondence has taken place upon the subject of the atrocious system of exporting young females for the purpose of vice; and the Belgian officials, who seek to clear themselves, merely show how completely the traffic is treated as matter of business on the Continent. A lady-writer in the *Times*, whose name (did courtesy permit its recognition when the owner has chosen to be anonymous) would com mand all respect, has met the appeal which has been made to the women of England to exert themselves for the sake of the victims of this infernal traffic. She asks—

What can we do?" The etiquette of English society supposes a virtuous woman to be ignorant that there are vicious women; and as for a preventive remedy—the dealing with those for whom the latter live—the education of your sons is not with us." To both points the writer meets the journalist full front, and upon neither point can we deny that her reply is complete.

Observations of various value have been ma de upon the execution of the ruffian Bousfield, who was hanged at Newgate on Monday morning. The crime of murder has been so fearfully ramp ant of late, and its perpetrators, through the folly and weakness of juries, have had so many escapes, that it almost becomes necessary to recall the features of a particular case. This Bousfield, in a jealous rage, murdered his wife in a most barbarous manner, and, as was inferred at the time, and as his subsequent cunning conduct seems to make probable, was induced to add the yet more cruel slaughter of his two fewer than three children, in the idea that such wholesale and unprovoked murder would be regarded—in the fashion of the day—as proof of insanity. But the instincts of human nature were too strong for the success of his horrible stratagem, and he was found guilty and sentenced to be hanged. Sentimentalists of various weakness besieged Sir George Grey in his favour, but the Home Secretary was firm and the murderer was hanged on Monday last, having previously had brief reprieve, that the popular holiday might not be s addened by a terrible example. It appears that Bousfield had never relinquished his hope of escape; and, after various affectations of lunacy, so transparent that they were at once detected, and discontinued on their uselessness being pointed out, he assumed a sullenness and after wards a helplessness, with the same view. After one violent simulation of outrageous frenzy, he afflicted to be utterly prostrate, and this assumption he preserved until the final moment. Had not precautions been taken, his death might have been a more painful scene than it was. As the drop fell he suddenly regained his strength, struggled up to the platform, and sought to support himself by the cord. These efforts—doubtless the genuine results of despair—were, of course, repressed by the officials, and the execution was completed. Comments have been made upon the circumstance, both by the opponents of public executions, who adduce a rational objection to making a spectacle of such events, and would adopt the American system as more decorous and solemn, and by the amiable philanthropists whose sympathies are for the criminal, not his innocent victims—and who would reason with a murderer, and beg him not to do so shocking a thing again,—would "serve, instruct, protect, and save him," as the ablest of the 'humanity" organs actually avows. We can, however, see nothing in the whole case except a good riddance of an atrocious ruffian; but, if the details suggest any additional precautions against the recurrence of what has rightly, we think, been called "a scene" planned by the criminal, the authorities will doubtless attend to them. Sir George Grey has since announced that it is not the intention of Government to introduce the practice of private execution, a determination which is to be regretted. The change, however, will eventually be made.

We sincerely trust that when the "financial arrangement" to which the Chancellor of the Exchequer is looking with apprehension, and Mr. Disraeli with satisfaction, shall be proposed, one matter will not be allowed to remain upon its present basis—we allude to the duty on Fire Assurance. This is an impost which, for every reason, should be got rid of as soon as possible; but we regret to say that the newest step taken—not an unjustifiable one under existing circumstances—is in the other direction. To protect our companies against those of the Continent, the latter—whose agencies are established in London—are to be brought under the operation of the English law. Mr. Hankey stated, in the course of the brief discussion, that, while in England only one third of the property of the public is insured, in France the amount so secured is seven-eighths. Amid the numerous pleas for consideration that will come under the notice of the Chancellor of the Exchequer, we hope that an urgent appeal against this impolitic tax will be made by the commercial public.

## MR. DISRAELI, PRUSSIA, AND GERMANY.

*(To the Editor of the* Illustrated London News.)

Sir,—With wonder and astonishment the world will have perceived in a German paper of last week that the name of Mr. Disraeli, surrounded by those of ten Polish Generals, figures in the pages of the so-called "Black Book." Everybody of course must ask, to what strange circumstance the very man who once in the English Parliament defended the partition of Poland enjoys the honour, along with the martyrs of the holy cause of Polish independence, of being signalised to the surveillance of the dull eye of the police of the German Fatherland. The riddle, however, is easily solved when we look into the Frankfort correspondence of the weekly organ of the leader of the Conservative party. In this correspondence, in last week's number of that paper, we find the clue to the great Asiatic mystery. In that correspondence (which, by-the-by, may as well have been written in the Strand at London, as at Frankfort) Mr. Disraeli gets the faded la.rels of the old German Goths party flung round his head. The same small party which, by their unhappy blunders and their doctrinarism, ruined the revolution of 1848, is, as it seems, used there for the purpose of helping Mr. Disraeli into office again and vice versâ, as it seems. Though it originally is no concern of ours to criticise English politicians, only as far as their politics exercise an influence on those of Germany they can become an object of our criticism. If we may believe the Frankfort correspondence of the *Press* there was scarcely anything wanting in Germany in order to complete the triumphal impression which Mr. Disraeli's speech, according to the statement of that paper, has created there, but triumphal arches, illuminations, gun-firing, and public dinners. You may get a faint, but only a *faint* idea of the excessive raptures into which German patriotism was thrown by those remarkable words of Mr. Disraeli's, "*Prussia is almost Germany*," when you imagine that those words were taken by the German public *as an acknowledgment of German unity as a fact.*

Has the German police, in a prophetic spirit, seen the spectre of the speech of that new and strange defender of German unity before it was uttered? The German police, ever since 1848, has been imbued with a somewhat stupid hatred against the so-called Professoren or Goths party. It had the somewhat confused notion that those pedantic worthies of German University learning, the ideologists of a constitutionalism which the Frankfort Diet and its princely bayonets never suffered to become a living fact—the old martyrs of folio and quarto learning—were the very originators of revolution in Germany—the "Girondins," as they are called in the above-mentioned "Black Book" of our native country. The German police, according to its usual dulness, has, of course, greatly overrated the importance of these men: a fact which now a again repeated in the *Press*.

Depend upon it, Sir, and allow me to tell it the world by means of your widely-circulated paper, that this very Goths party knows nothing of the true feeling of Germany; nay, events have proved that it even does not know *where the true heart of Germany* beats. Professor Gervinus, who has now turned away from his party, was the first who in the so-called Heidelberger "Professoren-Zeetung" (which died an early death of insufferable tediousness) startled the German people by proclaiming the idea of a Boruso-Germanic Empire, called by way of nickname "Minor Germany." We well remember what a strange, bewildering impression the announcement of this idea produced in the heads of the majority of the German people, which, even geographically and statistically, cannot be made to fit exactly with Prussia. The people of Southern and Eastern Germany, where they like easy living, free manners, good humour, and a glass of Rhine wine, have always rather indulged in a somewhat prejudiced hatred against Prussia; or they at least hated Prussian drill. This hatred never has entirely died out, and as far as it is connected with German particularism and ind.vidualism, as opposed to a system of strict national unity and centralisation, appears even as somewhat virtuous and blameable.

But the German people is very excusable in this antipathy. The German people ever since the days of Freder.c the Great (the glory of whose victories, however, in the minds of the people atoned in some respect for the perfidious spacity of his policy), and still more so since those of Frederic Wilhelm II., who, in the treacherous separate peace of Basel (1795) betrayed the common interests of the German empire—the German people, we say, ever since those days have had an instinctive consciousness that Prussia used to follow interests separate from those of Germany as a whole—that she, in the artificial structure of her State, formed out of so many and partly different elements, represents rather the incarnate egotism of an independent part of Germany than the very heart and soul of that country. The very stock of Prussia, the country beyond the Elbe, is not originally German, but *Slavonic*; and the most faithful and ever-willing tools of governmental despotism among the Prussian regiments of the line are the so-called "Kujawiaken," the natives of the Mark Brandenburg, of Eastern Silesia and Pommern (a province the very name of which denotes Slavonic origin). And those wide plains, stretching towards the Baltic, the traveller will scarcely recognise the well-known character of beautiful Germany—of that beautiful Central Germany where, on the sunny hillside, the vine and the almond-tree grow; where the rich variety of hill and dale, of wood and field, charms the eye of the wondering student and artisan; where the ruined castle tells the tale of Florian Geyer, Götz, Lichingen, and the Peasants' War; where people know the songs of Uhland by heart; where, from the blue waters of the Rhine, the dreamy eye of the poet may still see rolling on the ground the "yellow gold" of the Niebelungen-Lied, which was buried there, together with German liberty and greatness, a good many hundred years ago. You will perhaps object, Sir, that Prussia is that which is possessed of the greater part of the Rhine-Land. Read the *Cologne Gazette*, Sir, and you will see if the Prussian system is liked by the people of the Rhine-Land.

And lastly, Sir, I may ask, what is Prussia? What does the name signify? As I said already, an artificial State—a mechanism, not an organism; a mechanism which has been created by the spirit and the strong hand of some clever military despots; a mechanism the parts of which have little withstand external or internal shocks that the entire fabric has ever been on the verge of falling to pieces when a Napoleon or a revolution (and in the minds of the Junker party both words are synonomous) thundered at the gates of the kingdom.

When the fabric of that State, which actually "requires slavery of the press and the most revolting kind of Protestant orthodoxy," mixed up with a decided political leaning towards Russia, as conditions of its existence; when, we say, the fabric of that State was artificially created by some strong rulers, who were not Prussians, but Suabians by birth, it was saved by a statesman who himself was no native of Prussia, but of Central Germany—by the great Minister Von Stein, who wrote to one of his friends—"I am rather sorry that your Excellency takes *me* for a Prussian, and that you represent yourself to me as a Hanoverian. *I have but one fatherland—Germany.* In this great crisis (it was in the year 1812 that he wrote thus) the dynasties and their interests are quite indifferent to me; *they are mere tools!*" When German doctrinarism has in later years been able to startle us with the sham project of Prussianising Germany, it was because Stein had first boldly tried to *Germanise* Prussia. He had to save that country in spite of the King and his camarilla. He unhappily was only able to do half as the cost of allying himself with Russia; and he even, as we read in the popular work, "*Stein und sein Zeitalter*," by Sigismund Stein (Leipsic: Brockhaus, 1855), had to suppose that the central Government of Germany, after the deliverance of the country *from* the French, should be placed in the hands of the English and of the Russians, rather than in those of the German Princes. Alas for the German dynasties! So little confidence felt the greatest statesman of modern Germany for them! It will not be uninteresting for our readers to know that Stein deemed it necessary, for the safety of Europe, that Italy and Germany should be formed into great masses.

He afterwards had *to suffer* for the revolutionary act of having saved Prussia. He was repaid with the blackest ingratitude by King Frederic Wilhelm III., and died in disgrace.

I have the honour to be, Sir, your most obedient servant, A German.

## *COUNTRY NEWS.*

### METEOROLOGICAL OBSERVATIONS AT THE HIGHFIELD HOUSE OBSERVATORY, NEAR NOTTINGHAM,

FOR THE WEEK ENDING APRIL 1, 1856.

*The range of temperature during the week* was 43°1.

*The weather* cloudy on the 26th and 28th; on other days scarcely a cloud. No rain fell; sharp frosts occurred every morning. Zodiacal light brilliant on the 27th, and visible on the 29th and 30th.

*The direction of the wind* was—on 26th E.N.E., becoming E. at 8h. a.m. and again E. at 9h. p.m.; on 27th, at 5h. a.m., again E.N.E. at 7h. a.m., N.E. at 6h. p.m., N.N.E. at 11h. p.m.; becoming N.N.W. on 28th, at 7h 45m. a.m., N. at 8h. a.m., N.N.E. at 9h. a.m., N.E. at 9½h. a.m., E.N.E. at 2½h. p.m., E. at 10h. p.m., E.N.E. on the 29th at 2h. 45m. a.m., E. at 7h. a.m., E.S.E. at 7h. 45m. a.m., E. by S. at 11h. a.m., E. at 2h. p.m., E. by N. at 3½h. p.m., E.N.E. at 7h. p.m. On the 30th, at 3 a.m., the wind veered through the N. to N.W., becoming N.W. at 2½h. a.m.; a further change occurred at 10h. a.m., the wind passed through the W. to S. by W., and until 5½h p.m. constantly changed its direction between S.S.W. and S. by W., at 5½h. a.m. true S; in which quarter it remained until 5½h p.m on the 31st, when it became S. by E., 7h. p.m. S.S.E., 8½h.p.m. S.E. by E.; becoming E. on the 1st of April at 2½h. a.m., S.E. at 5½h. a.m., S.S.E. at 10½h. a.m., S.E. at 2½h. p.m., E.S.E. at 3½h. p.m., in which quarter it remained.

The Chiff-Chaff arrived on the 1st of April (the first summer bird).

This has been a remarkable week, especially as regards temperature and the great dryness of the air.

The following remarks are appended from observations at the Beeston Observatory:—

On the 30th, temperature on grass as low as 16·2°; and on 31st, 17·4°. On the 1st, the temperature in shade rose to 61.1°; and in sunshine to 76·4°.

| | | | |
|---|---|---|---|

(Complete saturation of hygrometer—100.)

E. J. Lowe.

The New Judge of the Common Pleas in Ireland.—Mr. Keogh was appointed on Wednesday last as successor of Mr. Justice Torrens on the Irish Bench. He is the youngest Judge that was ever appointed in that country, being as yet under thirty-nine years of age. He entered Parliament in 1847.

Ripley New National Schools.—Another delightful meeting between the employers and the employed took place on Friday evening, the 28th ult., at Ripley, in Derbyshire, on the occasion of the opening of the new National Schools. The firm of the Butterley Ironworks, having contributed very largely to the building of the schools, as being especially intended for their people, invited a considerable number of their leading workpeople and clerks to a tea-meeting; Mr. Francis Wright, of Ormeston Manor, the chief partner in the Butterley Company, took the chair. The meeting was densely crowded, and formed, with the taste fully-decorated rooms, an imposing spectacle.

The Convict Thorogood.—On Sunday the governor of the County Gaol, Springfield, received an official intimation from the Home Office that her Majesty had been graciously pleased to "extend her royal mercy" to James Thorogood, convicted at our late assizes of being accessory to the murder of Hales, the gamekeeper, "on condition that he be transported beyond the seas for the term of his natural life."—*Chelmsford Chronicle.*

The Tipperary Bank. Official notice has been given to the depositors and creditors cautioning them not to part with their interest in the bank to any persons as the readiest and surest mode of raising whatever is available under these circumstances. Litigation should, above all, be avoided, or it can lead to nothing but interminable delay and increased loss to the unfortunate claimants.

Capture of a Gang of Garotte Robbers.—At Bristol, on Tuesday morning, the police arrested three powerful men—Rewins, Lynch, and Lyons—who are supposed to have been the perpetrators of a number of daring robberies which have recently spread dismay through Somersetshire. The other day two farmers were robbed and nearly murdered on returning from market. In another case a young man was attacked, robbed, and thrown into a pond, from which he made an almost miraculous escape. The robbery which led to the arrest of the gang was committed during the night of Monday last, at St. Arno's Vale, near Bristol, on the person of a Mr. Williams. Mr. Williams had been at Bath that day; and, missing the last train from Bristol, he determined on walking thither. After he had gone about a mile on the road the villains ran after him and knocked him down, and one of them seized hold of his cravat and garotted him with it, forcing him back until he was nearly strangled. Another fellow tore his watch and guard-chain from his person, and rifled his pockets of all the money. They then began to use very rough language towards him, and one of them said something about pistols, when fortunately some persons were heard approaching, and the ruffians decamped. Mr. Williams returned to Bristol, and gave information to the police, who found out that some men had been at an "early-pint" house, and that one of them had been seen in the act of exhibiting a watch to a companion. They were traced from place to place, and found at length in a public-house, and arrested. On their way to the station-house one of them was seen to take the stolen watch from his hand, and throw it away from him. Mr. Williams identified two of them; and they have all three been remanded.

## THE PROCLAMATION OF PEACE ON MONDAY.

On Sunday afternoon, shortly after two o'clock, intelligence reached London that an hour before the anxious work of negotiation was consummated, and that all the Great Powers of Europe, with Sardinia and Turkey, were once more united in a solemn Act of Peace. The news, unaccompanied by any public demonstration, at first spread slowly, but afterwards became sufficiently known to be a subject of voluntary thanksgiving at several places of worship at evening service.

The Field-Marshal Commanding-in-Chief, Viscount Hardinge, G.C.B., after a protracted interview with Lord Panmure, the Minister of War, attended at the Horse Guards late in the afternoon, and shortly afterwards issued an order that the news of the signing of Peace at Paris was to be announced, both at St. James's-park and at the Tower, by the firing of 101 guns. The orders were not issued from the Horse Guards until after seven o'clock, and, that Divine service might not be interrupted in the metropolitan churches, the hour appointed for the ceremony was ten o'clock. In the expectation that the guns would be fired a very large concourse of persons had collected in St. James's-park within the space leading from the entrance by the Horse Guards to the Duke of York's Column. Fifty-one guns were brought from the gun-house in the park, and arranged with the mouths facing the inclosure; Sergeant Bickford, and the Invalid corps under his command, being assisted by a fatigue party of the Scots Fusilier Guards, from Wellington Barracks; and a party of the Grenadier Guards, on guard at the Tilt-yard, had charge of the guns. At ten o'clock precisely the firing commenced. The effect of the unaccustomed sounds breaking the peculiar stillness of Sunday night in London, and associated with an event of deepest concern, was solemn in its character.

The military bands of St. George's and Wellington Barracks played the National Anthem, and, when the Park guns had ceased to fire, the reports of the guns at the Tower of London were distinctly heard booming in the distance. Soon afterwards the bells of St. Martin's, and other churches in Westminster, with those of St. Dunstan's and St. Bride's, Fleet-street, were rung in honour of the event.

On Monday morning, at a few minutes before ten o'clock, the Lord

FIRING OF THE PARK GUNS.

Mayor, attended by Sheriffs Rose and Kennedy, the Sword-bearer, Mace-bearer, and City Marshal, proceeded to the stone balcony in front of the Mansion-house, where a raised dais had been erected, covered with crimson cloth, whence his Lordship read the appended despatch:—

Home Office, March 31, 1856.

My Lord,—I have the honour to acquaint your Lordship that a despatch has been this morning received from the Earl of Clarendon, her Majesty's Principal Secretary of State for Foreign Affairs, dated Paris, the 30th, announcing that a definitive treaty for the restoration of peace, and for the maintenance of the integrity and independence of the Ottoman Empire, was yesterday signed at Paris by the Plenipotentiaries of her Majesty, of the Emperor of the French, of the King of Sardinia, and of the Sultan, and also of the Emperor of Austria, and of the King of Prussia on the one part, and of the Emperor of All the Russias on the other.—I have the honour to be, my Lord, your Lordship's most obedient humble servant, (Signed) G. Grey.

The Right Hon. the Lord Mayor, &c.

An immense concourse of persons had assembled in front of the Mansion-house, to hear this important despatch read, after which there was a general huzza and waving of hats and handkerchiefs.

Precisely at twelve o'clock the civic functionaries, preceded by the Lord Mayor, left the Mansion-house and proceeded on foot to the Royal Exchange, from whence, amid much enthusiasm and loyalty, his Lordship read the despatch which appears above. The roofs and windows of all the houses in immediate contiguity to the Royal Exchange were crowded, the greater part by ladies, who evinced lively interest in the proceedings by a unanimous waving of handkerchiefs. Standards and union-jacks were floating from most of the public and Governmental buildings, and also on the mast-heads of the ships in the river.

On taking his seat at the London Sessions on Monday the Lord Mayor addressed the gentlemen at the bar and persons present, and said that he had received a communication from Sir George Grey that the treaty of peace had been signed. Mr. Bodkin asked his Lordship whether it was in contemplation to have a general illumination in the City. His Lordship said that at present nothing of that kind had been proposed, but such a thing might take place hereafter. The announcement was received with applause, for, although a great number had heard the guns fired on Sunday night, they had not heard the news on sufficient authority.

Shortly after twelve o'clock on Monday the guns were taken out into St. James's-park, and ranged along the line from which they are usually fired. A vast number of persons collected in the park, and waited patiently for the expected salute. At one o'clock the sound of the Tower guns was heard, and all were on the *qui vive* for similar proceedings in the park. The dense mass of persons who had collected, numbering by this time many thousands, pressed forward with eager anxiety to the place where the soldiers were stationed, and for the first time heard, to their great disappointment, that the guns were not to be fired. At twenty minutes before two arrangements were made for the removal of the guns to the place from which they had been brought, and the people displayed their indignation in very loud terms. They yelled and hooted with great perseverance until the soldiers had deposited the guns, and then on their way to the Horse Guards pelted them with stones; but the men took the matter very quietly, and by the prompt interference of the police all mischief was prevented.

FIRING OF THE TOWER GUNS.

H.M.S. "COLOSSUS," WITH THE GUN-BOAT FLOTILLA, LEAVING THE MOTHERBANK FOR PORTLAND. (SEE PAGE 340.)

## H.M.S. "COLOSSUS," WITH THE GUN-BOAT FLOTILLA, LEAVING THE MOTHERBANK FOR PORTLAND.

OUR Illustration represents the *Colossus*, 81 guns, Captain the Hon. Henry Keppel, C.B., with gun boats of the red and white division, getting under way from the Motherbank for Portland.

On Monday, 24th ult., Sir Charles Wood, Bart., M.P., First Lord of the Admiralty, and Rear-Admiral the Right Hon. Sir Maurice F. F. Berkeley, K.C.B., M.P., Senior Naval Lord of the Admiralty, accompanied by his son and private secretary, Mr. Berkeley, arrived at Portsmouth, and were entertained at the Admiralty-house by Vice-Admiral Sir George F. Seymour, K.C.B., G.C.H., where they slept. At 10 30 steam was ordered to be got up on board the Admiralty yachts *Black Eagle*, Master-Commander Petley; *Vivid*, Master-Commander W. H. Allen; and *Fire Queen*, Master-Commander F. W. Paul; and about eleven o'clock the Lords of the Admiralty before named, accompanied by Sir George Seymour, Captain Codrington, C.B., and Captain the Hon. J. R. Drummond, C.B., embarked in the *Black Eagle* for Spithead. The *Vivid* and *Fire Queen* followed, and, as her Majesty's steam-yachts *Fairy* and *Kitn* were going out at the same time to try their machinery, &c., prior to being reported ready for the service of the Court, the scene presented was a very interesting one.

The Admiralty squadron steered towards the fleet, on the way to the Motherbank; the flag-ship *Victory* having previously made signal for the *Colossus*, 81, Captain the Hon. Henry Keppel, C.B., and the gun-boat flotilla under his command, to get under way—signal having previously been made from the flag-ship at Spithead early in the morning for all to get up steam. When their Lordships arrived at the Motherbank, the gun-boat squadron (comprising between twenty and thirty four and two gun steam-vessels) weighed in two columns, following the *Colossus*, and proceeded towards the westward to join the blue and light divisions of gun-boats, and H.M.S.S. *Sampayoeli*, 71 guns, at Portland. After a time, the gun-boats, in addition to their steam, made all sail to keep their allotted stations; in doing this the fleet-keeled *Vivid* acted as a sort of whipper-in, being ever and anon sent by the Admiralty ahead to order such and such a boat to get up and keep her station. When off Osborne, Vice-Admiral Sir George Seymour and friends returned in the *Fire Queen* to harbour, and landed at three o'clock. The *Black Eagle*, with the Lords of the Admiralty on board, proceeded with the flotilla for Portland. The whole force passed over the "Bridge" (off the Needles) at about two o'clock, at which spot the *Vivid* left them, making all speed towards Portland in two lines, one on each quarter of the *Colossus*, and each keeping position as well as it could according to the seniority of the respective Commanders. They arrived at Portland the same afternoon, and it was intended that all the gun-boats of the different divisions should go through their exercising the next day, but the weather proved so boisterous that this intention could not be carried out; and on Thursday all four of the division, with the line of battle ships, returned to the Motherbank, there to await the review, which is expected to take place on the 16th inst.

### CALENDAR FOR THE WEEK.

SUNDAY, April 6.—Second Sunday after Easter.
MONDAY, 7.—Badajos taken, 1812
TUESDAY, 8.—Hudson's Bay Company chartered, 1692.
WEDNESDAY, 9.—Lord Chancellor Bacon died, 1626.
THURSDAY, 10.—Anglo-French Alliance, 1854.
FRIDAY, 11.—Bonaparte abdicated, 1814.
SATURDAY, 12.—America discovered, 1492. Rodney's victory, 1782.

### KEY TO THE ENGRAVING OF THE CONGRESS OF VIENNA

(*See page 361 of Supplement, published with the present Number of the* ILLUSTRATED LONDON NEWS.)

Commencing from the left hand, the four Plenipotentiaries standing are Lord Wellington (England), Count de Lobo (Portugal), Prince von Hardenberg (Prussia), and M. de Saldanha (Portugal). In front of the above is seated Count de Lowenheim (Sweden). Next is Count Alexis de Noailles (France), and Prince Metternich (Austria), Count de Latour Dupin (France), and Count de Nesselrode (Russia). The seated Plenipotentiary next is Count de Palmella (Portugal); and next, in the centre of the picture, is Viscount Castlereagh (England). Next at the table are the Duc de Dalberg (France), and Baron von Wessenberg (Austria). Standing behind the latter is Prince de Razumofsky (Russia); and next is General Lord Stewart (England). Next, seated at the table, is Chevalier Gomez La Brador (Spain), and next, with one hand upon the table, stands Lord Clancarty (England). Next is Mr. Wacken, reading a document to Chevalier Gentz, below whom, seated at the table, is Talleyrand (France). Next, reading, is Baron von Humboldt (Prussia), behind whom stands Lord Cathcart (England).

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, APRIL 5, 1856.*

WE believe, for several reasons, that our American difficulties will "blow over." In the first place, our Transatlantic relatives—even those who talk most loudly and illogically upon the subject—do not, and never did, mean to go to war with us, either on account of the Foreign Enlistment Bill or on that of the Central American dispute. In the second place, the persons whose angry words reach us from the other side of the ocean do not speak for the American people, but for a small section of them. In the third place, supposing all the bluster of the Anti-Anglian faction to have meant something, and to have been adopted in its spirit and its consequences by the Government of the United States, the circumstances of Europe, and of Great Britain more particularly, have changed so greatly since the conclusion of peace with Russia, that those who might not have hesitated to provoke this country six months ago would certainly hesitate to do so at the present time.

We dismiss altogether the Enlistment question, as unworthy of greater notice than it has already received. That of Central America is more complicated. On the first question the British Government has yielded—because it was in the wrong. On the second question it will not, dare not, and cannot yield—because it is in the right; and because a principle is involved, the pusillanimous betrayal of which would impair the dignity and tarnish the honour of this nation. The Americans, with a not unnatural desire to extend their dominion over the North American continent, have quarrelled from time to time with Mexico, and have managed, by diplomacy, or by war, or by shutting their eyes to the doings of Filibusters and outlaws, to annex large and valuable territories to the States. Their doing so is no business of ours. This country does not seek to intermeddle in the wars of the Western Hemisphere; but if the Government of the United States, either from a mania for annexation, or from a tolerance for the proceedings of Filibusters, should attack the rights of this country, in Canada, New Brunswick, Newfoundland, or Mosquitia, or suffer its subjects to do so, without affording redress, the matter assumes another aspect. The United States have permitted American citizens to invade Nicaragua; and Great Britain neither complains, nor asserts any right to complain, or even to remonstrate. The Governor of Nicaragua issued a proclamation on the 8th of February last annexing to Nicaragua—which on its side is evidently preparing for its own annexation to the United States—a portion, if not the whole, of the territory of Mosquitia. By this act the rights of England are directly invaded. Mosquitia is under the protection of this country, and has been so since the year 1687, when the then King made a formal and voluntary cession of his dominions to Great Britain; which, without occupying his country, bound herself to protect him and his successors. This right was respected even by the Spaniards, at a time when they claimed, as the Americans appear to do now, to be lords paramount of the soil of Central America. Those Americans who would annex Mosquitia, and who endeavour to justify the acts of the Governor of Nicaragua, assert that, by the treaty known as the Clayton-Bulwer Treaty, Great Britain renounced her sovereignty over that district. The British Government denies that it ever did make such renunciation; that it ever intended to make renunciation; and maintains that neither the words of the treaty, nor its spirit and obvious meaning, bear out in the remotest degree the interpretation sought to be put upon them. Great Britain has offered to submit the dispute to arbitration, and to abide by the award; and the United States' Government has threatened to refuse arbitration, and to submit the dispute, if need be, to the decision of the sword. We believe the threat to be an idle one. We do not believe that any Government will so dare to set the public opinion of its own people and that of the world at defiance. But, in order to be prepared for all contingencies, the British and French Governments, at the request of the British and French residents in Mosquitia, have resolved to unite their naval forces now in the Mexican Gulf, and dispatch them immediately for the protection of Greytown.

There is a disposition on the part of some members of the United States' Government to disavow the proceedings of the Filibusters in and out of office in Nicaragua. We are glad to observe this, for it shows returning reason, or at the least a misgiving that such a course will ultimately become imperative. Indeed, President Pierce himself appears to have taken preliminary steps towards escaping from the dilemma into which he has drifted, and speaks in his recent Message to Congress of "lawless proceedings"—that must be those of General Walker and the other Americans who have thrust the Union into this perplexity. Let us hope that this disposition on the part of the American Government will grow powerful enough to dictate the policy of the Union. We trust that, either in this way or in some other, the good sense and good feeling existent on both sides of the Atlantic will preserve the world from so fratricidal a catastrophe as a war.

FROM a Parliamentary paper presented by command of her Majesty during the last Session, it appears that considerable reductions were made in the tariffs of France, Spain, and Portugal between 1853 and 1855. France lowered the duties on pig-iron, and on iron in bars and plates, on cast and wrought steel, and on coals; Portugal reduced the rates on cotton thread, china, porcelain, and iron nails; Spain, on iron tools, copper ore, and zinc. The liberal policy of international freedom in commerce was interrupted by war, or at least not carried to that extent which foreign Governments contemplated; but the restoration of peace now affords an opportunity of enlarging and accelerating the industrial movement. To promote this object an association has been formed at Hanley, in Staffordshire, the immediate purpose being to introduce the beautiful pottery ware of the district into France. At a public meeting held in Hanley, most numerously and influentially attended, it was stated that at the Paris Exhibition, when "the visitors came to the stalls devoted to the productions of the Potteries, they were found to be crowded. Every Frenchman wanted to buy everything. It was a positive fact that a representative of one of the most eminent houses in the Potteries had been obliged to label every article on his stall with the word 'Sold.'" An extract was also read from a letter addressed to two of the most respectable firms in the Potteries, to the effect that the Emperor intended to take off the prohibition duties this Session, and that in a few months a more liberal system would be seen in action. The ornamental ware of France, particularly the Sèvres china, is very beautiful, but its extreme cost places it beyond the reach of all but the rich. In comparing two vases, equally beautiful in design and execution—the one manufactured by Mr. Minton, of Staffordshire; the other manufactured at the Sèvres works—the difference in price was enormous—the former being sold for £15, the latter being charged at from £60 to £70. As to ordinary utensils—as cups, jugs, and basins, for daily domestic use—the superiority of the English article, at a very much lower price, is incontestable.

Free-trade between France and England must be based on the principle of reciprocity. Louis Napoleon has many prejudices to encounter, and it is our interest and our duty to remove difficulties from his path. We must remember that a nation which refuses to buy cannot sell. Providence in its wisdom has ordained that various climates shall yield different products, and, though political geography separates peoples by the boundaries of rivers, seas, and mountains, commercial exchanges are designed to unite them in a common brotherhood. If we desire to find a market in France for our pottery, coals, and iron, we must permit France to find a market in the United Kingdom for wines and spirits, which are her staple products. The late Mr. Porter, of the Board of Trade, recommended a reduction of the duty on wines to one shilling per imperial gallon, and other authorities have proposed to lower the duty on brandy to 5s. per imperial gallon. These rates, it is now understood, would be acceptable to the Emperor of the French.

Mr. Oliveira, M.P., who has laboured ably and earnestly for the revision of the wine-duties, attended the Hanley meeting, and communicated much valuable information. Some years since that gentleman formed a committee, consisting of 120 members of Parliament, and 1000 magistrates, medical and surgical practitioners, and men of science, all desirous of introducing cheap and good wine into the country, not only as a wise expansion of Free-trade principles, but because a wholesome beverage is calculated to supersede the noxious and demoralising practices of spirit-drinking. Mr. Oliveira stated that in Paris, Bordeaux, Tours, Montpellier, and other parts of France; in Lisbon, Oporto, and other wine districts of Portugal; in Xeres, Cadiz, and other parts of Spain; in Germany, Sicily, and some parts of Italy, the market of England was demanded as the grand object. He had an interview with M. Duffour Dubergier, the President of the Bordeaux Chamber of Commerce, who assured him that there was a strong feeling in favour of reciprocity, and of a large reduction in tariffs. M. Drouyn de Lhuys, late Minister for Foreign Affairs, expressed the same sentiments as did M. Ducos, Minister of Marine; and M. Magne, Minister of Commerce and Public Works. All these eminent men were in favour of the principle of Free-trade; but they more particularly referred to a lowering of the duties on coal and iron, cotton and pottery, when imported into France. It is plain, therefore, that our neighbours are ready to meet us half way; and our Government ought eagerly to embrace the golden opportunity. Not only would an increasing trade be promoted between the two countries; but, as one of the consequences of that increasing trade, we should secure the best guarantee for perpetual peace. Men engaged in trade are not so senseless as to shoot their customers. It is to be hoped that this subject will engage the early attention of Parliament.

### THE REVENUE.

### THE COURT.

The Queen and the Prince Consort, with the youthful members of the Royal family, arrived at Buckingham Palace from Windsor Castle shortly before five o'clock on Tuesday afternoon. The Royal party travelled from Windsor by a special train on the South-Western Railway to the private station at Vauxhall, and thence proceeded in seven of the Queen's carriages, escorted by a party of the 3rd Light Dragoons.

Viscount Palmerston and Lord Panmure had audiences of the Queen on Tuesday and Wednesday.

The Queen and the Prince have taken equestrian exercise during the week; and on Wednesday her Majesty and his Royal Highness accompanied by the Princess Royal, honoured the Princess' Theatre with their presence.

Yesterday (Friday) the Queen held a Privy Council at Buckingham Palace.

Lord Alfred Paget (Clerk Marshal) and Colonel Francis Hugh Seymour have relieved Major-General Buckley and Captain the Hon. D. de Ros in their duties as the Equerries in Waiting to the Queen and Prince Albert.

The following notice has been issued from the Lord Chamberlain's office:—"Notice is hereby given, that the Levee announced to be held on Wednesday, the 16th inst., will be held on Tuesday, the 15th inst." This alteration is understood to have been made in order to allow her Majesty to be present at the great naval review at Portsmouth on the 16th inst.

His Excellency the Ambassador of France and the Countess Persigny left town yesterday afternoon for Paris. M. Charles Baudin has arrived at Albert-gate House, and will act as Chargé d'Affaires during the Ambassador's absence.

The Duchess of Beaufort gave birth to a daughter on Wednesday, at Badminton. Her Grace and the infant are going on well.

Viscountess Palmerston has issued cards for "receptions" this evening (Saturday), and on the 12th inst.

The marriage of the Lady Rachel Russell with Lord James Wandesford Butler took place on Thursday morning, at St. Peter's Church.

The Right Hon. R. Vernon Smith, M.P., gave a dinner on Wednesday evening to his colleagues in the Cabinet. All the Ministers attended except Earl Granville and the Earl of Clarendon—the latter being absent in Paris, and the former, we regret to learn, too unwell to attend.

The Right Hon. B. Disraeli and Mrs. Disraeli have arrived at Grosvenor-gate from Hughenden Manor, for the season.

### *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS.—*Rectories:* The Rev. S. Brown to Hasguard, Pembrokeshire; Rev. C. J. Forshaw to Cudworth, Somerset; Rev. R. P. Hall to Bromsberrow, Gloucestershire. *Vicarage:* The Rev. G. F. Deedes to Haydor, near Sleaford, Lincolnshire. *Incumbencies:* The Rev. W. Owen to St. Stephen's Church, Tonbridge; Rev. C. D. Marston to Christ Church, Dover.

THE GOLDEN LECTURESHIP.—Amongst the names announced as candidates for the above appointment are Dr. Croly, and the Rev. Daniel Moore, Incumbent of Camden Church, Camberwell; the Rev. Capel Molyneux, Minister of Lock Chapel; the Rev. R. Bickersteth, Rector of St. Giles's and Canon of Salisbury; and the Rev. Thos Jackson, of Stoke Newington.

TESTIMONIAL.—The churchwardens and parishioners of St. Ippolyt's cum Great Wymondley, Herts, have just presented to the Rev. John Scott Whiting a valuable clock, to which there were nearly 200 subscribers, as a tribute of their regard and esteem, and in testimony of their deep sense of his zealous and faithful discharge of the arduous duties of his ministry, upon his resigning the curacy.

## METROPOLITAN NEWS.

HER MAJESTY'S BENEVOLENCE.—Amongst the numerous acts of kindness displayed by her Majesty towards the wounded soldiers from the Crimea, the public will be gratified to learn that, at her own private expense, the Queen has commanded Mr. Heather Bigg, of 29, Leicester-square, the well-known anatomical mechanician, to construct artificial legs for the following men, whose severe mutilation attracted her Majesty's notice during her recent visits to the hospitals of Portsmouth and Chatham: Corporal Burland, John Hall, Francis Ready, Samuel Hugon, Corporal Marks, and Patrick Kenny. With the exception of Kenny and Huson, all these poor fellows had lost both legs; they are now, however, by her Majesty's bounty, enabled to walk as well as ever before. In addition to these, the Queen requested Mr. Bigg to supply Mr. Greenway, William Boyce, and Henry Ashforth, with artificial arms. The first man had his arm shot away just below the shoulder; the second lost both arms by the explosion of a shell whilst he was in the act of lifting a pickaxe above his head; and the third lost his arm below the elbow. A man named Edward Sharpe has also been presented with a spinal apparatus; his vertebræ having been injured so severely by a spent ball as to prevent the poor fellow standing erect. By the aid of the spinal instrument employed he now walks perfectly upright with the utmost ease.

VOLUNTARY EDUCATION.—On Wednesday night the friends of voluntary education held a meeting in Crosby-hall for the purpose of considering the educational measures of the Government, and Lord John Russell's resolutions, and the propriety of adopting proceedings in opposition thereto. The meeting was numerously attended. Mr. Barnes, M.P., was to have presided, and that there were three distinct measures connected with education before Parliament—the measure for the creation of a President of the Council, Earl Granville's measure on education, and Lord John Russell's resolutions—which he believed were to be considered on the 10th of the month. In the course of some remarks on Lord John Russell's recent speech, he said his Lordship affirmed that the operation of the factory act in respect of education had been beneficial. He (Mr. Barnes) did not believe the fact was so, and for this reason, that the "half-timers" were very indifferent to teaching, and came to school half asleep after their half-day's work, whilst they disregarded the instruction also, because it was forced on them by law (Hear, hear). It had been said that people were criminal because they were not educated. Did education prevent crime? Was there no crime in America, where they had State education? They might make schools as thick as palaces, but they would never prevent crime as long as there were so many thousands who rose every morning without knowing where to get a breakfast.—Mr. Bell, M.P., was decidedly of opinion that the interference of the State in educational matters was unwisely prejudicial to education itself (Hear, hear). He was a friend of the voluntary principle, because it was the only practicable one. He hoped that religion would never be separated from education (Hear, hear). Yet, if they had a State education, they must do injustice by supporting a religious system in which they disregarded others, or they would educate all sects indifferently, which would lead to the forgetfulness of all distinctive religion. He believed that the best motive to education was to give people an interest in being educated (Hear).—Mr. E. Baines said that no persons were more friendly to education, even to universal education, than the voluntaries. The religious body to which he belonged showed how friendly they were to education when they subscribed no less than £190,000 to promote education But, though he loved education much, he loved freedom more (Hear). It was quite clear from the examples of ancient Rome, China, France, and Denmark, and other countries, that people might be educated and yet remain slaves. He was sure that education would be the result of freedom The free prizes and the cheap literature of this country were evidences of the progress of education. The social advantages of education were so great that they might rely on them as a stimulus to education.—Mr. R. Scott did not believe that the State was honestly desirous of extending education, because it always exhibited the greatest neglect of schoolmasters and literary men.—The Rev. Andrew Reed said that the expense of education under the British school system was only 12s a head per year, whilst under the Government system the expense was now 8s. or 9s. a head (Hear, hear). There were no adequate results to justify the present cost. He did not believe that central-action was a good thing. Chevalier Bunsen admitted that it had failed on the Continent, and that the greatness of England was owing to her local and diffused power (Hear, hear). Montalembert had made the destruction

## *IMPERIAL PARLIAMENT.*

### HOUSE OF COMMONS.—MONDAY.

The House of Commons reassembled on Monday for the first time after the Easter recess.

MALT TAX.—In reply to a question from Mr. Spooner, in the absence of Mr. Mullings, the CHANCELLOR of the EXCHEQUER said that, should the additional duty on malt cease on the 5th of July, the usual course would be adopted of allowing the drawback on the stocks in hand.

COMMITTEE OF SUPPLY.—It was anticipated that some question would be asked relative to the peace on the motion for going into a Committee of Supply, but the anticipation was not realised. The House went into Committee without any question whatever. Shortly before five o'clock Lord Palmerston entered the House, and was slightly cheered on taking his seat on the Treasury bench. Several votes having been agreed to, including a sum of £195,000 for the palaces, parks, and public buildings, on the proposal to vote £91,684 for the maintenance and repair of the Royal parks and pleasure-grounds, Sir R. WILLOUGHBY moved that the vote be reduced by £5000, and Mr. SPOONER that it be reduced by £22,140. For the latter amendment 35 member voted, for the whole amount 119.

### THE PROCLAMATION OF PEACE.

On the next amendment for reducing the vote by £5000,

Colonel FRENCH rose to move that the Chairman should report progress and ask leave to sit again. Ministers had not condescended to state anything with regard to the conclusion of peace, and the Prime Minister did no more than to the House in time to do so. It was but respectful to the House of Commons that they should go into Committee of Supply till after some such statement had been made, and he (Col. French) now brought his motion to order to enable the Prime Minister to make a statement on the subject. He (Colonel French) might be told that the conclusion of peace was already well known by the firing of the guns; but that was no confirmation of the fact. Sebastopol might have had been fired for the capture of Sebastopol when that fortress had not been captured at all at the time (Hear, hear).

Lord PALMERSTON: I entered the House a few minutes after the usual time for presenting petitions. There were, besides, notices of motion and notices of questions also; and I was as much surprised as any other member could be at finding the House was in Committee at so very unusually early an hour (Hear). If I had been in the House sooner I should have made the statement which I am now prepared to make (Hear), though it is very short, and can be soon communicated to the hon. and gallant House already possesses. Sir, the House is perfectly aware, from an extra *Gazette* which has been published, that yesterday, at about two o'clock, a treaty of peace was signed at Paris (Hear, hear). The House will have perceived, by the announcement in the *Gazette*, that it was determined by the Congress that the particular conditions of the treaty should not be made public at the ratification of the treaty. That is the usual course of proceeding, for various reasons, out of deference to the Powers who are parties to the treaty. At the same time, without going into details of the conditions, there are many of the conditions which are already known to all the world, because they have been published in every country in Europe. It will be found that the objects for which the war was undertaken have been fully accomplished; and the independence and integrity of the Turkish empire will be secured, as far as human arrangements can effect that purpose. It will be found that the treaty will be honourable to all the contracting parties, and I trust that, while on the one hand it has put an end to a war which every friend of humanity must naturally wish to see concluded, it will on the other lay the foundation of a peace which, I trust, as far as respects those dangers out of which the war began, will be lasting and enduring (Hear). During the negotiations which have led to this peace I am happy to say that the same cordiality which prevailed among the Allies in carrying on the war has most materially contributed to the accomplishing of peace, and that we shall leave off at the termination of this war with a stronger, and closer, and more extended alliance than existed during the continuance of the war; and that, therefore, the future permanence, not only of a good understanding, but of intimate relations, among the great Powers of Europe will be cemented and strengthened by communications passed at these negotiations (Hear). Sir, I have nothing more to say, except this—which it must be gratifying to the country to know—that nothing could exceed the ability with which the British negotiators have performed their arduous and difficult task during these negotiations (Hear)—that Lord Clarendon and Lord Cowley not only maintained the honour, dignity, and interest of the country they represented, but, by their conciliatory conduct, secured for themselves and their country the respect and good will of those with whom they acted (Hear, hear). The ratifications are to be exchanged as soon as they can be procured from Constantinople and St. Petersburg. The limitation of time is four weeks; but I should hope that within three weeks they will be exchanged at Paris (Hear, hear).

Col FRENCH then withdrew his motion, and the Committee proceeded with the consideration of the Estimates.—Several votes were agreed to; after which the House resumed, and the remaining business was disposed of.

### HOUSE OF LORDS. TUESDAY.

FALL OF RAIN.—The Earl of MALMESBURY, referring to the motion of which he had given notice respecting the fall of rain, inquired as to the progress of diplomatic proceedings in Paris, and the probable date at which the Foreign Secretary might be expected to resume his place in Parliament.—The Earls of LANSDOWNE and GREY said that he had no further information to impart than had been already made public by the daily journals, the official *Gazette*, or the Ministerial announcement in another place. Although the treaty which had been signed would not be published until the ratifications were exchanged, he had himself prepared to answer any inquiries that might be urged on the subject. As many important questions, consequential upon the treaty, remained still for discussion and settlement, it was impossible to say how long Lord Clarendon might be detained in Paris for that purpose.

### HOUSE OF COMMONS. TUESDAY.

THE DEFECTIVE MORTARS.—Mr. MONSELL stated that some explanatory letters had been received from Messrs. Grissell and Co. respecting the defective mortars supplied by their firm to the Ordnance, and the case had been referred to a competent officer to examine and report thereon.

EXECUTION OF BOUSFIELD.—Sir G. GREY, in replying to Lord W. LENNOX, said that a full explanation touching the occurrence which took place at the execution of William Bousfield, on Monday last, had been required by the Government from the Sheriffs of London and Middlesex.

THE CRIMEAN INQUIRY.—Lord PALMERSTON, to a question from Mr. Layard, replied that the Board of General Officers would commence their sittings almost immediately, the delay that had occurred having arisen chiefly from the necessity of arranging certain points of detail, The rules which the Inquiry Board would take were, he intimated, to be left in great measure to the discretion of the officers to whom it was intrusted.

SALARIES OF COUNTY COURT JUDGES.

Mr. ROEBUCK moved an address setting forth an opinion that the salaries of the County Court Judges should be fixed and uniform, and that the rate of such salaries should be £1600 per annum. On the question of principle the hon. and learned gentleman contended that remuneration of functionaries intrusted with the administration of justice should in amount be sufficient to relieve them from all pecuniary anxieties, as well as to secure and maintain the services of competent Judges, and ought at the same time to be fixed by law, and not left to the favour or caprice of the Government. At present he contended the minimum of £1200 was paid to the majority of the Judges of County Courts was inadequate to remunerate them for the duties they were called upon to discharge, while the maximum of £1500 was a boon for which the judicial functionaries in question were obliged to look up to the hands of the Secretary of the Treasury, who had more than once accorded or withheld the favour under the impulse of political or family influences. After enforcing this assertion by referring to the treatment received by his own brother-in-law at the hands of Mr. Wilson, Mr. Roebuck submitted that the adoption of the plan he had proposed was essential to relieve the County Court Judges from the painful and mortifying position in which they were now too often placed.

The motion was seconded by Lord STANLEY.

Sir G. GREY confessed that his own impressions had from the first been in favour of assigning fixed and uniform salaries to the County Court Judges. The salaries of these functionaries, he explained, had originally been derived from fees, which were found to operate with great inequality in the different districts. These were subsequently commuted for settled incomes of £1000 per annum, until, in 1852, Parliament fixed the minimum of £1200 and the maximum at £1500 for those salaries, and assigned to Government the invidious responsibility of determining to which of the sixty Judges the greater or the less income should be awarded. Despairing the hope that his own proposals for a settlement of the whole subject was dealt with in a bill lately introduced by the Lord Chancellor; and, as the proposed adoption of the existing maximum would involve an augmented charge on the Consolidated Fund, he recommended that no definite resolution should be adopted until that measure came before the House. He concluded by moving the previous question.

Mr. WILSON defended himself from the accusation brought forward by Mr. Roebuck. He entered into a minute detail of particulars to show that the brother-in-law of that hon. member had been treated by the Government in the matter of salary without the slightest reference to the accident of his relationship, or upon any other considerations than those arising from an impartial investigation of the labour and duties which had devolved upon him, as compared with the many other County Court Judges who had also memorialised the Treasury on the same subject.

Sir J. PAKINGTON approved of the principle that the Judges of the County Courts should receive a fixed and uniform salary, independently of any discretion of the Government. For the amount he considered £1000 per annum not exorbitant.

Sir G. PECHELL and Mr. MALINS having briefly spoken,

Mr. GLADSTONE wished to leave himself and the House unpledged by any result which might arise from the immediate question before them as to their opinions touching the salaries to be paid to the County Court Judges. This subject should be left open for a formal discussion hereafter. Adverting to charges of partiality brought by Mr. Roebuck against the Secretary to the Treasury, he expressed his persuasion that they were unfounded, and hoped that they would be withdrawn.

After a few words from Mr. DISRAELI,

Mr. ROEBUCK replied, consenting to withdraw his motion.

IRISH AND SCOTCH PAUPERS.—Mr. BOUVERIE moved for leave to bring in a bill to amend the law relating to the removal of poor persons, chargeable in England, to Ireland, and to certain other parts of her Majesty's dominions. The measure, he explained, was founded upon the report of a Committee appointed to inquire into the Law of Settlement and Removal of Scotch and Irish Paupers who sought relief from English parishes. By the present mode a summary power of extradition was given to the English magistrates in the case of natives of Ireland and Scotland, and the consequent results often proved exceedingly cruel and unjust towards the paupers so removed, and the Irish and Scotch districts upon which they were discharged. In the bill now proposed it was intended to provide that the course pursued towards Irish or Scotch born paupers should be assimilated to that practised with regard to English paupers, so that no removal should be allowed without the notice being given, and sufficient grounds for the step shown by the parish authorities. After some discussion, in which Mr. Williams, Mr. V. Scully, Sir W. Jolliffe, Mr. Baines, and other members took part, leave was given to bring in the bill.

CITY CORPORATION REFORM.—Sir G. GREY begged leave to introduce a Bill for the Reform of the City of London Corporation. This measure was framed on the report of the Commissioners; and was designed, as the hon. Secretary declared, not to retrench the authority or the dignity of the Corporation, but to render it practically more fit to exercise the functions which it possessed to fulfil. For this purpose, it was proposed to remodel the constitution of the civic assembly of the metropolis according to a scheme which Sir George described in much detail, so as to render it conformable to the general system created by the Municipal Corporations Act, retaining at the same time many of the distinctive features which it at present possessed. The judicial functions intrusted to the Lord Mayor and Aldermen were also to be considerably modified, and the anomalous rights enjoyed by them, and which often interfered with the freedom of trade, to be altogether abolished. Among the other changes, the conservancy of the Thames would be transferred to a board, of which the First Lord of the Admiralty and the Vice-President of the Board of Trade were to be members. The control of the City Police he intended to leave, as at present, in the hands of the civic corporation; but the criminal jurisdiction of the City Police Courts was to be exercised by stipendiary magistrates appointed upon the same principle as the other members of the metropolitan magistracy. After a few remarks from Sir J. Duke, Mr. Williams, and Mr. Masterton, leave was given to bring in the bill.

A Select Committee was appointed to inquire what temporary laws had lately expired or were about to expire.

The CHANCELLOR of the EXCHEQUER obtained leave to bring in a bill to continue for a further limited period the composition paid to certain bankers who had ceased to issue bank-notes.

The report from the Committee of Supply was brought up and agreed to.

DUTY ON FIRE INSURANCES.—The House having gone into Committee on Fire Insurances, the CHANCELLOR of the EXCHEQUER moved a resolution, preliminary to the introduction of a bill, by which he proposed to render the incidence of the stamp-duty levied on fire insurance more strict and extensive. His object was to include the policies at present granted at agency-offices on behalf of foreign companies, so as to protect the English companies from the unfair competition to which they were now exposed. The motion was agreed to after a short conversation, and leave given to introduce a measure on the subject.

### HOUSE OF COMMONS.—WEDNESDAY.

MEDICAL PROFESSION BILL.

On the motion for going into Committee on the Medical Profession Bill, Lord R. GROSVENOR said that amendments varying the very principle of the bill had been placed on the paper only on the previous evening, and he, therefore, suggested that the bill should be postponed, in order to give time for their consideration.

Mr. WALPOLE supported the suggestion, and moved that the Committee on the bill be postponed until next Wednesday.

A discussion of some length ensued as to the propriety of postponement. This was followed by a division, which terminated in favour of the amendment by a majority of 116 to 81, the Government voting against Mr Headlam.

Mr. HEADLAM complained of being thrown overboard by the Government at the last moment. He had not any right to complain, but he had no further information to impart than had been already made public by the daily journals, the official *Gazette*, or the Ministerial announcement in another place. Although the treaty which had been signed would not be published until the ratifications were exchanged, he had himself prepared to answer any inquiries that might be urged on the subject. As many important questions, consequential upon the treaty, remained still for discussion and settlement, it was impossible to say how long Lord Clarendon might be detained in Paris for that purpose.

### HOUSE OF COMMONS. TUESDAY.

THE DEFECTIVE MORTARS.—Mr. MONSELL stated that some explanatory letters had been received from Messrs. Grissell and Co. respecting the defective mortars supplied by their firm to the Ordnance, and the case had been referred to a competent officer to examine and report thereon.

EXECUTION OF BOUSFIELD.—Sir G. GREY, in replying to Lord W. LENNOX, said that a full explanation touching the occurrence which took place at the execution of William Bousfield, on Monday last, had been required by the Government from the Sheriffs of London and Middlesex.

THE CRIMEAN INQUIRY.—Lord PALMERSTON, to a question from Mr. Layard, replied that the Board of General Officers would commence their sittings almost immediately, the delay that had occurred having arisen chiefly from the necessity of arranging certain points of detail, The rules which the Inquiry Board would take were, he intimated, to be left in great measure to the discretion of the officers to whom it was intrusted.

SALARIES OF COUNTY COURT JUDGES.

Mr. ROEBUCK moved an address setting forth an opinion that the salaries of the County Court Judges should be fixed and uniform, and that the rate of such salaries should be £1600 per annum. On the question of principle the hon. and learned gentleman contended that remuneration of functionaries intrusted with the administration of justice should in amount be sufficient to relieve them from all pecuniary anxieties, as well as to secure and maintain the services of competent Judges, and ought at the same time to be fixed by law, and not left to the favour or caprice of the Government. At present he contended the minimum of £1200 was paid to the majority of the Judges of County Courts was inadequate to remunerate them for the duties they were called upon to discharge, while the maximum of £1500 was a boon for which the judicial functionaries in question were obliged to look up to the hands of the Secretary of the Treasury, who had more than once accorded or withheld the favour under the impulse of political or family influences. After enforcing this assertion by referring to the treatment received by his own brother-in-law at the hands of Mr. Wilson, Mr. Roebuck submitted that the adoption of the plan he had proposed was essential to relieve the County Court Judges from the painful and mortifying position in which they were now too often placed.

The motion was seconded by Lord STANLEY.

Sir G. GREY confessed that his own impressions had from the first been in favour of assigning fixed and uniform salaries to the County Court Judges. The salaries of these functionaries, he explained, had originally been derived from fees, which were found to operate with great inequality in the different districts. For this purpose, it was proposed to remodel the constitution of the civic assembly of the metropolis according to a scheme which Sir George described in much detail, so as to render it conformable to the general system created by the Municipal Corporations Act, retaining at the same time many of the distinctive features which it at present possessed. The judicial functions intrusted to the Lord Mayor and Aldermen were also to be considerably modified, and the anomalous rights enjoyed by them, and which often interfered with the freedom of trade, to be altogether abolished. Among the other changes, the conservancy of the Thames would be transferred to a board, of which the First Lord of the Admiralty and the Vice-President of the Board of Trade were to be members. The control of the City Police he intended to leave, as at present, in the hands of the civic corporation; but the criminal jurisdiction of the City Police Courts was to be exercised by stipendiary magistrates appointed upon the same principle as the other members of the metropolitan magistracy. After a few remarks from Sir J. Duke, Mr. Williams, and Mr. Masterton, leave was given to bring in the bill.

A Select Committee was appointed to inquire what temporary laws had lately expired or were about to expire.

The CHANCELLOR of the EXCHEQUER obtained leave to bring in a bill to continue for a further limited period the composition paid to certain bankers who had ceased to issue bank-notes.

The report from the Committee of Supply was brought up and agreed to.

DUTY ON FIRE INSURANCES.—The House having gone into Committee on Fire Insurances, the CHANCELLOR of the EXCHEQUER moved a resolution, preliminary to the introduction of a bill, by which he proposed to render the incidence of the stamp-duty levied on fire insurance more strict and extensive. His object was to include the policies at present granted at agency-offices on behalf of foreign companies, so as to protect the English companies from the unfair competition to which they were now exposed. The motion was agreed to after a short conversation, and leave given to introduce a measure on the subject.

### HOUSE OF COMMONS.—WEDNESDAY.

MEDICAL PROFESSION BILL.

On the motion for going into Committee on the Medical Profession Bill, Lord R. GROSVENOR said that amendments varying the very principle of the bill had been placed on the paper only on the previous evening, and he, therefore, suggested that the bill should be postponed, in order to give time for their consideration.

Mr. WALPOLE supported the suggestion, and moved that the Committee on the bill be postponed until next Wednesday.

A discussion of some length ensued as to the propriety of postponement. This was followed by a division, which terminated in favour of the amendment by a majority of 116 to 81, the Government voting against Mr Headlam.

Mr. HEADLAM complained of being thrown overboard by the Government at the last moment. He had not any right to complain, but he had no further information to impart than had been already made public by the daily journals, the official *Gazette*, or the Ministerial announcement in another place. Although the treaty which had been signed would not be published until the ratifications were exchanged, he had himself prepared to answer any inquiries that might be urged on the subject. As many important questions, consequential upon the treaty, remained still for discussion and settlement, it was impossible to say how long Lord Clarendon might be detained in Paris for that purpose.

Sir G. GREY said that the hon. and learned gentleman had no right to complain. At all events, he must, on the part of the Government, decline to take up the bill.

Mr. WALPOLE observed Mr. Headlam would not abandon the bill, but assent to have it referred to a Select Committee

Mr. BRADY thought Mr Headlam had great reason to complain, for he had every right to anticipate that the bill would be proceeded with, however, had thrown him and the profession also overboard at the last moment.

Sir J. PAKINGTON commented on the conduct of the Government which had supported both sides of the question, and voted against the side which they had at first supported.

The amendment to postpone the bill until Wednesday next was then agreed to.

FACTORIES BILL.

On the second reading of the Factories Bill, Colonel W. PATTEN said the object of the bill was to release proprietors of factories from a strict compliance with the letter of the law relating to the fencing of their machinery in all cases where it was substantially complied with.

Mr COBBETT moved, as an amendment, that the bill be read a second time that day six months. The hon. and learned gentleman contended that the result of the repeal of the existing law would be a large increase of accidents to factory operatives.

Lord J. MANNERS seconded the amendment, and warned the House that the bill was only the first step in that course of retrograde legislation which the Millocracy Association was endeavouring to bring about.

Mr. M. GIBSON supported the second reading of the bill, contending that it was impossible to fence all mill-gearing, and, of course, impossible to comply with the law as recently laid down by the Court of Queen's Bench.

Sir G. GREY said if the existing law could be enforced it should not be interfered with; but it appeared there was not only an uncertainty as to the law itself, but it was also asserted that it was impossible literally to comply with it. It was clear that according to the law as laid down by the Court of Queen's Bench all mill-gearing should be fenced; but it was equally certain that some portions of that gearing could not be fenced. He would not object to the second reading of the bill if Colonel W. Patten would agree that the bill should be altered only so far as related to that portion of the mill-gearing which was unlikely to lead to danger if unfenced.

Lord STANLEY said he would, on the part of his hon. and gallant friend, at once agree to the proposed modification.

Mr. HARDY contended that the law upon the subject was clear enough, for it had been settled by the Court of Queen's Bench

Mr. MUNTZ recommended Mr. Cobbett to accept the modification suggested by Sir George Grey.

Mr. CHEETHAM supported the bill.

Mr. BROTHERTON said he entirely agreed in what had fallen from Sir G. Grey, and would therefore support the second reading of the bill.

Colonel DUNNE spoke in favour of the bill.

Mr. M CHARLES seconded the motion.

The House then divided on the question of the adjournment, which was negatived by a majority of 119 to 59.

It being now seven minutes to six o'clock, the debate was necessarily adjourned in compliance with the standing order.

NEW WRITS.—Mr. Keogh has received a new writ for Athlone, in the room of Mr. Keogh, who has accepted the office of one of her Majesty's Judges in Ireland; also a new writ for Ennis, in the room of Mr. J. D. Fitzgerald, who has accepted the office of her Majesty's Attorney-General for Ireland.

### HOUSE OF LORDS.—THURSDAY.

The Earl of SHAFTESBURY gave notice of his intention, upon the return of the Earl of Clarendon, to move an Address to her Majesty for the appointment of a Select Committee to inquire into the nature of the British Consular Service within the Turkish empire.

The Delamere Forest Bill, and the Secretary to the Poor-law Commissioners (Ireland) Bill, were severally read a third time and passed.

The Earl of ALBEMARLE moved for a series of returns in reference to the system of torture practised in the Madras Presidency, in connection with the collection of the revenue.—The Duke of ARGYLL assented to the motion, which was then agreed to.

### HOUSE OF COMMONS.—THURSDAY.

Mr. MIALL gave notice that, on the 22nd inst., he should call attention to the temporal provision made by law for the support of religious worship in Ireland.

GREECE.—Mr. EWART inquired whether any measures were being adopted to relieve English commerce from the export duties of Greece which were so much complained of?—Lord PALMERSTON, in reply, said that efforts had been made for that purpose, but without success; and he was afraid there was no present hope of success, as, owing to the administrative incapacity of those who now ruled in Greece, no person's property was safe, except at a distance of three miles from the coast, between Athens and the Piræus, which was patrolled night and day by detachments of French cavalry (Laughter).

THE ARMISTICE.—Lord PALMERSTON, in reply to Mr. Mitchell, said that the armistice was yesterday extended to the sea as well as to the land; and, consequently, the blockade of Russian ports in the Baltic would cease. He could not, however, say whether British ships could at present enter Russian ports without risk of seizure.

Mr. H. BERKELEY gave notice that on the 22nd inst. he would make his usual motion on the subject of the Ballot.

TRANSPORTATION

Mr. SCOTT moved for a Select Committee to inquire how far, and in what direction, recent legislation, in substituting other punishments for transportation, had influenced the existing amount of crime. He contended that it had influenced it to a serious extent, and he thought that the whole subject involved in penal servitude and the ticket-of-leave system ought to be thoroughly investigated by Parliament.

Mr. L. DAVIS seconded the motion, believing that the ticket-of-leave system had proved a failure, and that the only means of checking crime, which now kept pace with the increase of population, was to return to transportation to some distant penal colony.

Sir G. GREY moved an amendment to the effect that a Select Committee be appointed to inquire into the operation of the Act 16 and 17 Vict., cap. 99, intituled "An Act to Substitute in Certain Cases other Punishment in lieu of Transportation." The object in view was of a practical character, and ought, therefore, to be specific and defined. He denied that crime had increased since the adoption of the ticket-of-leave system; and declared that the result of the proposed inquiry would show that great exaggeration prevailed in the public mind on this subject.

Sir J. PAKINGTON supported the original motion, considering that it would be unwise to exclude from inquiry the policy of reviving transportation. He was by no means satisfied with the working of the Act of 1853.

Mr. LABOUCHERE defended the measure which abolished transportation, upon the ground of the opposition offered to its continuance by the colonies.

Mr. ADDERLEY urged that inquiry would be premature, but pressed for further explanation as to the future intentions of Ministers with regard to tickets-of-leave, and the disposal of criminals sentenced to secondary punishments. With regard to the increase of crime, the best prevention would be educational and reformatory measures.

After some further discussion, in which Mr. Baines, Mr Newdegate, Sir Stafford Northcote, and Mr. S. Fitzgerald took part, Sir G. Grey suggested that Mr. Scott the propriety of withdrawing his motion, and of allowing the amendment to stand as a substantive motion, with the addition of the word "provisions," so that the inquiry would then be one into the provisions and operation of the law.

Mr. SCOTT having assented, Sir G. Grey's motion, as amended, was agreed to.

Mr. MALINS obtained leave to introduce a bill to abolish all distinctions between specialty and simple contract debts.

The ATTORNEY-GENERAL obtained leave to introduce a bill to amend the law relating to the Criminal Appropriation of Trust Property held by persons as trustees or bailees. The object of the measure was to make persons guilty of a malappropriation of such property criminally responsible.

Sir J. SHELLEY obtained leave to introduce a bill to amend the law with respect to the election of Directors of Joint Stock Banks in England.

Mr. BOUVERIE obtained leave to introduce a bill to amend the law relating to the relief of the poor.

On the motion of Mr. A. PELLATT, the Draughts on Bankers Bill was read a second time.

The Married Women's Reversionary Interest Bill passed through Committee.

## *NAVAL AND MILITARY INTELLIGENCE.*

THE MILITARY BOARD OF INQUIRY.

The board of military officers appointed to inquire into the conduct of those officers implicated in the report of Sir J. M'Neil and Col. Tulloch, commenced their duties on Thursday morning in the great hall, Chelsea.

At half-past eleven o'clock the following general officers forming the board took their seats at the table:—Sir Alex. Woodford (President), Lord Rokeby, General Brown, Sir John Bell, General Peel, M.P., General Estcourt, and General Sir George Buckley.

The Judge-Advocate (the Right. Hon. C. P. Villiers, M.P.) read the Royal warrant appointing a board, and stating the purpose for which it had been instituted; and next, a letter from Lord Palmerston to Lord Panmure, informing him officially of the appointment of the Commission and the scope and nature of its inquiry.

The Judge-Advocate then read the regulations, which stated that the proceedings of the Board would be conducted, as near as possible, with the practice of military courts of inquiry. Evidence might be given in writing or verbally. The Court was not empowered to examine witnesses on oath. Every military witness would be at liberty to decline making any statement that might afterwards be made the subject of a charge for a court-martial against him, but that having done so it might be used against him. The cases of persons whose conduct had to be inquired into would be taken separately.

The Board, after a short consultation, decided that the Earl of Lucan's case should be taken first, and directed that summonses should be forthwith sent to him and his witnesses, requiring his attendance on Monday next.

The Court will sit daily, after Monday next, from eleven a.m. until four p.m.

MAJOR-GENERAL MACINTOSH, K.H., commanding the troops in the Ionian Islands, has resigned, and will be succeeded in April by Major-General Shrapnel, late of the Grenadier Guards.

By a general regimental order, just issued from the Adjutant-General's Office at Woolwich, commanding officers, at home and on foreign stations, are informed that the following books for the use of officers of the Royal Artillery are now in course of issue, and already been supplied thereto can be had on application at the Adjutant-General's office: and on an officer joining a station, from leave or otherwise, the commanding officer will be pleased to make application for these books, provided they are not in the possession of such officer:—viz., "Carbine Drill," "Dress Regulations," and "Local Standing Orders for the Royal Artillery at Woolwich."

The news of peace has not resulted in any demonstration of rejoicing, either on the part of the Government authorities or the inhabitants of Woolwich. The general feeling amongst the latter is, that, unless some very good terms have been made, the war should have continued another year. It is expected that, after the ratification of the treaty, an order from the War-office will arrive for a grand display of fireworks in the Royal Arsenal marshes. The *Plymouth Mail* says the Government will not for some time to come any immediate reduction in our military forces. As far as the Navy is concerned the paying off will be confined almost exclusively to ships which have overrun or completed the usual period of commission. The several divisions of gun-boats will be maintained and stationed in the ports assigned them, where they will be "drilled" as frequently as circumstances will admit. The forces on the several naval stations remain as before the outbreak of war will be now again increased. It is also said that each of the principal dockyards will have stationed at it four effective screw line-of-battle ships, instead of the present guard ships. It is probable that the *James Watt* and *Exmouth* will be two of the four allotted to this port (Plymouth). The number of men entered for continuous service, we understand, now amounts to 37,000—to find employment for whom, with the ships (appendages), will necessarily require the Admiralty to keep a good number of ships in commission.

ORDERS have been issued to recruiting parties to enlist men in future not less than five feet five in height, instead of five feet four. The future men for the household brigade of infantry has been raised to five feet eight inches.

THE fleet now collected at Spithead, in Portsmouth harbour, and at the Motherbank exceeds by far the whole Baltic fleet in 1854; and by the 16th instant for which, with the exception of a few steamers, will be in the possession of such officers:—viz., "Carbine Drill," "Dress Regulations," and "Local Standing Orders for the Royal Artillery at Woolwich."

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

We went on Wednesday last, in common with fashionable London, to the late Colonel Sibthorp's house, on the south side of Eaton-square, No. 46. We have before hinted that the defunct M.P. for Lincoln was a constant attendant at auction-rooms, a collector of china, and of the refined marine-stores. He bought liberally and promiscuously. The fame of his collection had got beyond Wardour-street, Christie and Manson, and Sotheby and Wilkinson. We were assured that his collection was good. We had reason to believe it was good, and—we found it not up to promise. Lady Fallsey (we sink her Ladyship's title as in Burke) happily described it as "a very fatiguing collection." The most knowing and intellectual dealer in London spoke of it with a wink "as very poor, with a sprinkling of good." Some

demon whispered Sibthorp had a taste.

The fact is, the dear Colonel bought without discrimination. Lord Raphaelware spoke of his old friend as "a collector by habit;" as a collector without knowledge; as a rusher into auction-rooms, bidding violently, and buying thoughtlessly. His Lordship's description of his friend was perfectly true. Some twenty articles set aside, and the whole nine days' sale may be described as an auction such as any two dealers in London could get up with the utmost ease. The plots are the drawings, are veritable Art-Union prizes! But then there are prizes! In the dining-room observe (lot 133) "A very handsome silver Monteith, or Punchbowl," of the age of Anne, noble in look, capacious in size, heavy in its unalloyed ounces. What shall we bid for it? "Forty pounds, Mr. Christie, to begin with—just to set you going." "Thank you!" exclaims Mr. Christie, and on the biddings ran. Secrets were whispered on Wednesday about that bowl. Some one (and he is always well informed) assured us that it was one of the Kit-Kat Collection; whereupon another equally well-informed friend surmised that this (and he looked reverentially at it) was, "doubtless without question," the bowl out of which the now celebrated custom of toasting hadits origin; and that out of this "Monteith" bowl the health of the girl Mary Pierrepoint was given by the proud Duke of Somerset, and warmly drunk to by all the Whigs constituting the celebrated Kit-Kat Club. Mary Pierrepoint was a lovely girl: she was and is everybody's Lady Mary Wortley Montague. We almost fall in with our friend's surmise.

Never heed what Lady Fallsey says and we record, but go and see "the Sibthorp Collection," as Messrs. Christie and Manson describe it in their gilt-covered two-shilling catalogue of eighty octavo pages. Old "Sibby" had, somehow or another, knocked down to him a few very choice things. There is a Pallasy plate in the forthcoming sale (lot 661, which Messrs. C. and M. properly describe as "A group of pike and other fish, with foliage, on a dish," and do not dignify with capitals; but which we, in common with all present, must describe as one of the very best Pallasy plates we have ever seen. Never was pike, jack, "[illegible]rged drawn more to the life than on this oval plate. What a chara[illegible]g illustration (plate, we mean) it would make to the "Complete Angler" of Izaak Walton and Charles Cotton! "Twenty guineas to begin, Mr. Christie." "In two places," Mr. Christie, with his winning smile, replies.

We lately served with pleasure on the honour of .C.B., and its attendant knighthood, bestowed on Colonel Rawlinson, and we have now to record that this gallant and accomplished officer has just been nominated to the vacant directorship in the East India Company. This will add a further link of affection between the country of Clive, Munro, and Malcolm and the country in which those great men were born. The new Director, the accomplished antiquary—the gallant officer—was till yesterday only a Captain in his own regiment; a Captain under "John Company." This wise appointment will delight the three presidencies.

The Literary Fund difficulty is not easily settled. Authors (and they will be heard) complain that the Duke of Cambridge, who takes the chair on the approaching anniversary dinner, is not the man to be in the chair on such an occasion. No one agrees who should be the person. Surely, the objections to his Royal Highness are a little exaggerated. Where will the objectors find "a Duke of Cambridge of the middle classes"? Authors, it is said, do not live by dedications—authors do not require patrons. An anniversary dinner for authors is surely something perfectly preposterous. Authors, it is said, are well off. With more reason it is asserted that we have too many authors. Cannot this "Fund" matter be settled by some one not on the part of the committee? What says our clever contemporary, the *Saturday Review*? What reply shall we have from Mr. Calcraft, the member for Shrewsbury, in his phalanx, the onslaught which authors make against publishers, booksellers, printers, stationers, papermakers, bookbinders, and even stitchers?

We have chronicled the wise appointment of Sir Henry Rawlinson, and we dip our pen in fresh ink to record the pleasure we have felt in hearing that Mr. Kaye, long an able servant of the East India Company, is about to be appointed (if he is not already appointed) to an important office in the treasury of Leadenhall-street. When will the Treasury in Downing street do as much for the Kayes of the civil service of the Crown?

We are told that the Trustees of the British Museum are about to expend the munificent sum of ten pounds in restoring the monument at Chelsea covering the ashes of Sir Hans Sloane. "Old Mortality," represented by Sir Walter Scott, would weep over the neglected condition of that monumental urn. I think what our American brethren must think of English-men, Scotchmen, Irishmen, and Trustees. The best—yes, the largest—pair of Gulliver spectacles—nay, the best-made pair of London spectacles—would fail in deciphering the name of "Hans Sloane" on that neglected urn covering the ashes of so noble a man. What do we owe to Sir Hans Sloane? We owe the uncurted gift of a noble collection of rare things in every branch of art and science. We owe to Sir Hans a collection of curiosities that Messrs. Christie and Manson would retire from business on the percentage of its sale. To Sir Hans Sloane (whose monument we neglect for the value of fifty dollars) we are indebted—[illegible]. Pray, Mr. Wilson, of the Treasury, out of the *savings* on the voted amount for the restoration of the statue of Charles I. at Charing-cross, expend a ten-pound note on dear Sir Hans Sloane, a munificent benefactor to the public, and founder of the British Museum.

There has been some very idle talk this week in the House of Commons about the frescoes in the Lords by English artists. One member (at least) expressed his regret that foreign artists had not been preferred to English artists. This reminds us of an anecdote of Queen Anne which has escaped Walpole, and may, therefore, be included in the class of odds and ends aptly described by Mr. Timbs as "Things not generally known:"—"When Queen Anne was informed that foreign artists were anxious to compete with English artists for the decoration of St. Paul's, she asked if there was any great difference in the merits of the candidates; and, being answered in the negative, declared that in that case she preferred employing her own subjects." Old Benjamin West had heard this story of "Brandy Nan," and sent it to Mr. Prince Hoare, who has preserved it in his Academic Annals.

EAST INDIA FINANCE ACCOUNT.—An account respecting the annual territorial revenues and disbursements of the East India Company for the years 1851-52, 1852-53, 1853-54, and 1854-55 (estimated) has been published. It contains very comprehensive statements regarding the different presidencies, from which we gather that, during the four years named, the net revenue of India amounted in English money to £20,404,230 in 1851-52; £20,947,425 in 1852-53, £20,328,862 in 1853-54; and (estimated) £20 171,450 in 1854-55. The total charges on these years were, successively, £19,572,965, £20 529,168, £19,272,979, and £20,018,150. There was thus in 1851-52 an increase of income over expenditure of £531,265; in 1852-53 the increase amounted to the sum of £424,257. In 1853-54, however, there was a deficit of £3,044,117; and, according to the estimate for 1854-55, this deficit was further increased to the sum of £3,543,710.

## CHESS.

### TO CORRESPONDENTS.

CHESS.—The new series of the *Amateur Chess Magazine* is to be under the management of [illegible] of the original editor, Mr. G. H. Stanley, who will have the assistance of all the strong players of all the most able Chess Clubs in town except the United Service. What has become of that name of the London Club, and to whom all contributions in this country may be addressed will be shortly announced.

W. M. S.—PLAY IN PARIS. The match between MM. St. Amant and De Rivière, in which the former gives the odds of the Pawn and Move, has not yet terminated. A considerable number of games have been played between them, but as yet no victory has been declared. The last game, however, which has been brought to a close—the score at the end giving to—

M. De Rivière, . . . . . 7 | Herr Schulten, . . . . . 6

In addition to these sitting events in the saloon of the *Cercle des Echecs*, a spirited little tournament has been organised by the frequenters of the Café de la Régence, which MM. Le Roi, Tassilieri, Rousseau, and Preti at their head. Twenty-four games were played on Tuesday last, when M. Clinc, the second to M. Martin, was declared the first prize was there awarded.

VILNEUVE, Brussels. A problem from you has been received, but not yet examined.

CHESS IN AUSTRALIA. By a letter from [illegible] we learn that an old correspondent now resident in Melbourne, we are sorry to say, [illegible] going to make no more important figure among the amusements [illegible] of that we are told the inhabitants, with the benevolent [illegible] purchased to give a prize of the one guinea to the party who first played a game to a Chess problem. The success—for such on either was it—but no successful were the candidates that no less than 540 were remitted, as the proceeds of this simple experiment to the governors of the hospital! Public spirit [illegible] an example which was to be behind the Queen [illegible] in which the Patron of Victoria is expected to take part, and he hints at the formation of a Chess-club as a thing of certain accomplishment during [illegible].

G. P.—For the correct solution of Mr. Hall and's beautiful Problem, which was published with [illegible] and not [illegible].

H. M.—[illegible] received, and [illegible] for the excellent specimens you are kind enough to send us. They [illegible] Problem, and [illegible] answering [illegible] The Problem marked has been received [illegible].

C. A. M. of Cheltenham [illegible] to the Problem in No. [illegible] received together this week, [illegible] carefully looked over.

A. B. [illegible] of Edinburgh.—The Problems submitted are now under examination.

[illegible] A. M. Nos. [illegible] of the Problems in the ILLUSTRATED LONDON NEWS has ever been made.

CAMBRIDGE.—You have printed the Solution of the Indian Problem more than [illegible] the key to it is *B to Q B square*.

A. B. C. of Cambridge.—A neat little Problem.

JOHN B. JAMES.—We believe it cannot possibly be solved under five moves, but will look through it again.

F. W.—Your question on the subject of the Pawn and two moves open or shall be answered, if possible, in our [illegible].

T. KENTISH.—The Game shall have more [illegible] whenever we can find room for it.

SOLUTION OF PROBLEM No. 629, by F. R., of Norwich; Mr. [illegible] of Hanworth; Mr. [illegible] of Folkestone; J. S. L.; J. A. M.; J. M. Inglis, Dover; Dover Game Hands; J. B. W.; F. H.; S. W. G. O., Rathbone, John de Kenton, Kormes, &c. F., M. D. P., Hexeter, A. Holloway, N. C., H. P. G., are correct.

SOLUTIONS OF PROBLEM No. 630, by F. R., of Norwich; T. Simpson, Dorcas, Kormes, Omega, J. B. W., Mood, Little Ernest Simpleton, Rumble, F. H. S., B. T. W., Alpha, A. C. and Lynx, H. P., S. W. T., S. S., Boston, A. Holloway, are correct. All others are wrong.

### SOLUTION OF PROBLEM NO 630.

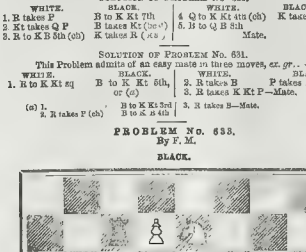
By F. M.

BLACK.



WHITE.

White to play, and mate in three moves.

### GAME OF CHESS BY ELECTRIC TELEGRAPH BETWEEN MANCHESTER AND LIVERPOOL.

MANY of your readers will recollect that in a volumes of the ILLUSTRATED LONDON NEWS for 1846 (vol. vi.) there appeared an account of an interesting game of Chess played between London and Gosport. This was soon after the first electric telegraph had been laid down to any distance in England. Since that period various attempts have been made to repeat the experiment, and at one time the arrangements were all but completed for a match between London and Paris; but the difficulty of securing an uninterrupted medium of communication proved insurmountable, and the idea was postponed. That which was ultimately effected between the Metropolis and any far-removed town (a wire exclusively reserved for the combatants) appears to have been granted readily by the telegraph authorities between Manchester and Liverpool, and we have now the pleasure of recording the result, in the shape of a very entertaining game. Before doing so, however, we are tempted to transcribe the following account of the battle by an eye-witness at the Manchester Terminus, which appears in the *Manchester Guardian* of March the 29th:—

"The Consultation Game at Chess, between the Manchester and Liverpool clubs, transmitted to and fro by electric telegraph, commenced yesterday afternoon at five o'clock. The strict game was to be played, and for no stake. The Manchester players were—Messrs. D. Val. Kupping, jun., Cohen, Pindar, and Hasche: the umpire representing Liverpool at Manchester being Mr. M. B. Wood. The Liverpool players were—Messrs. Sparke, Sinclair, Soul, Throckmorton, and Jones: the umpire for Manchester at Liverpool being Mr. Morecroft. The first move was to be drawn for, but as the hands were more than thirty miles apart it had to be guessed for. It was arranged that one of the Liverpool players should hold in one hand a black pawn, and in the other a white one—the latter to have the first move. Manchester guessed the hand that held the black pawn, consequently Liverpool won the move. The game excited considerable interest in both towns; and, through the courtesy of the Telegraph Company, the clubs were accommodated with rooms at each terminus, so as to be in more proximity with the wires. By this means the move made on the board at the Manchester telegraph office, for instance, could be known to the Liverpool players, even before the messenger dispatched from the same office could carry the intelligence of the move to the other members of the Manchester club, who were assembled in Ridgefield, a walk of three minutes. In these rooms of the club many persons interested in Chess assembled, the club having given a public invitation, and numerous players had their boards, following the course of the game. In Liverpool also the rooms of the club, which are in the Medical Institution, Mount Pleasant, were open to the public. Up to eight o'clock only eleven moves had taken place—those made by the Liverpool club occupying much more time than was taken by the Manchester gentlemen. At one o'clock the moves numbered 28, when the game was drawn by mutual consent, having lasted eight hours."

### THE GAME.

(*Giuoco Piano Opening*)

| LIVERPOOL. *White.* | MANCHESTER. *Black.* | LIVERPOOL. *White.* | MANCHESTER. *Black.* |
|---|---|---|---|

| 13. B to K 2nd | B to K Kt 3rd | 27. P to Q Kt 4th | K to B 2nd |
| 14. B takes K Kt | Q takes B | 28. Q to K 2nd | K to K 2nd |

And the game terminated by agreement in a drawn battle.

## MUSIC.

THE ITALIAN OPERA AT HER MAJESTY'S THEATRE. Mr. Lumley has issued an advertisement, from which we learn that Her Majesty's Theatre is to be opened in May; "that engagements of great interest have been effected both in opera and ballet; and that the prospectus will shortly be issued." Mr. Lumley deserves encouragement and success, and we cordially hope that he will obtain both.

SEVERAL paragraphs of "gossip" have appeared in the daily papers during the week respecting the doings of Mr. Gye at the Lyceum Theatre. Mr. Gye is to open the Lyceum, retaining the principal members of his last year's company, who are complimented by him for their generosity of their conduct. His orchestra and chorus are to be accommodated to the size of the theatre. How this is to be done is not explained. Some say that a great number of them will be discharged; others conjecture (for it is all conjecture) that they will all be retained, but employed according to the factory practice of *half-time*, being divided into relays, and performing alternately. Mr. Gye enumerates the operas to be performed; from which it appears that he will make no attempt to continue the gorgeous spectacles of Covent Garden, but will confine himself to pieces suitable to the small dimensions of the theatre.

THE NEW Philharmonic Society commenced their fifth season on Wednesday evening. They have transferred their "whereabouts" from Exeter-hall to the Hanover-square Rooms, and they have done well. Exeter-hall is the last place we have for oratorios, but is by no means fitted for miscellaneous concerts of secular music. The concert of Wednesday evening consisted of the following selection:—

PART I.

| | | | | |
|---|---|---|---|---|
| Overture—Egmont | .. | .. | .. | Beethoven. |
| Air—"Il mio bel dolce Gelo" (Pirata) | .. | .. | .. | Bellenoven. |
| Sinfonia—Vivi il mio cuore, with orchestra | .. | .. | .. | Mozart. |
| Litany, in E flat | .. | .. | .. | M. Bach. |
| Symphony, No 4 | .. | .. | .. | Beethoven. |

PART II.

| | | | | |
|---|---|---|---|---|
| Overture—Der Freischutz | .. | .. | .. | Weber |
| Duet and Air (Faust) | .. | .. | .. | Spohr. |
| Concerto, No 1—pianoforte | .. | .. | .. | Mendelssohn. |
| Chorus of Dervishes | .. | .. | .. | Beethoven. |
| Overture Domino Noir | .. | .. | .. | Auber |

Conductor, Dr. Wylde.

This programme included two pieces of peculiar interest. Mozart's sinfonia for violin and viola, and his Litany in E—both of them having on this occasion been performed for the first time in this country. Both of them are posthumous. They were among the mass of Mozart's manuscripts which, after his death, were sold by his widow to the music-publishing firm of André, at Offenbach, on whose shelves they remained till within this year or two, when they were at length published. Both of them appear to have been early works of the author; and it would rather seem, from their having remained for years in his portfolio, and been found there at his death, that he himself had not intended to give them to the world. They are, however, interesting relics. Both of them are strongly marked with his clear, melodious, and graceful style; but they are both somewhat antiquated in construction and phraseology, and do not evince the strength and grandeur of his more matured compositions. The "Litany" is probably an earlier work than the "Sinfonia." It is very unequal; and its airs (of which there are two, both for a soprano voice, and admirably sung by Madame Rudersdorff) are in the diffuse Italian style of that day, and loaded with formal roulades and divisions. The best portion of the work is the choruses, which contain grand passages; but they were very imperfectly executed. All the rest of the concert consisted of things quite familiar to the musical public. The orchestra was large and powerful; but it was often far from steady; and in the great orchestral piece of the evening—Beethoven's magnificent symphony in B flat—the effect there was no lack of vigour, there was a want of that delicacy and precision, and of those contrasts of light and shade, which so great a work demands. The room was full, and the audience showed by their applause that they were well satisfied with the concert.

MR. HULLAH has commenced, at St. Martin's Hall, a series of what he calls Orchestral Concerts, to be given every Saturday evening during the season. The first took place on Saturday last. In undertaking these concerts Mr. Hullah has departed widely from the object which he has so long and so ably pursued the cultivation of vocal harmony. He has partly adopted, and partly invented, a method of tuition whereby large popular classes are instructed in the art of reading and singing choral music; and the chief purpose of the concerts hitherto given by him has been to show, by practical results, the efficacy and success of his system under his own administration. These concerts have deservedly drawn large and increasing audiences, for they give the public an opportunity of hearing on very moderate terms the orators and other choral works of the greatest masters, sung (chiefly by his own pupils) in a manner calculated to satisfy the most critical judgment. These new Orchestral Concerts cannot be said to have any peculiar object, except perhaps that of cheapness. The public have many means of hearing the best orchestral music in the best manner; but hitherto it has only been at Jullien's Promenade Concerts that it has been possible to hear the symphonies of Mozart and Beethoven for a shilling. Mr. Hullah offers the same entertainment, at the same price, in a place where it can be enjoyed more quietly, and without being mixed up with noisy waltzes, polkas, and quadrilles. He has mustered a first-rate orchestra, between fifty and sixty strong, selected from the bands of the Italian Opera and the Philharmonic Society. On Saturday he gave an excellent selection of orchestral pieces, including Mozart's famous symphony in C, known by the name of "Jupiter," and interspersed with some agreeable vocal music. The hall was well filled, and the scheme promises to be successful.

THE MUSICAL UNION gave its first concert of this season at Willis's Rooms, on Tuesday morning. The performance was most brilliant, and the crowded and fashionable aspect of the room betokened undiminished prosperity. The peculiar feature of this concert was the appearance of M. Franchomme, the celebrated violoncellist, whom Mr. Ella, with his usual spirit, brought from Paris for the sole purpose of performing on this occasion. M. Franchomme having left London the same evening. He had never been in this country before; a some-what remarkable circumstance, considering the high position he has so long held in the musical world. He is the first violoncello at the grand concerts of the Conservatoire, a professor in the Academy, and a Chevalier of the Legion of Honour. Among those who had not heard him in Paris his appearance excited great expectations, which were fully gratified. The music was selected with a special view to the advantageous display of his powers. It consisted of two Quartets for two violins, viola, and violoncello—Mozart's seventh in D, and Beethoven's first in F; and of Mendelssohn's Trio for the pianoforte, violin, and violoncello, in D minor. In all of these pieces (as our musical readers know) the violoncello part is prominent, and peculiarly interesting, being full of beautiful *cantabile* passages for this instrument. M. Franchomme played exquisitely; and all agreed that they had never heard a more charming combination of tone, execution, and expression. His instrument sounded like the finest tenor voice like Mario warbling a cavatina. His fellow-performers were Sainton, Carrodus, Hill, and Hallé, and certainly we have never heard more delicious playing. In addition to the above concerted pieces M. Franchomme played a solo, consisting of a slow movement of his own and one of Chopin's pianoforte pieces, arranged for the violoncello. Judging from all we heard, it seems to us that Franchomme's characteristic features are grace, delicacy, and pathetic expression. We have met with more forcible performers, but in those qualities we are inclined to think he is unrivalled.

## THE THEATRES, &c.

SADLER'S WELLS.—"The Courier of Lyons" was performed on Monday, and continued on Monday evenings. Mr. Leigh Murray was announced for *Dubosc* and *Lesurques*, but for some reason replied from the two characters, which have accordingly been supported by Mr. Elgar, a rising young actor. On Friday Mr. Anderson appeared in *Rob Roy*, and Miss Edith Heraud in *Helen Macgregor*.

ADELPHI.—On Tuesday evening this theatre was suddenly closed, owing to the indisposition of Mr. Wright, who was taken ill soon after his arrival. Mr. Webster appeared on Wednesday in Tartuffe."

*Punch* was seized in Paris last week for the first time for several months. Its offence was the picture representing the Emperor standing by the cradle of his infant, while a figure of Liberty in the act of coming forward says, "May I not be godmother?"

M. Rodenbach, the blind member of the Belgian Chamber of Representatives, has received from the Sultan the rank of Commander of the Order of the Medjidie.

In consequence of a Ministerial order from Paris, from 6000 to 7000 troops are to be immediately embarked for Algeria.

## THE HON. G. M. DALLAS, THE NEW AMERICAN MINISTER.

THE HON. GEORGE MIFFLIN DALLAS, the successor to Mr. Buchanan, as United States' Minister at the Court of St. James's, arrived at Liverpool by the steamer *Atlantic* on Thursday, the 13th ult. During his stay in Liverpool he has had a foretaste of the fraternal welcome which England eagerly extends to the Ambassador of the United States, coming among us at a moment of grave controversy between the two Governments. Immediately after his arrival at the hotel at Liverpool, the American Chamber of Commerce, consisting of merchants in the Transatlantic trade, waited upon him by a deputation to express congratulations and to declare a significant desire "to co-operate with his Excellency in all measures tending to promote the common interests of commerce, and to strengthen the bonds of amity so long happily existing between the two countries." In his reply Mr. Dallas said that he was confident "that the cause of difference which now existed between the two countries could soon be amicably arranged, as in his opinion they were not of such a serious character as would or ought to lead to any disturbance of the relationship subsisting between the United States and Great Britain."

Mr. Dallas is one of the most distinguished of the public men of the United States. For some years he has lived in retirement in his native city, Philadelphia, and his name is not familiar; but from 1812 to 1849 he was active and prominent as statesman and diplomatist; in his latter capacity having been before a resident in England, and during that residence (in 1813-14) having likewise been engaged in the business on which he has now come—that of peacemaker. Elected by the Democratic party, with which he has always been identified, he was Vice-President of the United States from 1844 to 1849.

His father, Alexander Dallas, was an eminent lawyer, and was also an active politician, having, under Madison, resolved the office of Secretary to the Treasury. George Dallas was born in 1792, graduated with high honours at Princeton College, studied law in his father's office, and was admitted to the bar in 1813. But he did not practise for some years. Mr Gallatin, who was a member of the commission to negotiate the peace in 1813, under the mediation of the Emperor Alexander, selected him as his private secretary; and in that capacity Mr. Dallas was for a long period at St. Petersburg, and subsequently in London, we believe, as Secretary of Legation. On his return to the United States, after the great European settlement in 1815, he devoted himself to his profession, and in a few years won a high position as a criminal lawyer. In 1825 he was Mayor of Philadelphia, and in General Jackson's Presidency was appointed District Attorney, which post he held till 1831. In that year he was elected a member of the Senate for Pennsylvania, and acquired a strong position in that Assembly. In 1837 he returned again to diplomacy, being selected by Mr. Van Buren as Ambassador to Russia, where he remained for two years. In 1844 he became Vice-President, and when he was succeeded by Mr. Fillmore (subsequently President) he abandoned public affairs, and lived the life of a very quiet citizen. In emerging now from his retirement he may be supposed to have been influenced by a strong sense of duty. The greatest confidence is placed in him by his countrymen; and, as a man of high position, great experience, and great polish, he is admirably qualified for the work he has undertaken in London.

Mr. Dallas's father was Alexander James Dallas, a native of Ireland, who emigrated in early life to the United States. His family is very highly connected, and has from time to time been brought into prominent notice by the literary and scientific talents of its members. Sir George Dallas, whose political writings were so highly appreciated by William Pitt, and his brother, Sir Robert Dallas, Chief Justice of the Common Pleas, were its most distinguished ornaments. Miss Dallas, the Minister's aunt, married Captain Byron, of the English Navy, and was mother of the present and seventh Lord Byron. His eldest brother rose to the rank of Commodore in the American Navy, and his youngest was the late Judge Dallas, of Pittsburg.

THE NEW AMERICAN MINISTER, THE HON. G. M. DALLAS.—FROM A PHOTOGRAPH BY MAYALL.

## THE LORD MAYOR'S DINNER TO MR. BUCHANAN.—A PACIFIC PROPOSAL.

*(From the New York Herald, March 19.)*

THE Lord Mayor of London invited a select circle of leading commercial men (a most significant token) on the 17th ult., to meet Mr. Buchanan, and to testify to him, and through him to the American people, the cordial friendship of the British people. It was unfortunate, indeed, that Mr. Buchanan was invited also by the Queen, on the same day, and was compelled by respect to her Majesty, as the chief of the nation as well as by courtesy, to decline the Lord Mayor's reception. These demonstrations have suggested a plan for settling our dispute with Great Britain, and we lose no time in laying it before the Cabinets of London and Washington.

It is tolerably clear that the Central American controversy will be permitted to remain precisely where it is—both parties adhering to their construction of the Clayton-Bulwer treaty. Meanwhile the matter in dispute is really no concern of England or the United States.

Lord Clarendon has proposed to Mr. Marcy that the differences between the two Governments shall be referred to the decision of a friendly Power, and thus the case stands, and so it is likely to remain. It is not probable that the Washington Cabinet will consent to arbitration, and it is even more unlikely that England will yield to our pressensions. The dispute thus will become chronic, and be permitted, in the hands of politicians on both sides of the water, to disturb the commerce and the industry of the two nations. Neither party is likely to take the initiative of war, and indeed it is not easy to see how it can be made the subject of such an issue in the face of the events occurring in Central America under our own auspices

Meanwhile business of every kind will continue to be conducted by the people of the United States and her Majesty's subjects just as usual. We shall produce and send forward our cotton, rice, wheat, flour, corn, beef, pork, and lard; and we shall receive in return the products of British manufactories, just as we have done for the last twenty years. We shall, too, welcome to our shores great numbers of emigrants from her Majesty's dominions, and they will become citizen producers, good democrats, and faithful adherents of our political and social institutions. We shall advance our frontier limits at the rate of twenty-five miles every year; and our enterprise, overleaping the federal boundaries, will appear here and there, even in Central America.

While these are certain to be practical results on this side of the water, we are equally ready to concede that her Majesty's subjects will be exceedingly active and fruitful of good works on the other side. Against the success of British industry and the well-being of the people of that country we have never had, and never expect to have, reason to complain. We rejoice in their triumphs, and freely and gratefully acknowledge the benefits they have conferred upon us. The two industrial nations, united in the bonds of reciprocal trade, have secured vast good to the human family, and if they are permitted to continue their works they will clearly prove that their beneficent service has but just commenced. It is very remarkable, too, that they are, and ever have been, fast friends, ready to promote the common good by acts of honourable rivalry and emulation

Now, we propose to the Cabinets of London and Washington a reference of the Central American difficulty to the decision of the people of England and the people of the United States. By the theory of the British and federal constitution, the subject matter in dispute distinctly appertains to them. They are the only parties in actual interest—the only parties to be affected by the decision one way or the other

Central America is governed by small nationalities, recognised as independent States by all the world. Neither John Bull nor Brother Jonathan has any business there. Let the people of England, then, and of the United States be free to make terms with the Central American Governments for occupation and citizenship. It is for the latter to fix these conditions, and for the former to determine the advantages and disadvantages thereof, and to govern themselves accordingly. Should they be induced to become inhabitants of that country, it may be counted on as certain that they will greatly improve it in industry and government. The people of England and the United States have one satisfaction in consulting the careers of their voluntary industry: they have never failed to advance the cause of civilisation, social excellence, political equality, and justice.

## LAUNCH OF HER MAJESTY'S DISPATCH GUN-BOAT "VIGILANT" AT BLACKWALL.

IN last week's Number of this Journal we gave an Illustration of the *Wanderer*, the first complete vessel of a new class of dispatch gun-boats which have been lately constructed by eminent shipbuilding firms in the Thames, from designs furnished by the Surveyor of the Navy, Sir Baldwin Walker.

These vessels the most elegant and beautiful specimens of fighting-ships that have ever appeared in our Navy—reflect the greatest credit on all concerned in their build and equipment They are being fast completed at the different dockyards, and by the time of the contemplated review of the fleet by her Majesty many of them will have joined the flotilla of gun-boats at the Motherbank

These vessels are of two classes, differing in size from each other by about 150 tons. The vessel, whose launch at Messrs. Mare and Co.'s, on the 20th ult., we have illustrated this week, is of the second class, of 670 tons burden, 180 feet in length, 28 feet beam, 14 feet depth of hold, and will be propelled by engines of 200-horse power. The most interesting character: three iron mortar-boats had been launched in the Lea by the same firm a few minutes before; and immediately after the launch of the *Vigilant*, which was named by Miss Armytage, the sister of the gentleman who will command her, the company present were conducted to another part of Messrs Mare's immense building-yard, to witness the launch of the *Alacrity*, a sister vessel. In a period of fifteen minutes the five vessels were successfully afloat, the attendance of visitors was very numerous, and the whole affair gave the greatest satisfaction.

The expedition displayed in forwarding the iron mortar boats reflects the greatest credit on Messrs Westwood and Baillie, the managing representatives on the works for the assignees, as also for the very able and efficient manner in which they have conducted the business of this extensive establishment, now giving employment to over 3000 persons.

On the 5th April (to-day) will be launched from the same yard a large iron screw-steamer, the *Genova*, of 2000 tons burden, being built for the Genoese and Transatlantic Steam Packet Company, accompanied by six other iron mortar-boats, and an iron paddle-boat for the South-Western Railway Company, to be named the *Haure*.

The *Genova* is at present so far advanced towards completion that an excellent idea can be formed of her. She is a perfect model of beauty and naval architecture, both in finish and mould, her lines being laid down with great care and judgment, and she promises great speed. The *Genova* will be followed by the *Torino*, also 2000 tons burden; and sister-ships to the *Victor Emmanuel* and the *Count di Cavour*, recently built by Messrs. Mare and Co., for his Sardinian Majesty. The gun-boats, and twelve remaining vessels, will be launched from the same yard in the course of three weeks.

LAUNCH OF H.M. DISPATCH GUN-BOAT "VIGILANT," AT MESSRS. MARE AND CO.'S, BLACKWALL.

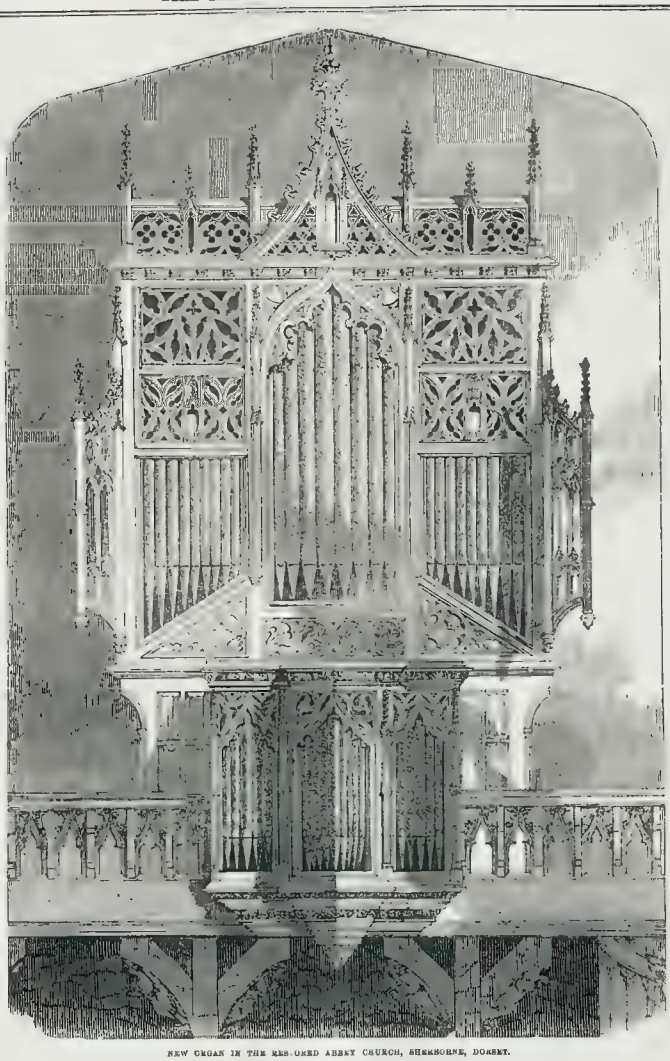
## THE NEW ORGAN FOR THE ABBEY CHURCH, SHERBORNE.

The combined ceremonies of the opening of the splendid instrument just completed by Messrs. Gray and Davison, and the laying of the foundation-stone of the new Church Schools, attracted an immense concourse of persons on Wednesday, the 26th ult., from many parts of Dorsetshire and the adjacent county. At the commencement of the service every seat was occupied; and nearly two thousand persons must have been within the building. The clergy attended in large numbers. Amongst them were the Hon. and Rev. A. Byron, the Hon. and Rev. W. H. Scott, the Rev. Prebendary Grant, the Rev. Prebendary J. S. Coles, the Rev. Dr. Symonds, the Rev. Messrs. Easternmare, Blennerhasett, Messiter, Wickens, Heale, Phabayn, Allford, Lane, Lagden, Horton, Brancker, Mackay, &c.

Full cathedral service was performed. The Hon. and Rev. A. Byron intoned the prayers; the Hon. and Rev. W. H. Scott and the Rev. G. W. Horton read the lessons; the Revs. Robert Grant and — Buttermare officiated at the Communion; and the Rev. Edwd. Harston, the Vicar, preached an appropriate sermon from the 4th chapter of Ephesians, 4th verse—"There is one body and one spirit." At the conclusion of service, which lasted two hours and three-quarters, a collection was made, amounting to £51 17s. The musical services were performed by the members of the Salisbury Cathedral Choir, Mr. Richardson presiding at the organ. The services were—"Venite," Gregorian; "Te Deum" and "Jubilate," Clark in F; Psalms, Fitzherbert in G (double); Anthem, Quartet, "Plead Thou my cause," and chorus, "I will give thanks," Mozart. This was very beautifully sung; and in the concluding voluntary Mr. Richardson brought out the capabilities of the grand instrument with considerable effect.

The afternoon services were performed by the church choir; Mr. Morgan, the new organist, presiding. The preacher was the Rev. H. D. Harper. The afternoon's collection was £14 3s.

The Organ is inclosed in a very handsome carved oak case, designed by the late Mr. R. C. Carpenter, the architect, engaged upon the restoration of the church. It is in keeping with the chief architectural features of the building. Projecting from the gallery is the choir organ, which, though considered a part of the organ, is an organ *per se*, being placed in its own case in front of the great organ, and being separated from it by a space in which the organist sits. This organ rests upon a beautifully-carved oak plinth and finial; and, jutting out from the gallery, like an oriel, it forms a most pleasing embellishment, relieving the chief erection of the flatness which gives to large organs, in spite of their front pipes, the appearance of gigantic ornamental cupboards. The pipes are white and gold, and vermilion and gold, alternated; in the larger organ they are green and gold, and white and gold, alternated; the diapering, which is handsome and appropriate, was designed by Mr. W. Slater (Mr. Carpenter's successor). Standing in a gallery, supported by carved oak pillars, the instrument has a magnificent appearance; and, when age has darkened and enriched the oak around it, it will be hand-somer than it is even now in all its newness. In its position it is a splendid ornament in front of an unsightly wall; whilst it harmonises with and balances the gorgeous stained window in the chapel in the opposite transept.



NEW ORGAN IN THE RESTORED ABBEY CHURCH, SHERBORNE, DORSET.

This instrument, though spoken of as *an* organ, is in truth an elaborate combination of instruments, comprehending no less than *four* distinct organs—the choir organ (of which we have just spoken), the great organ, the pedal organ, and the swell organ. It possesses a movement called the tremulant, which is copied from the Madeleine at Paris. This consists of a valved exhaust-box, attached to the wind trunk of the swell, which, in working, occasions a rapid exhaustion of air, producing a tremulous movement, from which its name is derived. With these appliances, in addition to the ordinary resources of a first-rate organ, it may be easily conceived that immense powers are placed within the reach of an accomplished player to pass with instant rapidity from the most stirring, sonorous, and lofty peals to notes the most plaintive, trembling, and pathetic. The swell is powerful and brilliant; the increasing pressure is applied to the stops of the great organ. From middle C sharp upwar is the wind is half an inch heavier than on the lower octaves, and its importance is manifest by the remarkably fine tone preserved throughout the pessune of this manual. The choir is a gem throughout; it is long since we have heard anything to approach the exquisite grace and purity of the dulciana, the gamba, the gemshorn, and metal flute. The instrument has three manuals from C C to F, and possesses the following stops:—Great Organ—quintaton bass and double dulciana, 16 feet; open diapason, 8 feet; prepared for No. 2 8 feet; stop diapason bass, 8 feet; clarionet flute treble, 8 feet; octave, 4 feet; twelfth, 3 feet; super-octave, 2 feet; sesquialtra, 3 ranks; mixture, 2 ranks; posaune, 8 feet; clarion, 4 feet. Choir Organ—Gamba, 8 feet; salcional, 8 feet; stopped diapason bass, 8 feet, clarionet flute treble, 8 feet; gemshorn, 4 feet; flute, 4 feet; super octave, 2 feet; piccolo, 2 feet; cremona, 8 feet. Swell Organ—Bourdon, 16 feet open diapason, 16 feet; kemulophon, 8 feet; stopped diapason, 8 feet; octave, 4 feet; super-octave, 2 feet; sesquialtra, 3 ranks; prepared for contra fgotto, 16 feet; cornopean, 8 feet; oboe, 8 feet; clarion, 4 feet; tremulant, as in the Madeleine at Paris. Pedal Organ—Open diapason, 16 feet; bourdon 16 feet; octave (metal), 8 feet; super-octave (ditto), 4 feet; trombone (ditto), 16 feet. Couplers—Great manual, to pedals; choir manual, to pedals; swell manual, to choir; swell to great organ (unison); swell to ditto (super-octave). All the mechanism of the interior is remarkable for simplicity.

This substantial addition to the attractions of this splendid church will cost upwards of 1000 guinea; and three and a half years have elapsed since the idea of it was first originated.

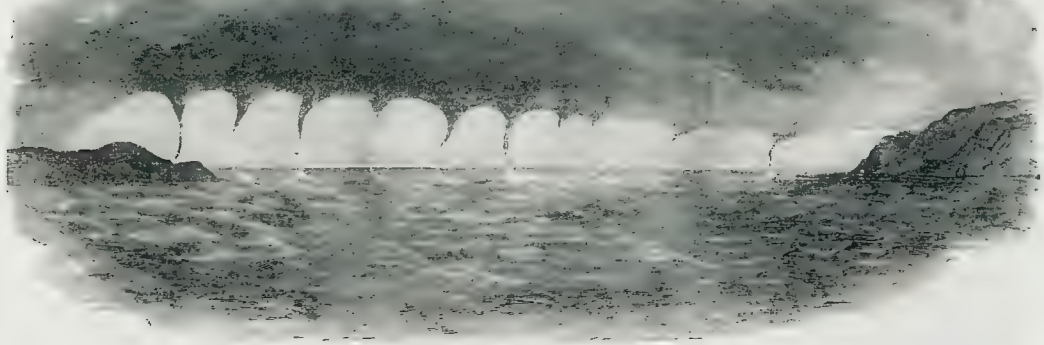
The Abbey Church of St. Mary, Sherborne, is mainly in the Perpendicular style, the tower arches being Norman, of very bold and massive character. The four windows in the north aisle are in the Decorated style; the rest in Perpendicular.

The roof, which is of groined stone throughout (with the exception of that in the south transept, which is of oak), presents a very fine specimen of fan vaulting, the bosses and capitals being richly carved and illuminated with various colours.

The stained glass is by Hardman; subjects—west window, the Kings and Prophets of the Old Testament; north windows, the Twelve Apostles; large window in the south transept, the Te Deum. This last window is one of exquisite beauty of colouring, from the designs of the late Mr. A. W. Pugin.

The fabric, and especially the tower piers and roofs, having become seriously dilapidated, the restoration was undertaken by the parish in 1848—part of the money having been raised by rate, the remainder given by Lord Digby and a numerous body of subscribers, both in the parish, the neighbourhood, and the county, as well as by an appeal to those friends at a distance.

The nave and transepts have been completely restored, at an expense of nearly £14,000. The choir (the roofs of the roof of which present a frightful spectacle) yet remain to be done.



WATERSPOUTS SEEN OFF MALTA.—(SEE NEXT PAGE.)

## EXTRAORDINARY WATERSPOUT.

*(From a Correspondent.)*

I SEND you a sketch of a phenomenon seen on our recent outward passage to Malta, of which the following is a brief account:—Lat. 37 14 N. long. 8 40 E.; March 2. The weather was just what one may expect in the Mediterranean at this time of year—the sea smooth, the sky cloudless, and the atmosphere calm. At one p.m. a large spreading cloud arose in the north-east, sprinkling a few drops of rain in passing, and then, gradually contracting, it settled low down in the horizon astern. The two centre waterspouts (of enormous size) formed first, the others followed in rapid succession, and in five minutes no fewer than ten were distinctly visible at the same time, and proceeding from the same cloud. Their distance from us was six miles. They were visible a quarter of an hour, and then passed away to the south-west, two of them bursting on the land. The land to the right in the Sketch is Galita, and the spot at the top of land to the left, C. Senat, Africa. The base of the cloud was very dark, gradually shaded off towards the top. HARRY CAIGER.

## *NATIONAL SPORTS.*

THE Doncaster Meeting was rather below its usual mark, although the struggles for its two great races were uncommonly severe and close. Eighteen out of sixty-four "Young Hopefuls" came to the post; and, after half an hour had been cut to waste by false starts, the four first finished will in a space of little more than half a length. There was a still closer finish between four of this race in 1853; and the natural inference is that the form of the whole field is not very high. John Osborne won the £355 in this instance with Saunterer; and as his Augury—who is the very image of old Maid of Mashum—ran remarkably well at Catterick, when there was far from fair play, Ashgill seems to be entitled to the notorious G. oculus Esuriens achieved his maiden race; and a daughter of Inheritress, who has not been very lucky at the stud so far, was also among the winners. Mr. Morris's stable kept up their charter over this their favourite ground, as Cossey repeated his last year's performance in the Handicap, although he only pulled through by a head from Bracken. Gamekeeper finished third, which makes Hospodar's running with him at 21 lb. at Catterick a better performance than it was thought at the time, as the easy overthrow of Cossey by Young Shirtmaker on that meeting is the greatest disappointment the Yorkshiremen have had this season; but Sharpshooter and two other Voltigeurs are still to make their essay in the "red spots." It is rather an odd coincidence that the first of the Young Dutchman that ever ran had also to contend itself with a fifth place.

Croxton Park—which is the conventional wind-up of the Belvoir, Cottesmore, and Quorn seasons—comes off on Tuesday and Wednesday, and has a very fair list, though the Farmers' Plate entry is painfully poor. Maulds is in the Two-year old Stakes, and Tilly in the Belvoir Castle Stakes; and, if his owner (who is said to have been forestalled in the betting for the City and Suburban) scratches Fisherman at Epsom, she will have to meet him here with his 7 lb. allowance. The licensed weal are will have a strong day's racing at Epsom on Thursday. The Two-year-old Stakes has thirty-five subscribers; and Jessie, sister to Adine, and very nice-looking in her yearling days, is among the "dark" ones. Forty-one out of seventy-nine have accepted for the Great Metropolitan, in which Mishap (7 st. 4 lb.) is capitally in, and Cannobie a great favourite, and at least nine or ten (including Fisherman (5 st. 9 lb.) are very favourably weighted among the fifty-five in the City and Suburban Handicap.

The steeplechases of the week will be "legion," and comprise five at Birmingham, on Monday; three at Pembroke, on Tuesday; two at Taufield, on Wednesday; and two at Hornsastle, and three at Kilmarnock, on Thursday. The Irish ones consist of four at Skerries, on Monday; three at Boyle, on Thursday; and nine at the Kildare Hunt, on Thursday and Friday.

The rumours of retirements among masters of hounds are becoming very rife, and the honour does not seem nearly so much coveted as of yore. Lord Hopetoun will, it is said, give up the Fytchley, and bring his hunters) the sixty-five couples of hounds belong to the hunt) to Tattersall's in May; and Lord H. Thynne retires from the Blackmore Vale and Major Douglas from the Forfar and Kincardineshire countries. On the other hand, it is said that Mr. T. Philipps will take the Craven; and although a noble Duke declines to protect the foxes on his broad acres, which number 10,000 in the very heart of the Bedale country, Mr. Ernest Duncombe will probably be enabled to put the hunt on its legs again, although its old supporters are sadly lukewarm. The late Bedale pack, along with twenty couples purchased at the late Sir R. Sutton's sale, and ten couple of unentered hounds from Lord Fitzhardige's kennel, will, we hear, principally compose the packs, with which Earl Stamford will open the Quorn next autumn. Lord Fitzhardige's hounds have had especially good sport this year in the Berkeley country, and up to the middle of March they had killed fifty-three and a half brace of foxes. It is rather a remarkable fact that out of fifty brace of the above, at the death of which the huntsman was up, thirty-three brace were dog-foxes, and only seventeen brace vixens.

The reports from the stables of many of the Derby nags are the reverse of flattering, albeit many Newmarket men are still very sweet on their Verdant Green, who, if it is rumoured, make his début in appearance in the Rowley Mile Plate at the ensuing Craven meeting. Fly-by-Night's position strengthens, but his shoulder is described as thick at the point, and his whole frame still "the cob." Wentworth's legs, like Polmondre's and West Langton's, are sadly out of condition, and he is said to be growing, in emulation of Vandermeulin, to the height of a dromedary. Birdin-hand was heavily laid against for the Two Thousand, at Doncaster, and many good judges know that he will never see either that or the Derby post, and that he has been twice lame since Christmas. All reports must, however, be received with the greatest caution; but, although it is thought that the breaking of his stable at Middleham was little more than an old wife's story, hardly any one has a stone to throw at the Derby pretensions of Ellington, which are of a most modest order. Still no horse is regarded with any great amount of confidence, and there has seldom been, to all present seeming, a more open Derby.

The weather is still too cold to tempt the boating-men and cricketers out in any great force; and we know at present of no rowing match except that between Cannon and Watkins, for £30 a side, on Tuesday, from Woolwich to Limehouse. Box has now the care of the Brighton ground, and Diver and John Lillywhite have the Hugbean eleven in charge; while Winchester has engaged Lafju; Cheltenham, James Lillywhite; Marlborough, Dean; and Hailey bury, Lockyer.

RATAPLAN AND IRONSIDES.—Sir, in your paper of Saturday, March 22, under the heading "Newmarket," you speak of a mare "*Ironsides*" as having walked a certain distance in such a time. This, I think, is wrong. In *Bell's Life* of Saturday, or rather Sunday last, the same thing is noticed, with this exception, that "*Ironsides*" is a name given to a noted Kensington, which is not a mare. I am, &c., W. H. B. [*Note.*—The mistake occurred through an error of the press: our reporter wrote "man" and not "mare."]

### DONCASTER SPRING MEETING.—TUESDAY.

Trial Stakes.—Dresser, 1. Bird in the Bush, 2
Municipal Stakes.—Inheritress f., 1. Miss Allen, 2.
Chesterfield Plate.—Omer Pacha, 1. Gracculus Esuriens, 2.
Hopeful Stakes.—Saunterer, 1. Magnifier, 2.
Sheffield and Rotherham Plate.—Gracculus Esuriens, 1. Plausible, 2.
Badsworth Hunt Cup.—Venture, 1. Life Preserver, 2.

WEDNESDAY

Scurry Stakes.—Ariel, 1. Weathercock, 2.
Doncaster Handicap Stakes.—Cossey, 1. Bracken, 2.
Juvenile Selling Stakes.—Adamas, 1. Sebastopol, 2.
Innkeepers' Stakes.—Inheritress f., 1. Valtory, 2.
Betting-room Stakes.—Saunterer walked over.

### TATTERSALL'S.—THURSDAY EVENING.

CITY AND SUBURBAN.—4 to 1 agst Fisherman (5); 8 to 1 agst St. Hubert (6).
METROPOLITAN.—5 to 2 agst Cannobie (5); 10 to 1 agst Middleton (6); 10 to 1 agst The Earl (5).
CHESTER CUP. 25 to 1 agst Scythian (5); 40 to 1 agst Canadian (5).
TWO THOUSAND GUINEAS.—7 to 1 agst Fly-by-Night (8); 8 to 1 agst Yellow Jack (8); 11 to 1 agst Exchequer (8); 16 to 1 agst Star Two (off.)
DERBY.—7 to 1 on the field (off.); 1000 to 30 agst Cannobie (wanted); 50 to 1 agst Enchanter; 100 to 1 agst Skyscraper (5).

RAILWAYS IN RUSSIA.—The hopes of approaching peace, which continue to increase in confidence, have naturally awakened anew the bad state of our internal means of communication in every day more and more seriously felt by the commercial and manufacturing world. A single line of railway, well constructed, would render more service than the millions of carts drawn by oxen which annually traverse our dreary plains, leaving one-half of their teams behind them. Unfortunately, with the exception of the railway from the Prussian frontier, the rapid completion of which has been ordered, the only one for which surveys have been commanded by Government is that which will go from Moscow to Odessa, passing through the rich districts of Orel, Toula, Kourach, &c. When companies shall have been formed for the establishment of other lines, they will, it is said, be also bound to render the Dwina and the Dnieper navigable.—*Letter from St. Petersburg, March 18.*

## THE TREE OF PEACE.

FAST by the Thracian Bosphorus, within an Eastern glade,
Dying, a Christian warrior slept beneath an olive's shade;
His latest cup of glory drained, his last of battles won,
Small space away his dropped sword lay, lit by the Moslem sun.

Sudden, a wild tumultuous shout resounded fast and far,
And a pealing clang of arms rang out, which spoke not of the war:
Burst on his soul that trumpet-roll—half rose he from his rest;
And Death took pause a little while to mark his heaving breast.

Not to his gleaming sword he looked; no martial impulse stirred
The passing spirit of the brave; but Peace, thy magic word!
And, turning to his own loved West, where low the sunbeams lay,
His dying voice in joy he poured upon the dying day:—

"Silence yon brazen trumpet! Call my children to my knee,
And let me feel the winds that steal along the olive-tree:
It is the same blest tree of Peace round which the breezes curled
When rose its form above the storm that wrecked our ancient world.

"Sound not one note! the trumpet's throat that summoned to the fray
Shall never wake rock, hill, or brake, to hail the better day:
The God-sent pledge of Peace of old, the ripe green bough of love,
Never the croaking raven bore,—its herald was the dove.

"To weeping nations lift the cry of this redeeming birth:
Let leaping babes proclaim it round to all the listening earth.
The cannon's roar shall burst no more through Stamboul's Golden Horn:
But voices soft shall sound aloft—' This day a Peace is born!'

"O, gracious Tree! O, living Tree! that budded on the Mount
Where stood of man the sacrifice—of Peace the source and fount;
Shower gent'y down thy sunny crown of leaves on each dear head
Bowed humbly 'neath thine ancient boughs to hail the blessing shed!

"Come hither in your beauty, O beloved of my heart—
Ye' olive branches' of my soul stern war would rend apart!
The vital trunk that gave ye birth to spread its roots shall cease,
But ye shall flourish greenly still, and bear the fruits of Peace.

"My course is run—my day is done, but of this Peace, I ween,
These scions fair shall nobly dare to keep the memory green:
What heed I though the mists of death are gathering in mine eye—
For this I fought, for this I bled, for this I gladly die!"

E. L. HERVEY.

## CITY STATUES.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

IN your paper of the 29th instant you pay me the compliment of saying I had the lion's share in inducing corporate sympathies in favour of art, more especially as regards the commissions given for the decoration of the Egyptian Hall with statues by modern sculptors. This is an error. I only co-operated with others, whose combined efforts resulted in the accomplishment of a most desirable object. The "lion's share" is due to Mr. Bunning, the City architect, whose ceaseless anxiety has been to make the City worthy the metropolis of the empire, and, if the authorities would entertain a little self-denial in creature comforts, a thousand or two pounds per annum might be saved and expended in paintings for the adornment of the fine vestibule and other rooms of the Mansion-house.—I am, Sir, yours faithfully,

City, March 31. FRANCIS BENNOCH

FRATERNISATION AT TRAKTIR-BRIDGE.—Riding along our own side (the left bank) we got ahead of the Cossacks, and conversing, group by group, with the Russians more to the right, picked up some pocketcheroots, on most of which a small body of Russian troops had been quartered, resting thousands of Infidel Turks. In addition to kerchiefs, we also obtained purses, pipes, cakes, and other odds and ends, some of them curious enough. One Cossack threw over his sword! During the most confidential chat with a Russian lady, a sun lady, said to be a daughter of General Luders, was present for a very short time in a landau drawn by four grey ponies, and escorted by a Greek guard. No ladies were among the Russians on Sunday. By-the-by, I then observed very many kilted Greeks among the Russians. They were surly, and would scarcely exchange a word with the Allies. Opposite the Russian side of the Inkerman valley stands a fine house, standing in front of water but a few feet deep, which it is necessary to wade in order to reach the real left bank of the Tchernaya. Here the scene on Sunday was most exciting. On the right bank stood a Russian priest in full canonicals, and half a dozen officers on horseback. Two of them spoke fluently English, French, and German, and all spoke French. The conversation was carried on, on both sides, as if the speakers had been firm friends of long standing. Seeing the Russian officers mixing among the men on both sides, Russians and Allies, stripped off their boots and stockings, and crossed the river at all points where not too deep. Soon, on the English side, Russians, Greeks, and Scouts, were seen dancing round huge fires, and whooping, and yelling, and laughing, and enjoying themselves as if such battles as Inkerman and Alma had never occurred, and were but myths.—*Letter from the Camp.*

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE tone of the Consol Market has been precisely as we have long since anticipated. The certain prospects of peace induced jobbers to speculate upon a higher range of value during the two previous weeks, until prices advanced to a point beyond which, in the existing state of the Money Market, it would appear unsafe to operate. The proclamation of peace, therefore, has had very little effect on the market. No transactions of magnitude have taken place in it, and the improvement in the quotations has been only about one-half per cent.

There has been a very active demand for money, chiefly to meet engagements falling due on the 4th, and the Bank rate of interest remains unchanged. In Lombard street discounts are difficult to obtain, except upon first-class paper, and that at 5½ to 6½ per cent, short dated. The impression, however, is that we shall shortly have money cheaper, as we learn that most of the recent imports of gold have gone into the Bank of England, that the demand on account of the Bank of France has almost wholly ceased, and that bullion is rapidly returning to the Continent. We must bear in mind, however, that there are two instalments of the new English Loan yet to be met; and that the shipments of silver to India and China, notwithstanding the two have advices of a fall in the exchange at Canton, will be extensive for some time. However, it is probable that future arrivals of silver from Mexico will be nearly sufficient to meet the demand in question; consequently it will be unnecessary to send gold to the Continent to purchase silver. One step towards cheaper money is the important fact that the Bank of France has reduced its rate of discount from 6 to 5 per cent.

The imports of bullion this week have been £27,000 from the Continent, £565,000—£60,000 being in gold—from Mexico and the West Indies; £160,000 from New York, and £700 from Portugal. The value of the gold known to be on passage from Australia is £500,000.

On Monday the national Stocks were firm, as follows:—Three per Cent Consols, for Money, 92½ to 93½; Ditto, for the Account, 93 to 93¼; Exchequer Bills—March, 2s. to 5s. prem.; Ditto, June, 1s. dis. to 1s. prem.; Exchequer Bonds, 98¾; and Consols Scrip, ¾ to ⅞ prem. The transactions on the following day were less numerous:—The Three per Cents were 93 to 93⅜ for Money, and 93¼ ⅜ for Time; Consols Scrip, ⅝ prem.; Exchequer Bills—March, 4s. to 1s. prem.; Ditto, June, 2s. prem. to par; Ditto, Bonds, 98⅜ to 98½. On Wednesday very little change took place in the quotations, with a steady market:—The Three per Cent Consols marked 92½ to 93⅛ for Transfer, and 93¼ ⅜ for Account; India Bonds, under £1000, 10s., 8s., 5s. dis.; Exchequer Bills—March, 1s. prem.; Ditto, June, par to 2 dis. The small Bonds were 5s. prem.; Exchequer Bonds, 98⅜ to 98½. There was scarcely any movement in the market on Thursday:—Consols for Money were 92½ to 93⅛; and for Account, 93 to 93⅜; Exchequer Bills, June, 2s. dis. to par; Exchequer Bonds, 98⅜; India Bonds, under £1000, were 5s. dis. We must bear in mind, however, that there are two instalments of the new English Loan yet to be met; and that the shipments of silver to India and China, notwithstanding the two have advices of a fall in the exchange at Canton, will be extensive for some time. However, it is probable that future arrivals of silver from Mexico will be nearly sufficient to meet the demand in question; consequently it will be unnecessary to send gold to the Continent to purchase silver. One step towards cheaper money is the important fact that the Bank of France has reduced its rate of discount from 6 to 5 per cent.

The imports of bullion this week have been £27,000 from the Continent, £565,000—£60,000 being in gold—from Mexico and the West Indies; £160,000 from New York, and £700 from Portugal. The value of the gold known to be on passage from Australia is £500,000.

On Monday the national Stocks were firm, as follows:—Three per Cent Consols, for Money, 92½ to 93⅛; Ditto, for the Account, 93 to 93⅜; Exchequer Bills—March, 2s. to 5s. prem.; Ditto, June, 1s. dis. to 1s. prem.; Exchequer Bonds, 98⅜; and Consols Scrip, ⅝ to ⅞ prem. The transactions on the following day were less numerous:—The Three per Cents were 93 to 93⅜ for Money, and 93¼ ⅜ for Time; Consols Scrip, ⅝ prem.; Exchequer Bills—March, 4s. to 1s. prem.; Ditto, June, 2s. prem. to par; Ditto, Bonds, 98⅜ to 98½. On Wednesday very little change took place in the quotations, with a steady market:—The Three per Cent Consols marked 92½ to 93⅛ for Transfer, and 93¼ ⅜ for Account; India Bonds, under £1000, 10s., 8s., 5s. dis.; Exchequer Bills—March, 1s. prem.; Ditto, June, par to 2 dis. The small Bonds were 5s. prem.; Exchequer Bonds, 98⅜ to 98½. There was scarcely any movement in the market on Thursday:—Consols for Money were 92½ to 93⅛; and for Account, 93 to 93⅜; Exchequer Bills, June, 2s. dis. to par; Exchequer Bonds, 98⅜; India Bonds, under £1000, were 5s. dis. Much disappointment was felt in some quarters when it became known that the Bank rate of discount remained unaltered.

The Board of Trade returns of the import and export trade of the United Kingdom, during the first two months of the present year, show very favourable results, when compared with the corresponding period in 1855. The total value of our shipments for the first two months of the present year exceeds the figures show how little our commerce has been injured by the war, now brought to a conclusion.

The transactions in the Foreign House have been important, and a steady advance has taken place in prices generally. We have had dealings in Buenos Ayres Six per Cents, 89½; Ecuador Two-and-a-Half per Cents, 14¾; Mexican Three per Cents, 20¾ to 21¼; Peruvian Four-and-a-Half per Cents, 79 ex div.; Ditto, Three per Cents, 57; Portuguese, Four per Cents, 42¾; Sardinian Five per Cents, 94½ to 96; Spanish Three per Cents, 45¾ to 46¾; Ditto, New Deferred, 20¾; Ditto, Passive, 7¾; Turkish Six per Cents, 103½; Ditto, Four per Cents (guaranteed), 101¾ to 102; Belgian Four-and-a-Half per Cents, 96; Chilian Six per Cents, 101 ex div.; Danish Three per Cents, 84¾ ex div.; Russian Five per Cents, 103¾ ex div.; Ditto Four-and-a-Half per Cents, 94¼; Venezuelan One-and-a-Half per Cents, 13; Dutch Two-and-a-Half per Cents, 61½ to 61¾; Ditto, Four per Cents, 94 ex div. We understand that a new Russian Loan for a larger amount will shortly make its appearance.

Mining Shares have been very firm as to prices, but the transactions in them have been but moderate: Linares have marked 7⅞; Santiago de Cuba, 3⅞; Tin Cash, 4¾; and United Mexican, 4.

There has been an improved inquiry for Joint-Stock Bank Shares, as follows: —Australasia, 99; Bank of Egypt, 6⅞; Bank of London, 66½; Commercial of London, 30¼; London Chartered of Australia, 17; Ditto, New, 2; London and County, 32½; London Joint-Stock, 30½; London and Paris, 7⅞; New South Wales, 20¾; Oriental, 24½; Ottoman Bank, 6⅞; South Australia, 40⅜; Union of Australia, 71¼; Union of London, 27; Western Bank of London, 23¾.

All Miscellaneous Securities have continued very firm:—Australian Agricultural have realised 27; Australian Royal Mail, 4¾; Canada Company's Bonds, 142; Ditto, Government Six per Cents, 109½; Crystal Palace, 5¾; Electric Telegraph, 83; General Screw Steam Shipping Company, 1⅝; London General Omnibus Company, 3⅝; London Docks, 99⅝; North of Europe Steam, 13⅜; Oriental Gas, 1⅛; Ditto, New Shares, 4 prem.; Peel River Land and Mineral, 2¾; Scottish Australian Investment, 1⅞; Ditto, New, 1¼; St. Katharine Dock, 88.

Rather an important rise has taken place in the value of most Railway Shares, and the market generally has ruled very firm. The total "calls" for the present month are increased to £2,432,802; but at least three-fourths of that amount are upon foreign lines. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 37½; Ambergate, Nottingham, and Boston, 48; Caledonian, 61¾ ex div.; Chester and Holyhead, 15½; East Anglian, 10; Eastern Counties, 12½; Eastern Union, 8 Stock, 9½; Edinburgh and Glasgow, 69; Edinburgh, Perth, and Dundee, 80; Great Northern, 94½; Ditto, A Stock, 80; Ditto, B Stock, 135¾; Great Southern and Western (Ireland), 105½; Great Western, 65; Lancashire and Carlisle, 71¾; Lancashire and Yorkshire, 87¾; London and Blackwall, 7¾; London and Brighton, 104; London and North-Western, 101¾; Ditto, Fifths, 1⅝; Ditto, Eighths, 1⅝; London and South-Western, 86¾; Manchester, Sheffield, and Lincolnshire, 39; Midland, 75; Norfolk, 53; North British, 34½; North-Eastern—Berwick, 79½; Ditto, York, 86½; Ditto, Leeds, 16; North Staffordshire, 11½; North and South-Western Junction, 10¾; Oxford, Worcester, and Wolverhampton, 32½; South Central, 60 ex div.; South-Eastern, 72½; Waterford and Kilkenny, 4¾.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 104½; London and Thirsk, 113; Preston and Wyre, 45; Rugeley, Hixhun, and Shugrush Stock, 135.

PREFERENCE SHARES.—Cork and Bandon, 4½; Eastern Counties, New Six per Cent, 5⅝; Edinburgh, Perth, and Dundee, 71; Great Northern Five per Cent, 117; Great Western Charter Shares, 15; Lancashire and Yorkshire, Six per Cent, 136; Manchester, Sheffield, and Lincolnshire Six per Cent, 114½; Midland Consolidated, 138; North British, 109¾ ex div.; North-Eastern—Berwick, 99½; North Staffordshire, 21; Oxford, Worcester, and Wolverhampton, 95¾.

FOREIGN.—Antwerp and Rotterdam, 8¾; Belgian Eastern Junction, 2⅜; Dutch Rhenish, 12⅜; East Indian Extension, 22½; Grand Trunk of Canada, A issue, 14½; Ditto, 17½; Great Indian Peninsula, 21½; Ditto, New, 8½; Great Luxembourg Consolidated Shares, 7; Ditto, Obligations, 3½; Great Western of Canada, 26⅝; Ditto, New, 8; Madras, 20½; Namur and Liege, with interest, 7⅞; Paris and Lyons, 51½; Sambre and Meuse, 14⅜; West Flanders, 4⅝.

*Friday Afternoon.*

There have been very few transactions in the Consol Market to-day. In prices, however, scarcely any change has taken place. The rates per Cents for Money have been 92⅝ to 93; and for the Account, 93 to 93⅜. Foreign Bonds and Railway Shares are firm.

## *THE MARKETS.*

CORN EXCHANGE (Friday).—Very moderate supplies of English wheat—2250 quarters—have arrived coastwise this week. Fresh up to day the receipts by land-carriage were small, and those of samples of both grain and wheat was laid on. For most kinds we had a steady demand, and, in some instances, prices were the turn higher than on Monday. Foreign wheat—the supply of which was by no means extensive—was steady, but the business done in it was very moderate, at Monday's quotations. There was a firm demand for barley and the quotations had an upward tendency. Malt was firm, but not essentially altered, at late rates. Oats and beans, peas, and flour commanded very full price.

*Arrivals of British Grain.*—English wheat, 2010; barley, 1071; oats, 350; flour, 740 sacks. Irish: oats, 4650. Foreign wheat, 1910; oats, 6800

*Arrivals of Wheat.*—Essex and Kent, 1500 qrs.; ditto white, 650; Suffolk and Suffolk, red, 650; to 70s.; rye, 42s.; grinding barley, 23s. to 23s.; distilling ditto, 28s. to 29s.; malting ditto, 40s. to 43s.; Ancaster and Norfolk malt, 70s. to 76s.; brown ditto, 68s. to 70s.; Lincolnshire and Yorkshire ditto, 72s. to 76s.; Chevalier, 74s. to 78s.; Lincolnshire feed oats, 23s. to 25s.; potato ditto, 27s. to 28s.; Youghal and Cork, black, 23s. to 25s.; ditto, white, 25s. to 26s.; fine ditto, 27s. to 30s.; grey peas, 34s. to 35s.; maple, 42s. to 44s.; white, 40s. to 42s.; beans, 44s. to 44s. per quarter. Town-made flour, 37s. to 38s.; Suffolk, 37s. to 40s.; Norfolk and Yorkshire, 41s. to 50s. per 280 lbs. American flour, 32s. to 35s. per sack.

*London Corn Exchange.*—Best wheat commanded the most sale, at fully last week's quotations. Inferior and English, crushing, 66s. to 67s.; Mediterranean, 64s. to 66s.; bonpassed, 56s. to 58s. per quarter. Coriander, 20s. to 22s. per cwt. Brown mustard-seed, 14s. to 16s.; white, 12s. to 13s. per bushel. English rapeseed, 39s. to 40s. per last. Linseed: Calcutta, 56s. to 57s.; Mediterranean and Odessa, 54s. to 55s.; Baltic, 53s. to 54s.; Hull and Lincolnshire feed oats, 23s. to 25s.; potato ditto, 27s. to 28s.; Youghal and Cork, black, 23s. to 25s.; ditto, white, 25s. to 26s.; fine ditto, 27s. to 30s.; grey peas, 34s. to 35s.; maple, 42s. to 44s.; white, 40s. to 42s.; beans, 44s. to 44s. per quarter. Town-made flour, 37s. to 38s.; Suffolk, 37s. to 40s.; Norfolk and Yorkshire, 41s. to 50s. per 280 lbs. American flour is dull at 32s. to 35s. per sack.

*Seeds.*—Linseed has been offered to a moderate extent, at fully last week's quotations. Coriander, English, crushing, 66s. to 67s.; Mediterranean, 64s. to 66s.; bonpassed, 56s. to 58s. per quarter. Coriander, 20s. to 22s. per cwt. Brown mustard-seed, 14s. to 16s.; white, 12s. to 13s. per bushel. English rapeseed, 39s. to 40s. per last. Linseed: Calcutta, 56s. to 57s.; Mediterranean and Odessa, 54s. to 55s.; Baltic, 53s. to 54s.; grinding barley, 23s. to 23s.; distilling ditto, 28s. to 29s.; malting ditto, 40s. to 43s.; Ancaster and Norfolk malt, 70s. to 76s.; brown ditto, 68s. to 70s.; Lincolnshire and Yorkshire ditto, 72s. to 76s.; Chevalier, 74s. to 78s.; Hampshire, 74. Lincolnshire feed oats, 23s. to 25s.; potato ditto, 27s. to 28s.; Youghal and Cork, black, 23s. to 25s.; ditto, white, 25s. to 26s.; fine ditto, 27s. to 30s.; grey peas, 34s. to 35s.; maple, 42s. to 44s.; white, 40s. to 42s.; beans, 44s. to 44s. per quarter. Town-made flour, 37s. to 38s.; Suffolk, 37s. to 40s.; Norfolk and Yorkshire, 41s. to 50s. per 280 lbs. American flour is dull at 32s. to 35s. per sack.

*London Corn Exchange.*—Best wheat commanded the most sale, at fully last week's quotations. Inferior and English, crushing, 66s. to 67s.; Mediterranean, 64s. to 66s.; bonpassed, 56s. to 58s. per quarter. Coriander, 20s. to 22s. per cwt. Brown mustard-seed, 14s. to 16s.; white, 12s. to 13s. per bushel. English rapeseed, 39s. to 40s. per last. Linseed: Calcutta, 56s. to 57s.; Mediterranean and Odessa, 54s. to 55s.; Baltic, 53s. to 54s.; grinding barley, 23s. to 23s.; distilling ditto, 28s. to 29s.; malting ditto, 40s. to 43s.; Ancaster and Norfolk malt, 70s. to 76s.; brown ditto, 68s. to 70s.; Lincolnshire and Yorkshire ditto, 72s. to 76s.; Chevalier, 74s. to 78s.; Hampshire, 74. Lincolnshire feed oats, 23s. to 25s.; potato ditto, 27s. to 28s.; Youghal and Cork, black, 23s. to 25s.; ditto, white, 25s. to 26s.; fine ditto, 27s. to 30s.; grey peas, 34s. to 35s.; maple, 42s. to 44s.; white, 40s. to 42s.; beans, 44s. to 44s. per quarter. Town-made flour, 37s. to 38s.; Suffolk, 37s. to 40s.; Norfolk and Yorkshire, 41s. to 50s. per 280 lbs. American flour is dull at 32s. to 35s. per sack.

*Smithfield Cattle Market.*—Best beasts, 4s. 6d. to 4s. 8d.; second quality, 4s. 2d. to 4s. 4d.; ordinary, 3s. 8d. to 4s.; prime Scots, 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 3s. 4d. to 4s. 4d.; second quality ditto, 4s. 6d. to 4s. 8d.; prime Southdown ditto, 5s. 2d. to 5s. 4d.; large lambs, 6s. 2d. to 6s. 4d.; second quality ditto, 5s. 6d. to 5s. 8d.; prime small ditto, 5s. 10d. to 6s.; large hogs, 3s. 10d. to 4s. 2d.; neat small porkers, 4s. 4d. to 4s. 6d.; lambs, 6s. 6d. to 7s. 6d.; suckling calves, 22s. to 28s.; and quarter old store pigs, 21s. to 27s. each. Total supply: beasts, 912; cows, 132; sheep and lambs, 6360; calves, 140; pigs, 340. Sorely beasts, 44 calves 9.

*Newgate and Leadenhall (Friday).* The trade generally was inactive, as follows. Per 8lbs.: coarse beef, 3s. 6d. to 4s. 8d.; middling ditto, 4s. 4d. to 5s. 4d.; prime large ditto, 5s. 8d. to 6s. 0d.; ditto small ditto, 4s. 2d. to 4s. 6d.; large pork, 3s. 0s. to 3s. 6d.; inferior mutton, 3s. 4d. to 4s. 0d.; middling ditto, 3s. 4d. to 3s. 10d.; prime ditto, 4s. 0d. to 4s. 6d.; veal, 4s. 0d. to 5s. 2d.; small pork, 3s. 10d to 4s. 8d.; lamb, 5s. 4d. to 6s. 6d.

ROBERT HERBERT.

## *THE LONDON GAZETTE.*

FRIDAY, MARCH 28.

BANKRUPTCY ANNULLED.

H. PRING, Bristol, baker and flour-dealer.

BANKRUPTS

WEBSTER'S DICTIONARY.

The Sixth and only Complete New Edition—In one vol. royal 8vo, price 18s., cloth extra.

WEBSTER'S DICTIONARY of the ENGLISH LANGUAGE, revised and enlarged by GOODRICH. NOTICE TO THE PUBLIC.

The Edition of Webster's Dictionary is generally known, and universally acknowledged the best in the English language, is the one originally introduced into this country by the Proprietors of the ILLUSTRATED LONDON NEWS, and by them most extensively circulated. It is now the property of the advertiser, who particularly desires to caution purchasers against the many abridgments now issued, or being issued, purporting to be Webster's Dictionary. They are, for the most part, but garbled reprints of old works; and no five or smaller edition of Mr. Noah Webster's is complete and genuine, unless on the titlepage it bears the imprint of GEORGE ROUTLEDGE and Co., 2, Farringdon-street, London, and 18, Beekman-street, New York.

BOOKS FOR THE COUNTRY.—NEW VOLUME.

In fcap. 8vo, price One Shilling, with cloth cover,

Early in May will be published, to be continued Monthly, price 3s. 6d., No. I. of a Series of

PHOTOGRAPHIC PORTRAITS of LIVING CELEBRITIES with appropriate Biographical Notices, written by HERBERT FRY, Esq.

Each Number will contain one Photograph on paper (in the first style of the art), of the size of eight inches by six inches, mounted on drawing paper by Messrs. De La Rue and Co., in their handsome manner, and will be published, with its Biographical Sketch, in a neat wrapper, price 3s. 6d.

PORTRAIT AND BIOGRAPHY OF PROFESSOR OWEN.

Messrs. MAULL and POLYBLANK, the Artist-Printers and Publishers of this series, are of opinion that the high rank of excellence to which the Photographic Art has now attained will be the means of enabling them to supply recurring Portraits, at moderate price, of great public men, whose history is that of the age in which they live, and whose features may thus be rendered as familiar as their names, and, in due time, be transmitted with their works to posterity.

Messrs. Maull and Polyblank, in proof of their capacity to produce first-class specimens of Photographic Portraiture, have obtained prizes for their exertions attendant upon the series of the Literary and Scientific Portrait Club, which included some of the most eminent men of the present day.

The present series will be of the same size and style as that of the Literary and Scientific Portrait Club, copies of which, being distributed to the members only, may be seen at the Libraries of the Royal Society, the Linnean, Geological, Royal Astronomical, Royal Geographical, and Chemical Societies, and the Artists', 59, Gracechurch street.

59, Gracechurch-street, April, 1856.

WEDDING STATIONERY.—The largest Assortment, Newest Patterns, and latest alterations, at PARKIN and GOTTO'S, 24 and 25, Oxford-street. N.B. Patterns sent post-free.

THE LORD IS MY SHEPHERD: No. II. of a Second Set of Three Sacred Songs. By JOSH. F. HARRIS. 1s. each, or 2s. for the set. 16, Newman-street, Oxford-street; where also the First Set can be obtained.

VERDI'S NEW SONG—WE'LL LAUGH AND SING ALL CARES AWAY, from the celeb ste Opera "La Traviata," performed with immense success three times at Italy Price 2s., post-free All the Music in LA TRAVIATA is pub. and by BOOSEY and SONS, Musical Library, 28, Holles-street

IL TROVATORE, arranged by DIABELLI, as in No 183, PIANISTA, price 2s.; also L'Etoile du Nord, Sonnambula, Norma, Robert le Diable, Dur Freischutz, Don Pasquale, and 50 other operas, 2s. each, overtures and airs; or semi pos.-free for stamps. GAY and CO., 67, Paternoster-row.

NEW SONG, THE OLIVE BRANCH, the Poetry by CAULFIELD; the Music by HARROWAY, R.A. This is going to be the happiest effort of the above talented authors, and is being sung with great success at various concerts.—Also STEPHEN GLOVER'S SONG of PEACE. Fifth edition. Price 2s. each. Postage-free for stamps.—London: D. WILLIAMS, 11, Paternoster-row

NEW SONGS by RICHARD HARVEY (of Dublin), BEAUTIFUL FRANCE and THY SMILE is BEAMING THERE The Poetry of both by ROBERT BUTLER These are two of the most brilliant and pleasing songs yet produced by R. H The Music of both the author will be widely diffused in England by the best comp sitions as it already is in Ireland Price 2s. each, postage-free for stamps.—London: D. WILLIAMS, 11, Paternoster-row

SILKS for the MILLION! SILKS CHEAPER THAN EVER. At STAGG and MANTLE'S, Leicester square and Leicester street.

NEW SPRING GOODS! At STAGG and MANTLE'S, Dress Goods and Silk Mercers, Leicester-square and Leicester-street.

MESSRS. TURNER and TEAKLE invite Ladies' attention to their New and Fashionable STOCK of the following articles, selected from the first Parisian houses

SILKS, SHAWLS, and FLANNELS

MILLINERY and MANTLES

MORNING and EVENING DRESSES

JOUVIN'S PATENT FRENCH KID GLOVES.

377 to 379, Regent-street, London.

REAL SPANISH MANTILLAS.—M. A. BLACKBORNE begs to inform the Nobility and Gentry that he has just received a consignment of the above Mantilla, now so generally used for evening costume on account of its elegant and graceful form. SPANISH DEPOT, 36A, South Audley-street, Grosvenor-square

ZIBELINE.—This entirely New and Elegant MATERIAL for WINTER DRESS is intermediate in texture between the Paramatta and Barège, of rich soft appearance, very durable, and particularly adapted for Spring and Summer wear; obtained "Honourable Mention," at the Paris Exhibition, for Woven Fabrics Sole Agents in England, Messrs. BUCKNALL and SON, 112, Bold-street, Liverpool. Patterns free by post on application

PARASOLS.—The "Persian" Parasol, made entirely without any Seam, of rich chastic Silk, ornamented with Grisette Plaitings, and Fringe, Parisian Shape, Handles of Ivory, Ebony, and Fancy Woods, Price 10s. 6d. Gentlemen's Travelling Dressing-Cases, from 1½ to 50 guineas. Dressing-Bags, from 30s. to 20 guineas. Ladies' and Gentlemen's Portmanteaus, Despatch-Boxes, Writing-Desks, Envelope-Cases, Tablets, Purses, Pocket-Books, Reticule-Bags, Cigar-Cases, Tobacco-Pouches, Pipes, Meerschaum, Amber, and Cherry-wood Mouthpieces, Walking-Canes, Fishing-Rods, Tackle, Guns, Rifles, Pistols, Powder-Flasks, Shot-Belts, Game-Bags, Shooting-Coats, Hats, Caps, Boots, Shoes, Gaiters, Spurs, Hunting-Whips, Saddles, Bridles, Horse-Clothing, Harness, Carriage-Lamps, Portmanteaus, Rugs, Travelling-Bags, Dressing-Cases, Writing-Desks, Despatch-Boxes

# THANK GOD FOR PEACE.

I.

I think the sweet spring-time that soon will come
With shine and shade—intensest smiles and tears—
Will laugh in joy to many an English home
That hath not known a Spring for two sad years.
I think that many little ones there are,
Will feel the world grow holier apace,
While watching melt in dew the cloud of care
That hath so long o'erhung the mother's face.

II.

I think there's many a pale and patient band
Of women, sable-clad, who weeping say,
"Thank God for Peace that cometh from His hand,"—
Although it comes too late for such as they.
I think the world groans hard beneath its load
Of wrong and sufferings, falsity, and strife,
And cries are wrung forth—piteous calls to God—
To give it grander uses—nobler life.

III.

O Heaven, so calm! that on pure, peaceful nights,
Looked down reproachful with its every star,
Wondering, it might be, at the dreadful sights
That did blaspheme God's world i' the name of War,—
When shall new health come to this morbid race?
When shall these seething, whirling turmoils cease?
We wait for the full shining of His grace,
And cry in faith and trust, "Thank God for Peace."

PEACE SUPPLEMENT

# THE PEACE.

## HISTORY OF THE WAR AGAINST RUSSIA.

*(Concluded from the* ILLUSTRATED LONDON NEWS *of Feb. 2 1856.)*

WE take advantage of the signature of the Treaty of Peace by the Plenipotentiaries of the Great Powers of Europe assembled in solemn Conference at Paris, to conclude the History of the War, commenced in this Journal on the 30th September, 1854. Our rapid summary of events brought down the narrative to the Battle of Balaclava, at which point we resume the story.

The final results of the surprise of Balaclava, and of the various combats which it comprises under one name, were these:—First, that the Russians had stripped all the four redoubts of their defences; secondly, that they had captured and removed seven large guns; thirdly, that they had seized and that they maintained the fourth or furthest redoubt, in some measure unlocking the possession of the others; fourthly, that they, consequently, necessitated, or induced our relinquishment of the other three, and the contraction of the besieguering position (which measures on our part however, though humiliating, were beneficial to us rather than disastrous); fifthly, that they had destroyed our matchless Light Cavalry. On the other side, the advantages of the Allies were—first, that in numerical loss they had inflicted far more than they had suffered; secondly, that, in moral effect, all the profit of the encounter rested with them, whether the defence of Sir Colin Campbell's infantry, or the attack of General Scarlett's, Lord Cardigan's, and General Bosquet's cavalry be regarded; thirdly, that our position was now both improved in compactness, and more clearly understood, in one at least of its assailable points, by its own defenders. As to the fact which then first startled Europe, that, if Sebastopol was besieged, so were its besiegers, that fact was not due to the battle; what ensued from the battle was not the fact, but only the distinct knowledge of the fact.

In dismissing this event, we may yield a well-earned tribute of admiration to the manner in which the Russian operation was planned, and, indeed conducted. The honour of the strategy belongs to the assailants; but the honour of the fighting and (excepting the one charge) of the field tactics, as contradistinguished from strategy, entirely and unquestionably to the defenders.

The next day 4000 of the garrison (who during the night had manifested their joy at the capture of our guns, by ringing of bells, continual shoutings, and a deafening but innocuous cannonade) attacked the right of the British siege position at Inkerman, but were, by Sir De Lacy Evans and his division, repulsed with a loss of five hundred killed or wounded, and a hundred prisoners. Our loss in killed was under ten with about seventy wounded. We mention this little affair of the 26th of October, because it was in reality a battle of Inkerman, baulked merely by timely discovery of the attempt; and the 4000 defeated Russians were but an advance guard. Had the lesson of that warning blow been put to profit, the name of Inkerman would not now in so many thousands of households excite the feelings of a rebuking grief, and recall the remembrance of a scene of bloodshed equally profuse and profitless. Sir De Lacy Evans was now obliged by illness to go on board ship at Balaclava, but he went in deep uneasiness respecting the British right flank. He even urged some precautions to be taken, and more men to be stationed in that quarter. More men could not be spared; but what was executed afterwards could have been executed then; some intrenchments and some batteries could have made the brinks and the verges of the eminence impregnable.

A reinforcement of 1000 French cavalry landed the very next day after that of the cavalry actions which we have described; the works of the siege were continued amidst constant interruptions from the sorties of the garrison; various ill-managed arrangements disordered with diurnal regularity the dépôt at Balaclava, whilst the French dépôt at Kamiesch was acquiring an ever improved condition; and, in short, the ordinary business of a camp occupied the interval between the last encounter with the enemy and the fifth of November.

### BATTLE OF INKERMAN.

Already the exhausting labours to which the proportionately small British army had been applied in the trenches, the camp service, the batteries, the circumvallation, and the guards, was beginning to produce their effect upon the health and spirits of the men, when the first unfavourable atmospheric changes—harbingers of still greater—came to aggravate their case. Nothing in the military art (excepting always the paramount business of the commissary and the armourer) is either so important or so accurately ascertained as the exact numerical proportion of a corps to be told off and devoted to the rotation of its general duties in revolving succession. An army which is invincible while this numerical proportion is regularly observed, may become a rabble of invalids—or rather, half rabble, half hospital—easy to beat still easier to surprise, if the least deviation occurs from the well-known average of allotments for the "on duty" and the "off duty" in their thousand varieties. We should wander from our province if we did more here than just recall this principle; the details of its application would lead us into technical reckonings more proper for a professional treatise than for our present memoir. It is sufficient to remark that the duties of an army must be done; and that, if it be underhanded for those duties, the rule on which its efficiency depends must be waved in favour of another rule—that on which depends its existence. For example, if there be no guard in yonder trench, or on yonder hill, the lines are broken, and the camp is crushed within the next six hours; but if you have no relief for the guards at certain intervals, the utmost limits of which are well tested by every form of experience, then the guard must be continued in their work for inordinate stretches at a time; and, if so continued, the men are worn out and rendered worthless as soldiers, or probably they perish altogether. But continued they are, and must be; for in a choice of two modes of destruction the more gradual must be preferred. When an army is long regularly overworked it certainly becomes inefficient, and inefficiency means the likelihood of defeat; but rather let it become inefficient, and be exposed to the consequent risks, than, by not being overworked, incur the certainty of one grand butchery at the first instant that the enemy discover its sword-point lowered.

The British army, then, being underhanded, was of course overworked. Two words will express their real state: the work of six men was given to one man to perform, whilst the time of sleep necessary to one man was distributed among half-a-dozen, to repair exhausted nature. Such was their condition when the weather, as we have observed, began to augment the already excessive burden of their hardships. On the night of the 4th of November it rained in torrents; the men in the tents were as little to be envied as those who had custody of the flooded trenches. Those on outlying duty were not only drenched themselves, but had not been able to keep the arms which they held in their benumbed hands from the wet. Towards daybreak of that winter morning, as they stood shivering and dripping on the cliffs, scarce awake, yet stamping to and fro upon their beats, there broke upon the half-conscious ear from Sebastopol the dreary distant ringing of its church bells. But this had occurred morning after morning—there was nothing to remark in it; and when the worn-out sentries endeavoured to see what might be in progress among the Russians the dense fog concealed everything from him—everything not within reach of his arm. With the morning the fog seemed to thicken, and the drifting masses of vapour fell close over and around every object. Day brought no light. Some, however, had heard in the night a dull and muffled roll, as of wheels far down. There was a sergeant in an outlying picket of the Light Division who had noticed some such sound—unless in his exhaustion he had fallen asleep for an instant, and had dreamt. When he reported his impression, it was remembered how constantly the arabas entered Sebastopol by the Inkerman road; it must have been carts of that description, if it was a real sound at all. It was, indeed, too real! We are relating the facts, not resting an indictment upon them, or we might here pause to press certain questions not yet answered, though often since that dreadful day they have been asked.

About five o'clock, just after General Codrington, who held a brigade in the Light Division, had made his round, and having received a report of "All well," had ridden back from the brow of the hill, a sudden ring of musketry broke the unconsciousness of the right flank. At this place the Inkerman height is cleft, all the way up from the valley, by three or four deep indentations, and in the shadow of them, under the sleet and rain, with the long grey great-coats which made them literally seem but so many shadowy formations of the atmosphere itself, came the "Children of the Mist," not, however, like those of Scott, few and wild, but in a vast and regular army, all whose dispositions for battle had been matured during the night, and who were now rushing in irresistible columns upon the Second Division, even with that division's own outposts and pickets. The Second Division's position had been dropped like a fold a little over the verge of the hill, which, therefore, making head against the mass of assailants, and contesting every square foot, it was now obliged to reascend with the utmost haste. The enemy was in prodigious force, outnumbering, indeed, the whole available combatants of the British Camp by ten to one. These advanced troops, consequently, had no chance of arresting them. The Light Division was in five minutes as completely engaged as the Second. They receded with steadiness, and though they had received the first fire, and that at point-blank distance, they expended the last cartridge ere they had been driven back upon the plateau.

In every sense the attack was thoroughly earnest, and had been concerted with large combinations. To prevent the French from bringing assistance to the right or British flank, a desperate sortie was made from Sebastopol upon the front of our allies, simultaneously with this assault at Inkerman, and to paralyse analogously any aid from Balaclava, as well as to dislocate our whole position, Liprandi renewed his movement of the 25th in the valley of the redoubts, just beyond, on, and around "Canrobert's Hill;" there he drew up his immense cavalry, which, if there had been the slightest wavering or yielding at Inkerman, would have swept our retreating columns into the sea. Prince Napoleon—if the substance of the pamphlet he has which is universally attributed to his general dictation and suggestion, though not supposed to be his own actual composition—thinks that General Liprandi committed a great and most fortunate mistake in not pressing the Balaclava attack more vigorously. It was, in truth, only a demonstration, which, however, kept our Marines and our Highland Brigade from all chance of effectively aiding their comrades at Inkerman, had such aid been wanted; and General Liprandi, moreover, was evidently acting under higher authority, whose directions were communicated to him by signs from an aërial telegraph erected expressly for that purpose on the hill of Inkerman opposite to ours, across the one side, and to the army of Liprandi between Tchorgoum and Kadikoi, on the other. Of course, such signals could be discerned only after the mists had cleared away.

These combinations were not enough; vessels were steamed up into the creeks, and thence shelled the British Camp with considerable effect during the action. The Grand Dukes Michael and Constantine inspired the soldiers by their presence; the priests solemnly blessed them ere they issued to the attack; they were plentifully supplied with *raki*, and they came on mad with physical inebriation and spiritual enthusiasm, in numbers, and under a combination of skilful arrangements, which promised, if ever the feat was to be accomplished, to crush the Allies in one grand battle. Everything most infuriating in the actual struggle of the soldier was united in this enterprise with everything most provident, calculating, and astute in the scheming of the General. It has since transpired that the late Emperor Nicholas, distant as he was, had charts, plans, sketches, reports, so finished and exact, that his spirit could often preside over the minutest details, as well as the general course of the tenacious and desperate defence of Sebastopol, his "holy city;" and certain we are that, in the pre-eminent effort of the 5th of November, where it was arranged that the sons should bear their part, the father's mind had itself delineated much of the executory work. The whole day, indeed, discloses traces of that vast and strenuous supervision.

The manifest preparation of the assailants is a contrast to the surprise and discomfiture of the Allies. The men who, at Inkerman, made the most marvellous resistance known in modern warfare, had just come drenched, dripping, famished, reeling with weariness, and with sleepiness from the knee-deep rain and slush of the trenches, scarcely able to stand, they were occupied in trying to cook a mouthful of breakfast with such haste, and to eat it with such voracity, as would yield them a few minutes the more for the deep slumbers of fatigue. But they were not to eat that meal; and for many and many of them a yet deeper slumber was prepared—the couch spread out, and the pillow ready beneath their feet.

It would have been an historical treason to the memory of the heroes who perished if we had omitted to recall these circumstances of disparity between their situation and the situation of the host whom they on that day hurled back into the Tchernaya.

Sir De Lacy Evans being sick (as we have said), General Pennefather had the honour to command the Second Division; and now dispatching General Adams with three regiments—the 41st, 47th, and 49th—to arrest the enemy in front, he sent the 30th, 55th, and 90th to support them *en echelon*. Next these troops, on the Sebastopol, or west side, General Cathcart promptly pushed left with the 20th, 21st, 46th, 57th, 63rd, and 68th, moving with them in person, and attended by Brigadiers Torrens and Goldie. Sir George Brown was, of course at once involved in the rush, with the 88th, 77th, 7th Fusiliers, 19th and 33rd; and Brigadiers Buller and Codrington were in their places. But, hitherto, the three divisions mustered scarcely five thousand bayonets on the ground; and the enemy had already climbed the heights with twenty thousand such troops as the Russians never previously showed themselves to be; for they came with stubbornness to the push of the steel. And as the portions available of the three Divisions advanced to repel this terrific attack—which was evidently intended to end only in precipitating the whole Allied army over the cliffs of Kherson Bay—some forty heavy pieces of artillery opened upon their columns from the well-prepared and well-posted batteries of the opposite hill. It was now that the Duke of Cambridge, with his Guards, under Brigadier Bentinck, came speedily through the deep slime of the saturated table land from behind, and took his post in the dim and drizzly obscurity to the right of the Second Division. Sir Richard England and the Third Division moved up in reserve; while his Royal Highness, having reached the steep margin of the plateau, became at once engaged hand to hand with a double column of Russians, who were attempting the Camp in that direction. The attack thus formed a slight concave; and yet we who formed the inner or convex portion of that crescent of fire, had comparatively plenty of room, whereas the Russians were densely crowded in a much larger space. Could they have once securely fixed their footing on the level heights of the Encampment, they would have spread out; everything, therefore, depended on arresting them at or near the brow. Each shot of the mine told with fearful effect upon their deep columns—one bullet sometimes laying low as many as four in file. But those behind pushed on those in front, who were, besides, not sorry to exchange a mode of combat wherein their numbers were a disadvantage to them, for one in which, by mere weight, they hoped to prevail against the few, feeble, fatigued, and surprised defenders.

Thus it happened that the rarest characteristic of battles became the grand characteristic of this battle. The *Times* correspondent was in error when he alluded to Maida as the only instance where troops were known to cross bayonets in earnest. This occurred at Alexandria and it has occurred on other occasions; but it never occurred as it occurred at Inkerman. The bayonet was, for great part of the engagement, the only weapon used, and it was the chief weapon throughout—it was the weapon which decided the event. We had indulged the idea that no enemy could withstand the British charge of bayonets; and, nevertheless, these Russians, whom we certainly should not have imagined likely to furnish the first memorable exception to such a rule, not only awaited with firmness the bayonet of our Grenadier Guards themselves, but withstood it successfully, over and over again, when those unsurpassed soldiers renewed the dreaded onset, with an energy which each time seemed as if it could not be more strenuous or more desperate, and yet each time gained in violence and fury; and this is not all, for the bayonet charge was returned, and returned repeatedly. The horrible fight raged in this manner for hours. No conflict in history resembles it. It has since been called the victory *of the soldiers and regiments*. Hours; and as such it will be handed down to never-ending remembrance. Order, and formations, and tactics, were impossible. Hand to hand, steel to steel, a company of one regiment amid the companies of another, a British battalion lost to sight amongst the hostile masses, and then ripping its desperate way back to view—all torn, soiled, and bloody—with bayonets bent double or broken, with clubbed muskets, without muskets, with blocks of stone besmeared with the hair and brains of some slaughtered foe—thus, and worse than thus, in close fight—wrestling often with the Russians, and often strangling them with hands that had smashed every weapon they had held; thus, we say, the 8000 troops who were attacked that morning defended and kept the heights of Inkerman for nearly four hours against 50,000 Russians.

It were hard to say on which side the conflict was most desperate; throughout it partook more or less of the awful character we have described; whether on the left, where Sir George Cathcart, descending the ravine to take the enemy in flank, was outflanked himself, and killed; or on the right, where the Duke of Cambridge beheld his Guards perishing amid piles of hostile dead; or in the centre, where Sir G. Brown and General Pennefather resisted similar odds. When, between seven and eight o'clock, the mist cleared away, the practice of the Russian artillery became more murderous. But Lord Raglan ordered Colonel Gambier to bring up two 18-pounders; and these, under his, Lieut.-Colonel Dickson's and Lieut.-Colonel Dagular's command, rendered inestimable service against the crowded assailants, as well as against their artillery, which was silenced and dispersed by half-past one.

Long before this, at ten o'clock, the French infantry (the Zouaves and Chasseurs de Vincennes, and Arabian Chasseurs Indigènes) appeared to the right of our Guards, and cheered all our labouring divisions; and a little earlier still the French had turned some guns upon the flank of the Russian masses, who were still clambering up the hill; for as fast as one furious charge was repulsed, fresh columns advanced with a yell, exchanged volleys at close range, and then rushed into the British ranks with the steel. But they could make no progress beyond the brow of the hill; and now the 50th, 28th, and 4th Regiments, held in reserve, and forming part of Sir Richard England's Division (the Third) entered comparatively fresh into the struggle; so that when the British, still making head in front, saw their brave allies descending the slope to charge the enemy in flank, a wild rapturous cheer arose through the whole line, and one vast last desperate onset was made. Nay, a curious feat was accomplished by the French cavalry (the Chasseurs d'Afrique); for no sooner had the Russians begun to give way in all directions before the final bayonet charge of the French and English, than, despite the unevenness of brake and brushwood, these Chasseurs charged the masses already in confusion, and inflicted upon them incredible loss. But, just then, the fog returned, and pursuit became impossible.

Thus ended the great Battle of Inkerman, the like of which is not to be found in the annals of France and England. The loss of life bespeaks the magnitude of the struggle; the number of officers slain shows its desperate character. The British lost about 2400 men, the French some 1800. Of these last, a third exactly fell in repelling the sortie from the south-east sallyports of Sebastopol—a sortie designed to paralyse the action of our friends, and prevent them from helping the British. It had no such effect, as the reader has seen; on the contrary, had the combined forces only been so numerous as to have afforded us fourteen or fifteen thousand spare bayonets, there is no doubt whatever that Sebastopol, which was emptied of all its garrison save those who were driven back into it from this sortie, must necessarily have been taken during the action. Lieutenant-General Cathcart, Brigadier-General Goldie, and Brigadier-General Strangways, were killed. Colonel Swiney, of the 63rd Regiment, and only too many others of his or nearly equal rank fell that day. The Guards lost fourteen officers; and the Coldstreams alone buried seven of their chiefs in a single grave. Few regiments suffered more than the gallant Connaught Rangers—five companies of which, trusting only to the guidance of their excessive and romantic impetuosity, were literally lost in the wilderness of enemies through which they rushed forward to make a clearance. Out of 350 men but seventy escaped the fatalities of this terrible field. With respect to the French, our soldiers expressed themselves rapturously. Our allies, in truth, not only behaved with surpassing vigour and gallantry, but with that coolness, prudence, and order, on which, if possible, even more depended. Their blows were weighty, and they were all dealt in the right place, and at the critical moment. Their Commander-in-

Chief was wounded, though not so severely as the Chief of our Light Division, Sir George Brown, who was carried off the field. To tell the episodes and romantic incidents of the day, though strikingly illustrative of its character, would occupy more space than we have at command. One rescue created peculiar attention then and since. A British sergeant, being attacked by five Russians, killed two, and was knocked down by the remainder, with five wounds; as they were on the point of dispatching him, he saw them fly, and felt himself lifted by a powerful hand upon a horse, the rider of which, a French officer, galloped with him to the rear, and, placing him in safety, kissed his hand, and rode back to the fight. Who this noble officer was, or what his fate, will never be known on earth.

Lord Raglan estimated the Russian force at 60,000. The prisoners, who were very numerous, gave it at the same figure; stating that it was in great part the Bessarabian army, which had been transported in light order by forced marches to the Crimea. In killed, wounded, and prisoners this host lost just about the number of the whole of the troops engaged with them in actual conflict—nearly 14,000 being slain, disabled, and captured. The field presented a significant spectacle The dead lay in the attitudes of fight: one seemed to be firing his piece; another, with both hands above his head, as he was stretched supine, held the barrel of his musket in act to repeat with the iron part that blow which had already smashed the stock; another had his own hand pinned to his body by the bayonet which had pierced him; others had fallen by the side of the Russians whom they had struck through with that weapon at the very moment of receiving from them the like blow; others grasped a large stone, which they appeared never to have been able to lift, having sunk in death upon their faces while stooping—every posture of violence and mortal battle.

Of the fruits of such a struggle, we must say that they consisted in merely having repulsed the enemy. All the valour described was exercised, and all the losses enumerated were sustained, with no other effect on which to found congratulation or joy than that the Allied army was not strangled, so to speak, by the immense attack of the 5th of November.

## ABSTRACT OF SUBSEQUENT EVENTS.

On the 14th of November occurred the great storm which inflicted immense loss upon our transports and fleet. Great treasures were engulphed, and numerous vessels cast away. But both before and since considerable reinforcements and supplies continued to reach Balaclava rather than the Allied Camp. The French, indeed, received their consignments with far greater regularity than we ours. Everything was dispatched from England that could minister to the wants of our soldiers, or mitigate the sufferings which now began to thin their ranks more rapidly than the enemy had thinned them. Intense cold, combined with alternations of sleet, of storm, and snow, made their position on the bleak hills of Inkerman more fatal, as least in the number of dead, than a defeat which would have, once and for all, driven them to their ships. The wet rotted the ground into a morass; the road between Balaclava and the Camp became impassable to wheeled vehicles, no matter what the horse-power employed to draw them; and the horses and mules themselves began to perish from exposure and from want of forage; for that very road which they could no longer traverse was their sole independent channel of supply. The transport beasts were not worse circumstanced than the cavalry horses. The enemy, aware of the situation, began to renew with vigour those continual sorties by which he harrassed our front; and the British army, unequal in numbers to defend its own lines, was, of course, still more unequal to spare hands for the construction of a road, and for the necessary guard of the workmen, should these have been found. While the strength of the ranks was diminished, their work was meantime increased, and sickness ravaged or enfeebled them in every direction. It became difficult to bring up their rations—to tend the sick—nay, even to remove them. The state of our army was "heartrending." We do not contemplate on this point of the subject—because, though the effects are historical, the causes are involved in recrimination, and perplexed with arguments, speculations, suggestions, reproaches, charges, counter-charges, and intricate discussions which find their most fitting place elsewhere; and which, we trust, will never again be needed or provoked during the progress of a British expedition. A single sentence will explain—not all, but much: *we entered on war with peace establishments*. It would be very easy indeed to fil a dozen columns with but a portion of the cross-purposes which have entailed so much misery and calamity. But this we must say—that, in addition to the grand cause at which we have already glanced, much—very much—of the mischief would be traceable to the conditions of our military system; and to treat of that system were to write an essay, not a narrative. We may further observe, that what is directly imputable to individual mismanagement does not appear to us to attach, or to inculpate Lord Raglan himself, so much as a crowd of others, over whom, *practically*, he had not sufficient control, because his control could be only retro-active, not preventive. One point we wish emphatically to place before the attention and remembrance of the reader, viz.—That, if we had no road, while the French had, the French possessed more free hands for the construction of a road—enjoyed five times a shorter line on which to construct it—and were sheltered during the operation itself on both flanks and in the rear.

During the distress in the British army our allies lent us apparel, provisions, and mules; and at length, when our strength, in spite of every effort, had sunk so far as to make this indispensable, they cheerfully assumed our positions, in addition to their own, along the right attack upon Sebastopol; the British main body retiring to recruit their energies at Balaclava, where the French Imperial Guard joined them. This was on the 12th of January—the New-Year's-day of the Russians. The guard of the British batteries and the protection of the corresponding trenches, were thus left to our allies; but our own artillerymen remained to work our guns.

The principal business of the besiegers was now to make various internal arrangements—to supply a road from Balaclava to Inkerman, and to accumulate in their batteries, which were gradually approaching the place (the left of the French attack had been worked up within 300 yards of the ramparts) such a mass of ammunition as would, if this was possible at all, reduce Sebastopol when the bombardment should be renewed.

Meantime, Omer Pacha, who had twice visited the Allied Camps to concert measures with the English and French Commanders, had gone with 30,000 Turks to Eupatoria—a position of paramount importance to the ultimate success of the expedition. Various events had occurred more important in their promise than in their immediate effects. In England the Government of Lord Aberdeen had fallen before Mr. Roebuck's motion for a Committee to Inquire into the Management of the War. In the Crimea Mr. Brassey and his navvies had arrived at Balaclava to make a railway from that town to the centre of the north-east attack. Sir Francis Head had long before suggested a plank-road, after the Canadian fashion, as more expeditious to make, and ten times cheaper. A powerful contemporary, which printed his letter, commented upon it derisively; but it is now generally allowed that the suggestion was wise. By the 8th of February the navvies had laid down a mile and a half of the railway, to the great wonder and visible excitement of the Cossack pickets, who gazed upon the panting steam-engine from the hills beyond Kamara and Kadikoi. It was not all early in February that General Liprandi quitted the position at the further gorge of the valley of Tchernaya, which he had retained ever since the 25th of October. Whither he went was not at first ascertainable, as the deep snow repeatedly prevented that "reconnaissance in force," which the French, under General Bosquet, aided by Sir Colin Campbell, and the Highlanders, desired to execute in the direction of Tchorgour and the vale of Baidar.

All this time the fighting was incessant along the front of the belaguering lines; and frequently the French miners encountered the Russian counter-miners underground; so that, if we entered more into the minute details of this terrible war, we could fill chapters with its subterranean episodes, in addition to the horrors which were enacted on the surface of the earth. Desperate sorties were incessantly repulsed, while the accumulation of the bombarding materials proceeded steadily, though slowly.

It was now, as the besieging lines began to hem in the place more and more closely, that the Russians, rising in spirit with the pressure, displayed the energies of assailants and besiegers, encountering the gradually tightened leaguer with advanced works all around their previous forts, particularly in front of the Malakoff Tower. This they fenced with a new exterior girdle of earthworks, trenches, and rifle-pits—approaching, so to speak, the approaches of the French. The tower is so situated, that its fall would command much of the neighbouring fortification. The French determined to destroy its new defences, when the noise of a distant exploit reached the Camp.

## COMBAT OF EUPATORIA.

Omer Pacha had considerably increased the defensive lines traced, and partially executed by the French at Eupatoria, when his Tartar scouts brought him word that a large body of Russians, coming from Simpheropol, were approaching. Their videttes were visible on the evening of the 16th of February. The Turks under Omer's command were his tried veterans, very different from those whom he had lent to the French and English, and who had made so poor a stand in our redoubts at Balaclava on the 25th of October. Eupatoria projects into the sea, which overlays it, north and south, in two creeks. By Omer's request, the Allied ships stationed themselves in these creeks, so as to raise the plain in front of the town, the artillery of which commanded it also. Beyond this plain is a wooded prairie country, yielding but little water, and that water brackish and deleterious. The Russian columns were suffering already from the effects of their march over such a region. They mustered about 35,000 men in all, and were under the immediate orders of General Khrulef, but directed it is supposed, by Prince Menschikoff and Count Osten Sacken, and aided by a division of General Liprandi's. They had brought scaling-ladders, and advanced at day break of the 17th, under cover of thirty large pieces of artillery—their infantry being in their usual dense formations, and a considerable cavalry force manœuvring on the flanks, to prevent any regular sortie. It was evidently, from the effects of the position itself, a hopeless attempt—which however they renewed some half-dozen times, with praiseworthy resolution. The ship's guns on either flank, and the town artillery in front made havoc in their columns. Still they pressed on till the Turks who had reserved their rifle fire and musketry for a moment when they would prove most decisive, poured them into masses already shaken, when these were close to the gabions and batteries, and then, under cover of a powerful discharge from all the batteries, sallied upon the assailants and broke them completely. The Turkish loss has been variously stated; but they certainly had not much more than 200 killed and wounded—the latter forming the majority of the number. In fact, of the mixed defenders, Turkish, Egyptian, French, and British, about sixty only were slain. Among them was the Egyptian General, Suleiman Pacha. The Russians, counting those who perished in their retreat over the salt region, which lay behind them, are supposed to have lost upwards of 1000 men. The prisoners were not in proportion, owing to the relative strength in cavalry.

Just at this very epoch (February 15th) Europe was startled with the rumour that the Emperor Napoleon had determined to go in person to the Crimea. Every effort was made in France and in England by the highest personages to turn him from this intention. The Conference, or, indeed, Congress, just about to open in Vienna, had the effect of averting the step, for the time at least. Lord John Russell passed through Paris, on his way, to represent England at those solemn discussions, in which one more effort was to be made to terminate the deplorable struggle between the East and the West.

## NIGHT COMBAT AT THE SELENGHINSKI REDOUBT.

A last incident will claim our notice at the scene of the war, before we mention the great event which seemed to mark the close of the first grand stage in the hostilities, if not to presage their total cessation.

We have alluded to the works with which the Russians had surrounded Fort Malakoff, and to the anxiety of General Canrobert to destroy them at once. On the night of the 23rd of February, the Zouaves and Marines, 3000 strong, under General Bosket, sallied forth silently to attack these works, which consisted principally of a great but unfinished redoubt, on the right bank of the Careening Bay. The assailants were soon detected by the outposted marksmen of a rifle-pit, who retreated firing. The Zouaves rushed into the ditch, after receiving and returning a severe volley, and took the defence by the sheer force of the bayonet. The Russians were reinforced, and returned to the charge with eight thousand men. A dreadful conflict ensued; but the Zouaves, thus overmatched, long held their ground, and twice succeeded in driving the immense masses of enemies. A third time these returned; and the Marines, who had throughout behaved irresolutely, fled; then the Zouaves, though still resisting most desperately, were driven fairly out of the redoubt. Re-forming, in the darkness at a little distance, they rushed back against the thresefold numerical odds within the redoubt, and won possession of it once more. When the Russians were expelled in this manner the second time, blue lights were flung up from the ramparts, to enable the Russian gunners to take aim, and by this intermittent glare a storm of artillery was poured into the work from all the forts around. In a few minutes five hundred of the heroic Zouaves were laid low; flesh and blood could not withstand such a fire; the spot was found completely untenable, and the redoubt was abandoned. It is stated, however, that the enemy's success had cost him a heavy price, and that his slain were much more numerous than those lost by the French. Again we are forced, in justice, to praise the intrepidity of our foes; for they fought with inconceivable fury in defence of this outwork; which, nevertheless, they could not keep by the bayonet or by numbers, though they recovered it by artillery.

## DEATH OF THE EMPEROR NICHOLAS.

The Emperor Nicholas was ill at St. Petersburg, when the news reached him of the unsuccessful attack upon Eupatoria. For nearly two years he had heard nothing but disastrous tidings. He had just given his consent to the resumption of negotiations at Vienna; he had hoped to have enforced good terms by the stubborn defence of Sebastopol and the recapture of Eupatoria, which is a place of inexhaustible importance to the Allies for ulterior operations. The last blow is said to have shaken his spirits incurably. He from that moment rapidly sunk; and on Friday morning, the 2nd of March, in the 59th year of his age, and the 31st of his reign, he breathed his last. The event was known in Paris the same day; but its results cannot be truly estimated even now.

Here we close, for the present, this collective account; all the incidents of the month of March and of the first half of April being of that kind which oblige us to regard many of them in succession as virtually but one form and one stage of the struggle, and yet too near us to be placed properly or successfully in the light which that view demands.

## MISCELLANEOUS SURVEY.

The new Emperor, Alexander, began his reign with a declaration that he would read in the footsteps of "Peter, Catherine, Alexander the First, and Nicholas;" a manifesto on which he acted. It was in an evil hour that he adopted such counsels; they caused much suffering throughout Europe,—thousands of lives, and millions in expenditure,—and brought his own empire to the verge of destruction.

The month of March was remarkable for the establishment of a Parliamentary Committee of Inquiry (which was a measure of possible prospective utility, but of no actual relief or value). Now, moreover, there had begun a diminution of those sufferings of our army which had suggested the investigation. Lord Palmerston, who had, on the fifth of the preceding month, undertaken to form a Government, was, himself determined to adopt practical steps which showed far more vigour than those of his predecessors. Whatever the positive value, moreover, of the exchange which the country had made in its rulers, the moral effect was immense; for it showed to the world that the English people were now thoroughly aroused, and that a Ministry would be long suffered to hold office without embodying the public spirit which this great emergency befitted; and that for this end the representatives would be obliged to proceed, if necessary, from change to change in the trustees of our common destinies until the right man had been found. It is even probable that not the least of those warnings of chastisement which broke the spirit, or at least clouded the declining days, of the Emperor Nicholas was that very change of the British Ministry. He saw in it the extent to which his insane rashness had committed the fortunes of an empire far from really capable of confronting the opponents which its rulers had so incurably offended.

We can scarcely except from the class of secondary events,—in all but the steady progress of a moral effect destined to give us victory at last,—the departure of the advanced or flying squadron of the Baltic fleet as it was called. That fleet was not yet what the Baltic navigation and the hostile coast fortresses required from us as belligerents. Such as it was, however, no such naval armament had ever sailed or anchored out of port; it was as much superior for the purposes of regular marine warfare to anything ever witnessed before as it was inferior to that which was prepared for the next such expedition, both in the respect mentioned and in aptitude for the special service demanded. The fact is, that means of action may be rendered so effectual as to preclude the necessity for using them; and this was gradually becoming the case with the Western Powers.

We may here say that the public feeling was not quite the best for rendering justice to the public servants; and some were too much honoured at first who were subsequently too much condemned. The natural indignation, for instance, excited by the sufferings and temporary destruction of a victorious army was intense, and it was just; but it took its original aim with temerity. We allude specially to the case of Lord Raglan, whose subsequent death alone disarmed the rage of a nation with whom his popularity had just been high. And yet it is now made clear that he had not the powers indispensable to have averted all the misfortunes which occurred. Those powers existed; but it is not enough in war that authority for every needful arrangement should exist somewhere. By far the most favourable condition for the execution of a general's complicated and multiform task, is that he should be a despot in his control, and that this control should be as unlimited as the fixed laws of nature allow. All the power in its supreme resort, should centre in his orders, and be at his own immediate disposal. At the same time he was not a first-rate commander. Some of his subordinates were more to blame than he. They ought to have reported to him what means were at their disposal; but a great general would have supplied even this remissness, and would have made himself acquainted with even those particulars that ought to have been volunteered, but were withheld.

It was just seven days after the death of the Emperor Nicholas that the Russians commenced those defensive works on the Mamelon, which were the real cause of the prolongation of the siege. In short, from this moment, everything depended on driving them from a position which, perhaps, it would have been easier to have prevented falling into their possession. Independently of the sufferings which the Allies had undergone, there was this quite distinct and separate subject of regret that those trials were not made to purchase all that ought to have been shown for them." The siege long seemed as though it stood still; there was no very sensible progress for three months from this time. Or rather the assailants positively lost in relative position. It was even doubtful for the period mentioned which side ought to have been considered as enduring, and which as pushing, a siege. Reinforcements, however, were at and continuously arriving on both sides; and, of course, they arrived in a much more advantageous form for the Allies, whose troops disembarked unwasted by long marches. The sorties were incessant, and they were carried on with frightful prodigality of life. At length a slight superiority was perceptible; but perceptible rather to military men who considered the subject deeply, than to the general public. Almost every day saw the enemy losing something, however little that something might be; and never, except in the solitary preceding instance of the Mamelon, did he recover what was thus slowly wrested from his power. The fighting in front of the Malakoff Tower, which the Russians knew to be the key of the situation before that fact was equally apparent to the Allies, was murderous and uninterrmitted. It was because the Russians were the first to appreciate the situation that they threw up the exterior works which we have mentioned. They gained but little an instant, and lost them instantly, slowly, and only by dint of regular approaches. By the middle of March (it was on the 15th) the French carried a large ambuscade, the destruction of which greatly facilitated the parallels which they were driving forward. Another circumstance, which was the most complete innovation in warfare, and which took nine-seven days later, enabled the Allies to open fire and trying a fresh bombardment on a scale which would otherwise have been impracticable for months. We mean the completion of the railway to a distance of four miles and a half from Balaclava. Indeed, modern science was taxed in its rarest resources by this extraordinary siege. It was commenced in a manner which set some of its prescriptive principles governing the military art in all ages at defiance—the non-investment of the place being the most important of the departures from custom. Then the nature of the soil and the height of the surrounding eminences constituted difficulties of their own. Shot and shell were seldom conveyed over so many natural obstructions, for were the pickaxe often plied in ground more unfavourable. The crevices and ravines afforded a labyrinth of ambuscades to the defenders; and some of these posts required separate sieges, as it were, before they could be reduced. To the right of the Mamelon, as you face it, the Careening Creek held on its eastern bank some other redoubts, which the French had stormed so early as the 26th of February. Then came the approaches we have chronicled; while the English, on the 19th and 21st of April, carried two rifle-pits in front of the Great Redan, which were afterwards to prove so fatal to our arms. In the first of these brilliant exploits Colonel Egerton was killed; the second was accomplished with the bayonet by Lieutenant and Adjutant Walker at the head of a volunteer party. The sorties, meantime, were numberless; they were invariably repulsed, though often not without heavy loss. To chronicle in detail all these operations would be to write a diary affording very little variety in the particulars. The great point was that a progress was being slowly effected; but to follow its incidents minutely would have an effect somewhat like watching the hour hand of a clock.

Shortly after Lord Palmerston took office (March 30th) he dispatched Lord John Russell as Representative Extraordinary of this country to a Conference at Vienna, and at the same time appointed him Secretary of State for the Colonies at home. The noble Lord was not destined, either by his skill or by his docility, to answer the expectations which his chief had a right to form. He may have been a diplomatist; he was not a brilliant, and, as it proved, not a cautious or a safe, negotiator; and, to crown all, in the absence of those qualifications which usually determine the selection of an envoy,—in the absence, we say, of any one special accomplishment in this nobleman,—there seemed to have been a "specialty" quite extraordinary in the opposite extreme; for Lord John Russell happened to be conversant with no modern language but his own. As the Vienna Conferences came to nothing, except derision and contempt, we shall not say more about them than that they lasted some five or six weeks.

Before passing to subsequent occurrences we may notice two subjects—one of which at the time created the greatest sensation, and both of which will enter into the future history of this epoch. The first was a heartfelt departure for, and the second an actual arrival in, the same scenes. The Emperor Napoleon as soon as he had verified the appalling accounts of the sufferings endured by all the Allied troops (though in a far greater degree by the English than by his own) secretly commenced the most active preparations to set out in person to the Crimea. The design transpired by degrees; inconceivable efforts were made and the highest influences (including that of Queen Victoria) were exerted to dissuade the Emperor. The project was conformable with his romantic courage and adventurous character, as well as with that vehement sympathy which he ever testified for those servants who were exhibiting devotedness in his behalf, but, above all, for his military servants. No entreaties could move his purpose. "My army suffers," he said to one expostulator; "I *must* be with it." At last, however, what neither arguments nor supplications could do was accomplished by important State necessity, the social condition of France, and the political exigencies of Europe,—indeed, of the world. We may observe the curious and romantic circumstance that his young and beautiful bride—the good, gentle, and grateful Eugénie—who might be supposed likely to be the very first to fas-i thrown her arms round her husband's neck in order to forbid a project which, most infallibly in that kind of trench and *rifle-pit* warfare to which he was going—his hardy daring, and example-giving character being borne in mind—would have ended in the death of so marked an object, and have deserived the bride-empress of her throne, threw her influence into the other scale, and decided upon accompanying him to the East.

The other event to which we have adverted was the arrival in the Crimea of a personage not so high in rank as the Emperor of the

THE ATTACK ON SVEABORG

French, but destined by the long operation to make his name permanently memorable. Admiral Menschikoff was definitively superseded in the command of Sebastopol, and his post intrusted to a less irritable, less haughty, less impetuous, less intractable, but far more really stern, unflinching, and capable soldier,—to him who bears the henceforth imperishable name and title of Prince Michael Gortschakoff. This appointment and change took effect practically on the 20th of March.

## PROGRESS OF THE SIEGE. INCIDENTS IN IT, AND CONCOMINANT EVENTS IN EUROPE.

Long before this date the weather (for chronicling the changes of which with so much care a number of foolish jests were aimed at Lord Raglan, deriding him as the "barometrical chief," &c.), had mitigated its fury; and on the fine days, from the heights of the Allied Encampment, long convoys were seen over the town of Sebastopol, flowing in an interminable current from the great north road into the doomed fortress. By the end of the month the English and French commanders counted a hundred thousand combatants, though these were not all healthy. The English army, however, was so fast recovering from the horrors of the preceding winter, that, in four weeks more, General Canrobert announced its restored and perfect efficiency in a despatch to his own Government.

The general situation of the hostile forces was now what we before hinted: it was hard to say which side stood, which side pressed, the siege. The south front, indeed, of Sebastopol was closely beleaguered; but it was only one front of an enormous polygon, and, like those whom they assailed, the assailants had been obliged to fortify themselves not only in their front, but in their rear. They were pressing the enemy with unsurpassed valour and unexampled resources in one direction; but they were still kept at fierce bay in that direction, hemmed in themselves all round. For instance, on the 13th of the month (the day after Omer Pacha's presence became universally known in the Camp) the Russians showed so little solicitude regarding the immediate safety of the place, that they could spare a large force of cavalry and infantry, attended by 130 guns, to make a demonstration against Balaclava. It was but a demonstration; the British troops, with a French division under General Vinoy being sufficient to deter a serious attack. Nevertheless, such movements served to keep the assailants on a continual alert, which was highly fatiguing, and to maintain among the enemy's troops the illusion that he was not really reduced to the defensive at all.

THE APPROACH TO ST. PETERSBURG.

## DESPERATE COMBATS IN CLOSE QUARTERS.

### STRATAGEMS AND DEVICES.

The same relative appearance was supported by him in the occurrences of the siege proper. In the first place, as we have already observed, the fortress, so far from shrinking inwards, or appearing to fall back on itself, under the urgency of the Allied approaches, had swung itself out to meet them. It seemed to dilate in its pride. If we were nearer the Russian exterior enceinte, or belt of counter-redoubts than before, this was not only because we had advanced, but because they also had advanced. The Mamelon was a deserted mound when the Allies began their parallels; it was now a formidable fort between them and the place, and required a preliminary siege in that part of the attack. Again, all the direct personal encounters with the garrison arose from his sorties, not from our assaults. The business was still to defend the trenches, not to storm the town. These sorties were almost always executed during the night, and they were numberless. They were often repeated for half-a-dozen nights in succession, in various and uncertain quarters, on a scale of incredible magnitude, and with astonishing desperation. From the middle to the end of March these nocturnal battles were nearly incessant. On the 22nd, for instance, fifteen thousand Russian soldiers sallied from their shelter under the right front of the Malakoff, and attacked the "attacks" of the French with the bayonet; and it will give some idea of the obstinate fury of the terrible combat which followed if we say that it lasted, more or less, for twenty-four hours. The Zouaves, meantime, had endeavoured to free the army from the annoyance of the Mamelon by one of the most persistently daring assaults on record; they were literally crushed by artillery, and so, at length, forced to quit their hold, as though a grasp should be subdued only by positively smashing and pulverising the hand which maintained it.

The besiegers then began to shell the Mamelon, but were surprised to notice how few of the fulminating projectiles which alit in that redoubt seemed to explode there. The reason was not discovered till the place was subsequently stormed by the Zouaves, when it was discovered that the ground was honeycombed with perpendicular tunnels,

CAPTAIN HEWLETT, C.B., OF H.M.S. "EDINBURGH," DIRECTING THE MOVEMENTS OF THE "SNAPPER" AND "STORK" GUN-BOATS AT A RUSSIAN THREE-DECKER BETWEEN GUSTAFSWERN AND BARTHOLOMEW. SKETCHED BY J. W. CARMICHAEL.

gaping, trumpet-like, at the orifice, and presenting on every side a capacious decline, to receive and engulf the rolling shell, which, rushing into it with a whirl and a spin, burst innocuous far below in the compressing embrace of the solid earth. Nothing, in short, could well exceed the ingenuity of the enemy in defence. He was everywhere armed with the most unexpected resources of skill and forethought.

The space between his own rifle-pits and ours, and all the spots which he did not calculate on occupying in force, were sown with foot-mines, the technical name is "fougasses." A quantity of explosives were inclosed in a globe of tin, and this was attached to a tube of tin. The globe was buried some feet below the surface, the tube was allowed to emerge, and was so bent as to lie along the ground. Inside the tin tube near the top, was a glass phial containing an acid. The pressure of a man's foot would break the phial and disengage the acid, which, running down, would encounter a few drops of a chemical, with which it would ignite; the explosive materials would immediately blow into the air the earth around them and whatever was above. The top of the tube by which this artificial volcano was made to act, remained hidden under a little rubbish until one of the Allied soldiers unsuspectingly trod upon it. To the Russian troops the fatal spot was marked by a bit of ribbon or rag of some preconcerted colour, or by any other arranged sign.

## SECOND BOMBARDMENT OF SEBASTOPOL.

All this time both parties were indefatigably augmenting their respective means of destruction. Huge convoys were discerned on the 4th of April converging into the north of Sebastopol. On the other hand, the cholera had entirely disappeared from the English army, which was fast resuming its martial condition and capabilities. The French soldiers had suffered severely, but the French army had never for one moment presented even the appearance of succumbing to the hardships and privations which ours had felt so overpowering. The reason is obvious. It is not that they, or any troops, could endure those trials better; but, in the first place, they had less to endure, and, in the second, their share was regularly distributed among a never-interrupted succession of reliefs which their numerical superiority enabled them to maintain. Thus, three French soldiers bore each a third part of what one English soldier bore; the three Frenchmen were greatly fatigued, but could be soon restored, when relieved, the Englishman, perhaps, was rendered useless for life when withdrawn

At present both armies were efficient, and our Allies had abundantly

CAPTAIN GLASSE, AND HIS CHIEF ENGINEER, H.M.S. "VULTURE," SUPERINTENDING THE REPAIRS OF [illegible] THE EMBARKMENT OF SVEABORG.—SKETCHED BY J. W. CARMICHAEL.

provided themselves with the arm in which they had previously been inferior. It wanted, on the 9th of April, only eight days of six months since the last general bombardment; and the besiegers had used the interval in accumulating far larger means than before. Our own artillery had not been so much increased in proportion as that of our allies, which had proved ridiculously inadequate on the 17th of October. They had now, instead of less than a hundred insignificant brass pieces, 300 siege guns. The alliance between Sardinia and the Porte had been signed at Constantinople in the preceding month; but, of course, no Sardinian troops had yet arrived upon the theatre of war. At five in the morning of Monday, the 9th of April, the bombardment commenced along the whole of the besiegers' lines. It was immeasurably more heavy than that of the previous winter; and this last—which, indeed, was the heaviest bombardment ever until then known in warfare—had been expected at the time to endure the place. On the present occasion it was arranged that each piece should deliver 120 rounds a day, so that the French batteries alone threw thirty-six thousand shot of all kinds against the ramparts in the space of twenty-four hours. Before evening a manifest superiority of fire was established by the besiegers. Along the whole line of the defensive works, the Flagstaff and Garden Batteries alone replied quickly and spiritedly. At three o'clock the Mamelon was silenced altogether for the time; while but four guns continued to thunder from the Round Tower of the Malakoff, and but six from the Redan. A breach was effected between the centre and the Quarantine Bastion. The French then concentrated a terrible mass of fire against the two collections of batteries which we just now specified as retaining their activity; and of these the Flagstaff (*Bastion du Mât*) was reduced to silence before nightfall. Prince Gortschakoff admits a loss in his batteries, for this first day, of 833 killed, which would suppose 2500 wounded. When darkness fell upon the scene, shells and bombs relieved the horizontal ordnance all night long. This great effort to crush the place by artillery was sustained for three weeks; but prodigious had been the supply of ammunition prepared. Thus, at the time of the Emperor Napoleon's visit to London, which began on the 16th and terminated on the 22nd, this awful contest of artillery was raging at its very height. In the midst of it, our allies buried their gallant General Bizot: it was on the 16th, the very day of that Imperial visit which we have mentioned. On the same day our Allies burnt two Russian ships in the Sebastopol Creek. On the preceding day Prince Gortschakoff telegraphed to St. Petersburg that the place was deluged with "a fire of hell" (*feu d'enfer*). It is the first time the phrase occurs in his despatches. He was destined to use it again on a still more awful occasion, and under far more tempest of fire than so awful that it needed not to be maintained for the same length of time.

Still the constancy of the enemy was not shaken. His workmen repaired the batteries at night; and the garrison, so far from discontinuing their sorties, redoubled them. On the 10th Omer Pacha visited Lord Raglan, and two councils of war were held at the English Commander's. Three days later the Russians sallied at ten in the evening upon the French left; the French repulsed them, and attacked in turn the defences near the sea. Twice they gained these, but twice had to retire. The bombardment never ceased for these incidents. On the 17th and 18th zigzags were opened and pushed forward in front of Gordon's Battery to within a hundred, or nearly a hundred, yards of the Redan, and about sixty of the Malakoff. There were two hostile rifle-pits in front of the former—one inside, or behind, the other. On the 19th and 21st the English took the first by the bayonet, and kept it; took the second in the same manner, and destroyed it.

Such were the main incidents of this unprecedented three weeks' bombardment, well described at the time as the most terrible ever known. On the 28th of April it was suspended, the ammunition being brought too low to risk what remained, and many of the guns being damaged. On that very day the naval blockade in the Baltic Sea was established; and on the next Pianori attempted to assassinate the Emperor Napoleon in Paris.

Soon after this the Vienna Conferences having ignominiously failed, and the counter-propositions of Austria having been rejected by England and France, M. Drouyn de Lhuys retired from the French Ministry.

## VARIOUS ASSAULTS DURING THE SUMMER, KERTCH EXPEDITION, AND GENERAL HISTORY.

The interest of Europe in the siege augmented with the obstinacy and duration of the resistance, and with the recurrence of the bloody episodes which marked its progress. Between Varna and Balaclava, moreover, since the 28th of April, electric wire was known to be flashing its messages under the sea; and the public entertained hopes of receiving from day to day accounts of events which should have hardly occurred at the theatre of war before they were to be announced at home.

On the 1st of May General Pelissier was ready to assault the Russian counter-approaches in front of the Bastion du Centre; but, it is said, that General Canrobert, on second thoughts, entertained a misgiving about the result, and wished to postpone the attempt. His subordinate would not consent to have ground for nothing at all, and carried his battalions to the arduous business. The loss was severe, but the success complete. A dangerous starting-point for the sallies of the garrison was removed, the approaches were everywhere in the neighbourhood pushed forward with greater speed and greater security, and those in particular which were creeping about the Mamelon were rescued from the murderous effects of an occasional enfilading fire, which greatly retarded the work.

A more gallant soldier in the field than General Canrobert could not be named. He was, besides, highly efficient as a second in command, on account of the prompt, clean, decided style in which he handled a division. Weighted, however, with the responsibility of the supreme post, he was as slow and scrupulous in giving, as he would have been rapid and intelligent in executing, instructions. We have just seen one instance of his hesitant, if not vacillating, disposition, in the case of General Pelissier's arranged and ordered attack on the outworks of the Central Bastion. A greater example of his indecision now awaits us. It had been agreed between Lord Raglan and him that, if the Sea of Azoff could be forced, not only many prizes would be taken from, and a wage inflicted on, the enemy, but a large part of the supplies on which he depended, uninterrupted. Eight thousand French and five thousand English troops were accordingly embarked at Kamiesch and Balaclava respectively, and so dispatched on the 4th of May towards the Strait of Kertch. This movement did not escape the vigilance of Russia watched within the great stronghold; and on the very day Prince Gorischakoff telegraphed the fact to St. Petersburg just as the expeditionary squadron had sunk below the horizon came a warning voice from the Emperor Napoleon to General Canrobert, to hold his troops well together for some undertaking of magnitude. The General interpreted this order as inconsistent with, and condemnatory of, the deduction at that very moment of the troops which had sailed. He immediately countermanded by telegraph the expedition, and which accordingly returned on the 6th. The Emperor's direction, doubtless, referred to the bulk of the armies in camp, to the more or less straggling manner in which they might be posted, and to their total muster under arms. In about a fortnight the mistake was rectified, the expedition sailed again, and on the 24th of May forced the Strait of Yenikale. That place and Kertch were occupied. Arabat was reduced, Soujouk-Kaleh was evacuted; and Genitchi, at the extremity of the Spit so called, was bombarded by Captain Lyons. The whole of the Cimmerian Bosphorus was swept of all its merchant vessels, some hundreds in number; Taganrog, where the Czar Alexander had died, was captured, and even the guns of the Swash, or Putrid Sea, was penetrated and patrolled by the boats. Here they afterwards, at Gheisk, burnt along the coast a quantity of stacked corn sufficient to have fed fifty thousand men for six months. This brilliant series of successes was all completed before the end of the second week in June. On the 17th of May, meanwhile, the Russians had evacuated Petropaulovski on the Pacific, and, embarking on board of two steamers and four merchantmen, took their stores and ammunition into the river Amoor. Meantime, two days after the first false start of the Azoff expedition General Canrobert had resigned his command into the hands of General Pelissier. It was the same day at ten in the forenoon that the Sardinians, 1500 strong, under General Della Marmora, arrived at Balaclava. On the preceding night, and on the three nights following in succession, the garrison of Sebastopol made the most furious and sanguinary sorties.

When General Pelissier had been about ten days in command, his superior vigour began to be felt. As the Russians had on the Alhed right flung out the Mamelon, so on the left, over the sea, they had constructed an immense and truly strong excavated fortification among the rocks, where they had sapped forward in a manner to collect, under seemingly impregnable protections, a whole army, with advantages for sallying which might have proved most dangerous. The entire position overlapped and paralysed the left of the French army. General Pelissier attacked it on the night of the 22nd with twelve battalions, who found the enormous labyrinth garrisoned by about seventeen. The most terrible conflict which had yet taken place occupied the night. Towards morning the French, who had carried half the works, had turned them against the defenders; next night they stormed the rest, reversing them in the same manner.

June was an eventful month. On the 5th, in the Baltic, occurred the massacre at Hango Point, of which the details are familiar to everybody. Under an English flag of truce, dispatched on an errand of kindness and deliverance, English sailors, and Russian subjects about to be generously restored to their country, were foully butchered by the countrymen of a part of the victims. On that same day the legions of the Czar thought it prudent to evacuate Anapa, and retire behind the Kauban; and soon afterwards they blew up all their forts on the eastern shore of the Black Sea, withdrawing the much-needed garrisons to reinforce the corps in campaign, or else to swell the forces of Generals Bruguton-Mazovsasky, Bebutoff, and Mouravieff who were about to operate actively in Armenia.

On the 7th, after twenty-four hours of renewed bombardment, the besiegers of Sebastopol stormed the Quarries in front of the Great Redan and the Mamelon. Colonel Brancion, a most promising French officer, was killed as he planted the tricolor on the Mamelon, and so bequeathed to it his name: it is called the Brancion Redoubt. These were the last of the real *outworks* of the Russians; and by their fall the Allies had at last forced their way face to face with Sebastopol. They lost no time in trying its strength. On the night of the 17th, the *Sidon*, *Princess Royal*, and *Miranda*, in conjunction with a division of French steamers, made a spirited attack on the sea forts. It was here that Captain Lyons received his last wound. On the 18th was adventured the fatal assault in which the Allies sustained their very first genuine repulse since the commencement of the colossal war. The French were beaten with frightful slaughter from the Malakoff, after stupendous efforts of persevering valour. Our men who advanced later, were pounded by a side fire from the Russian right of that work, and shattered in front by the batteries of the Redan, before they ever reached that place. Nevertheless the Royal Irish, slipping down into a hollow road to the left, there met a few companies of French, passed on, stormed the defences at (as *they* approached it) the left flank of the Redan, stormed the Barrack Batteries, and, bayonet still in hand, dropped out of view among the houses of the suburb, where they literally held their ground *for eighteen hours*. They then made their way back to the trenches. Had they been supported it is impossible to say what might not have ensued. Our loss was 251 killed, of whom twenty-one were officers; and 1200 wounded, of whom seventy were officers: twenty-two of all ranks were missing. The cause of this double failure of the French and English was the excessive length of the *open* which the storming columns had to cross ere coming to push of bayonet. The Generals resolved now to sap up to the very foot of the Russian ramparts. But Lord Raglan, who was now in bad health, could not surmount the moral effect produced in his mind and spirits by this first repulse. He sank fast, and on the 28th expired. General Simpson assumed the vacant post.

## NAVAL OPERATIONS IN THE BALTIC AND BLACK SEAS.

In the Sea of Azoff the work of destruction and prize-taking continued for about two months on all the coasts, north, east, and west. Not a town but was visited.

In the Baltic, so early as the 7th of May, the *Archer* and *Geyser* captured eight Russian ships off Riga. On the 21st of the following month the masked battery of Nystadt was destroyed. Innumerable prizes of small value continued to be taken, the Russian fleets never once daring to come from behind the granite fortifications. At last, on the 9th of August, the Allied fleets moored off Sveaborg, and sent in their gun and mortar boats to bombard the place. For ninety-six hours only their ammunition lasted; and, indeed, the very ordnance had then suffered crystallisation, and threatened to burst. The loss of the enemy is stated to have amounted to 2000 men. Numberless stores, barracks, magazines, Government buildings, and part of the Arsenal were burnt. The whole place seemed one huge fire. The Allies had, we believe, about ten or a dozen men wounded slightly. A week later there was a skirmish between the *Bulldog*, *Magicienne*, and *Vesuvius*, and six Russian gun-boats. This terminated operations in the north of Europe.

## BATTLE OF TRAKTIR-BRIDGE ON THE TCHERNAYA.

The garrison of Sebastopol having failed on the 2nd of August in a desperate attempt to force the Allied lines by the Woronzoff Road, remained inactive only in appearance. They were ready for a new Balaclava and a new Inkerman all in one, so far as the strategic movement is concerned. In August the Tchernaya is fordable at many points, and was known to be so by the enemy. On the 16th of that month they debouched from the Tchoulou Heights, and descended to the Tchernaya in the neighbourhood of Traktir-bridge. Behind this bridge rise at a little distance the Fedukine hills, on which rested the rear of the French army, which now faced about. To their right were the Sardinians,—to theirs the Turks. Beyond the river, and under Tchoulou hills is a valley, along which swarmed the Russian masses, driving the outposts of the Sardinian Bersagliers, or sharpshooters. About 1500 Zouaves and Chasseurs guarded the bridge: they were attacked by 10,000 Russians, under General Read. For an hour the 1500 held the 10,000 beneath the storm of artillery which poured upon their dense columns from one English battery and from the Sardinian and French artillery. At last, the Russians swarmed over the fords, forced the bridge, and slowly pushed the brave Zouaves up the hill: but executed this movement painfully, out of breath, in disorder, and rent by ordnance. At the hill's brow the main body of the French received in their openings comrades worthy of Leonidas, who, turning, and now backed by strong columns, charged bayonets down the declivity. Twice the enemy rallied, but in vain. The Zouaves executed a final rush, and drove them with carnage upon their supports, who were thus disarrayed. The artillery reopened, and the battle was won. General Scarlett's dragoons came up at this moment; but General Pelissier deemed pursuit unwise. The enemy retired on Mackenzie's Farm. He left on the field a quantity of fascines, planks, beams, ladders, and sappers' tools, destined to destroy the works of the besiegers. He left also 2500 dead; and 1620 of his wounded were that night in the ambulances of the French, who took, in addition, 600 prisoners. They themselves lost 120 killed, and 810 wounded—chiefly on and near the bridge. This great battle occurred the day succeeding the First Napoleon's new anniversary, and the fête-day of the French Empire. It was on that very morning that the Queen of England set out to pay the first Royal visit ever made by English Monarch to a Sovereign of that warlike dynasty. It seems as if events both in the East and in the West were conspiring to raise to the highest point the glory of the Napoleon destinies at one and the same hour.

The Baltic fleets—whose loss in the recent bombardment of Sveaborg had, as Admiral Penaud wrote to his Government "been insignificant in men and nothing in materials," were at this epoch withdrawn towards Nargen. But it is a most curious coincidence that, on the very day when they appeared off Sveaborg, the Russians, two thousand miles away, at the opposite side of the huge area of hostilities, with the whole continent of Europe between the two scenes, invested Kars, on the frontier of Armenia. On the 7th of August their squadrons were patrolling at Capricio, across the Erzeroum road, quite to the rear of the devoted fortress.

## FALL OF SEBASTOPOL.

September was the month of great catastrophes. By the 23rd of the previous August the French had sapped up to the very foot of the Malakoff Tower; and fitly completed their approaches by repelling that day from a Russian ambuscade which they had already stormed upon the glacis, a sudden and furious sortie of the garrison. These left five hundred dead bodies strewn over the neighbourhood of a work which no effort could regain. The guards in the French trenches could now without leaving them, place a hand upon the incline of the tremendous tower the strength of which they were so soon to try.

The 5th of September arrived. The preparations were complete for an indescribable and inconceivable bombardment, which was to surpass the previous bombardments as signally as they surpassed all former efforts of artillery. This was to be the supreme experiment in that order or plan which had hitherto more or less governed the proceedings of the assailants.

The siege had now continued eleven months and six days, when, at dawn on the 5th, the batteries opened for the last time with 800 heavy guns and 150 large mortars.

In all attempts of this nature the horizontal and the vertical fire had been alternate. Here, they were combined. The consequence was, that, while the casemates were battered, the guns dismounted, the carriages smashed, the parapets blown in, the ditches encumbered with falling rubbish, and bridged over, the defenders were at the same time driven from the embrasures, and hindered from repiying effectually. That was one difference from all antecedent embarcments. Another was still more important: the fire was not seven—not directed in a steady, sustained hurricane of destruction; it blew fitfully and in gusts. One result of this was that the enemy emerged repeatedly from their bomb-proof covers, only to meet the storm of ruin which they thought had passed, but which revived. A second result was to ensure the character of a surprise to the assault whenever it should thereafter be made. Had the fire been consecutive, supported evenly, then the moment it ceased in order to allow the storming columns to go up, the ramparts would have swarmed with defenders. But, as it had already ceased a dozen times for a few minutes, and as, on each of these occasions, the Russian Guards had emerged only to be overwhelmed with the renewal of the burning tempest, they lay close at the last and fatal moment. It was the old nursery tale exemplified of "Wolf! wolf!" On the eternal moral truth conveyed in that little apologue, the stratagem which laid the place low, was founded.

Such was the second grand distinction between the present and the former bombardments. But there was a third distinction, and this third distinction was the most important of all. It was the prodigious force and weight of fire now brought to bear on the fortress. The April cannonade had astonished all Europe by its fury and magnitude; but yet during nineteen days, at a rough computation, the number of projectiles hurled against the place was *only* 36,000. Now in this last bombardment, during less than a sixth of the time, that is during three days, the number of shells a-one was upwards of 60,000; while simultaneously the horizontal discharges sent 96,000 cannon-balls among the defences. Strong and proud as was the giant fastness, it bowed; it was bent, it was crushed, under this overwhelming union of the elements which wreak destruction. While the level storm swept against its face, the vertical storm descended. There was a hurricane of fire, and there was a deluge of fire. Well might the stern Russian soldier who stood erect amidst these days of doom call that unearthlike paroxysm of ordnance "a fire of hell." Nothing could live against it; nothing could stand against it; and nothing could be repaired while it lasted.

On the 8th there was a lull. The grey-coats teamed out of the cavernous shelters. Again flamed up the convergent blaze, again shook every cliff and every edifice with the redoubled thunders. No living thing remained upon the ramparts. A fiercer crash than ever was succeeded by a momentary pause. Ere the echoes died away Sebastopol had fallen. In loose, light, floating order, scarce seen amidst the smoke, not heard amidst the din, like the blue wreaths of an exhalation, rapid, fleeting, wave upon wave of ranks appeared for an instant passing shadowily up the face of the Malakoff, and vanished within. Looking more attentively through the glass, the spectator saw myriads of Zouaves and Chasseurs fast supported, some with long poles, armed crook-wise at the top, swinging themselves over the parapets, clambering across the choked-up ditch, descending into it, emerging on the further side, creeping round the ledge of the rampart, and disappearing in the embrasure of the breach. It was like a dream or a vision; it was a half-minute's diorama. But eleven months of toil were over; the work was done. Then faintly came the clash of steel, the distant mutter of a deadly struggle, the sharp, irregular ring of rifles. But the pickaxe and the hatchet had gone up as well as the bayonet; an intrenchment was formed; the traverses were interposed; the wires of the mines were cut. The enemy had been found playing cards and taking refreshments in the bomb-proofs. The rule of Sebastopol had passed to the stranger. Scarcely one man of the assailants fell in the critical and conclusive assault, though they lost thousands in the others.

It was our turn. Our part remained to perform. The Light Division was no longer the Light Division which had rushed with such magnificent enthusiasm up the heights of the Alma. The veterans were nearly all replaced by raw youths not yet fully disciplined. The first division was selected for the assault of the Redan. Their advanced party went against the salient, climbed into it, and then, instead of advancing as their officers wished them, to charge the breastwork drawn across its base, they began to exchange musket shots with the defenders. These were sheltered behind their work, besides having a considerable width of ground, whereas the assailants were huddled in the narrow corner or apex of the salient. A few had got uselessly into isolated corners of the side batteries. Meanwhile the supports could not be brought up. There were about two hundred yards of "open" to cross from the English trenches, which were, besides, in that spot too narrow for good formation. This space was swept by three lines of fire at least which converged there. Colonel (now Major-General) Windham sent officer after officer; and, at last, went himself for the convened and expected reinforcements. Before he could bring back any help the Russians behind the breastwork "did what our men should have done"—charged bayonets; and our position in the Redan was definitively lost. A Redan means a fort open at the base or rear; and the beaten defenders of the Malakoff had, by this time, thronged in irresistible numbers into the place; so that the very success of our gallant allies rendered ours, at that moment, only additionally difficult. The assault was to have been renewed next morning; but next morning the enemy was on the further side of Inkerman Creek, Prince Gortschakoff having, with astonishing skill, order, constancy, and firmness, withdrawn his whole army during the night over a bridge of boats which he destroyed at nine of the forenoon. He set fire to the town on evacuating it; he quitted it as the fiend quits the demoniac, rending and ravaging the habitation from which he is expelled.

The Russian hospital, filled with sick and wounded, was found in a horrible state of stench and neglect. It was exposed to fire. The amount of ammunition and stores captured was very great. The number of guns alone was twice what General Pellissier supposed when he wrote the following striking account with which we may properly close our own:—

> This terminated this memorable siege, during which the relieving army was twice beaten in the open field, and the means of defence and attack of which had assumed colossal proportions, the besieging army had in its different attacks, about 800 guns in battery, which fired more than 1,600,000 rounds, and our approaches, dug during 336 days of open trenches, through a rocky ground, with a development of more than eighty-six kilometres (sixty miles), were made under the constant fire of the place, and with incessant combats by day and night.

The day of the 8th September, on which the Allies gained the mastery at last, was equal in number, not invested, ensconced behind formidable defences, provided with more than 1100 cannon, protected by the guns of the fleet, and the north battery still retaining enormous resources, will remain an example of what may be expected of a brave disciplined army hardened by war.

The French lost, on this occasion, in killed and wounded, nearly 8000 men, of whom nine were generals, and forty-four were superior officers. The English had 1788 wounded, of whom 124 were officers; and 375 killed, of whom twenty-nine were officers.

On the first day of the last bombardment, the Russian two-decker, *Marina*, had been burnt by a shell from the French right attack. The rest of the fleet Prince Gortschakoff himself sank on his evacuation. They consisted of seventeen ships of the line, seven frigates, and various smaller vessels of war.

The docks were afterwards destroyed by the engineers of the Allies. It took three months to blow up the southern docks, which it fell to the English share to demolish.

## OPERATIONS AT THE LIMAN OF THE DNIEPER AND BUG; AND WAR IN ASIA.

On the 4th of September, the very day before the final bombardment of the Crimean stronghold, Omer Pacha at length, after much suit

made at Constantinople, and much importunity for the aid of the English transport service, obtained an arrangement by which his army could be conveyed by instalments, at least, to the eastern shore of the Black Sea. Not knowing how reduced were the provisions of the heroic garrison at Kars, or how little chance there was of any direct relief being sent to them from Trebizond and Erzeroum, he proposed to effect a grand diversion in their favour; and, at the same time, change the whole aspect of the Asiatic war. It is probable that, had Kars been in the condition which he supposed, no better plan could have been selected. Proceeding first himself to Abasia, he fixed on Soukoum Kaleh as the fittest place for debarkation. He then returned to hasten the transport of his troops; but the fleets were then very busy, not only with the conveyance of supplies for the immense camps established on so many far-separated points, but with the transport hither and thither of large expeditionary detachments.

The most important of these went to the delta of the Boug and Dnieper, where, near their confluent estuaries, Otchakoff on the retreating northern, and Kinburn on the projecting southern bank, defended the approach from the west, to the dockyards of Nicolaeff, and of Kherson. On the 17th of October the garrison of Kinburn, 1500 strong, under Major-General Kokonovitch, surrendered to the Allies, who, having disembarked some troops to the north, bombarded the place both by sea and land. The French—still beforehand with us—here brought into action, for the first time in warfare, the new floating batteries invented by the Emperor Napoleon III. They succeeded admirably, the balls of the fortress, which mounted 174 guns, rebounding innocently from their crab-like shells, at a range of only 800 yards. Otchakoff was then blown up, and evacuated by the Russians.

Three weeks before this occurred the cavalry combat of Khougill, fifteen miles north-east of Eupatoria, between the Cossacks of General Korff and the French horse under General d'Allonville. On the very same day, the 29th of September, at the other side of the Euxine, General Mouravieff, having learnt the fall of Sebastopol, and wishing to expiate that dishonour, assaulted Kars with his whole infantry. The battle lasted eight hours, the Russian masses displaying the greatest stubbornness as they advanced under the well-arranged fire of the Turkish guns. At last, beaten everywhere, they were assailed in turn by the garrison which had scarcely yet been under fire; the confused and fatigued assailants could not make head against this sortie, and were driven back in shelter under the protection of their numerous and powerful cavalry, leaving eight thousand dead in the trenches and near them.

It was at this time that Omer Pacha, gradually overcoming the difficulties of that deficiency in transports to which we have adverted, found himself at the head of about 15,000 troops in Abasia, a force many of these being his own trustworthy veterans. He had gradually edged them down towards Redoubt Kaleh, which he fixed on as his basis of operations. On the 30th Shemseni was secured; and, having driven in the Russian out, from Sogdidi as their endeavoured to open relations with Schamyl, while conciliating the Princess Dadian and the Christian population in his own neighbourhood, he moved inland in a south-eastern direction. But, owing to the difficulties of the country, which is an entanglement of woods interspersed with very rich but neglected farm lands, and owing still more to the precariousness and uncertainty of any supplies from the inhabitants, his progress was extremely slow. He did all that lay in his power, purchasing provisions in every direction, and organising, as his principal resource, a regular commissariat at Redoubt Kaleh. The river Phasis, which flows from the Caucasus to the Euxine, is navigable for nearly a hundred miles from the sea; and he had heped to have availed himself of this channel for important manœuvres. His plan was this:—The first strong Russian post was at Kutais, where the great high road—by Gori, into Georgia, and down to Tiflis—would take his advancing columns over the celebrated Soorem Pass. Once master of Kutais, and with his communications well secured upon the Black Sea along his rear line, he hoped either to be able to defeat all the local Russian garrisons and posts between Soorem and the capital of the fertile province lying beyond and below it, or else to recall by the terror of his progress the army of General Mouravieff, then menacing Armenia, and beleaguering Kars. In either case a great blow would be struck, and the hard-pressed troops of General Williams relieved. Then, should it even prove too late to advance permanently that year beyond Mingrelia, he could at least strengthen himself in Kutais, make it his new centre for future operations, and call up, meantime, additional forces for the campaign of spring. General Mouravieff would then be pressed from the side of Armenia, where he was playing offensively, and from the side of Imeretia, on which he would be thrown also upon the defensive. But it was already too late; and the Russian chief knew it. Well informed of the true state of the Kars garrison, he never disquieted himself, or in the slightest altered his plans, in consequence of Omer Pacha's diversion. Should the Muscovite beat the militia which now guarded the northern gorges of Georgia, he felt sure that it would all come to the same result. The season, the floods, scarcity, would compel the victor to retreat; much more would such become his necessity if, in the interim, General Mouravieff, should succeed in reducing Kars, and, while thus liberating his own army for an encounter with the Ottoman, should rob the latter of the chief motive which prompted this venturous advance, by depriving it of its character *as a diversion*. Indeed, in such a contingency, the further Omer might have penetrated the worse would perhaps be his situation; since General Mouravieff, by not returning directly towards Tiflis (which would be rather better able than Kars had been to stand a siege in its turn and to hold any assailant in play), but, by moving diagonally, north-east by north, along the excentent Russian line from Alexandropol to Akhazik, would himself interpose Omer Pacha in flank and rear, shatter his line of communication, overwhelm his detached supports, and cut him off from the sea.

For these reasons, General Mouravieff tranquilly and steadily persisted in the blockade of Kars; and never for a moment showed any inclination to turn aside to face the Turkish invader. A month and seven days had now elapsed since the assault on Kars was repulsed so gloriously, when Omer Pacha at length brought his labouring column, through the miry woodlands as far as the Ingour. There he saw, for the first time, a regular stand prepared by the enemy, about twelve thousand strong, intrenched on the opposite bank, and commanding the passage by batteries. They were chiefly the Russian militia of Georgia, and were under the command of General Bragation-Mukransky. The Turks had some twenty thousand men. The stream was barely available in half-a-dozen places by which the enemy's intrenchments could be turned. The Turks passed it, up to their armpits in water, holding their muskets aloft; our countrymen—Colonel Ballard, Captain Dymock, and others—showing a splendid example worthy of Christian heroes. The engagement lasted five hours, when the Russians fled, leaving behind them sixty pieces of five gun carriages and ammunition carts, and 400 killed. They appear to have carried off their wounded. Omer Pacha had 220 wounded and 68 killed. Pressing on the track of the fugitives he came up with them again before the end of November, with slight advantage. A month and seven days had now elapsed since the assault on Kars was repulsed so gloriously, when Omer Pacha at length brought his labouring column, through the miry woodlands as far as the Ingour. There he saw, for the first time, a regular stand prepared by the enemy, about twelve thousand strong, intrenched on the opposite bank, and commanding the passage by batteries. ## INTERIOR OF THE MONASTERY OF ST. GEORGE.

THIS antiquarian nook of the Chersonese has been frequently described of late, in letters from the seat of war in the Crimea. Mr. Danby Seymour, in his deservedly popular work, pictures the famous Monastery as ensconced in a ledge of the precipice:—

From the plateau above, which has all the aridity and monotony of the Steppes, its ancient walls are not visible, and it is not till the traveller approaches the edge of the cliff, and looks over, that he sees, instead of a frightful-wave-beaten precipice, a most charming little village, nestled in the rocks at about fifty feet below him. There are a church, and houses, and terraces, cut one below the other, and ancient poplars, and gardens irrigated by a fine rivulet of water. The spot looks like a little oasis suspended, as if by enchantment, at several hundred feet above the sea, in the midst of an amphitheatre of black, basaltic rocks, which rise majestically around, and form a striking contrast to the rich verdure in which the Monastery is hidden. A door and staircase, cut in the rock, form the only entrance to this great hermitage, which was no doubt first created by the ancient Troglodytes, or dwellers under ground, whose remains are so numerous in the Crimea, as all the rocks near the Monastery, which are composed of chalk, are pierced by ancient grottoes, which are now only used as cellars and poultry-yards, although they were inhabited by the monks so lately as the time of Pallas, in 1794. The Monastery consists of many large buildings, several of which are devoted to the reception of strangers. The church has unfortunately been rebuilt, and the ancient chapel that stood here has been totally destroyed. A rivulet runs in front of the houses, and trickles into a stone basin, shaded by poplars, while below it are terraced gardens and small vineyards.

This little nook generally enjoys a most unbroken quiet; but on the 23rd of April, St. George's Day—when crowds arrive, and the plateau above is covered with huts and tents—the Greeks, from all parts of Crimea, flock to the place, and the women especially frequent the Site, and embellish the scene by their picturesque dresses and traditional beauty. As in most religious festivals, the world always claims its part, and a kind of fair is held here in the early part of the day, at which much business is done. But all at once the scene changes—the hour of Divine service has arrived, the crowd flocks to the church, and, as soon as the benediction has been given, there is a rush to the basin containing the water, which is supposed at this season to be a remedy against all kinds of diseases.

AN HERETICAL TOAST.—At a great banquet given lately at Santiago, some young people drank to the health of the first Protestant who came into Spain to celebrate the functions of his religion. The local authorities attached no importance to the fact, but the Minister of Justice has sent orders to the effect that a prosecution be instituted against the authors of so scandalous a toast.

## PICTURE OF THE CONGRESS OF VIENNA.

THIS memorable scene in the diplomatic history of Europe—at which were made arrangements which formed the last general settlement of the affairs of Europe—derives additional interest at the present moment from its being placed in parallel with the Treaty of Peace just signed at Paris. The Congress was held at Vienna in 1815, at the Foreign Office, in the same apartment wherein was held the Conference of last year, 1855. The former Congress, whereat was signed the Treaty between Austria, Spain, France, Great Britain, Portugal, Prussia, Russia, and Sweden, was painted by Isabey; and is valuable for the admirable portraits it contains of the great diplomatic celebrities of the period who attended the Congress. Upon the right, placed upon a pedestal, is a bust of the illustrious Austrian statesman, Prince Kaunitz.

The new number of the *Westminster Review* contains a lively and graphic article on 'The Congress of Vienna,' from which we have taken the following notices of the leading diplomatists:—

Ever since the 16th the Plenipotentiaries of the four Powers—Castlereagh for England, Rasumofsky or Nesselrode for Russia, Hardenberg and William Humboldt (sometimes either, but oftenest both, Hardenberg being deaf and requiring a query second) for Prussia, and Metternich for Austria—have been holding preparatory meetings and conferences. Castlereagh, the English readers knows. Voices from the Congress speak of his narrow horizon, and of his long-winded ignorance of Continental affairs, with which he had to deal; but give him credit for honest attention to the interests of his country, to the best of his not very shining ability. Count, soon to be Prince, Andreas Rasumofsky was nephew of the handsome clever Ukraine peasant-lad with whom the Czarina Elizabeth, of singular memory, shared her couch, if not her throne; and son of that peasant-lad's and Czarish partner's equally handsome and clever brother, who had wandered to Petersburg with his guitar, and risen to be Hetman, and President of the Academy of Sciences there. Both the brothers, commencing in such a way, earned for themselves the character of estimable efficient noblemen: their Ukraine peasant-blood proving itself a naturally noble sort. Count Andreas, who has also had his adventures, has grown grey in diplomatic service. He has been many years ambassador at Vienna: has accompanied the Czar in the late campaign, and possesses his master's confidence—as far as anybody can be said to possess the confidence of so capricious and impressible a man as Alexander, who listened to many advisers.

Count Nesselrode, Rasumofsky's colleague and rival, was then not much above thirty, and had already advanced so far by dint of pliancy and dexterity. Stein speaks of him with a certain contempt, as "Little Nesselrode," and describes him as a good-tempered, rather feeble, parasitic man, devoid of character or originality—a clever, handy secretary, not a statesman. But he was of the yielding, elastic nature of the willow, whose pliancy, in some situations, outdoes the strength of the unbending oak.

Hardenburg, the Prussian State Chancellor, was a high-bred, accomplished gentleman, who began his administrative career in Anspach-Bareuth, and rose to his present eminence by skilful service during Prussia's critical years; in reward for which he has just been created Prince. He also partakes somewhat of the nature of the willow; and, thanks to his bland, elastic character, has been able to maintain himself in a post which the sterner Stein could not hold. He has been, not unaptly, called the Mark Antony, and Stein the Cato of Prussian statesmen. He was of a sanguine, happy temperament, and always managed to reconcile the labours and duties of the minister with the graces and pleasures of the man of the world. He was distinguished by personal beauty as well as perfect manners; shone much in society, and was still a favourite with the ladies, though past sixty.

The Baron William von Humboldt, who was associated with Hardenberg, is known to the world as a man dis-

THE CONGRESS OF VIENNA: PORTRAITS OF THE PLENIPOTENTIARIES OF THE EIGHT POWERS WHO SIGNED THE TREATY OF PARIS IN 1815.—FROM THE [illegible]

tinguished in letters, as well as a statesman of high quality. His natural gifts had been developed by great culture and rare opportunities. He had travelled with Canpe, studied æsthetics together with Schiller, and administered the State (as Minister of Public Instruction and Health) along with Stein; yet the refinement of his mind and universality of his culture were, perhaps, injurious to him as a man of action.

Metternich, in more senses than one, presided over the Congress. He was the minister of the host, conducted the festivities as well as the business, and made the one serve the other. Nature had endowed him with all gifts that ensure success in the world—fine presence, ingenious wealth, amiable disposition, high spirits, quickness, adroitness. His successes had begun early. At seventeen he officiated as master of the ceremonies at the coronation of the Emperor Leopold. He was twenty-two when old Kaunitz gave him his granddaughter and heiress in marriage, with the testimony of being "a good, amiable young man, of the most graceful verve, and a perfect cavalier." At thirty he negotiated the third coalition against France. At thirty-six he was Prime Minister. He was created a Prince after the battle-field of Leipsig, and is now President of the Congress; all, one may say, by virtue of a happy organisation, and the talents and accomplishments of the outward man.

## MR. BRAHAM.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.*)*

Sir,—As your journal is often referred to for the settlement of disputed questions, you perhaps will allow me to correct an error in the account of Braham's first appearance. It, of course, was not, as stated in your paper, on the 31st, but on the 21st, of April, 1787. Mrs. Siddons, on the same night, was playing *Isabella* at the other house. They who love to connect eras together may, perhaps, find some gratification in hearing that Braham, who sang in public within the last four years, was the contemporary of Roger Kemble, the father of the Kembles (who was a tolerable actor, in spite of the sneer levelled at him for being an ex-hairdresser), of Macklin, and of Charles Smith. All these actors played subsequently to Braham's début. The father of John Kemble made his first and only appearance in London more than a year after Braham. This was at the Haymarket, where he played the part of "Miller of Mansfield." Roger must have been in indifferent circumstances, if a story told by Geneste be true. "I spent the winter," he says, "of 1786-1787 in London. Mr. Bonney, of Percy-street, told me one evening that he had been at some banker's in the course of the day, and had heard the banker observe that he had a sum of money deposited in his hands for charitable purposes, and that Roger Kemble had applied to him for a part of it. His answer was, that he could not consider the father of Mrs. Siddons, who was making so much money, as a fit object of charity." Macklin did not leave the stage till May, 1789, about two years after Braham's first appearance. Macklin (according to Congreve's biography of the actor) made his début at Lincoln's-inn-fields, under Rich, in 1725. So that a month ago there was living amongst us a performer once contemporary with a player who could recollect Betterton, and had seen many an old comedian who had played under James II. and William III. "Gentleman Smith," the original *Glenalvon* and *Charles Surface*, quitted the stage a year after Braham came upon it. More than a century has elapsed since this contemporary of Braham first tempted fortune before the lights as *Theodosius*. Let us add one more circumstance connected with the year of Braham's début. In that year the newspapers announced the second edition of Scottish Songs by Robert Burns, an Ayrshire Ploughman. Intimation is added to the ignorant, that, if they are curious to know who this Ayrshire Ploughman is, they will find an account of him in "The Lounger," No. 9. The ploughman is now more famous than the players.—J. DORAN.

THE POSITION OF FRANCE AT THE VIENNA CONGRESS.—France occupied at the opening of the Congress a peculiar, and, in her history, novel position. Her Plenipotentiaries were to arrive last, and to rally without having been consulted. That was not the part French Ambassadors had been accustomed to play at congresses for three two centuries past. At the Congress, for instance, which in European importance bore most resemblance to the present assemblage of Westphalia—the French Ambassador, Count d'Avaux, began his functions by demanding that the whole constabulary force of the free Imperial city of Münster, officers and all, be preliminarily put in durance, till the proper punishment could be ascertained for their enormous crime of having exerted themselves to maintain the public peace against some rioting followers of the French Embassy. The same Count, in a despatch to his Court, makes sport of one of the Imperial Plenipotentiaries, the learned Dr Valmar, who, writes the Count, "has no people at all about him to assist in ceremony, whilst I, in my coach-and-six, attended by twelve pages and thirty-two cavaliers, let the world see of what sort the least of your Majesty's servants are." At the dawn of congresses with whom Louis XIV.'s ambitious designs has inflicted the world, the French had had the chief word to speak; and at Napoleon's congresses, his word, of course, was command. At Erfurt, but a few years since, Talleyrand dictated terms to Kings and Kaisers; and told the Weimarian Chancellor von Müller, who had been congratulating himself at the friendly reception which his Duke had experienced from the Emperor, "We say fine things to those we don't like but to our friends we say, Moque-vous de tout cela!" And now the same Talleyrand, Prince of Benevento, ex-Vice-Grand-Elector, and ex- many other things, has to meet that Erfurt, "*parterre de rois*," under quite altered circumstances. One would like to have seen him "tell fine things" to the Duke of Weimar, and wonders whether he made any reflections on the occasion.

BOU-MEZA.—This famous Arab brave, who, next to Abd-el-Kader himself, was the the greatest of the Algerian leaders, followed the fortunes of his chief, and after sharing his long captivity in France was liberated at the same time and on similar conditions by Louis Napoleon. Shortly after the breaking out of the present war, when Abd-el-Kader was despondent in receiving the independent command of an Arab force, Bou-Meza procured the rank of Colonel in the Turkish army; but, Mussulman though he was, the rank was sparingly all he did procure, for as in the case of nearly every other foreign officer forced upon them by Ambassadorial influence, the Turks virtually withheld from him all actual military command, and scary the whole of his pay. When I last saw him in Constantinople, more than four months ago, he wore the flowing white silk *burnous*, and looked every inch the Arab Chief. At Batoum he was cased in the bastard frock-coat and tights which constitute the "reformed" Turkish dress, looking—to all but the large and bright black eye, which is as terribly lustrous now as when he led resistless charges against French dragoons—as unlike the Bou-Meza of ten years ago as does any seedy cavalier who swaggers, yet a spavined Turkish Pacha's Arab. Besides this sartorial abomination, he wore a huge French Cuirassier's sword—evidently as great a misfit as was the tight narrow-chested coat, with its shabby worsted braiding, or the yet more unnatural pantaloons. More than once during the evening did he crack a joke at the expense of his own appearance, without, however, seeming to feel greatly the sad reverse in fortune which it painfully indicated to others. Though he enjoys no regular French pension, the generosity of the Emperor supplies the funds necessary for h s support, but for which the income from his solonicky would no longer enable him to maintain before his Arab men the state with the idleness to which the Turks have condemned him, he declared his intention of throwing up the unprofitable sinecure and rejoining Abd-el-Kader in his new retreat at Damascus, in which case our allies will lose perhaps very efficient leader of irregular cavalry whom their whole army could furnish for an Asiatic campaign.—*Letter from Erzeroum, March* 4.

A NEW RUSSIAN LOAN.—It is said to be seriously in contemplation to negotiate a loan for no less a sum than one hundred millions of silver roubles. This will be the fourth since the declaration of hostilities. It will doubtless be effected with less difficulty than the previous ones, when peace has been secured, but it will aggravate still more the financial situation of the country, which is already seriously compromised; and the amount will be, it is feared, insufficient. The public debt before the commencement of the war amounted to 733,573,112 silver roubles (more than three milliards of francs), divided as follows:—Old foreign debt, 57,149,000 silver roubles; debts a terme, 110,857,055; rentes, 258,184,476; credit notes bearing interest, 51,000,000; paper money, 311,375,581. Since the war the debt has enormously increased, in consequence of three successive loans and several issues of Treasury bonds bearing interest. The expenses have exceeded all the calculations made by the Russian financiers. The State, therefore, in order to extricate itself from its embarrassments, must give unusual activity to production, and even double it, and simplify and extend the means of transport; for those now existing triple the original price of produce of every kind. This undertaking, however, is a most difficult one, and can only be effected by a complete regeneration of the present commercial system of the Russian empire.—*Letter from St. Petersburg, March* 18.

A FRENCH OPINION ON MR. CARLYLE.—After having travestied the History of the French Revolution in the Rabelais style, where the atrocities of the actors and the innocence of the victims are confounded and laughed at with a revolting buffoonery, Mr. Carlyle tried to impose on England a sort of Cromwell-worship, *to begin with*. He has many admirers and many copyists. A number of periodicals have become the echo of his doctrine. This adoration of Force—this kissing of the iron hand—is nothing but a consequence—apparently puerile, but profoundly logical—of the spirit of democracy cleverly grafted on the interests and passions of the moment. It may help to explain certain recent phenomena of popular admiration in England which have astonished the world. Some languishing poets make themselves the organs and partisans of this admiration and of this sickly envy, in some elegies which contrast strangely with the national pride which inflamed the poets and prose writers of the last century in all ranks of society. We remember that in the reign of Louis XIV. the French refugees in England published a protestation, entitled "The Sighs of Enslaved France for Liberty." In our time, if the verses and prose of those panygerists of revolutionary reform were deserving of so great an honour, we might form a miscellany of complaints, entitled "The Sighs of Free England for Slavery!"—*M. de Montalembert.*

## THE PEACE.

HARK! through the deep'ning silence
Of the Sabbath night!
Hark! to the solemn echo,
Or, did we hear aright?
Again, again it thunders—
It is the cannon's roar,
That tells a list'ning people
Their work of death is o'er!
Now raise your hearts to Him above,
"Who biddeth wars to cease"—
To the Lord God of Battles,
Who sends the nations Peace!

Peace! let the glorious message speed
Upon the lightning streams
Till on the throne and in the cell
The joyful knowledge beams!
For carnage and destruction,
Twin demons, now are chain'd.
And war's red furious steeds, that long
Trampled the earth—are rein'd,
So raise your hearts to Him above,
"Who biddeth wars to cease,"
To the Lord God of Battles,
Who sends the nations Peace!

And ye, O unknown martyrs,
Who sigh "too late, too late!"
As ye hear the cannon thunder
Their tidings to the state—
Your silent tears and agony,
Your lov'd ones' life-blood shed,
Mingling in solemn sacrifice
The living and the dead,
Have been your portion of the price
For Europe's glad release—
The mighty price Old England pays
For the blest boon of Peace!

Oh! look throughout the length and breadth
Of lands to Britain given,
And search a fitting tribute
To offer before Heaven.
Look for the fatherless and poor,
And for the mourner seek,
And let reflected mercies cheer
The widow'd and the weak.
Thus raise your hearts to Him above,
"Who biddeth wars to cease,"
To the Lord God of Battles,
Who sends the nations Peace!

See! We have work before us—
Work meet for men who rose
Like giants to defend the right,
And grapple with their foes;
We've ignorance to vanquish,
And darkness to dispel,
And many a human dwelling
Too like an earthly hell.
Up! let us know no respite,
Still working hand in hand,
To cleanse these mighty evils
That stain our native land.

We've borne a solemn chastisement,
See that it works aright!
And opens ev'ry heart and mind
To Truth's most holy l ght!
We've learn'd the impotence of man
To guard 'gainst future ill,
We've seen the fruitless vanity
Of pride and human skill,
So let us raise our hearts to Him
"Who bidderh wars to cease,"
And thank the Lord of Hosts for this
His last best gift of Peace!

A. F.

THE POSTMASTER-GENERAL'S REPORT.—The report of the Postmaster-General for 1855, just issued, states, with regard to the inland service, that 832 new post-offices have been established, making the total present number 10,492. The experiment of pillar letter-boxes has fully succeeded, and the number, especially in London, is to be largely increased. Measures are in progress for accelerating the first delivery in the metropolis, so that it may be effected by nine a.m., and also for securing a more speedy transmission of letters between one part of London and another. For this latter object ten centres of distribution are to be established, and hourly deliveries will then take place. Both plans involve such important alterations as to require great care; but the difficulties will be lessened by the public adding to the direction of their letters the initials of the district for which they are intended, in accordance with instructions which will be given. A substitution of new names for streets, when there are two or more of the same name in a district, will, if it be adopted in accordance with a previous recommendation, likewise prove advantageous. During the past year a vast number of accelerations have been effected on the most important lines. The total number of letters was 456,000,000, showing a proportion of nineteen letters for every individual in England, seven in Ireland, and fifteen in Scotland. The number of newspapers posted has undergone a diminution of about one-fourth since the abolition of the stamp, and the loss of revenue from that source has been about one-half. The transmission of bookpackets has experienced during 1855 the enormous increase of 378 per cent, and the number is now 1,400,000 per annum.

NEW WARMING APPARATUS IN FARNBOROUGH CHURCH, KENT.—A constant circulation of the air of a building through the air-drain, and its concentration on the stove, appears to be the principle of this apparatus. The warm air ascends, expands into every part, and gradually descends, as it cools by contact with the walls and windows, flowing down the air-drain, to be again warmed, and thrown up into the church. It is not necessary to confine it to the extremities of a building, because the coldest air is always flowing down the drain; and, as the warm air must necessarily take its place, the warmth is diffused. The construction of the stove is simple and inexpensive; it consists of an iron cylinder, cast in two pieces, five feet long by two feet six inches in diameter, the fire-bars are placed a little below its centre, and are lined with Welsh lump fire-bricks. By means of a small register-valve in the lower door the draught is regulated, and no damper is used in the chimney. The stove is fixed under the side of the church. It has three gratings: the first serving the double purpose of a fresh-air intake-hole, and an air-draft to the fire; the second is placed over the stove, and admits the warm air to the church; and the third, at a distance of twenty-four feet, is put over the air-drain to receive the cold air which is conducted down the drain. The fire is lighted on Saturday, and keeps in without an attendant during the night, and it is never touched during the services. The apparatus was put into the church when it was restored last autumn, and has been found to answer remarkably well. In the construction of the drain care should be taken that the air-drain has no sharp angles; it should be large—two feet six inches by two feet six inches at the least. Sufficient air only is admitted by the screw-valve for combustion, very little heat escapes into the chimney, and the stove is never hot enough to burn the air.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

Her Majesty will hold her first drawingroom this season on Thursday, the 10th of April; and her fourth levee on Wednesday, April 16th, at St. James's Palace.

There is no day yet fixed for the Empress to leave her room. As the baptism of the Prince Imperial must, according to the programme published, follow the above event, it is calculated that it will take place the second form git in April.

The Duke of Cambridge has consented to preside at the 67th anniversary dinner of the Royal Literary Fund, which is fixed to take place at Freemasons' Hall on the 7th of May.

The *Frankfort Journal* announces that the Empress of Russia, widow of the late Czar Nicholas, is about to visit her daughter, the Grand Duchess Olga, at Stuttgardt.

The Berlin papers begin to talk openly of the marriage of Prince Frederick William with the Princess Royal of England. The Prince will visit England at the conclusion of the spring reviews, and it is expected that he will return an accepted suitor.

The telegraphic despatch sent by the Pope in reply to that of the Emperor Napoleon, announcing the birth of the Imperial Prince, and asking for the apostolic benediction, was, according to one of the French religious journals, in the following terms—"I bless the Emperor, the Empress, the Imperial infant, and France!"

Lord Canning reached Calcutta on the 29th of February, and was sworn in Governor-General on March 1. Lord Dalhousie was to leave Calcutta for Suez on the 6th ult.

On the occasion of the signature of the Treaty of Peace the King of Prussia conferred on M. de Manteuffel the Grand Cordon of the Order of the Black Eagle.

An order of the day from the Minister of War, published in the *Invalide Russe*, makes known to the troops that the Grand Duke Wladimir Alexandrowitch, second son of the Emperor, has been inscribed on the muster rolls of the cavalry of the Imperial Guard.

Within the last two months no less than four earldoms have been presented with heirs apparent; namely, the Earls of Airlie, Portsmouth, Lichfield, and Munster.

The biography of the Emperor Napoleon III. has been published in the Russian language at St. Petersburg, and very extensively sold.

From Russia we learn that the Grand Dukes Constantine and Nicholas, and General Todleben, accompany the Emperor Alexander on his journey to Finland.

Accounts have been received of the death of Sir Charles Hotham, Governor of Victoria.

Count Morny is spoken of as likely to be appointed Minister of France at the Court of St. Petersburg.

The marriage of Count Wladimir de Daun, chamberlain of the Emperor of Austria, Colonel in the Austrian service, with the Countess Machet de Laubespin, of Paris, was celebrated on the 27th ult. at Brussels.

It was rumoured that Sir Henry Barkly would shortly leave Jamaica for England.

In the Upper Chamber at Berlin, on the 28th ult., the President read a letter from the Commander-General of the third corps of the army, demanding authority to prosecute M. von Rochow-Plessow, by whom M. von Hinckeldey was killed, and M. von Marwitz, his second.

The fine bust in porcelain of the French Emperor, from the chisel of M. Aug Barre, has been placed in the Salon de l'Empereur, at the Palace of the Senate.

Her Majesty has given an order to Mr. F. Grey, of Cork-street, to supply an artificial limb to Isaac Church, of the Grenadier Guards, who lost an arm at Inkerman, and has appointed him a porter at Windsor Castle.

The *Mémorial des Pyrénées* announces that General Bosquet transmitted by telegraph the intelligence of his elevation to his mother in the following terms:—"Marshal Bosquet to his mother: Pray for the Emperor."

A hundred members of the Catholic Young Men's Society of Dublin assembled to present a respectful remonstrance or protest to Archbishop Cullen, against the act of excluding, by his directions, the three Roman Catholic papers, the *Tablet*, *Nation*, and *Weekly Telegraph*, from the reading-room of their society.

Aali Pacha dined with Count Orloff on the 27th ult. In the course of the day the Russian Aides-de-camp hunted in the forest of St. Germain, in company with some superior officers of the Imperial Guard.

A grand fête in honour of the conclusion of peace is to be celebrated at the Crystal Palace on Wednesday next.

A proposal is before the public in Manchester for a grand exhibition of pictures, sculptures, glass, china, engravings, and other works of art. The subject was broached a few days ago at a meeting of the School of Art, by Mr. E. Potter.

The old story o. an approaching union between the Greek and Ro—an Catholic Churches is revived. An ecclesiastic has published a work on the subject at the expense of the Pope, and, with the patronage of his Holiness, has left Rome on a mission to the authorities elsewhere.

The two statues of Tragedy and Comedy, by Flaxman, and the two fine bas-reliefs by the same artist, on the Bow-street front of Covent-garden Theatre, have happily escaped uninjured from the fire.

On the 30th of January the Chilean war-steamer *Cazador* left Talcahuano for Valparaiso, having on board 363 persons (86 of whom were soldiers, 4 officers, and the remainder women, children, and the crew). Shortly after leaving she ran upon a rock and sank. Only 43 persons were saved.

A notice was posted at the Paris Bourse on Monday, stating that the Council of the Bank of France have lowered the rate of discount from 6 to 5 per cent.

Sir Colin Campbell denies the truth of an anecdote circulated in a newspaper paragraph some time ago, to the effect that Sir Colin had been sent for to the Palace, had left in the Princess Royal to dinner, and had been seated by the Queen. This anecdote, and remarks deprecatory of the Guards (attributed to Sir Colin), are both declared to be utterly fictitious.

A Swedish lady, described as possessing a beautiful voice, has been singing in the north of Germany, and is shortly to appear at the Opera, in Berlin, as the *Queen of Night* in the "Zauberflöte."

Government has accorded a charter to the Ottoman Bank. This step is adopted after communication with the Ottoman Government, which grants to the bank the firman requisite for the establishment of the public undertakings of this nature.

The Castle of Arenenberg, on the lower part of the Lake of Constance, which formerly was the residence of Queen Hortense and her son, now Emperor of the French, fired a salute of several guns on the occasion of the birth of the Prince Imperial.

The four colossal allegorical statues intended for the middle roof of the new Museum and Berlin, and representing Art, Peace, Fortune, and Prussia, have just been cast in zinc at different Berlin foundries. They will be covered with a sandstone-coloured paint, and then be erected at once. The relievo for the frontispiece, modelled by Professor Kiss, will soon be finished.

A Baltimore schooner has been seized at New York, under orders of the United States' district attorney, charged with being fitted out as a slaver.

There is some talk of forming in the Crystal Palace a collection of pictures illustrative of English art.

The *Genoa Gazette* quotes a letter from Sarzana, stating that on the night of the 17th ult. two men who had disguised themselves with masks, assaulted a broker at Carrara, and stoned him to death. It is believed they mistook him for a notorious informer.

A petition has been forwarded to the Board of Trade from the watermen at Deal and Ramsgate, complaining that they are not sufficiently paid for the risk and expense they incur in saving the cargoes of vessels wrecked on that dangerous coast.

The *Czas*, the Austrian journal of Cracow, says:—"In the night of the 26th ult. the recruitment of 30,000 men, from the age of nineteen to thirty-five, took place in Poland."

By order of the Prefect of the Seine, daguerréotype artistes and others are forbidden to take drawings of mausoleums which are the private property of families without an authorisation from the administration.

M. d'Esterhazy, the Austrian Minister, is dangerously ill of an inflammation of the lungs.

The cultivation of the mulberry-tree, the breeding of silkworms, and the production of silk, are making great progress just now in Poland.

The Russian Government proposes to found a new University for Southern Russia at Nicolaieff. An observatory—arranged for meteorological as well as astronomical records is also to be erected in the city, at the instance of the Academy of Sciences at St. Petersburg.

On the 16th ult. Colonel Turr reached Corfu. He was accompanied by an Austrian guard, who delivered him into the hands of the British authorities. Soon after his arrival the Colonel left for Constantinople.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*A little spice may let in much light.*" -Old Proverb.

THE SANCTUARY KNOCKER, DURHAM CATHEDRAL.

We are indebted for a sketch of the very interesting relic here given to the accomplished pencil of our correspondent Cuthbert Bede. The "Sanctuary Knocker" is affixed to the exterior of the north door of the nave of Durham Cathedral. Its former use is best described in Sanderson's "Antiquities of Durham Abbey (Ed., 1787; pp. 43, 44):—"Near to the said altar" (of our Lady of Pittie*), "on the south side, adjoining the Gahley Door, was a grate, whereon the countryman lay, when they fled thither for refuge In ancient time, before the house was suppress, the Abbey Church, the churchyard, and all the circuit thereof, was a sanctuary for all manner of men that committed any great offence: as killing of a man in his own defence, or any prisoners who had broken out of prison and fled to the church door, knocking to have it opened; also certain men lay in two chambers over the north door for that purpose, that when any such offenders came and knocked they instantly let them in at any hour of the night; and rin quickly to the Gahley Bell, and toll'd it, that whomsoever heard it might know that some had taken sanctuary. When the Prior had notice thereof, he sent orders to keep themselves within the Sanctuary—that is, within the church and churchyard: and that everyone should have a gown of black cloth, with a yellow cross, called St. Cuthbert's Cross, on the left shoulder, that everyone might see the privilege granted to St. Cuthbert's Shrine for offenders to fly unto, for succour and safeguard of their lives, until they could obtain their Prince's pardon: and that they should lie within the church or Sanctuary on a grate, made only for that purpose adjoining to the Galley South Door. They had likewise their meat, drink, bedding, and other necessaries, at the cost of the house, for thirty-seven days, being only such as were necessary for such offenders. But the Prior and Convent could get them conveyed out of the Diocese: this privilege was confirmed not only by King Edward, but by King Alured likewise." The two chambers over the door have been removed. A list of those who claimed sanctuary has been published by the Surtees Society: the last date is Sept. 10th, 1524."

The grotesque and huge knocker is a very fine specimen of Norman metalwork, and is in excellent preservation. As the head is hollow, and as there are apertures at the eyes and mouth, Cuthbert Bede suggests that, when night drew on, a light was probably placed within the head to guide the fugitive to his haven of refuge Its effect must have been rather terrific than attractive to any one else than the claimer of sanctuary It is now no longer useful, whether or not it is ornamental is another question; but it is compassionately allowed to grin at its harmless existence in the place to which it once attracted such questionable company.

### NOTES.

Origin of Common Phrases.—Several of Scrutator's phrases are of too recent an origin, and somewhat base coinage, to require notes. The "cut up" of the shambles, the "high ropes" of the acrobat, the "cold shoulder" given to a guest expectant of a feast; the "wheelbarrow," the only vehicle for the late diner-out, when the last cab is gone home; the "tongs," to intensify the noise of the blacksmith's hammer: the "bucket" overturned, and cheap "five-penny" worth finery of the haberdasher, very probably suggested the "slang." Many, however, are of somewhat proverbial form and remote date. "He-ter-skelter" (Grose's hang-order!) is used by Shakespeare; "sleeveless," by Bishop Hall and Milton; "to boot" (from *bote*, profit, by Shakespeare said Herbert; to "cotton," by Swift; "half-seas over," by Dryden; "i' the suds," by Beaumont and Fetcher; the careful housewife "save the bacon" is employed by Prior. "To put a spoke in a wheel" made it run heavier; "lackadaisy" is the corruption of alackaday (ll tde il); "to haul over the coals" reminds one of the ancient ordeal of the red-hot ploughshare; "right as a trivet" comes probably from the motto of the three-legged stool of Mau.—*Quocunque jeceris stabit.*" "Dog-cheap" was contemptuous, as in dog-Latin and dog-rose, doggerel, or a dog-Jew of Shakspeare. "To curry favour" (or *favel*, a chestnut horse) came from the stable to the pen of Hooker; white to "eat unlucbe pie" was the fate of the menials, who fed on the refuse, when those "above the salt" feasted on the haunch of venison.—Mackenzie Walcott, M.A.

A Beautiful Inscription.—The following very elegant inscription was copied from a book of travels in Italy, published many years ago:—

Quintus Lucius Barea Soranus
Musarum amicus,
Domitianum,
Puellam formâ et virtute præstantem, quam adamaverat
Duris parentibus ei denegantibus:
In hac villa, quam Lautus sedit avit,
Lauda, viaitor, et discere, confectus,
Suum infelicem amorem continuo flevit.

Compare this ancient inscription with the much-admired modern one, by Shenstone.—

Ah Maria!
Puellarum elegantissima
Vale!
Hen quanto minus est
Cum reliquis versari
Quam tui
Meminisse.

Stocks, Barnacles, and Bilboes. Barnacles or Bernicles, appear to be first mentioned by Joinville, the chronicler of St. Louis:—"And the Saracens, seeing that the king would not comply with their demands, threatened to put him in the *bernacles*, which is the most grievous torture they can put any one to. And these are two great beams of wood which are fastened to a head; and when they put any one in them, they lay him on his side between the two beams, and pass his legs across great pins; then shut down the piece of wood that is uppermost, and make a man sit down on the beams, from whence it comes that there remains not half a foot of bones in the body that are not crushed and broken; and still worse to make the matter, at the end of three days they put the legs, which are all swollen, back again into these bernacles, and break them anew, which is a most cruel thing, as well you may believe, and with bullock's sinews they tie down his head for fear he should unsave himself therein." The two holes for the feet must have suggested the name of "barnacles" for a pair of spectacles, used as a conventional jest-word by the London populace. P. E. D

* "Pittie is, perhaps, a corruption of the French *petit*."—*Raine's Brief Account of Durham Cathedral*, p. 21.

### QUERIES.

*(To the Editor of the* Illustrated London News.)

I observe with great pleasure a portion of your very useful Journal devoted to subjects of archæological and antiquarian interest, and shall be glad to be afforded space for the insertion of the following queries relative to some subjects connected with those branches of inquiry

In my researches for materials for my forthcoming "History of Boston," in Lincolnshire, I have met frequently with the phrase "Culver Rent," implying annual payment to some persons, generally (perhaps always) the lord of the manor. What does it mean! Again, in several of the privileges near Boston there is a place called the "Shuftes." I cannot find any definition of this word. Once more, in four parishes I have found an inclosure called "Cold Harbour." In this case my difficulty arises from the multiplicity of opinions respecting the meaning of this appellation—none of which however, are satisfactory to me.

In the Vicarage-house at Boston is an oak panel (removed from the ancient Vicarage-house), which bears the following coat-of-arms:—A fesse charged with a fish and two annulets between three plates, each charged with a cross fitchee. This escutcheon is attached to a mitre, and a pastoral staff runs diagonally behind it. The tinctures cannot be traced. These arms undoubtedly belonged to some bishopric or mitred abbey; but as none of the former ever bore such arms, we must seek among the latter Fuller gives the arms of all the mitred abbeys, except those of Bardney and Crencester. As these arms are not among those which are given, it is probable they were borne by one of the two which Fuller did not discover; and if so, most probably to Bardney, which was within a short distance of Boston, and held property in that town, as well as several valuable fisheries on the river Witham. The fish in the escutcheon very much resembles a *pike*, and Witham was proverbially famous for its fish of that description Any information which your readers can favour me with respecting the arms formerly borne by Bardney Abbey, or relative to the origin of the terms mentioned in the preceding part of this communication, will much oblige and serve—Percy Thompson.

The Boston Alchemist.—I have before me a book entitled "Ripley Revived," London, 1678; and in an advertisement at the beginning mention is made of a reprint of Ripley's principal work. "The Compound of Alchemy," which reprint, it is stated, was by Ralph Rabbards, and was published at London, in quarto, in 1591. Can any of your readers inform me where a copy of Rabbard's reprint can be seen? Ripley was a native of Boston; and, having been for some time at Bridlington monastery, as one of the Canons, he travelled into Italy, and devoted himself for many years to alchemy and the discovery of the philosopher's stone On his return to England he betook himself to Boston, where he became a Carmelite anchorite, and where he wrote most of his works He died and was buried there in 1490. Whatever we may think of alchemy at the present day, there is no doubt that at one time it occupied the attention of some of the greatest philosophers of the age in which it was so much studied, and among these the Boston Carmelite took a very high place. He was, unquestionably, far before the age in which he lived, and in the success which attended his chemical researches he had no equal in that day. In Thompson's "History of Boston" he is spoken of as "George Ripley," but in the work I have mentioned above he is called "*Sir* George Ripley," though when or how he obtained knighthood I know not. In Thompson's History Rabbard's reprint is mentioned as a book of "exceeding rare occurrence."—Cosmopolite.

Smithfield Market.—We learn from Stow and other authorities that Smithfield was used as a place for the sale of horses and cattle even as early as 1150. Subsequently it was converted into a general market; but I cannot find when this took place. Can you or any of your readers inform me! —Civis, Bread-street.

Mr. Macaulay and William Penn.—Your correspondent Mr. Blundell has defended Mr. Macaulay with considerable success from the charges brought against him in the *Times* newspaper, with reference to Marshal Schomberg's and Judge Jeffrey's burial-places. Can he do anything to exculpate the historian from the imputations, far more serious, of unfairness towards the memory of William Penn, which appear in the columns of the same journal, for Wednesday the 26th Feb. The reputation of Penn, like that of Macaulay, is surely public property.

A Beggar-Banger.—When the town of Brackley was in a flourishing state, an officer was appointed and paid by the Corporation whose especial duty it was to expel beggars from the town, and who was consequently and formally designated the "Beggar-banger." Can any of your readers tell me any other Corporation which had in its pay an officer so designated?—Blunt

"Voicks, Bob!"—"Lace Songs."—I shall esteem it a favour if Mr Stenberg will kindly intimate where a copy of the ballad in which "Voicks, Bob" is introduced can be seen, and also where I can see a collection of "Lace Songs." Should they not be published in a volume, and should Mr Stenberg be willing to let me see any that he may possess, if he will kindly state as much in the Illustrated London News I will immediately forward my name and address to any place he may appoint.—Juvans.

The Double F.—A still more curious custom than that of using the ff as observed by a few families in adding a capital letter to the termination of the name, generally the letter "H," written thus "Singleton H." Perhaps some of the intelligent contributors to "Memorabilia" may be able to account for this.—Geo. Matthewson, Oxon.

### ANSWERS.

The Word "Bully."—In answer to your correspondent who suggests "boullyes" as the origin of the English term "bully," and to your remark, "that it is an ingenious suggestion," asking also if there is any trace of the word in French usage, I beg to inform you that there existed formerly a French verb (now obsolete), "boulier," which signified "to coseu," also "to box." Thus was pronounced "boulay," which a still the pronunciation of the word bully in England, although pronounced in Ireland, and I believe in Scotland, "bully," the u as in "gully" The French word was significative of the occupation of a "bully," which is that of "cosening," or cheating and defrauding, and even boxing, if his services are required. The term "bully" is at the present day known in France by a slang word, "mastereau" I think I am right in asserting that the English word "bully" was derived from the obsolete French verb "boulier," "to cozen," "to box." "Boullayes" was evidently derived from "boulay" (old French), a noun, signifying a birch-tree—"bouleau" (in modern French). The birch, we know, is a terror to schoo-boys. The "sergens-de-ville," or police of those days, were probably armed with a species of cat-o'-nine-tails, the handle of which was made of birch, and the thongs of white leather, with which instrument they kept back the crowd, as related by Victor Hugo in "Notre Dame de Paris." I shall be happy if my suggestion clears up the point in question. H. Bascher

Wife-selling.—The following passage from "How to Make Money," by Edwin De Freedley, may throw some light on the subject of wife-selling. It was most likely from a misunderstanding of the laws affecting sales in markets that this kind of traffic has sometimes been carried on. Tradition says it has been done in this town, and there are people now living who actually think it legal:—"A sale of a person who has no right to sell is not valid against the claim of the rightful owner, unless the goods are sold in what is legally termed '*market overt*,' that is, at the market-place on a market-day. . . . . *A sale of stolen goods in market overt passes the property in them to the purchaser.*" And most likely this was considered to apply not only to stolen goods but to other articles not lastly saleable.—Walter Scargill, Colchester.

### TO CORRESPONDENTS.

Tom D'Urfey's Songs. The song of "To horse, brave boys of Newmarket," alluded to by Mr Macaulay as an especial favourite of Charles II., will be found in the first volume of all the editions of "Wit and Mirth, or, Pills to Purge Melancholy" In the other song mentioned, "Phyllida, Phyllida," it is not easy to identify, there are so many similar. "Jones's Cabinet-Lid's excellent work now in course of publication, called "Popular Music of the Olden Time.'

A Lover of Old Theology.—See Cunningham's "Handbook of London," article "Great Queen Chapel"

W. Collingwood.—The phrase "as the crow flies" is derived from the habits of the crow, or rather rook. Any one living in the country must have observed that the homeward flight of rooks is peculiarly illustrative of a "straight cut across country," which the proverb in question is used to express

Yorkshireman.—Analysing ancient names is necessarily a department of the arts conjectural. While we cannot, in many cases, venture upon more than a guess, and our guesses are usually such as a logician would pronounce far from satisfactory. With this proviso we should consider *Rooby* merely a mode of spelling Rokeby, the town either of actual rooks or of a family so named

George Williamson.—"Rules of the Road."—This is merely a custom, which varies in different countries, but exists in all. It has the power of law, for a man would be held liable for consequences were he to infringe it

Ino.—The Parliamentary writ to peers summoned as jurymen. Why? The largeness of Norfolk Shire-ground . . . . . peers must not be tried upon any matter, jurors or inquests whatever, by petty juries, or trying any question arising out of the laws. 2 A privilege was granted to the Lords by King Richard II., was confirmed in the 8th of Elizabeth, and has been repeatedly confirmed . . . . . Chamberlayne's Present State of England, 1707.

Constant Reader.—A shilling of Edward VI. of no numismatic value. 2 A brass piece of Queen Anne, quite valueless. 3 Two pieces of the time of James and Fraserpence of Charles II. 4 Still, and William III., appy to Mr Webb or, the well-known coin-scientist 7 Great Russell-street, good gardens.

J. J.—A superstition, derived from the belief that a child with a caul will be very lucky

J. Rogerson.—The case of Lord Audley was a trial for the coronation of William and Mary. The . . . . . was with the ceremonial above 7 Persons and Audiences The inscription is . . . . . Montagu's house . . . . . 27

Cleophas.—Values from . . . . . of interest, it is of no particular value

Charles Dan.—The article in question would require much more space than we have to spare

W. P.—In portion, many pithy and clever lines. But we shall be glad to receive a few more of his unpublished and graphic Verses in hand are scarcely of sufficient general interest for publication

### SPRING FASHIONS.

The season is now approaching when out-of-door costume must occupy a good deal of attention Though the new bonnets do not present a sudden and marked alteration of style, there is some change of shape to be noticed. They sit close to the face, with an extremely full cap, and come a little more forward than they did last season; they have always a very deep and full curtain, with much of the trimming drooping behind. For the next few weeks straw bonnets are likely to be in favour, and these present such a variety of style and material that they are almost as coquettish as the more costly fabrics.

There is a charming bonnet of plain straw, ornamented with blue ribbon and white, and black lace: on one side, outside, is a bunch of blue flowers, and on each side a long streamer of ribbon. A row of narrow black velvet edges the bonnet, and black lace and blue flowers are intermingled with the cap.

There is another straw bonnet trimmed with rose-coloured velvet ribbon and a mixture of black and white lace for the curtain, with a bunch of miniature grapes inside.

A charming bonnet is composed of white blonde, with a slight intermixture of black lace, and a fanciful garland of green run through the puffings; cap to correspond, with blonde and bunches of green leaves.

Another bonnet is formed of a mixture of pink silk, black lace, ribbon, and flowers; and one remarkable for its simple elegance is a white silk drawn bonnet, with trimming of white blonde and lilac ribbon, with a row of lilac flowers across the forehead, but only the simple blonde cap at the sides.

A novel effect is produced by spotted black lace being placed over white tulle, with crêpe lisse for curtain, with an edging and trimming of blue and black.

Sometimes the curtain of the bonnet is composed of white tulle, with rows of narrow ribbon or black velvet upon it, and we may observe that flowers are more used than feathers at present, the latter being too heavy to harmonize well with the extreme lightness and delicacy of the fabrics chiefly employed.

Mantles are of a very becoming shape this season. They are generally of black, though silks of a quiet sombre shade are sometimes chosen for the purpose. Before describing the mantles, however, we must remark that a tight-fitting jacket with very deep basque is considered the most *comme-il-faut* costume. It is usually of rich black silk, profusely trimmed with black lace, fringe, and velvet.

For ladies who prefer a different mode we can recommend a black silk mantle of moderate size, with short ends before, and richly ornamented with brocaded braid and fringe.

Another mantle is richly embroidered, the embroidery being intermixed with jet beads. This mantle is edged with lace a quarter of a yard deep. Both on the jacket and the mantles there is a trimming across the shoulders.

A mantle of cinnamon-brown silk is somewhat of a scarf shape, with alternate rows of rich braid and plush trimming, and with fringe and tassels to correspond.

Another mantle is composed of violet-coloured silk, with a rich trimming of deep black lace and black velvet ribbon; a quilling of the latter goes down the front, while rows of the same are placed across, so as to produce somewhat of a military style; lace, velvet, and jet fringe forming a sort of epaulet across the shoulder.

For a more matronly wearer there is a large shawl-shaped mantle of black silk, richly trimmed with fringe, velvet, and jet beads.

The dresses are so beautiful this season that they may be justly considered chefs-d'œuvre of the manufacturers. Of course, we can only describe a few of those which present themselves.

There is a grey silk with three flounces, each flounce being edged with a *chiné* pattern, resembling a willow branch, in black, white, and grey.

A dress of pale green silk has the flounces edged with a *chiné* pattern of black and white; the body of the dress being trimmed with black velvet and black lace.

A lilac silk has three flounces, each flounce having a rich brocaded pattern of reversed Vandykes—that is to say, the points going upwards; the flounce is edged with fringe, and the body ornamented to correspond.

There is a violet silk, the flounces of which have a *chiné* pattern, and three rows of fringe interwoven with the silk.

When plain silks are adopted they seem to have innumerable trimmings.

Even moiré antiques are now made with flounces, the flounces having an appropriate pattern inwoven; generally this inweaving is a *chiné* of a sombre colour, the trimming of the body being made to correspond.

Silks for dinner dress are more magnificent than ever. There is a pink moiré antique that seems to be strewn over with white feathers, so perfect is the perspective of the weaving. This silk is well adapted for a court train, but if used for a private occasion should be richly trimmed with point lace.

There is an exquisite fabric of white silk with large bouquets of blue and white satin brocade.

An amber silk has flounces edged with an inweaving of white crêpe plush, nearly a quarter deep.

Perhaps, however, the newest and at the same time most costly and truly elegant dress is a blue silk with two flounces, each flounce being edged with a pattern in blue and white velvet, nearly half a yard deep. Though inwoven in the silk this velvet ornament has the appearance of being cut and painted in the most beautiful manner The design is of tulips and roses intermingling their leaves and stems, and is so delicately traded that it proves itself the work of a true artist.

Low bodies are made with points before and behind, and are profusely trimmed with lace, blonde, ribbon, and fringe.

High dresses are always of the jacket form, with a deep basque, and braid ornamented with fringe or velvet. The sleeves are usually composed of two or three falls.

We intend shortly to give a full description of ball dresses and coiffures; meanwhile we will just remark, that the latter are always full at the sides, and that they come a good deal on the top of the head. Ribbon and flowers at the back of the head are quite out of date.

We must find room for a few remarks on the novelties in lingerie which present themselves to our notice. The pointed collars have given place to quite a new style, namely, square worked collars, edged with Valenciennes lace. Sleeves are usually made to correspond, often with a gauntlet like turned-up cuff of the same fabric as the collar. Some of the designs are of an arabesque pattern. A favourite style of sleeve has three puffings finished off with a frill to correspond with the collar, and sometimes the square collar is double, a smaller one surmounting the first.

There is a long or *jabot* sort of collar of hewy guipure, to be worn with puffed sleeves, edged with a guipure frill.

Ribbons of a bright colour, to harmonise with the dress, are made into bows at the wrist, and otherwise trim the sleeves, and a small bow is worn at the throat. The ends of the bow are usually finished with tassels, and sometimes black velvet is intermixed with the ribbons

A stiff under sleeve, edged with a bright ribbon, and so arranged that the worked sleeve falls over it, produces a good effect; but much depends on the shape of the under sleeve.

[For our information on Dress and Fashion we are indebted to the courtesy of Madame Einstein Devy, 73, Grosvenor-street, Grosvenor-square.]

Rhubarb gives us an illustration of the suitability of our climate, the excellence of our soil, and the skill of our cultivators, in utilising exotic plants. The medicinal value of this root was known to the Chinese at a very early period, and European nations received it from China through Turkish traders. The true Chinese rhubarb was first cultivated in this country in 1763. A gold medal was awarded to Sir W. Fordyce for raising from seed 300 plants of the *Rheum Palmatum*. Since that period its cultivation has so increased in England that many thousands of tons of its succulent stalks are annually sold in our cities for the table, and for the manufacture of wine. Our horticulturists have again been successful in originating varieties of this root, equally adapted to the purposes to which it is now applied. In some sorts the stems are extremely large and juicy, others are valued for their precocity, and others for the equivalent quality. In Paxton's *Illustrated Botanical Mechanics' Institute*, we find the following account of the introduction of rhubarb into the Prince's dessert:—"The Prince of Wales, on the occasion of a large party the following year, ordered rhubarb to be served up dressed as it was in England. His cook knew nothing of English sauges, and, selecting the large leaves, served them up as spinach. The guests were astonished at the English dish, and well they might; and rhubarb was discarded from that time from the Prince's table.—*From an able and intelligent lecture "On the Inherent Powers of Development in Plants, recently delivered by Mr. T. Ingram, at the Nottingham Mechanics' Institute.*

"Foolscap."—Everybody knows what "foolscap" paper is; but they would be puzzled to tell how it came to bear that singular cognomen. When Charles I. found his revenues short, he granted certain privileges, among others to monopolies; and among these was the manufacture of paper, the exclusive right of which was sold to certain parties, who grew rich, and enriched the Government at the expense of those who were obliged to use paper. At this time all English paper bore in water marks the Royal arms. The Parliament under Cromwell made jests of this law in every conceivable manner; and, among other indignities to the memory of Charles, it was ordered that the Royal arms be removed from the paper, and the fool's cap and bells be substituted. These were also removed when the Rump Parliament was prorogued; but paper of the size of the Parliament's journals still bears the name of "foolscap."—*From "Notes and Queries."*

THE MARKET AT SCHUMLA.

## THE MARKET AT SCHUMLA.—A STREET AT CONSTANTINOPLE.

SCHUMLA has been a place of strategical importance ever since the Russians first made the provinces of the Lower Danube the aim of their conquest. Lying in a semicircle of hills, as in a horse-shoe, and populous at all times from the fertility of the land which surrounds it, Schumla gained additional size when it became a garrison town. The streets and market-places, which are not wider nor more fairly paved than those of other Turkish cities, are at all times filled with soldiers, and a busy mass devoted to the satisfying of soldiers' wants. But since the concentration of large forces in the centre of Bulgaria within the last two years Schumla is thronged. Streams of busy people of every denomination choke the narrow spaces between the low and ricketty and ill-built houses; there is no passing through the bazaar, where Jews and Greeks lazily loll before their wares, supremely careless whether they sell or not; and the market-place is a rendezvous for countless followers of every pursuit. In one corner a knife-grinder from the Turkish villages plies a wheel and sharpens everything from a yataghan to a toothpick; near him squats a vender of sweets and drinks—of these he has sorts as various as are his customers. The white *rahatlokoum*, the grey mixture of oil and almonds; sweetmeats, green, red, or blue, attract as many as do the red, yellow, and green beverages which sparkle in his decanters. He is, accordingly, surrounded by a crowd which continually recruits itself, and eats, and drinks, and smokes around him as if life was to be a perpetual recreation. Another group surrounds a vender of tobacco: a third, the maker of pancakes; whilst, in their immediate vicinity, Bashibozouks and horse-dealers are wrang'ling over the price of a charger not taller than twelve hands. Albanians stand by, too poor to pay but afraid to rob, and eyeing good things wistfully; whilst they scratch their dirty heads or twist themselves in their frowsy garments. Under the wooden arcades a crowd is also passing and repassing. Jews selling calico; Turkish men and women buying it. Auctions of horses and pistols and pocket-handkerchiefs are held together—the prices called by hoarse but burly Turks, who deafen by their roar. Egyptians may be seen endeavouring to change a shilling bank-note, whilst their cunning adversaries higgle for the discount. All the passions, good and bad, of a whole population—all the traffic of a city—all the gaming and swindling, as well as the honesty, if there be any, of Schumla, are condensed in its market-place, which is scarcely more, in truth, than a road of some breadth

In a street at Constantinople the European element to a greater extent prevails. The dandy amateur with Jim Crow hat, surrounded by a veil, is arm-in-arm with the dandy British officer, who clangs his long spurs on the bad pavement, and takes sly peeps at pretty faces in high-up windows from under the shadow of his white-covered cap. He has learned not to be annoyed at the vicinity of dogs—in Turkey they are mangy brutes—and to treat with great composure the request of dirty little picturesque boys to do innumerable things which we cannot comprehend. The Turkish soldier in dishabille is not quite certain whether the English *cakter* is likely to salute him, but he waits in readiness to give the never-failing salutation, if required. Under their awnings, meanwhile, sit some Turks—here, as in all places and situations—lazy, and squatting; whilst fat and contented old Mehemet has left his shop for the day, shouldered his umbrella, and mounted his ass, to join his family in the suburbs.

WILLIAM B RENDLE and CO., Seed Merchants, Plymouth.

CAUTION.—PATENT EVER-POINTED
PENCILS.—S. MORDAN and CO. are daily receiving constant imitations of their well-known and useful invention. S. M. and Co. therefore caution all Purchasers to see that the Patentees' name is stamped legibly on the case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the vendor, but will be found of no value in use.
Perhaps the above caution is even more strictly necessary when Cornhard Lead Pencils are purchased for writing the Pencil-case. Unless those have been most accurately gauged to the exact size of the lead, they will be found utterly useless.
Each box of Genuine Lead Pencils is stamped "Warranted S. Mordan and Co."—Manufactory, 22, City-road, London.

FINE ARTS.—S. MORDAN and CO. beg to
inform the Public that they are enabled to supply a genuine pure CUMBERLAND LEAD PENCIL without a particle of grit or any other impurity S. M. and Co. have no hesitation in asserting that such a pencil cannot be procured in every respect, and the confirmation of this the highest testimonials from all the first artists, architects, and engineers have been received. The following is an abbreviated list:—

| | |
|---|---|
| Charles Barry, Esq., R.A. | Copley Fielding, Esq., P.W.S.& |
| D. Roberts, Esq., P.R.A. | W. Wyon, Esq., R.A. |
| J. C. Bucknall, Esq., P.R.I. | Dav. d Roberts, Esq., R.A. |
| E. M. Barry, Esq., R.A. | J. R. Wildman, Esq., R.I. |
| R. Westmacott, Jun. Esq., P.R.S. | H. T. Wilson, Esq., Director |
| E. Pearce, Esq., P.S.A. | of Government School of De- |
| [illegible] Esq., P.S.A. | sign. |

Each Pencil is stamped with their name.
Manufactory, 24, City-road, London

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, King William-street, City, London. Established by Special Act of Parliament, 6 Will. IV., cap. 24. Sir Henry Willock, K.C.B., Chairman; John Stewart, Esq., Deputy Chairman. The successful operations of this Society have enabled the Directors for the last twelve years to reduce the Premiums to Policies entitled to participate in profits by 40 per cent, which will be found a most liberal restriction if the original premiums be compared with those of other offices adopting a similar plan of division of profits. Weekly Board day Thursday, at One o'clock. MICHAEL ELIJAH IMPEY, Sec.

DECLARATION OF BONUS.
ROYAL EXCHANGE ASSURANCE OFFICE, London, Sandary, 1856.
The Governors and Directors have to announce to the holders of Life Policies effected on the system of Participation in Profits adopted by the Corporation in December 1844, that a Second Septennial Bonus has been declared in respect of the surplus realised on that account. Such Bonus attaches to all Policies—effected subsequently to 1841 for the whole term of life, on the participating scale of that date—which were in existence on the 31st day of December, 1855, and on which three or more annual Premiums had then been paid.
The following Table shows the amount of Reversionary Bonus added to British Policies of fourteen years' standing, for the sum of £1000 each:—

| Age when Assured. | Addition made in 1848. | Further Addition in 1855. | Total Addition. | Per Cent per Annum on the Sum Assured. | Per Cent on the Premium paid. |
|---|---|---|---|---|---|
| | £ | £ | £ | | |
| 30 | 82 | 119 | 201 | 1·43 | 59·3 |
| 35 | 106 | 145 | 251 | 1·56 | 54·3 |
| 40 | 113 | 164 | 277 | 1·67 | 50·5 |
| 45 | 141 | 198 | 349 | 1·78 | 46·3 |
| 50 | 143 | 210 | 353 | 1·96 | 41·8 |
| 55 | 149 | 184 | 333 | 2·16 | 39·9 |
| 60 | 169 | 174 | 343 | 2·43 | 39·5 |

Equivalent Reductions have been made in the Annual Premiums payable by those persons who prefered that form of Bonus.
The future division of Profit will take place every Five Years.
Any sum not exceeding £15,000 may be insured on the same Life.
This Corporation affords to the Assured liberal participation in Profits, with exemption from the liabilities of Partnership; a rate of Interest equal to the average returns of Mutual Societies, with the guarantee of a large invested Capital Stock; the advantages of modern practice, with the security of an Office whose resources have been tested by the experience of nearly a century and a half.
Fire and Marine Assurances are granted on liberal terms.
Tables of Premium and other particulars may be obtained at the Chief Office of the Corporation, in the Royal Exchange, London; at the Branch Offices, 29, Pall-Mall; or from the Agents appointed in the principal Towns in the United Kingdom.
JOHN A. HIGNAM, Actuary and Secretary.

COD-LIVER OIL SUPERSEDED by Baron DOUVILLE'S PATENT AETNA MANEAR.—Analysed and recommended by Drs. Letheby, Pereira, Ure, Griffith, Jones, and many other eminent practitioners, and established on the authority of numerous high private testimonials, to be an agreeable a effectual substitute for Cod-Liver—a positive specific to constipation, and, by very best Indian Physicians, to be safely used with directions, 1s. 6d., 4s. 6d., 9s., 18s. Sold by GOULD and KO-LIN Prescribing Chemists, Oxford-street, London; and by Chemists and Agents 93, Vencuren-street; also by Barclay and Son, Farringdon-street; Leath, Sterling Edwards, Sutton, Ritter, and of every respectable Druggist and Provision Merchant in the Kingdom. Beware of a spurious imitation. The genuine bears the names of Gough and Co. and Lassell and Co., to copy which will be treated as a fraud

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL, prescribed with complete confidence by the Faculty for its purity, speedy and uniform efficacy, entire freedom from nauseous flavour, and marked superiority over every other variety.

EXTRACTS FROM SELECT MEDICAL OPINIONS.
The late JONATHAN PEREIRA, M.D., F.R.S.,
Professor at the University of London, &c. &c.
"It was fit thing that the author of the best analysis of this therapeutic agent should be the purveyor of this important medicine. I am satisfied that for medicinal purposes no finer oil can be procured."

DR. LETHEBY,
Medical Officer of Health to the City of London, &c. &c.
"The Oil corresponds in all its characteristics with that of Hinde Brune" and described as the best variety in the masterly treatise of Dr De Jongh. From my investigations, I have no doubt of its being a pure and unadulterated article."

ARTHUR H HASSALL, Esq., M.D., F.L.S.,
Chief Analyst of the Sanitary Commission of the "Lancet," &c., &c.
"So great is my confidence in the article, that I usually prescribe it in preference to any other, in order to make sure of obtaining the remedy in its purest and best condition."

Sold by ANSAR, HARFORD, and CO., 77, Strand, London, Dr. De Jongh's sole British Consignees; IN THE COUNTRY by many respectable Chemists.
Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), IMPERIAL MEASURE, 9s.

BERIAH DREW AND COMPANY'S
PURE COD-LIVER OIL WITH QUININE (Quinine à l'Huile de Foie de Morue) combines the tonic and strengthening properties of Quinine with the well known virtues of Pure Cod-Liver Oil. Many eminent medical men have testified to the efficacy of this PERFECT compound. In Bottles at 2s. 6d., 4s. 6d., and 9s. 6d., of Mr. Drew and Co., 91, Blackman-street, Borough, London; Sanger, 150, Oxford-street; Johnson, 68, Cornhill; Newbery, 66, St. Paul's; and of any Chemist in the World. Pamphlets, from J. C. W. LEWER, Esq., M.D., Physician, Accoucheur, Guy's Hospital, Fellow Royal Med. Chir. Society, &c. &c.
"I cannot have the least hesitation in bearing my testimony to the great efficiency and value of your preparation of Cod-Liver Oil with Quinine. In many cases under my treatment it has acted nobly, and I have the greatest confidence in it."
"Gentlemen,—Having given a fair trial in the Diseases of Women and Children, to your preparation of Cod-Liver Oil and Quinine, I can bear testimony to its value in those various cases in which the Cod-Liver Oil alone is desirable. SAMUEL GRIFFITH, M.D.
Physician Accoucheur, &c., 34 St. Thomas's Hos. and Mot Cal.
N.B. One Tb., or three 4s. 6d. Bottles sent FREE to all parts for stamps or money order.

WHETHER we consider ROUSSILLON WINE as the healthful agent of the medical man—the admirable substitute for wines of doubtful efficacy and inevitable after-ill—or whether we consider it as the home-bottle of the gourmand—the effect must be to secure for it favour, success, after-taste, colour, and mellowness, recommend it to the fancier; surely combining generous, nutritive, mild, and genial, it recommends itself to the dom stic physician. For particulars see the ILLUSTRATED LONDON NEWS of 16th February, 1856. Dinner Sherry, 20s.; Sound or Natural, 30s.; Old nutty (very like Port, 42s., 54s.; Manzanilla (delicate flavour), 36s., 42s.; Brown Cherry, 36s., Red Roussillon, 30s., 42s., 48s.; Milk Punch, 36s.; Sparkling Champagne, the cask. MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET.
Photographs, Stereoscopes, and Daguerreotypes
Taken daily.
Specimens on View.
"Mr Mayall stands unrivalled in Portraits, and is unrivalled for breadth, manner, and finish. Either from the character of his sitters, or the taste of his compositions, his portraits appear more dignified, more refined, and artistocratic, than those of any other artist. Queen Victoria, some of the Cabinet Ministers are particularly admirable. There is a grace and a bearing about the hands in a few of these which shows the sobbing tic of distinction as Titian a Senator is above one of Rembrandt's Alderman."—Critique of the "Athenæum" on the Photographic Exhibition of 1856.

POWERFUL and brilliant patent TELESCOPES, Camp, Race-course, Opera, and perspective glasses, to know the distance, possessing such extraordinary powers, that some, 3½ to 6 inches, will show distinctly a person's face at 10 miles, and the time by a church clock at 7 miles. The telescope with its six largest and 4 achromatic lenses, and the double stain, of powerful wide-angle pictures. Also, a very small acute objects at a distance of four miles.
DEAFNESS.—A newly-invented instrument for extreme cases of deafness, called the sound magnifier, organic vibrator, and invisible ear conductor. It fits so into the ear as not to be in the least perceptible, the unpleasant sensation of singing noises in the head is entirely removed. It affords instant relief to the deafest persons and sounds heard to hear distinctly at church and on public assemblies. Pascal Spectacles with lenses of the most transparent brilliancy for weak and defective eyesight.—S. and B SOLOMONS, Opticians and Artists, 39, Albemarle-street, Piccadilly, opposite the York House.

## BALACLAVA.

THIS very interesting port is thus described by Mr. Danby Seymour —

Balaclava is now a busy scene; the little bay is crowded with transports; thousands of our countrymen disembark here to exercise their perilous profession; and as many re-embark, poor wounded soldiers, shattered in constitution, or with the loss of limbs, but henceforth immortal heroes, whose deeds will be the theme of the historian and the poet, whose future welfare will be a subject of anxious solicitude to their country, and who henceforth, however humble their rank, in whatever country they visit, will be marked men; marked for honour, and distinction, and respect, from all who admire chivalrous boldness, and that still rarer quality, calm unimpassioned endurance.

The town of Balaclava has probably received its modern name from the strong Greek castle of Pallakium, which stood here, although some suppose it to have been taken from "Bella clava," or "the beautiful port," a derivation which every traveller would willingly concede as probable. It is mentioned by one Italian traveller of the seventeenth century under the name of Balachlaca, and at that time it was inhabited by Turks, Greeks, and Armenians. "Its unrivalled beauty and security," he says, "tempted him to stay there several days, and at that time its fine Genoese fortifications were entire." This old fortress, like all the strong places of the Genoese and Greeks in the peninsula, is erected on inaccessible rocks, close to the mouth of the harbour, in the adjoining eastern hill, and is fortified with high walls and towers.

When Clarke visited this magnificent fortress, the arms of Genoa were still upon the walls. "The mountain on the north-east side," he says, "is covered with its mouldering towers, and the rock itself has been excavated, so as to exhibit stately magazines and chambers, the sides of which were lined with coloured stucco. It is surprising," he continues, "that the inhabitants of Balaclava do not use these caves, for they are very habitable, and the stucco is still in the highest preservation. We entered one, which was a spacious oblong chamber lined throughout with stucco, and somewhat resembling the famous *nymphæum* at Bath, near the supposed ruins of Lucullus at Baiæ. We could form no conjecture for what purpose this place was intended, except as a granary or store-room. It bore no marks of any aqueous deposit on its sides, and was at the same time dry, and in perfect preservation: it could not, therefore, have served as a reservoir for water." Might not some use be made of these dry caves for the stores of our army, if they be not situated at too high an elevation?

The port of Balaclava is frequented by fish of passage, especially by mackerel, by the *sau, Scopelus*, in great numbers, and also by the red mullet, a most delicate fish, whether eaten in a fresh or pickled state, which is also caught in the lakes of the interior. The mackerels become as tender and savoury as herrings, after being kept twelve months in brine. The fishermen, when our army arrived at Balaclava, came with their nets to Lord Raglan, and offered, if they were allowed protection, to supply our army with fish, as the season was just commencing, but, from some mistake, their offer was neglected.

More germane to the above view are the following details from the recently-published work entitled "Inside Sebastopol" —

The entrance to Balaclava harbour is two cables length, or four hundred yards, broad. The harbour itself extends inland about a mile, and is, as I have already said, full of ships. On the right shore are tents and mud huts, and wooden huts, and a half-finished trumpery Greek church, with a green cupola, and the old tower, upon nearer inspection, expands into an extensive fortification, whose mouldering walls and ruined boathouses cover the sides and base of the hill on which it stands. The good ship being now well secured, we hail a Maltese boatman for those omnipresent Maltese have monopolised the trade of boatman at Balaclava, as elsewhere—and we go ashore, that is to say, we are deposited at the "Ordnance Wharf," and find ourselves in front of a sentry, and surrounded by shot and cannon and cases of fixed rifles, and broken anchors, and old chain cables, and knocking our shins improvidently against the sleepers and rails of a railway. We walk up into the town to make arrangements for the Camp to-morrow, and to make our observations as we pass. This railway seems to run about "promiscuously." It appears to have neither terminus nor direction, nor very much traffic, and looks like an unfinished tramway in any of the coal districts of England. There are the most high sounding titles upon the most unenviting edifices. A mud hut, with sparse whitewash, is inscribed "Commandant in Chief." The "Ordnance" department is like a toll-collector's residence which Rebecca has visited. The "Post office" is a wooden shed of that exact order of architecture which we used (alas! how many, many years ago) to draw upon our slates at school. The bakery looks like a cellar in St. Giles's. The "Coldstream Guards," the "Artillery stores," the "Engineer's stores" and so of all the other departments of the army, are wooden huts, where shells of rifles are piled and where, I suppose, somebody sometimes takes care of them. There is a long street in Balaclava, but the Police-office and the Post office are the principal objects of interest in it. The Government offices and stores are by the water side.

BALACLAVA—FROM A PHOTOGRAPH BY ROBERTSON

# THE ILLUSTRATED LONDON NEWS.

No. 793.—VOL. XXVIII.] SATURDAY, APRIL 12, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE SUPPLEMENTARY SITTINGS OF THE CONFERENCE.

For nearly forty years it was a matter of reproach against British statesmen and the British people that they habitually and systematically disregarded foreign politics. The revolutions and insurrections of 1848, and the war which ultimately grew out of them—and which has just been brought to a sudden, if not to a satisfactory, conclusion—awakened them both somewhat rudely to a sense of their mistake. It was a misfortune to this country, no less than to the world, that there was only one or at most two English statesmen in the year 1853, who knew the true relationships of the Continental States towards each other, and towards this country; or who had studied politics, not alone with reference to the narrow arena of the British Isles, but with reference to the equilibrium of all Europe, and to the general interests of the civilised world. Are the people and their statesmen wider awake or better informed at the present moment? Is the Peace of Paris—signed, but not yet ratified—worthy of the efforts that have been made to obtain it? And have the Plenipotentiaries, or the Potentates who pulled the strings of their deliberations, looked even five years before them? They have done much for the passing day and its longings for repose; have they given a thought to the morrow and to the troubles with which it is heaving?

Let us consider for a moment what the War has settled, and what the Peace has left unsettled, that we may be the better enabled to judge both of the War and of the Peace; and of the state of affairs which has been inaugurated by the Conferences. At Paris "all has gone merry as a marriage bell." The Russians have shown themselves humble; the Allies—England alone excepted—have been all smiles and sunshine towards the foe; an heir has been born to the house of Bonaparte amid the congratulations of diplomacy; the dispute with Turkey has been adjusted to the apparent satisfaction of all concerned; the price of diamonds has risen twenty per cent in Paris, to the immense delight of the smug jewellers of the Palais Royal and the Boulevard des Italiens; Paris has given itself a holiday; Prussia has hugged herself in the pleasant delusion that even she has done something towards the restoration of the Peace which she prizes; and the great Czar of all the Russias—sharing the general satisfaction—has announced to his people that the objects of the war are accomplished;—that, the rights of the Christians in Turkey being secured, he has sheathed his sword, and made terms with his opponents upon whom he has thus imposed his own views and his own course of policy. England and Austria have acquiesced in considering the war a purely Turkish one; Turkey, of course, had no call to consider it anything else; and Europe, by the intermediation of all who took part in the Conferences, has narrowed the subject to this one issue. On this one issue Peace has been proclaimed. France, Russia, and Prussia, are happy; Turkey is not very much dissatisfied; Austria is somewhat bewildered; Great Britain thinks she ought to be happy, but has a misgiving that, somehow or other, things are not so pleasant or so right as her good friends and allies endeavour to persuade her that they are; while gallant little Sardinia boldly proclaims her dissatisfaction, and treats the Peace as of little value and of problematical permanency. Perhaps Lord Palmerston and Lord Clarendon share the opinions of Count Cavour in this matter; but on this point the public has no means of judging. All that it knows is that the Conferences are yet sitting, and that the postscript of their deliberations, like that of a lady's letter, may perhaps turn out to be more important than the body of their note.

To heal a quarrel is a grand and a beneficent work; but to patch up a difference or a dispute for a day, without heeding whether it may break out with increased virulence to-morrow or the day after, is a work that merits little praise, either for its wisdom or its benevolence. We do not assert that the Peace which has just been concluded is unsatisfactory, for as yet we do not know its terms. The French and the British Governments have both proclaimed it to be honourable to all parties and humiliating to none; and the public must await the authoritative and official promulgation of the treaty before it can deliver its verdict upon the contract to which it has become a party. Yet it is impossible to deny that there is an uneasy feeling in the public mind of this country;—that the pacification is considered to be too sudden and premature to augur a long continuance; that having had it in our power to clothe the Angel of Peace with new garments, white and unsullied, we have dressed her up in rags and patches;—that we have put out a fire in the forecastle, and taken no heed of the leak in the hold;—that we have been so anxious to bestow mercy and display generosity to a defeated foe, that we have forgotten or neglected to do justice to our friends—that we have driven the robber from the door of Turkey, but have refused to take him into custody; and that in accepting Sardinia for an ally we have tacitly accepted responsibilities towards that Power, and towards the Italy of which she is the hope and the representative, which we have failed to meet except with empty promises and idle sympathies. This instinctive feeling on the part of the public may be right or it may be wrong; but it would be foolish to deny that it exists, or that it will continue to exist, until the tongues of our diplomatists and statesmen are unloosened, and the true state of the case made patent to the whole world.

CRIMEAN HEROES AND TROPHIES, AT WOOLWICH.—FROM PHOTOGRAPHS BY J. CUNDALL AND R. HOWLETT.—(SEE NEXT PAGE.)

Whilst continuing to hope that the Peace may deserve all the favour with which the French have greeted it, we cannot shut our eyes against the deep significance of the remonstrances which Sardinia has made on the affairs of Italy; and on the unexpected complications which may thence result in the international relations of those who were lately allies or foes. France, for Napoleonic purposes, may have views with regard to Rome with which Protestant England may possibly sympathise, and against which Greek Russia may have nothing to allege; but against which Austria may feel herself bound to protest, even if her protest should take the form of forty thousand men at Ancona. The designs of Sardinia upon Lombardy and Venice, while highly agreeable to the Italians in those provinces and elsewhere, may perhaps not be in any degree disagreeable to the Emperor of Russia, who can have no great amount of good will towards his good friend Francis Joseph, Great Britain may in like manner be well disposed to punish King Bomba; but if it be a portion of his punishment, as it must, if this country have anything to do with it, to insist upon some degree of constitutional freedom for the unhappy Sicilians, who deserve it; and for the equally ill-governed but less unhappy Neapolitans, who seem to have no great desire for freedom—we do not well see how the Emperor of the French can be a party to the chastisement. We say nothing of Poland, Hungary, or Germany. In Italy alone there are ample materials for the disquietude of all Europe, even though the Peace of Paris may, as regards Turkey, be all that the friends of Turkey can desire.

It is a mistake to suppose that the War was merely a Turkish one; and that no other or higher interests were involved in it than those of the Ottoman Empire. It is possible that all these things have been considered; and that, at the supplementary sittings of the Conferences, which are likely to continue for several days, the affairs both of the Scandinavian and the Italian peninsulas are receiving the earnest attention which they merit, if the Peace is to be as stable as it is said to be honourable. In the mean time let it be noted, as a sign how the wind blows, that, in proportion as Russia shows herself inclined to curry favour with France, Austria endeavours to attach herself more strongly to Great Britain. It is well no doubt to hollo when there is occasion for rejoicing, but the British people in this case are not likely to hollo very loudly till they are quite certain that they are "out of the wood."

## CRIMEAN HEROES AND TROPHIES.

IT will be remembered that, a short time since, her Majesty and Prince Albert visited Woolwich, to witness the arrival of a body of the Royal Artillery from the Crimea. Her Majesty was so much pleased with the appearance of some of the men that she gave instructions to have their portraits taken, and has been graciously pleased to allow us to make copies of the photographs, which are executed by Mr. Cundall and Mr. Howlett, of the Photographic Institution.

The two Sergeants on the right—Company Sergeant Christy (sitting), and Sergeant Samuel McGifford, both of the 4th Battalion, served throughout the siege of Sebastopol, and, although they were frequently knocked over with fascines and sandbags, luckily escaped without injury. The pictures, which they have converted into banners, were taken by these worthies from one of the churches of Sebastopol, where they decorated the wall. One picture is of St. Michael, the other of St. George and the Dragon. They are painted in a thoroughly Byzantine style, and in parts are illuminated with gold.

The two Trumpeters left England in July, 1854, and served through the whole campaign. The man, Trumpeter Gritten, arrived in England with an immense beard, which doubtless attracted her Majesty's attention: unfortunately before the photographers arrived at Woolwich, he had cut off this ornament because it was so red. The lad, William Lang, was barely thirteen years old when he first heard the whistling of cannon-balls on the banks of the Alma. He says he was frightened for the first half hour, but has never been afraid of them since. The night after the battle he was found by an officer lying under a bush, nearly dead from exhaustion. He was conveyed in a horse-rug, and carried to one of the campfires, where he speedily recovered. He sounded his trumpet at Balaclava, at Inkerman, and during the whole siege of Sebastopol. His comrades give him the highest praise for his intrepidity. He would ride through a storm of shot to carry provisions to the men in the trench; and when he could be spared he attended to the sick with all the care of a Nightingale. This boy, now fifteen years old, returns to his native town, Woolwich, decorated with the medal with four clasps, the youngest but not the least gallant hero of the war.

## FOREIGN AND COLONIAL NEWS.

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE conclusion of peace is the signal for innumerable fêtes, many of them of the utmost splendour. That of the Turkish Embassy last night was among the most magnificent; and ever since the issue of the invitations the costumes have been in preparation. The Préfet of the Seine also contemplates a brilliant ball at the Hôtel de Ville, and a number of other official and semi-official entertainments are taking place and projected. Everything, in short, looks bright and promising; and the aspect of agricultural affairs gives every reason to hope that in a very short time the present high prices will come down to meet the means of the population, and relieve the distress that has but too long reigned among them.

The health of the Empress continues to progress most favourably. Her Majesty has a concert every day in her apartments to lighten the tedium of her temporary imprisonment. Last week certain symptoms in the state o the Prince Imperial excited a degree of uneasiness at the Tuileries; but these, caused, it is said, by the operation it was found necessary to resort to on the occasion of his birth, seem to be only temporary and not of a dangerous nature, and the alarm they occasioned soon subsided. Orders have been issued that the Villa Eugénie at Biarritz shall be in readiness for the reception of the Empress by the 15th of May.

A considerable discussion, and one which has excited no small degree of interest both among clerical and lay circles, has taken place in the Senate on the occasion of a petition presented by M. de R——, whose daughter has for some years shut herself up in a convent against the wishes of her father, and whence he desires to obtain authority to withdraw her. The termination of these debates is a subject of the highest interest, as fixing the limits of the clerical and paternal power in such instances. It appears that there is a majority of four voices in favour of the cause of M. de R——.

Another case of even greater importance in the eyes of the clergy has lately arisen in consequence of a most melancholy and disastrous duel which took place at St. Germain, and to which the French papers have but slightly referred, without in any way alluding to the discussion arising therefrom. We may, therefore, be permitted to state the whole affair at length. At a mess dinner an officer of the Guides asserting that the army of Lyons was to be present at the late review, he was somewhat rudely contradicted by a brother officer. Hot words ensued, followed by a challenge; and the two young men—M. d'Alsème and M. du Peyrat—proceeded to the *manège* of the cavalry barracks, where, according to custom, the duel took place, with the opponents stripped to their shirts and trousers. In one of the first passes the sword of M. Peyrat entered the heart of his antagonist and broke in the wound, causing death almost instantaneously. On the body of the young man being taken for interment, the Curé refused to permit it to be brought into the church, or to allow it the usual rites of sepulture, asserting that he had the orders of the Bishop of Versailles to act in such a manner Hereupon the family of M. d'Alsème sent in a petition to the chief authority in the nation, who, by a special despatch, appealed to the Pope in favour of the petition. The reply was an order to the Bishop to accede to the desire expressed, and the interment took place with the usual ceremonies.

The Senate has offered a splendid sword, enriched with jewels to the amount of ten thousand francs, to the Comte Tascher de la Pagerie, on the occasion of his bringing to that body the intelligence of the happy deliverance of the Empress.

A legal separation has been pronounced between the distinguished actress, Made eine Brohan, and her husband, M. Hochard, in consequence of the ill usage of the latter. Madame Hochard has temporarily retired to a convent.

The races of Paris and Chantilly, at the end of the present month, are to be unusually brilliant. Upwards of one hundred horses are in training in the different studs in the neighbourhood of the capital in preparation for these occasions. Among all the fêtes in preparation, that looked forward to with the greatest curiosity and interest is the one promised by Count Orloff, at the Russian Embassy, at which the Emperor and Empress are to be present, and which will be attended by all the most remarkable personages, native and foreign, assembled in Paris.

On Sunday the Eglise Réformée of France had the misfortune to lose one of the most able, excellent, and conscientious of its representatives and supporters in the person of the Pastor Adolphe Monod, long celebrated for his eloquence in the pulpit, and his zeal and activity in the cause of Protestantism, an activity which entailed upon him an amount of labour and fatigue highly injurious to a naturally delicate constitution. The funeral, which took place on Tuesday, was attended by thousands of persons of all classes, thronging to pay a last tribute of affection and respect to the memory of such a man, of whose life and death we propose next week to offer our readers a brief sketch.

Last week took place the sale of a very remarkable collection of autographs and historical documents of high importance, belonging to a celebrated bibliophile, M. Parison. The history of this collection—belonging formerly, for the most part, to the Jesuit College of Louis le Grand, and classed and added to by M. Parison—being well known among scholars and amateurs, the attendance at the sale was very numerous, and some high prices were realised. Among other curious pieces were a letter inclosing an inedited copy of verses, both from the pen of Corneille; letters and documents from and relating to the great Condé (most of these were purchased for the Duc d'Aumale); letters of Fénélon, Larochefoucauld, Ignatius Loyola, Bussy Rabutin, and the Acts of the Congress of Munster, with the original signatures of all the members. The Louvre has purchased an entire autograph volume written and illustrated with pen-and-ink drawings by Leonardo da Vinci.

The chief theatrical piece of the moment is Mdme. George Sand's "Françoise," at the Gymnase. The work has not a popular success; but, for those who understand and appreciate beauty of style, observation of character, right feeling, and wholesome interest, it is full of charm and merit. The conception of some of the personages displays great originality; and it is admirably represented by Rose Chéri, Berton, Lesueur, Dupuis, Mdme. Chéri-Lesueur, and Mdlle. Delaporte.

In the marriage mentioned in our last letter the name of the bride was Mdlle. de Montbrison, a name of the highest distinction. Hence this rectification.

*(From another Correspondent.)*

PARIS, April 9.

The number of yesterday's (Tuesday) *Times* has been stopped at the Post-office, and, by a very strange coincidence, the journal *Le Nord* has been admitted in France, to-day, for the first time.

The reproduction of the song attributed to Beranger is said to be the cause of this measure.

We hear from Genoa that the Queen Amelia has received the visit of Count de Chambord.

A compromise has taken place about the election of a new member at the Academy to fill the *fauteuil* vacant by M. de Molé. The two candidates were M. de Falloux and M. Emile Augier, the author of "Gabrielle," a comedy that was rewarded by the Academy four years ago. M. Augier will be elected this time; and, as there will be another vacancy to fill up in a few weeks, that of M. de Lacretelle, the appointment of M. de Falloux will not meet with any opposition.

Saturday is to be the last sitting of the Conferences. The evacuation of the Principalities has not been obtained without difficulties: nothing short of a threatening of *a casus belli* would decide the Austrian Government to the withdrawal of the army from the Danubian provinces.

As to the affairs of Italy, in spite of the correspondence of the *Times* nothing has been decided, even in shape of remonstrances.

### DISTURBANCES IN SPAIN.

Affairs in Spain are once more looking rather alarming. A telegraph despatch from Madrid, on Tuesday last, says:—

The day before yesterday (April 8) an insurrection broke out at Valencia, for which the conscription was the pretext. The authorities got the better of it. Tranquility appears to have been re-established. Government has given the strictest orders to declare the province in a state of siege, and to put in force the law of the 17th of April, 1821, against the disturbers of order, without delay. All measures have been taken for repressing rigorously and instantaneously any attempt at disorder, wherever it may occur. Madrid is tranquil, as are all the provinces from which news have been received.

This despatch comes from an official source, and from the wording of the latter sentence there is some reason to suspect that risings may have taken place in other districts.

The Madrid *Diario* of the 3rd mentions a rumour of grave disturbances having broken out at Xeres, owing to the municipality having imposed an unpopular tax; and the *Espana* says that accounts from Saragossa announce that fears of disturbances in that place are entertained, that the municipality had declared that it could not maintain order if the octroi duties should be established, and that troops had been sent into the city.

### THE DANUBIAN PRINCIPALITIES.

The Moldavo-Wallachian question is not definitively settled by the Treaty of Peace signed on the 30th of March; but the Four Powers have agreed to send a commission into the two Principalities. On its arrival the commission will proceed to form two general Divans—the one for Wallachia, and the other for Moldavia—whose members are to be elected by the people. As soon as the Divans are duly formed they will proceed to draw up new organic statutes, and propose such reforms as may appear requisite and desirable. When the project of the national Divans is completed, it will be submitted to Constantinople, and, after having been revised by the representatives of the Powers, the new constitution will be granted to the Principalities by their Suzerain, the Sultan. It is not probable that Moldavia and Wallachia will be united, but one of the duties of the Commission will be to learn the wishes of the people on the subject. After the internal affairs of the Principalities have been definitively settled, and the new institutions established, Hospodars, natives of the Danubian Principalities, will be elected. It may be inferred from this that the parties who have signed the Treaty of Peace are resolved to maintain all the privileges of the Danubian Principalities, but without in any way interfering with the prerogative of the Suzerain Power. It is related in semi-official Austrian circles that the troops of the Western Powers will entirely quit the Turkish territories before the year is at an end; but those persons who best know how little reliance can be placed on promises made by the Porte refuse to believe that such will be the case. The *Ost-Deutsche Post*, which is in some connection with the Austrian Government, says that Austria will also evacuate the Principalities, "but not until the new frontier of Moldavia is definitively marked out, and the reorganisation of the two provinces completed." This is naturally a question to be settled by the Powers, but the commission appointed by the parties to the peace is not very likely to learn the wishes of the Roumain nation as long as the state of siege is maintained in the land by a foreign army.

### AMERICA

The Royal mail-steamer *Arabia*, which sailed from Boston on the 26th ult., arrived at Liverpool on Sunday last.

The Washington Cabinet had under consideration, on the 19th, the Sound Dues question, and it is reported that the Danish Government will have, at least, another year's respite before American vessels will attempt a free entrance into the Baltic

The Senate on the 24th adopted the resolution calling on the President for information respecting the revolution in Nicaragua, especially referring to Walker's seizure of the Transit Company's property.

The compliments of the British Government to Dr Kane and his associates, for their expedition in search of Sir John Franklin, were received in the United States with grateful feelings.

Dates have been received from Havannah to the 16th ult. There is no political or commercial intelligence. The English fleet still remained in port, and we hear nothing of the reported descent upon Nicaragua. The United States' frigate *Potomac*, and the sloop-of-war *Cyane*, were in the harbour

News has been received from Texas. Indian depredations continued, and a party had organised to follow them into Mexico and inflict punishment.

No tidings have yet been learned of the missing steam-ship *Pacific*. The *Arctic*, which had left New York in search of her, has returned without success. She has been cruising between Sable Island and the latitude of 37 degrees, along the edge of the Gulf.

### THE CENTRAL AMERICAN QUESTION.

The most recent intelligence from the United States brings very little information regarding the critical state of affairs in Nicaragua. Walker still maintains himself in authority there, but strong doubts are entertained as to his being able to do so much longer. Mr. Clayton had concluded a speech in the Senate on Central American affairs. He stated, on the authority of Mr. Vanderbilt, the president of the Transit Company, that that company had never encouraged Walker's invasion of Nicaragua. He referred to Walker's seizure of the company's property, amounting to nearly 1,000,000 dollars, and read letters from Mr. Vanderbilt to Secretary Marcy, in which the former asks for the interposition of the United States' Government for redress. The seizure was made on the ground that the company was indebted to Nicaragua. Mr. Vanderbilt denied the alleged debt, and refused to submit to the award of arbitrators, as the charges were entirely false. With regard to the settlement of the differences with England, the propositions had been made. Arbitration could not be countenanced, because the passage of the isthmus was necessary for the United States and not for Great Britain; and because, with an impartial umpire, the American case would be clear. Abrogation of the treaty would give a chance to Great Britain to get possession where she could usurp the United States, and as to giving notice to Great Britain to vacate the premises, it was not proper to do so at present. He proposed to continue the negotiation with the hope of bringing Great Britain to reason by argument. Meanwhile the Americans should arm in their own defence, protect their coast, build fortifications, and increase their navy—not, however, to make the United States rival Great Britain. They should take time to do this. This was the worst time at which they could engage in a war with Great Britain. She was armed cap-à-pie, capable of throwing 40,000 troops from the Crimea on the American coast, and with the greatest naval equipment ever known in the history of the world, whilst the United States were almost defenceless. If Great Britain should see the United States resolved to enforce their rights by pursuing the doctrine laid down by Washington—"In time of peace prepare for war"—should see the United States building up our fortifications and naval power, the people of England would compel their Government to send out its pacificus. Since the publication of the correspondence between Lord Clarendon and Mr. Buchanan, public opinion in England had been rapidly tending towards an acknowledgment of the justice of the American construction of the treaty. He had received on this point such information as left no doubt of the fact that the appeal must be from the British Ministry to the British people, who wished to engage in no unjust war with the United States. At any rate, be the consequences what they may, if the United States were driven to the alternative—disgraceful submission or war—they must fight. He could not, however, believe there was any real danger of war. If senators and representatives stood firm and presented an undivided front—if they all agreed on their rights, and manifested a determination to enforce them—they would be respected. The British people would turn any Ministry out rather than fight with such a nation as the United States.

THE CRIMEA.—In the ILLUSTRATED LONDON NEWS of last week the lower engraving at page 360 was erroneously described as the interior of the Monastery of St. George; whereas the illustration represents an excavated church in the caverns of Inkerman, on the left bank of the Tchernaya, at the foot of the Quarry Ravine. It has been the post of a French officer since the Battle of Inkerman. The asphalte wall through which the soldier is firing has been thrown up where the original wall has given way, for the place is of very great antiquity. Mr. Simpson has a drawing of the same image in the Admirable Crimean scenes, published by Colnaghi. Our misdescription arose from the Artist having inscribed his sketch "The Monastery," by which name this excavated church was known in the Camp.

The *Univers* claims for the dogma of the Immaculate Conception the honour of the peace, after having attributed to it all the advantages of the war.

GAMBLING AT CONSTANTINOPLE.—A letter from Constantinople, dated the 22nd ultimo, and published in the *Semaphore* of Marseilles, says:—"A few nights ago the local police, assisted by some French gendarmes and English policemen, made a sudden entry into an Armenian house, where they suspected the existence of clandestine gaming. They there found thirty persons seated round a table playing baccarat, and they took them all into custody. One of the principal organisers of the concern is a man named Dance, who calls himself Count d'Armancas, and who was condemned in France some years ago for a similar offence. Among the persons arrested are some Frenchmen, several English officers, and a few Turks. It may be said, without intending to perpetrate a pun, that the majority are 'Greeks.'"

THE DANGER OF EDINBURGH IN SPAIN.—A letter from Almeria, in Spain, dated the 24th ult., says:—"Three days ago a very tall man, enveloped in a black cloak, made of a light stuff, with a broad brimmed hat, and having his face covered with a white mask, suddenly attacked the principal editor of the journal *Voz de la Juventud*, in one of the most frequented streets, and laid him dead at his feet by a stab from a poniard given from behind into his loins. The assassin then took to flight, leaving his cloak behind him. On the following evening the director of the same journal was in his house, was attacked by six persons, and killed by numerous stabs from a stiletto. No robbery in either case was attempted, and, as the journal is purely literary, political opinions cannot have led to the crime, which remains involved in mystery. No clue to the assassins has yet been discovered. Measures have been taken to protect the other persons connected with the journal."

EXTRAORDINARY CASE OF POISONING IN NORWAY.—Great sensation has been caused at Christiansand and the neighbourhood by a crime of poisoning, nothing like which has been known in Norway for upwards of eighty years. A married couple named Thoreson, and a tailor named Petterson, of Strougenaes, were lately proceeded against by justice for usury and for various petty thefts, but, though they were notoriously of bad character, sufficient evidence could not be obtained against them, and they were acquitted. They fancied that a young man named Strid, in the service of the Thoresons, had denounced them, and they determined to be avenged. They accordingly, a fortnight ago, prepared a loaf containing a quantity of arsenic, and ordered Strid to go to a neighbouring farm to fetch bread, at the same time giving him the bread in his bag. Some time afterwards, Thoreson and Petterson went to the forest, and, as they had expected, found Strid lying dead. They returned home for pickaxes, and then they conveyed the body to the sea, which was at no great distance, and, cutting a hole in the ice, deposited it therein with two heavy stones attached to it, to cause it to sink. The disappearance of Strid having been noticed, the three murderers were arrested, but they denied their guilt. Search, however, being made, the body was discovered, and, on being examined, arsenic was found in the stomach. Still they denied their guilt, and it was deemed advisable to have recourse to stratagem to oblige them to confess. Accordingly a room in the Townhall of Etsklisnua, to the prison of which place they had been conveyed, was completely hung with black cloth, and the coffin of the deceased was placed on a bier surrounded with wax tapers. At midnight the three criminals were aroused from their sleep, and told to go and pray. They were at once led into the room, and they see ned struck with terror on finding themselves in such a place in presence of their victim. An examining magistrate, whom they had not seen, then asked them in a solemn voice if they had not poisoned Strid. At first they were too overcome with emotion to answer, but when the question they fell on their knees, confessed their guilt, and implored the pardon of the Almighty. The trial is expected to come on in a short time.

A NEW WITNESS.—In the action brought by the Rev. W. J. Bennett, of Frome, a novel witness was literally placed in the box—a photograph—which gave unerring testimony of the position of the premises involved in the dispute. Photographs have been used before for such purposes of justice as the identification of criminals, but the above is the first instance that we know of the importation of this most useful invention into a civil cause.—*Sherborne Journal.*

## NOTES OF THE WEEK.

A DEFEAT, sustained by Ministers upon a question which seems to have a fatality for Governments—our domestic dealing with our military—has signalised the week. The Scotch members led the attack with a motion condemnatory of the system of billeting soldiers upon private families, and, being reinforced by the Disraelitish free lan ce, triumphed by 139 to 116. Government has promised to act in accordance with the decision thus arrived at. There can be no doubt that the existing system is both oppressive to the householder and demoralising to the soldier, and that military training and officering would be far better secured by properly-conducted establishments, maintained at the general expense. As the keeping our army in the excellent condition to which the War has brought it is now the first duty of the War Minister, the billeting system must be considered by him in reference to its bearing upon that object. It will then be for the Finance Minister to remind the House of this week's decision, and to claim such other provision for the soldier as may be shown to be necessary.

In Committee of Supply, on the vote (£17,639) being asked for the National Gallery, a determined attack was made by Mr. Otway, supported by other members, upon Sir Charles Eastlake, the Director, especially in regard to the last important purchase for the Gallery, the "Adoration of the Magi," by Paul Veronese. The discussion was sufficiently warm, and Sir Charles was defended by Mr. Gladstone and Lord Palmerston—by the former in the earnest but gentlemanly manner natural to him, by the latter in the arrogant tone which he sometimes thinks it fitting to assume, and which may be well enough as a "*Quos ego*——" in an Irish squabble, but is vilely out of place in a discussion upon art, which it may be presumed is generally raised by educated men in every way Lord Palmerston's equals. He chose to talk about "anonymous writers to the newspapers," and the worthlessness of their strictures, when Mr. Otway had shown that an unfavourable opinion as to this Veronese had been deliberately given as the criticism of several of the best journals in Europe. Lord Palmerston does not show his good sense in this kind of scoff, which he might well leave to such persons as Lord Malmesbury and his like. Of the cultivated taste and honourable character of Sir C. Eastlake no one can doubt; but he is liable to error, like every one else who buys a picture; and the best thing such a man's friends can do is to admit the error when made. As to the money part of the business, it is a contemptible affair. Of course money ought not to be wasted, but a blundering official or a cheating contractor can put the nation to five times the expense in this case, and the blunder or fraud will be quietly jotted down as an item in the Estimates. Let us deal like gentlemen with the arts, if we can do no more.

The Sanitary Inquiry, which was intended to whitewash the Crimean incapables, has commenced its sittings; and Lord Lucan, who is the first on trial, began characteristically by wishing to have his case separated from the others. This was refused, and his Lordship has proceeded to "upset," in his own opinion, the charges against him. But one of his witnesses is the very officer whom he threatened to arrest for remonstrance, and who adheres with great firmness to his original testimony. Lord Lucan has also abused the *Times* with great fervour, and these are the chief steps he has taken for his exculpation. We wrong him. He has also charged the Commissioners with ill feeling against him,—which he seems to think a third and most convincing proof that he acted rightly.

A little pamphlet, modestly called "Considerations on the New System of Government Contracts," has appeared, and it ought to be in the hands of every member of Parliament during the discussion of the Estimates. It sets forth, *seriatim*, compact proofs of the wickedly improvident way in which our money is laid out by the Executive; and by which the worst articles are bought for the nation. As regards Sheffield ware, the writer says that respectable houses rarely get Government business, and therefore iron is given for steel, and cast for wrought. Bad timber is bought, army clothing is wretched, the saddlery and harness contracts are notorious failures; and other instances are adduced in which, on the ground of economy, we get villanous goods, which are, therefore, enormously dear. The writer also enters upon the question whether the Government should manufacture for itself; but this is a fairly debatable inquiry, whereas the facts he has stated admit of no reply. His conclusion is that respectable manufacturers should be paid good prices for their work; and we infer that he would desire a continuous system of contracts which should encourage the manufacturer to maintain first-rate establishments. There are two sides to this argument; but, without attempting upon the present occasion to discuss it, we may console ourselves with the conviction that the existing system is about as bad as it can be.

Another distinguished Frenchman, M. de Montalembert ("St." Montalembert, as the *Chartiaris*, painting him with a nimbus, used to call him in old times), is dragged into a controversy between two English writers, Mr. Wilson Croker and Mr. A. Hayward, and really appears to be unfairly treated. Into the literary part of the controversy we need not enter; but we record our protest against Mr. Croker's assumption that a translator has a right to "cook" a distinguished author's sentiments for the English market. M. de Montalembert is a devoted Roman Catholic, and pities Protestant England, while praising much that she does. We can respect his devotion, submit to his pity, and thank him for his appreciation; but we have no right to alter his language because we do not approve of his sentiments, or "bigotry," as Mr. Croker, perhaps rightly, calls it. Mr. Hayward has so completely the best of the argument, which, indeed, is upon a point one scarcely supposed could be raised in these days, that the veteran reviewer is compelled to have recourse to impertinence, which is to be regretted for the sake of Literature.

*Apropos* of the Church of Rome, since the other day when an Irish Roman Catholic hierarch announced that our belief in the solar system was heretical, that the sun went round the earth, which it was made to light, and so forth, we have not had such a shock to our astronomical creed as has been inflicted by Mr. Jelinger Symons, her Majesty's Inspector of Schools, who has suddenly found out the moon has no rotary motion; nay, he has made a little machine to prove it. He published a letter on Tuesday, stating this discovery; but we are happy to say that the orthodox believers instantly flew to arms, and next day poured upon him a storm of sacrafal proof that he was an ignorant person who did not know what rotary motion meant, and exhorting him to walk round tables, play at cup-and-ball, and otherwise explain to himself the very simple problem. Mr. Symons appears to have puzzled himself, and to have been somewhat over hasty to communicate the fact without a due test, just as *Don Quixote*, having cloven his helmet in proving it once, repaired it, and then would not test it again—a fine stroke by an artist who well knew human nature.

WRECK PASSED BY THE EAST INDIA SHIP "BARHAM," ON HER HOMEWARD-BOUND PASSAGE, IN LAT. 42.2 N., LONG. 32.1.—(From a Correspondent).—Monday, March 31, 1856.—At 4.45 p.m. sighted a vessel bearing N N E. with her topmasts, mainyard, and bowsprit gone, the foreyard up and down, having the remains of the foresail hanging to it, and the English ensign flying from the mizenmast-head; union-jack down. Captain Vale, believing he could be able to render assistance to any unfortunate people who might be on board, immediately shortened sail and bore up for the stranger, thereby altering the *Barham's* course from E. by N.½ N. to go direct for her. On nearing the stranger every eye and telescope was directed to ascertain if there was any human being on board, but none was to be seen. She had the No. 33 in large figures on her starboard bow, and the word "Liverpool" on her stern. Her bulwarks were all gone and her poop-deck completely razed by the force of the sea. As it was blowing hard from the northward and westward, and every appearance of more wind before night, which was closing in fast, and a high sea running, breaking over the wreck fore and aft, Captain Vale did not see the necessity of sending a boat on such dangerous service for no good, so kept the *Barham* away on her course again.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

The journey of the Emperor to Algeria after the ratification of the Treaty of Peace is talked of in Paris. Instructions have been given to expedite the completion of the electric cable from Cagliari to Algiers without loss of time, and the reason assigned is the journey of the Emperor.

The Queen of Greece is expected at Vienna and other German Courts in the course of the summer.

The arrival of the Marquis of Dalhousie is daily expected at Marseilles.

The Empress Dowager of Russia is expected at the Court of her brother, the King of Prussia, Berlin, in the course of May, and, after remain ag some time, will take her departure for some of the watering-places in the South.

The Count de Chambord paid a visit on Saturday last to the ex-Queen of the French, Marie Amelie, at her residence at Nervi, near Genoa.

The ex-Regent of Spain is expected to pay a visit to the Duke and Duchess of Montpensier at Seville, and thence to Madrid, to visit Queen Isabella.

In order to testify the satisfaction he felt at learning the birth of the Imperial Prince, the Sultan made a present to M. Scheffer, first Dragoman to the French Embassy, who announced the event, of a snuff-box, valued at from 5000f. to 7000f.

As his Holiness the Pope does not go to Paris, it is said that M. Villecourt will be the bearer of the "golden rose" to the Empress Eugenie.

The latest accounts from Melbourne say that Lady Hotham would sail in the ship *Anglesey* for London.

The Queen of Spain has bestowed the order of the Golden Fleece on the Imperial Prince of France. A high functionary is to carry the insignia to Paris.

It is said that Lord Stratford de Redcliffe has seriously thought of resigning, and consequently of quitting Constantinople, and that he is very dissatisfied at not being supported sufficiently in Parliament by Lord Palmerston.

Count Orloff has received communications from St. Petersburg informing him that his presence is necessary there, in order to assist at a grand diplomatic council which is to take place at the end of April. He will be replaced at the Paris Congress by M. Titoff.

Instead of being put off till October, the marriage of the Prince Regent of Baden with the daughter of the Prince of Prussia is to be celebrated in June.

The story runs that Louis Napoleon, on Count Orloff's introduction to him, asked "If he brought peace?" which elicited the courteous reply, "Sire, I come to ask it."

Omer Pacha has been appointed, by a decree of the Sultan, General-in-Chief of the army of Asia. He will leave Constantinople very soon for his post.

The French Emperor has purchased the ancient domain of Fouilleuse, between Saint Cloud and Mont Valerien, where he intends to establish a grand model farm. He proposes to collect specimens of the best agricultural implements, and the most perfect races of all varieties of cattle.

The King of Greece has received in private audience M. Mercier, Ambassador of France, who presented to his Majesty the notification of the birth of the Prince Imperial of France. King Otho has ordered Mr. Trocopi, Greek Ambassador at London, to proceed to Paris to congratulate the Emperor Napoleon on that event.

Sir William à Beckett is appointed Judge, and Mr. J. D. Pinnock is appointed Registrar, of the Vice-Admiralty Court of Victoria.

Count Buol has received instructions to remain at Paris, in order to take part in the deliberations upon such details of execution as yet remain to be settled.

The *Bourse Gazette* of Berlin, of the 29th ult., says that M. de Westphalen, Minister of the Interior, whose retirement has been spoken of, has consented to remain in the Cabinet for the present.

Mr. Buchanan, late American Ambassador at London, quitted the Hague on the 3rd for New York.

The Archbishop of Milan, the Bishop of Pavia, and Mgr. Paoli Ruscheni have arrived in Vienna, to take part in the deliberations relative to drawing up the law on the Concordat. The first meeting of the bishops took place on Sunday last. More than sixty prelates were present.

Mr. E. L. Betts and Mr. T. Brassey, two of the contractors of the Grand Trunk of Canada Railway, sailed on Saturday last in the *Arcos* to promote the contemplated arrangements with the provincial Government for expediting the completion of that undertaking.

Mr. John Bright, M.P., is gradually, though slowly, improving in health.

The notorious ex-Minister of Police, Orsino Mazza, has left Naples for Rome. Some say that his Majesty recommended him to travel; others that he is gone on a mission. However it be, Naples is well rid of him.

A letter from Athens states that Mr. Smith O'Brien is at present travelling in Greece.

The operatic company at St. Petersburg is at an end, and Fanny Cerito and Mdme. Bosio have quitted the city. M. Tamberlik has been giving concerts at Moscow.

Mr. G. M. Dowdeswell, of the Oxford Circuit, has been appointed Recorder of Newbury, in the place of Mr. K. S. Selfe, who has resigned on being appointed one of the metropolitan magistrates of police.

The *Ménestrel* says that Madame Cinti-Damoreau, the once-celebrated cantatrice, is about to resign her professorship at the Conservatoire de Musique, and to retire to Chantilly.

Abbotsford House is now open daily to visitors, and will be so during the whole season. Mr. Hope Scott and family have come to town, and, on their return, it is Mr. Scott's intention to spend the summer months on his estate in the west.

The Catholic Bishop of Liverpool, Dr. Goss, performed the ceremony of laying the foundation-stone of a new Catholic church on Tuesday morning. The rain poured down during the whole proceeding, and considerably damped its "pomp and circumstance."

The sum of £220 has been paid over towards the amount required for the stained window of St. John's Church, Stamford, being the proceeds of the lecture lately delivered in Stamford on the Crimea by Augustus Stafford, Esq., M.P.

Melbourne papers of recent date mention that Miss Catherine Hayes, after fulfilling a short engagement at the Bendigo diggings (!), will sing for a few nights at Sydney, and then return to the Old World for "good and all."

M. Kossuth is announced to deliver two lectures on the effect of the Concordat between the Emperor of Austria and the Pope, at the Concert-hall, Lord Nelson-street, Liverpool, on the 11th and 16th inst.

The Norwich Musical Festival will take place in the autumn of 1857. The Earl of Albemarle has been elected president of the committee of management, and Mr. R. K. Long, the present High Sheriff of Norfolk, vice-chairman.

An advance of from 20 to 25 per cent has taken place in the price of diamonds in Paris, which are being bought up for Russia.

The High Church party at Horsham have been defeated in their attempt to render attendance at church a compulsory law to the day-scholars of the grammar-school.

All the Paris *cafés chantants* have received orders to suppress the anti-Russian songs that they have lately been in the habit of giving.

The Persians have taken possession of the Island of Karak, on the Persian Gulf.

It is now said that Palmer will not be tried at the Common Session, but at a Special Session, at which the three Chief Justices will sit.

The French Government has chartered a number of merchant vessels for the conveyance of stores from the Crimea, and a number of articles which are to be first shipped have already been sent to Kamiesch.

Seven different proposals for forming banks have been submitted to the Porte by different capitalists.

The spring herring fishery is proceeding favourably on the Norfolk coast.

The French Minister of Finance has been authorised by Imperial decree to raise to 250 millions of francs the amount of Treasury Bonds to be issued for the service of the year in 1856.

Letters from St. Petersburg state that a special section at the Home Department has been formed, and charged with "taking cognisance of all offences against orthodoxy."

Advices from Trieste inform us of an important alteration just promulgated in the Austrian tariff. It effects in several cases a reduction of between 30 and 40 per cent, and is regarded as an experimental step towards a more general abandonment of the prohibitive system.

Advices from St. Petersburg state that the prohibition of the export of Russian produce from Russia is repealed.

## COLLISION WITH AN ICEBERG.—ONE HUNDRED AND THIRTY-FIVE LIVES LOST.

On the 20th of February the packet ship *John Rutledge*, of New York, while on her voyage from Liverpool, struck upon an iceberg and sank, with the mate, carpenter, and thirty to thirty-five passengers on board. The only information in regard to this disaster is derived from the sole survivor, Thomas W. Nye, of New Bedford, from whose account the subjoined narrative has been taken.

The *John Rutledge* left Liverpool on the 16th of January, with 120 passengers, and a crew of officers and men numbering, we are told, sixteen persons. During the passage she encountered severe weather. One of her crew was washed off the bowsprit, and a male passenger was carried through the bulwarks by a heavy sea and drowned. On the 20th of February the *John Rutledge* was struck by an iceberg, and was abandoned the same evening. Before leaving his vessel, Captain Kelly, finding that she leaked badly, manned the pumps with passengers and seamen; and, as the leak continued to gain upon her, had about 100 bags of salt and a number of crates of crockery broken out of the forehold and thrown overboard. Getting clear of the ice soon after, it was discovered that a plank was started from the forefoot, and an attempt was made to stuff the leak with blankets and rags. It appears that this was not very successful, as the Captain subsequently decided to abandon the vessel. There were five large boats on board, in which 134 persons were to be saved.

When last seen the ship was down to her mizen chains in the water; and from the character of her cargo—salt, iron, and crockery—she probably went down in a short time afterwards. Of the thirteen persons in the last of the five boats there were four women, one little girl, five male passengers, Mr. Nye, a Scotch sailor, and the boatswain, an Irishman. For the subsistence of these people there were only one gallon of water and six or eight pounds of bread. The mate had placed a compass in the boat, but his wife, in leaping from the ship, had broken it. Cast thus helplessly upon the open sea, among the fogs and mists of the Banks of Newfoundland, and surrounded by drift and berg ice, their prospect could hardly have been more gloomy. Soon after the boat broke adrift; night came on—how it passed may be imagined. Little was said by any one, and probably all of them soon came to a sad sense of their dreadful situation, for as soon as Mrs. Atkinson entered the boat she seized the vessel containing the water, and, being a powerful woman, fought off all who attempted to obtain a drink from it. Nye got only two or three mouthfuls, the rest was drunk by herself and the boatswain. What disposition was made of the bread does not appear. The probability is that there was no organisation whatever among the little party, but everyone looked out for himself. Having no compass nor sign by which to steer, they did not exert themselves other than to keep the boat before the sea. The sailors were warmly clothed, as was also Mrs. Atkinson; but the passengers for the most part were scantily attired, and suffered keenly from the cold. Day after day only dawned to raise their spirits anew with hopes of succour, which the long and dreary nights turned to the bitterness of despair. Thus time passed until the third day, when one of the little band, a man whose clothes were too thin to shield him from the bleak weather, sank under the combined effects of cold and hunger, and his body was committed to the deep. Then a woman died in the arms of her husband and little daughter, and her corpse was also silently dropped into the sea. The fourth day came, and with it the same angry sea, the same leaden sky—no ray of hope anywhere visible. The cold was so intense that it almost froze the marrow, and not a drop of water could be obtained, while only a small quantity of food remained. Human nature could not bear up much longer against this exposure and privation, when, just as they were about to give up all hope, the wind lulled, and lo! a brig hove in sight! She was not very far off," and they rallied for her with might and main. Signals were also made. For some time they seemed to gain upon her, but she did not see them, and, the wind freshening, she was soon out of sight. With her went all hope. A burning thirst soon fell upon all of them, and, heedless of young Nye's earnest appeals, they fell to drinking salt water. This only increased their thirst, and they drank eagerly and repeatedly of the fatal fluid.

What followed is the old story of delirium and death. One by one they grew mad and madder; besought each other to kill them; then they ceased, and sitting at sumptuous feasts, and spoke of the rare dainties which mocked their grasp; of the delicious beverages which they in vain essayed to quaff. At length, worn out with the intensity of their frightful and mental sufferings, they grew more quiet, and their haggard features became rigid, their wild eyes assumed a glassy look, and their shrunken forms seemed gradually to subside—the next lurch of the boat tumbled them off the seats dead! Such were the sights which young Nye witnessed daily. As they died he threw their bodies into the sea, as long as his strength lasted. He says that, although his thirst was of the most agonising character, he not only warned his fellow sufferers against drinking salt water, but showed them how he obtained relief by simply rinsing his mouth occasionally. They were hopeless and desperate, and would not listen to him. The boatswain grew delirious, and died within twelve hours after drinking it. In his delirium he was most violent. He attempted to throw the oars overboard, and did succeed in throwing over the bucket with which they baled out the boat. Nye did his best to quiet him and stop him from drinking more sea-water; but he struck him a severe blow upon the chin. Mrs. Atkinson was also very violent; and, being of a strong constitution, it was a long time before she expired. His recollection of the events which occurred about this time is very indistinct. On the sixth day there were only himself, a small woman wrapped up in two blankets, and the little girl alive in the boat. Before night the child died, and on the day following the woman breathed her last. He had strength enough to throw the body of the child overboard; but that of the woman, together with the bodies of three others, was so piled up under the thwarts that he was unable to extricate them. Feeling a strong sense of drowsiness creeping over him, he fastened a red shirt and white shirt to an oar, and, hoisting it to attract any passing vessel, he pulled himself up in the stern of the boat and dozed away the hours. Occasionally he would rouse himself, and bale out the boat, and then lie down again. He did not sleep, but the time passed in a kind of waking vision. Occasionally he fell light-headed, and began to dream of being at home in New Bedford with his family. Fearing that he too might be delirious, he fought against these influences, and kept himself awake by various means. At first the sight of his ghastly companions caused him much distress, and his mind became oppressed with gloomy forebodings. He resolved to shake these feelings off and hope for help even to the last, thinking it better to go to the next world with all his senses about him than to die a raving maniac. Thus resolved, he bore up bravely and to the end.

On the 28th of February a ship hove in sight of the lonely boy. He says that he saw her before those on board discovered him, and he was sure from the first that they would pick him up. That vessel was the packet-ship *Germania*, Captain Wood, from Havre, bound to New York. When Captain Wood descried the solitary boat he ordered one of his own quarter-boats to be lowered, and sent an officer to see what it contained. As they approached him poor Nye roused, "For Jesus Christ's sake, take me out of this boat!" They did take him out, with womanly tenderness, and, with the boat and its fearful load in tow, rowed back to the ship. The young sailor was quickly transferred to the comfortable cabin of the *Germania*, and his late companions were thrown into the sea. It is a wooden life-boat, about twenty-five feet long. After being thoroughly cleaned it was hoisted on board and brought into port.

Of the other boats of the *John Rutledge* no tidings have been received. Nye thinks that those were as badly off as he was, if not worse, and entertains but little hope that any of them would be picked up. Only the Captain's boat was furnished with a compass, and it is probable that all of them were poorly provided with food and water. The survivor believes that with plenty of these the majority of the people in his boat could have endured the cold until they were picked up.

## GRAND REVIEW AT PARIS.

ONE of the great commemorative events at Paris, last week, was the magnificent Review, on Tuesday, in the Champs de Mars. Sixty battalions of infantry, and a due proportion of cavalry and artillery, were on the ground. Marshal Magnan had the command in chief, the infantry being under the immediate orders of General Regnault de Saint Jean d'Angely, and the cavalry under those of General Korte. The Emperor arrived on the ground a little after one, attired in the full uniform of a general officer, and surrounded by representatives of every European nation. On his right was Prince Napoleon, on a magnificent horse richly caparisoned; and on his left was the young Prince de Reuss. Immediately behind his Majesty, among the Marshals, was Count Orloff, an Austrian General, the Marquis de Villamarina, and a crowd of officers of all countries. The British uniform appeared in great force. The new French Marshals seemed to be the favourite objects of curiosity with the multitude. After the usual manœuvres, the defile commenced about a quarter before two, the infantry and cavalry marching past the Emperor in battalions and squadrons, and the artillery in dead-batteries. Favoured by the splendid weather, the sight was one of gorgeous brilliancy, and calculated to give foreigners a wonderful notion of the warlike resources of a nation that could present so grand a military show, at the close of a war that has cost the lives of thousands of its best soldiers.

Our Artist has sketched this imposing scene of the Imperial Staff: first rode the Prince Napoleon; next, a few paces distant, is the Emperor, mounted on one of the finest chargers in Europe. Count Orloff, who was the lion of the day, rode between two Marshals, Canrobert and Vaillant.

THE GUN-BOAT FLOTILLA OFF PORTLAND.—SKETCHED BY LIEUTENANT MONTAGU O'REILLY.

## THE GUN-BOAT FLOTILLA OFF PORTLAND.

We gave last week a View of the Red and White Divisions of the Light-draught Gun-boats, under the orders of Captain H. Keppel, C.B., H.M.S. *Colossus*, 81 guns, leaving the Motherbank; and we now present our readers with the Squadron coming into Portland, from a sketch forwarded us by Lieutenant Montagu O'Reilly, now in command of H.M. gun-boat *Seagull*.

After leaving the Motherbank the vessels, under steam alone, formed in two lines, and followed in the wake of the *Colossus*, but the two-decker soon showed her superiority in speed, and the little fleet received orders to spread as much canvas as would enable them to keep their positions with her. This they did in excellent style, and their appearance as they neared Portland presented a very pleasing picture. Our readers may consider these little craft as the light cavalry of the navy; and they will prove an interesting feature in the forthcoming naval review at Portsmouth. The fleet consisted of the following vessels.—Red or Starboard Division *Charger*, *Doe*, *Beaver*, *Biter*, *Whiting*, *Bustard*, *Mayflower*, *Grasshopper*, *Pincher*, *Gorhawk*; and the White or Port Division of the *Seagull*, *Thistle*, *Sandfly*, *Julia*, *Peiter*, *Herring*, *Bullfrog*, *Plover*, *Ruby*, and others, accompanied by the Admiralty yacht *Black Eagle* and the dispatch gun-boat *Wanderer*.

THE EMPEROR OF THE FRENCH AND COUNT ORLOFF PROCEEDING TO THE GRAND REVIEW, IN THE CHAMP DE MARS.—(SEE PRECEDING PAGE.)

THE YARMOUTH HERRING FISHERY.—RETURN OF THE BOATS.

## THE YARMOUTH HERRING FISHERY.

The return of the Spring Herring Fishery has suggested the accompanying artistic illustration of this very interesting branch of coast industry. The locality is Yarmouth, north of which are the fishing-places, from fifteen to thirty miles, and from thirty to forty-five eastward; while the boats go southward as far as the mouth of the Thames and the South Foreland. Herrings also frequent a part opposite Yarmouth called the Head; and a place known by the fishermen as the Brown Bank, on the Dutch coast. There is also a smaller sort of herring caught at Yarmouth, by boats nearer the shore: they are of good quality, and are called "long shores," or "alongshore herrings."

When the fishery is near home, great numbers of boats depart from the shore at sunset to set their nets, returning in the morning to dispose of their cargoes. The beach at such times presents a very picturesque appearance, and when seen from the platform of the Jetty, from which a view of the whole business of the herring-boats may be commanded, exhibits a scene of an exceedingly animated and bustling description

SALE OF HERRINGS, ON THE QUAY, GREAT YARMOUTH.

This structure, erected in 1808, at a cost of upwards of £5000, is exceedingly convenient to seamen and others engaged in mercantile pursuits. It extends into the sea upwards of 450 feet, and is composed of strong oak piles driven into the soil, braced together by cross-beams of the same material, and well secured by iron fastenings; upon the top is a platform twenty-one feet in width, surrounded by a substantial railing. It is intended to facilitate the approach of boats to the beach, and the landing of passengers in bad weather, which would otherwise be attended with much danger. It was, until the recent erection of the Wellington Pier, the first pile of which was driven on the 28th of June, 1853 (an account of which is given in the ILLUSTRATED LONDON NEWS of July 9th of the same year), one of the most fashionable and favourite promenades during the bathing season. As a fashionable lounge the latter, however, now takes the lead.

The produce of the fishing-boats is conveyed from the beach, and from the larger vessels lying alongside the quay, to the premises of the herring-curers, by means of a peculiar kind of low cart, called a beach-cart, or "groll," to the shafts of which, when the load is unusually heavy, an additional horse can be attached. Their original construction was owing to the narrowness of the alleys or rows communicating with the quay, which are not of sufficient width to admit of the passage of the usual kind of cart; and at one time, "when there were no wider streets communicating directly with the quay," served as a means of speedy conveyance of goods to the interior of the town. They will carry a heavy load, the fishermen being very dexterous in the manner in which they pack the cart, which they will sometimes do to a great height.

The second illustration represents the sale of the cargo of one of these vessels on the quay at Yarmouth, the great and ancient mart of herrings. A number of baskets called "swells," somewhat in shape to a baker's basket, but considerably longer, with a broad flat handle in the centre, at 6d. each, presenting, from its being depressed at the sides, the appearance of a double basket, are ranged side by side to the number of twenty. These baskets are filled by means of a smaller basket, called a "marnd," into which the fish are counted from the vessel by the men engaged: they are emptied into the swells, the contain each 250 herrings: two of these marnds make one swell, and twenty swells, or a complement of 10,000 herrings, one last. The price of a last varies according to the season and the condition of the cargo, averaging from £10 to £16 and upwards; the Brown Sink herrings, which are held in great esteem, having been known to have sometimes sold as high as £30 and £40 per last. The sale is conducted in the following manner:—A bid is made by one of the persons assembled, the advances on which are made in crowns: the salesman, generally the owner of the swells, then rapidly names the amount at each advance, until no more bids are offered, when he books it to the last bidder. The effect of one of these groups must be exceedingly novel and striking to a stranger from the motley and characteristic appearance of the persons composing it, who, if they have no other criterion, would scarcely be accounted the men of capital some of them are.

Among the offences recorded, there is one to the effect that in the year 1641 Aliens, a shoemaker, and Hammond, a merchant, were fined 2s. each: the one for buying, the other for selling, a last of herrings in church during Divine service. The greater quantity of herrings are purchased by the curers; a considerable proportion are, however, forwarded from the quay to other markets, in trucks worked by horses, on a tramway communicating from the quay to the railway terminus, whence they are conveyed per rail to their destination.

### CALENDAR FOR THE WEEK.

SUNDAY, April 13.—3rd Sunday after Easter. Vaccination introduced, 1796.
MONDAY, 14.—Mutiny at Spithead, 1797.
TUESDAY, 15.—Easter Term begins. Sir Walter Scott born, 1771.

## THE ILLUSTRATED LONDON NEWS.
*LONDON, SATURDAY, APRIL 12, 1856.*

THE discussion that took place on Wednesday on Mr. Milner Gibson's Oath of Abjuration Bill has thrown no new light on the vexed question of the exclusion of Jews from the British Parliament. Session after Session for nine years the House of Commons, the best judge of its own affairs, has decided by considerable majorities that British Jews ought to be admitted to Parliament, if British constituencies think proper to elect them. Session after Session for the same period the House of Lords has rejected the claim; and so the matter has rested—a scandal to the statesmanship that has attempted the remedy, and failed to apply it. Mr. Milner Gibson's bill has sought to remove the exclusion under which the Jews labour, and to extend, by a new form of oath, those principles of civil and religious liberty on which our Constitution is now based; and the House of Commons, by a majority of 230 against 195, has once more affirmed its concurrence in the principle, and declared that a Jew may help to make the laws of Great Britain as well as to administer them. We shall not weary the patience of our readers by any recapitulation of the arguments on either side. We should like, we confess, to see this question tried more broadly and palpably on its own merits, and the issue fairly raised on the one point, without reference to any form of oath whatsoever, whether British Jews may, or may not, sit in Parliament? In the present state of the law, we either accord to the Jews too many rights and privileges, or one right and privilege too few. If it be contrary to the spirit of Christianity;—a practical denial of the Christian faith;—a de-Christianisation of the State, that Jews should be admitted into that Parliament where Unitarians, Diests, or Atheists may sit, speak, and vote, unquestioned, it must be equally a denial of the Christian constitution of the country if the vote of a Jew or Jews can return a member to Parliament; if a Jew can purchase an advowson and appoint a minister of the Gospel; or if a Jew, like Lord Mayor Salomons, can sit on the judgment-seat and administer justice between contending Christians. If Mr. or Baron Rothschild is not fit to sit in Parliament, let the fact be so declared openly and broadly, and let Mr. Salomons at the same time descend from his chair in the Mansion-house, and let every Jew voter throughout the country be forthwith struck from the register. But if such a disfranchisement of, and such a stigma on, a body of well-behaved, well-disposed, thrifty, and generally exemplary citizens be a thing that Bishops in the House of Lords, Sir Frederic Thesiger in the Lower House, and the body of those who still resist the claim of the Jews, are not inclined to attempt, we do not see how, in the name of common sense and consistency, to say nothing of the holier name of Charity, they can still further oppose the often-expressed wish of the House of Commons, and the equally emphatic and as often-expressed wish of the constituency of the first city in the empire. Why has the Ministry not the courage to make a Cabinet question of it, and stake its existence upon the result? If it would, the House of Lords would hasten to confirm the decision of the Commons, and thus a much-needed and would be put to a scandal and an inconvenience, if not a persecution.

THE Emperor of Russia has been far more communicative to his subjects on the terms of the Peace of Paris, than Napoleon III. to the French, or the responsible Ministry of Queen Victoria to the British people. In our land, where publicity is the rule, little or nothing is known of the doings of the Plenipotentiaries at the Conference; but in St. Petersburg, where there is supposed to be no publicity, a very full, though not a very fair, account has been given to the people of the results of the Conference. We shall not attempt to criticise the Imperial manifesto published at St. Petersburg on the 1st instant, nor to point out all the perversions of the facts which are contained in it, such, for instance, as the one in the first paragraph, "that Russia did not commence the war;" or that in the second, which states that the Emperor Nicholas "was a stranger to all interested views;" or that in the penultimate paragraph, which would lead the Russians to believe that there is still a Russian fleet on, instead of under, the Black Sea. All these softenings of unpalatable truth may be pardoned in a Sovereign who has been foiled and defeated, and who strives to put the best interpretation on the matter for the sake of the pride and the feelings of his subjects no less than of his own. Upon the whole, and with this allowance for the colour of a document which was intended more for Russian eyes than for the eyes of the people of Europe, the Emperor Alexander deserves credit for his proclamation, and for the sentiments which animate it. In its concluding prayer every one must sympathise; and, if the Czar Nicholas had both felt and acted upon principles so satisfactory, he would never have attacked the dignity and independence of Turkey, or rendered it necessary for the Allies to arm in defence of Europe. The following is a translation of the manifesto. It is dated on the 31st ult., and was promulgated on the 1st instant:—

The obstinate and sanguinary struggle which, for nearly three years, has subverted Europe has at last come to an end. We have at length concluded it. Even before it broke out, my late august father, of imperishable memory, solemnly declared to his faithful subjects, and to all the Foreign Powers, that the sole object of his desires and of his efforts had been to protect the rights of our co-religionists in the East, and to put an end to the persecutions to which they were subjected.

A stranger to all interested views, he never expected that his just complaints (*réclamations*) would have resulted in the scourge of war; but, considering its calamities with a deep feeling of sorrow as a Christian, and as the father of the people intrusted by Providence to his care, he did not cease manifesting his inclination in favour of peace. But the negotiations which were opened shortly before his death, on the subject of the conditions of that peace, which was a necessity for us all, remained without success.

The Governments which have formed a hostile coalition against us had not discontinued their armaments: pending the negotiations they had even increased them; the war had to follow its course, and we continued it with firm hope in the protection of the Most High and firm confidence in the unshaken devotion of our well-beloved subjects. Our expectations were justified. During that period of hard trials our faithful and brave soldiers, as well as all our people, without distinction of class, proved themselves, as always, worthy of their high calling. Along the whole extent of our empire, from the shores of the Pacific Ocean to the shores of the Baltic and Black Sea, one single idea, one single impulse, animated all, and made them spare neither life nor fortune in the defence of their country. Labourers leaving the plough and their fields, eagerly took up arms for our holy cause, rivalling in courage and self-denial our veteran soldiers. New and striking deeds of renown have marked the last struggle with powerful adversaries.

The enemy has been driven back from the shores of Siberia and from those of the White Sea, as well as from the ramparts of Sveaborg. The heroic defence for eleven months of the fortifications of the south side of Sebastopol, erected in the face of and under the fire of the assailants, will be handed down as a record to the remotest posterity.

In Asia, after the glorious victories of the two preceding campaigns, Kars was compelled to surrender with its numerous garrison, forming the whole army of Anatolia, and the *élite* of the Turkish troops sent to relieve the place were compelled to retreat. Nevertheless, by the impenetrable and wise decrees of Providence, a fact was preparing comformable to the wishes of our well-beloved august father, to our own, and to those of all Russia, and which realised the objects of the war. The future conditions and the privileges of all the Christians in the East are henceforth guaranteed. The Sultan solemnly recognises them, and, consequent upon this act of justice, the Ottoman empire enters into the family of European States.

Russia! Your efforts and your sacrifices have not been in vain. A great work has been accomplished, although by other and unforeseen means, and we may now with a quiet conscience put an end to those efforts and to those sacrifices by restoring to our dear country the inestimable blessings of peace. To hasten the conclusion of the Treaty of Peace, and to dispel, even for the future, the very idea of ambitious views or projects which might be attributed to us, we have consented to the adoption of certain preliminary measures destined to prevent a collision of our ships of war with those of Turkey in the Black Sea, and to the establishment of a new frontier line in the southern part of Bessarabia, nearest to the Danube.

The concessions are not great when put in comparison with the charges of a prolonged war, and the advantages presented to us by the tranquility of the empire, the destines of which it has pleased God to intrust to us. May all those advantages be obtained by our efforts, united to those of all our faithful subjects! May, with the aid of the Almighty, who has always protected Russia, its internal organisation be consolidated and perfected! May justice and clemency preside over its judgments—may the advancement of civilisation and of all useful activity spread with renewed force—and may every one enjoy in peace the fruits of his labour under the protection of laws equally just and watchful for all! Finally,—and this is the most important and most ardent of our hopes,—may the salutary light of faith, by enlightening the mind and strengthening the heart, maintain and improve more and more that social morality, which is the surest pledge of order and happiness.

Given at St. Petersburg the 19th March (31st), 1856, and in the second year of our reign. ALEXANDER.

The last news from the Australian colonies leaves the principal of them, Victoria, in a state of anarchy. The Governor dead, the temporary Governor succeeding by law objected to, and the people and the press clamouring for the right to elect their own Governor; and the Ministerial crisis, brought about by the new Legislature's adoption of the ballot, chronic and apparently invincible. At such a time it is obvious that the communication between the colony and the mother-country ought to be the most rapid that geography will present and steam can attain; and yet the ship which brought the details of this news, arriving at Liverpool on Wednesday last, left Melbourne on the 12th of January. And this is an extraordinarily fast passage. But it has been shown over and over again that, practically, Melbourne can be brought within from thirty-five to forty-five days' distance of London; and the fact that, under the existing organisation of the postal service, we are separated by, on an average, ninety days is not creditable to the administration of this commercial country. For the last eighteen months, under the pretence that the war used up all the steamers, there has been no steam communication between England and Australia; and notwithstanding that steam communication has all that time been easily maintained to every other commercial point. In those eighteen months the Australias have been, next to the United States, the best market in the world possessed by Great Britain. In those eighteen months Australian gold, supplied to the amount of a million sterling a month, has saved England from commercial panic, the Bank having been dependent from week to week on the arrivals of Melbourne gold-ships. The loss to merchants in the interest on the gold unnecessarily delayed at sea amounts to a sum which would build a fleet. At last these merchants have become wearied of expostulation with the non-commercial Lords of the Treasury, and a meeting is to be held in the City on Monday, the Lord Mayor in the chair, to offer a public protest.

On Monday night, in the House of Commons, there was a conversation on the point between Lord Hardwicke and the Duke of Argyll, the new Postmaster-General. Lord Hardwicke pointed out that, if the mails were taken by the "Overland" route, across Suez, and at Aden transferred to steamers of great speed these steamers going straight across the Indian Ocean to Melbourne, touching only at the Island of Diego Garcia for coal, the course of post between St. Martin's-le-Grand and Port Phillip Bay need never exceed, at the farthest, forty days. The calculation is based upon the figures of the official Hydrographer to the Admiralty, and is supported by the statements of high authorities among mercantile and naval people. But the Post-office seems determined on routine in the arrangement. They have issued a minute inviting steam-ship companies to tender for three routes, *viâ* (by steam) the Cape of Good Hope, *viâ* Panama, *viâ* Suez and Point de Galle—the old route; and, meanwhile, as the colonies are to share the expense, they have sent out despatches to Australia requiring the six colonies to agree (!) which route they prefer. This, it is shown, involves a delay of about eighteen months; and in the interval the Government appears resolute to maintain the service by the Liverpool clippers round the Cape; that is to say, they maintain the worst possible route by the slowest possible means, in order not to prejudge the question! Common sense revolts at this. Let the Duke of Argyll win for himself a reputation in his new capacity by it. Acting on *action* in this matter.

## FRENCH INSURANCE AGAINST ENGLISH FIRES.

The Chancellor of the Exchequer, unwilling to surrender any portion of the revenue, is determined to continue the taxes on property threatened by the invasion of a French Insurance Company. For this object he has introduced a new clause into the Customs Consolidation Bill, which every person who undertakes on behalf of a foreign or colonial proclaims its terms of business from the exchequer, shall be required to take out a proper license, and give security in such form and manner as the Commissioners of Inland Revenue shall prescribe "for accounting and paying the duties with which he shall be chargeable," under a penalty of £100 for every day that he may act as an unlicensed agent. Foreign Insurance-offices are to pay the same duties as English offices. By this enactment the Chancellor of the Exchequer expects to drive the foreigner from the field of competition.

It is an old saying, that what one man can invent another man can circumvent. The smuggler protests against all commercial restrictions; and, however culpable his conduct may be, he is one of the champions of Free-trade, and frequently baffles the ingenuity of lawyers and the vigilance of the Custom House. Let us assume that a French assurance-office were established at Boulogne: with the present facilities for crossing the Channel, what is to prevent an individual going to Boulogne and there paying his premium? and who is to restrain such an individual from rendering the same service to his friends? Any act of this description, not done within the realm of England, is not amenable to English jurisdiction, so that the new law is easy of evasion: it may cause some trouble, but the enormous saving effected would be ample compensation. Seven-eighths of the property in France is insured; with us not one-eighth. Surely we are as prudent a people as our neighbours; and in the Chancellor will even reduce the duty to one shilling he will get rid of a rival; and, far from losing, increase the revenue. He will also avoid the violation of that principle of Free-trade by virtue of which alone he and his party are in power.

## COMMERCE WITH RUSSIA.

*(From a Supplement to the* Gazette *of Tuesday.)*

At the Court at Buckingham Palace, the 9th day of April, 1856, present, the Queen's Most Excellent Majesty in Council. Whereas a treaty of peace and friendship has been signed between her Majesty and her allies and the Emperor of all the Russias, it is this day ordered by her Majesty, by and with the advice of her Privy Council, that the Order made by her Majesty in Council, bearing date the 29th day of March, 1854, by which it is directed "that no ships or vessels belonging to any of her Majesty's subjects be permitted to enter and clear out from any of the ports of Russia until further order; and that a general embargo or stop be made of all Russian vessels and ships whatsoever now within, or which shall hereafter come into, any of the ports, harbours, or roads within any of her Majesty's dominions, together with all persons and effects on board the said ships or vessels;" and such parts of any other Orders in Council as prohibit trade with Russia, be henceforth revoked and discharged. And the Right Honourable the Lords Commissioners of her Majesty's Treasury, the Commissioners for executing the office of Lord High Admiral of Great Britain, and the Lord Warden of the Cinque Ports, are to give the necessary directions herein as to them may respectively appertain

C. C. Greville.

At the Court at Buckingham Palace, the 9th day of April, 1856, present, the Queen's Most Excellent Majesty in Council. It is this day ordered by her Majesty in Council, that the prohibitions now subsisting under her Majesty's Royal proclamation of the 18th day of February, 1854, and under divers subsequent orders of Council, on the exportation out of the United Kingdom, or carrying coastwise, of arms, ammunition, gunpowder, saltpetre and brimstone, marine engines and boilers, and the component parts thereof, lead, nitrate of soda, sulphate and muriate of potash, certain descriptions of iron, and other articles mentioned in such proclamation and orders, be, and the said several prohibitions are hereby taken off. And the Right Honourable the Lords Commissioners of her Majesty's Treasury, the Commissioners for executing the office of Lord High Admiral of Great Britain, and the Right Honourable Lord Panmure, one of her Majesty's Principal Secretaries of State, are to give the necessary directions herein as to them may respectively appertain.

C. C. Greville.

## *THE COURT.*

The Queen has initiated the gaieties of the present season by holding her first Drawing-room almost before the note of hospitality has been sounded by any members of the aristocracy. This took place on Thursday, on which occasion the attendance was more distinguished than numerous.

The week has been a busy one in Court circles. On the 4th instant his Excellency Count Colloredo, Austrian Minister at St. James's, had an audience to deliver his letters of recall; and the Hon. George Mifflin Dallas, at an interview, presented his credentials as Minister from the United States. At the same Court Lord Leigh was appointed Lord Lieutenant of the county of Warwick, and Sir Lawrence Peel was sworn of her Majesty's Privy Council.

On Tuesday the Queen and the Prince Consort, accompanied by Prince Arthur and the Princess Helena, visited the Zoological Gardens in the Regent's-park. In the afternoon her Majesty and his Royal Highness, attended by the Equerries in Waiting, visited her Royal Highness the Duchess of Gloucester, at Gloucester-house. The Prince of Wales and Prince Alfred, attended by Colonel the Hon. C. B. Phipps and Mr. Gibbs, visited the establishment of Messrs. De La Rue, in Bunhill-row. In the evening the Queen and the Prince honoured the Princess' Theatre with their presence.

On Wednesday, at a Privy Council held by the Queen, an order was issued removing the prohibition of the export of articles to certain foreign ports. At the Court, her Majesty having been pleased to appoint the Right Hon. Francis Earl of Ellesmere to be Lord Lieutenant of the county of Lancaster, the customary oath of office was administered to his Lordship.

The Earl of Caithness has been appointed Lord in Waiting in the room of Lord Listowel, deceased.

*The weather.* Rain fell every day with a brisk wind, a thunderstorm on the 4th, with loud thunder at 11h. a.m.

*The direction of the wind* was—on 2nd, E.S.E becoming S.E. at 1h. a.m., E.S.E. at 9h. a.m., S.E. at 8h. a.m., S. at 4h. p.m. S.S.W. at 10h. p.m.; becoming S. at 8h. a.m. on 3rd; changing to W. 1 a.m. on the 4th; becoming S.W., at 4h. a.m., S. at 6h. a.m., W.S.W. at 8h. a.m., W. at 9h. a.m., S.W. at 10h. a.m.; W. at 4h. p.m., W.S.W. at 8h. p.m., S.W. at 10h. p.m.; becoming S. at 12h. a.m. on the 5th, S.S.E. at 4h. a.m., S. at 6h. a.m., S.S.E. at 8h. a.m., S. at 11h. a.m., S.S.E. at 6h. p.m., S. at 11h. p.m.; S.E. at 12h. a.m., on 6th, E. at 2h. a.m., S.E. at 7h. a.m., S.S.E. at 11h. a.m., S. at 3h. p.m., S.S.W. at 10h. a.m., S. at 2h. p.m., S.S.W. at 4h. p.m., S.W. at 9h. p.m., S.W. at 8h. p.m., S.S.E. at 11h. p.m., veering through the S. to W.S.W. at 1h. a.m. on 7th, became W. at 3h. a.m., W.N.W. at 8h. a.m., W. again at 7h. a.m., S.W. at 3h. p.m., N. at 4h. p.m. occasionally veering to S.S.W. and N.N.E., became S.E. at 12h. a.m. on the 8th, S.S.E. at 2h. p.m., moved through the S. to W. at 7h. p.m., changed to W.N.W. at 8h. p.m., W. at 9h. p.m., and W.S.W. at 10h. p.m.

E. J. Lowe.

Mr. Sadleir's Forgeries.—On Monday afternoon a London solicitor appeared in the Registry-office with a carpet-bag containing a number of deeds, in order that it should be ascertained whether they had been registered in accordance with certificates of registry which he produced. The deeds purported to be conveyances of estates sold in the Encumbered Estates Court to John Sadleir, and the certificates of registry, which were numbered, mentioned books in which the memorials of the deeds were entered. One of the certificates, dated in 1852, bore the signature of the late Mr. Walter Glascock, who died before the establishment of the Encumbered Estates Court. The other certificates purported to be in the handwriting of Mr. Chapman, First Assistant-Registrar, and to be signed by that gentleman. On examination by Mr. Morgan O'Connell, principal of the Registry-office, and his assistants, it was found that no such books were in existence, and that all the deeds but one, and the entire of the certificates, were forgeries. The deeds of conveyance, five in number (some of which contained many folio sheets), bore the signatures of two of the Commissioners, Dr. Longfield and Mr. Hargreave. The forgery of the signature of Mr. Chapman was exceedingly well executed. The deed that was not forged had been originally a conveyance of a small property purchased for £2000, but the amount was changed to £5000, the total amount of the consideration money on the five conveyances was £34,000; the sum lent upon those securities was £16,000; the lenders, of course, have been defrauded, like so many others in the gigantic and unprecedented swindles perpetrated by John Sadleir.—*Dublin Evening Post.*

Another Suspected Case of Poisoning in Staffordshire.—Great excitement has prevailed in Lichfield and neighbourhood for some days past in consequence of a rumour that the death of Mrs. Ashmall, the wife of an opulent farmer, living at Edial, Burntwood, in March last year, was occasioned by poison. She had been married upwards of twelve years, and at her death left three children: the eldest of whom, a daughter, is now about thirteen years of age. Mrs. Ashmall had been in ill health for some time, but notwithstanding there was no natural cause to account for the suddenness with which her death took place. She had not, it is said, been attended by any medical gentleman for some months prior to her death, and consequently no certificate was given as to the cause of death. A few months after her decease Mr. Ashmall married his servant-girl. Last week representations were made to Sir George Grey, Bart., by W. W. Ward, Esq., the coroner, and J. H. Hutton, Esq., chief constable of the county, the result of which was that the body, which had been interred in a brick grave in Burntwood churchyard, was exhumed on the 9th inst. The coffin was removed to one of Mr. Ashmall's barns, some distance from the churchyard (Mr. Ashmall affording every assistance to the authorities in the discharge of their duties). A *post-mortem* examination of the body has been made, but the report has not been published.

The Sunderland Bottlemakers' Strike.—This strike still continues, and the masters show no signs of yielding, as the following resolution, passed at a recent meeting, will show:—"The men have offered to work for the wages offered,—viz., 24s., 20s., and 17s.—the employers will not allow them to resume work, except at 20s., 18s., and 13s. per week, for the several departments." The men, in reply, have sent a series of resolutions, adopted at a trade meeting, to their employers; the most important of which is the second:—"That the bottlemakers of the Wear shall now offer their services to the Belgian manufacturers, and henceforth apply to them for employment.

The Bleachers' Short-time Bill.—The Manchester Commercial Association has sent a petition to Parliament against the Short-time Bill for compelling persons engaged in bleaching, dyeing, finishing works, which urges the objection to the measure, that its provisions would extend to prevent the employment of junior clerks in all such establishments after six o'clock in the evening, besides exposing the counting-houses in connection with such warehouses to the intrusion of Government inspectors.

Boiler Explosion in Portsmouth Dockyard and Loss of Life.—An explosion of a steam-engine boiler in Portsmouth Dockyard occurred on Saturday afternoon, by which four lives were sacrificed and about a dozen persons seriously wounded. The explosion was instantaneous, and carried the roof of the building for some fifty feet into the air. Admiral Martin having set a number of men to work to extricate the injured from the *débris* of the building, three men were taken out quite dead, and six others dreadfully wounded, one of whom has since died, while five or six others are more or less seriously injured. As to the cause of the calamity, from the appearance of the boiler it would seem that it had, before bursting, become very weak.

Murder in the County of Roscommon.—Last Tuesday evening Mrs. Sarah Kelly, hitherto distinguished in the Irish Law Courts as the successful suitor in the case of Kelly *v.* Thewles, was murdered whilst walking in her grounds with her nephew. Two men, with blackened faces, approached, and, desiring the nephew to stand aside, they shot the unfortunate lady through the head. Her death was instantaneous.

People's Park at Halifax.—A piece of land at Halifax has recently been purchased for a people's park by Frank Crossley, Esq., M.P. for the borough. The land is in a very pleasant situation, near the mansion of Mr. Crossley, and not very far from a number of almshouses now being erected by the hon. gentleman. The park is to be laid out from designs to be furnished by Sir J. Paxton.

People's Park for Wolverhampton.—A movement has been originated by working men at Wolverhampton for the establishment of a people's park. At a meeting held last week it was determined to establish such a park, and a committee was appointed to carry the scheme into execution.

## THE QUEEN'S DRAWINGROOM.

The Queen held her first Drawingroom this season on Thursday afternoon in St. James's Palace.

The Queen and the Prince Consort, accompanied by the Princess Royal, arrived from Buckingham Palace at two o'clock, escorted by a detachment of the Royal Horse Guards, and were received by the great officers of State.

Before the Drawingroom, her Majesty, according to annual custom, received a deputation from Christ's Hospital in the Throne room. The Duke of Cambridge, K.G., President of the Institution, was present in the Throne room with her Majesty and the Prince. The Queen condescended to inspect the charts and drawings of the boys, and to express her approbation of their performances.

After the reception of the deputation her Majesty and Prince Albert, accompanied by the Princess Royal and the Duke of Cambridge, received the diplomatic corps, and afterwards the general circle.

The Queen wore a red poplin train, with a running pattern of gold, trimmed with gold blonde. The petticoat was white satin, trimmed with gold blonde to correspond. Her Majesty wore a head-dress of opals and diamonds.

The Princess Royal wore a dress of rich white glacé silk, with three skirts of white tulle, looped up with bunches of corn-flowers, and rich white satin ribbon. The body was trimmed with a wreath of corn flowers, ribbon, and blonde. The train was of rich white moiré antique, trimmed with bouillonnées of tulle and corn flowers. Her Royal Highness's head-dress was formed of a wreath of corn-flowers, feathers, and lappets.

## HER MAJESTY'S DRAWINGROOM.—COURT DRESSES.

Since a certain richness of apparel and profusion of trimming are now the rule, even in ordinary toilets, her Majesty's Drawingroom on the 10th inst. afforded, as may be supposed, ample scope for a display of gorgeous costumes. Yet even at the present day a certain refined elegance often contrasts favourably with the more showy style, as our readers may judge in comparing some of the Court dresses we are about to describe.

A very attractive dress was composed of white tulle, ornamented with several rows of narrow scarlet velvet, edged with white blonde, the skirt being nearly covered by two flounces of rich black lace. The train was of white moiré antique, trimmed with white blonde, black lace, and bouquets of scarlet geranium; the body of course being ornamented to correspond.

Another Court dress has a skirt of pink tulle with not less than eighteen or twenty flounces, composed of pink satin ribbon, tulle, and narrow black velvet; the train of pink taffeta profusely trimmed with tulle and bouquets of pink roses and blackberries. The corsage low, with a point, and full short sleeves.

A lady whose acknowledged taste and elegance permits her to lead, instead of to follow, the fashion, even if she verges on an extreme style, adopted a dress of peculiar magnificence. The train was composed of a white and green brocaded silk, with stripes of variegated flowers, and was trimmed with point lace and pearls. The skirt of this dress was of white tulle, covered with white blonde, and the corsage was covered with lace and bouquets of variegated flowers and pearl wheat.

Another distinguished dress had a train of blue moiré antique, ornamented with blue cornflowers and silver wheat; a magnificent skirt of rich white and blue silk, embroidered with bouquets of blue cornflowers and silver wheat. The head-dress was of blue flowers and stars of diamonds.

Small feathers are worn at the sides of the head, with rich lappets of lace.

We must also notice a very rich dress composed of a green silk skirt, trimmed with blonde and tulle, and bunches of lilac and Brussels lace; having a train of green brocade, similarly ornamented. Head-dress of feathers and lace.

For more matronly ladies trains of velvet are sometimes adopted—green, purple, or some other rich colour being selected to contrast favourably with a white skirt. The head-dress on these occasions is generally of gold and silver, with feathers and blonde.

For young married ladies, however, or for young ladies who have already made their debut, it is considered in the best taste to have the train and the skirt of the same colour, and the head-dress to correspond with as much as possible. In most instances the train, after it has performed its Court service, is capable of being made into a dinner dress, while the remainder of the Court costume serves for an evening dress.

As our readers are probably aware, the Presentation Dresses are entirely of white; nevertheless, they present a considerable variety of style.

There is one of these dresses having a skirt of white tulle and a train of white silk, both being ornamented with white pinks and lilies of the valley. Another dress of the same materials is so profusely trimmed as to seem almost covered with acacia blossoms. A third has for the prevailing ornament a mixture of camellias and heath. Another of these presentation dresses, and one of the most elegant, is trimmed with blush roses; and all have more or less of puffings and flounces.

The head-dresses are invariably made to correspond with the prevailing ornament of the dress; and for these youthful belles it consists of a wreath in quite a new style, which forms a double circlet, and admits the full puffings of hair at the sides. These wreaths are peculiarly becoming, and are made in the greatest variety. Perhaps it is the comparative simplicity—for it is but comparative after all—of the presentation dresses which renders them so peculiarly attractive this season.

(We are indebted for the above information to the courtesy of Madame Einstein Devy, 73, Grosvenor-street, Grosvenor-square.)

## THE DRAWINGROOM.

### The Day Before.

The Lady May has eyes as bright!
(The simile is old)
As stars upon a frosty night,
But warm as they are cold.

Her cheek is fair, with just as much
Of colour as would be,
Suppose a moist rose-rose should touch
A lily, lovingly.

Her hair like wavy silk seems spun
By fairy worms, which fed
Upon the gold rays of the sun,
And gilded thus the thread.

Her form is Woman! O what more
Can Fancy's happiest thought express?
Creation's wondrous work was o'er
When she was made to love and bless.

(So ho! my Pegasus, awhile
Pull up, I beg, and mind your paces,
You'll not last at another mile,
If thus you will kick o'er the traces.)

Tybumia up! Belgravia wake!
Arise each West-end square!
To-morrow is a Drawingroom,
And May is to be there.

I've seen the costly, courtly robes
She purposes to wear.
Take heed, stout hearts, of that fair form—
When so attired, beware!

Her skirt is *lama*, fragile web
To brave the coming crush!
Her robe is formed of *moiré antique*,
Pink as her own sweet blush.

And as beside his suit of war
The Knight did vigil keep,
So Lady May her *toilette* guards,
She does not care to sleep;

But thinks upon the coming day,
When in her beauty's might
She shall go forth with right to slay,—
—Dreamer of dreams, Good night!

### The Drawingroom.

The day has come, and Lady May
Fulfils her destined fate.
She goeth to St James's Court
In beauty and in state.

Whose robes more graceful, rich, or rare?
None! Echo answers, None!
*Modiste, coiffeur, et bijoutier*
Have done all could be done.

See! Every eye is turned to her,
Hear all around her say—
(Of course we mean the gentlemen)
"Make place for Lady May."

Alas! slack! and well-a-day!
Such courtesy is scant
Where ladies strive for precedence,
And say "I'm sure we shan't."

On comes the crowd! O! can it be
This is no mob-led rout
That scoffs at the Lord Chamberlain
And pushes one about?

And can these modern courtiers be
That will not hear a nay?
But tread upon the *moiré antique*
Of our dear Lady May?

Her skirt of *lama*—fragile web—
Yields to the fatal crush;
Her starry eyes are fiery balls!
Her cheeks with anger flush!

Rent robes! Lost plumes!—We draw a veil
O'er all we would not see;
Go to our homelier drawing-room,
The ladies, and the tea.

M. L.

THE LONDON SEASON.—GOING TO THE DRAWINGROOM.—(SEE PRECEDING PAGE.)

## THE NEW CAVALRY UNIFORM.

DURING the last few years we have witnessed several changes in the habiliments of our gallant soldiers—changes which have not always secured public admiration on the score of taste, however desirable they may have been in other respects. Next month that most brilliant arm of the service, the Cavalry, is to appear in new regimentals, the general effect of which may be seen from the Illustration upon the preceding page. The principal alteration is in the substitution of the German frock for the coatee. Henceforth our stalwart Dragoons will wear a dress more in harmony with that of civilians; while in the disuse of epaulets, which is another distinctive feature, the officers, if they lose one of the symbols of their rank, will also be saved the cost of an expensive and not very handsome distinction. Gold lace, however, will not be dispensed with, as the Light Cavalry, with some exceptions, will wear five stripes of lace across the breast, as shown in the dress of the 3rd Light Dragoons. In the Royal Horse Artillery, the jacket is retained, but is longer and looser than hitherto.

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS.—MONDAY.

POSTAL COMMUNICATION WITH AUSTRALIA.—The Earl of HARDWICKE called attention to the state of postal communicaton between England and the Australian Colonies, and asked if there was any objection to lay on the table the correspondence from the Colonies on the subject?—The Duke of ARGYLL admitted the necessity of re-establishing the communication between this country and Australia; tenders for that purpose were now under the consideration of the Government; but before any route was adopted there must be a general assent of the Colonies to the plan, as they were to bear a large share of the expense.

THE CURRENCY.

The Earl of EGLINTON, in directing the notice of the Government to the expediency of issuing a Royal Commission to inquire into the laws regulating the currency of the United Kingdom, described the regulations and working of the present Bank Act, and stated that he objected to the shortness of the term for which the directors held office, and to the decisions of the body which affected the affairs of the whole country being made by a mere majority of them; he thought there ought to be a Government control. He worked well in the Bank of France. He approved the principle of the Act of 1844, particularly the separation of the two departments of the Bank; he approved also an issue of notes besides the portion issued on bullion; but objected to fixing a limit beyond which nothing could be done; he advocated an issue of £1 notes.

The Earl of BARROWBY repeated the statement made by the Chancellor of the Exchequer in the House of Commons, that the Government did not contemplate any change in the Bank Act; but that if any noble Lord pressed for an inquiry into it the Government would not throw any obstacle in the way.

The Earl of EGLINTON had hoped for a more satisfactory answer.

The Earl of DERBY wished to know what was the intention of the Government with regard to any inquiry at all. When was the proper time, and what was to be the mode?

The Duke of ARGYLL said if a Royal Commission were issued it would imply that the Government was dissatisfied with the present state of things. The Government had arrived at no such conclusion.

Earl GREY thought this was the proper time if there was to be any inquiry.

### HOUSE OF COMMONS.—MONDAY.

BILLETING OF SOLDIERS.

On the order for going into Committee of Supply, Mr. COWAN moved a resolution that the practice of billeting soldiers in Scotland upon private families is injurious to the comfort and discipline of the men, as well as oppressive to the people, and that it is the duty of the Government to take means to abolish the grievance.

The motion was seconded by Sir A. AGNEW.

After a few words from Mr. BAXTER in support of the motion,

Mr. E. PEEL observed that the termination of the war would put an end to the grievance complained of. The pressure, which had been undoubted, arose, he said, in consequence of the Militia having been embodied. The Government being under the necessity of placing the embodied Militia for the time of their respective counties during the new arrangements were making for removing them out of billet. He opposed the motion.

After some discussion the House divided, when the resolution was carried (against the Government) by 139 to 116.

Lord PALMERSTON said that the House had immediately resolved itself into a Committee of Supply, and he was agreed to after a few sarcastic remarks by Mr DISRAELI upon the lesson which the Government had just received.—The House accordingly, in Committee, resumed the consideration of the Civil Service Estimates, various votes were severally agreed to, after discussion.

The report of the Committee of Supply was brought up and agreed to.

The Draughts on Bankers Bill and the Factories Bill were committed *pro formâ*.

The Public Works Bill and the Public Works (Ireland) Bill passed through Committee.

Lord ELCHO moved for leave to bring in a bill to amend the laws relating to the medical profession, describing its principal features. Leave was given, after some remarks by Dr. CHANCE and Mr. COWPER.

Mr. LOWE obtained leave to bring in a bill to amend the LAW of Partnership.

### HOUSE OF LORDS.—TUESDAY.

The Agricultural Statistics Bill was read a third time and passed, after some miscellaneous conversation.

INDIAN ENLISTS.—The Marquis of CLANRICARDE moved for some returns relating to the expense of the Indian army, and entered into an analysis of the financial position of our Oriental empire.

### HOUSE OF COMMONS.—TUESDAY.

Sir W. CLAY intimated his intention to introduce the amendments suggested by the Government in his bill for the abolition of Church rates.

Mr. WHITESIDE deferred the discussion of his motion respecting the siege and surrender of Kars to Thursday, the 24th inst.

INCOME AND PROPERTY TAX.

Mr. HUNTE, pursuant to notice, moved a resolution setting forth that "an equitable adjustment of the income and property tax is essential to the interests of the country, particularly as regards the rates of payment upon industrial and professional incomes, compared with those derived from fixed property." In supporting his motion the hon. member briefly commented upon the unfairness of the existing system, which levied the same rate of impost upon incomes of every description. The injustice now perpetrated was, he contended, so gross and glaring that it demanded the most strenuous efforts to provide a remedy.

The motion was seconded by Mr. POLLARD URQUHART.

The CHANCELLOR OF THE EXCHEQUER, while recognising the importance of the subject, enlarged upon the difficulties and intricacies which, in his opinion, rendered every attempt to adjust the impost in question either abortive or dangerous. The alternative lay between the present system and a mere property-tax. According to the principle now followed, and of which he expressed his preference, the ability of every individual to pay a tax for the year was estimated by his income for the year. The State afforded protection for the twelvemonth, and was justified in exacting a corresponding revenue. It was impossible, moreover, to make taxation prospective, and levy on future instead of present incomings. Any advantage enjoyed by the owners of realised property through the incidence of the income had, he observed, been sufficiently compensated by the recent imposition of the succession-duty. He concluded by moving the previous question.

Mr. LAING felt obliged to vote against the resolution, considering that no abstract proposition should be affirmed by the House calculated to diminish the public revenue, unless accompanied by some suggestion for replacing the deficiency.

Mr. WILLIAMS [illegible] a few words upon the same topic.

Mr. SCHOLEFIELD [illegible] remarking that if the manner of levying the property tax were unjust, the remedy was to [illegible] to [illegible] bodies.

After a few words from Mr. Mackie, Mr. J. M'Gregor, and Sir H. Willoughby, Mr. HUNTE replied, and the House divided—For the resolution, 64; against it, 197; [illegible].

DIVISIONS IN SCOTLAND.—Mr. LORD ADVOCATE moved for leave to bring in a bill to [illegible] and take further provision for parochial relief in Scotland [illegible] and [illegible] purposes.

Mr. SMOLLETT [illegible] the appointment of the School Commission in Scotland, and offered by Mr Baxter, Mr A Black, Mr Mackie, Sir A Agnew Mr Blackburn, and Mr Stirling

LOCAL CHARGES UPON SHIPPING.

On the motion for nominating the Select Committee on the Local Charges upon Shipping,

Mr. J. SCHOLEFIELD demanded, with much warmth, the habitual, not to say systematic, exclusion of Irish members from committees and other public positions calculated to give them their due weight in the House, and cited them to prove the local inexpertness of Irishmen.

The CHANCELLOR of the EXCHEQUER denied all intention on the part of the Government to disparage the Irish representatives, and on the present question proposed to enlarge the Select Committee by the addition of two members from the sister island.

The discussion was pushed at much length, and with considerable warmth, by various hon. members. Mr. F. SCULLY reopened the Irish point of the controversy; and Mr. LABOUCHERE defended the present selection of the Committee. The House at last divided upon the motion for adjourning the debate, which was negatived by a majority of 103 to 67 —51. The Committee was then nominated.

### HOUSE OF COMMONS.—WEDNESDAY.

THE OATH OF ABJURATION BILL.

Mr. M. GIBSON moved the second reading of the bill for abolishing the oath of abjuration and the assurance which accompanied it. The measure, he said, was practically the same as that introduced in a previous Session by Lord Lyndhurst in the House of Peers, and was simply designed to efface from the statute-book a formula whose purpose had become obsolete, whose history was far from creditable, and which had, in point of fact, to a great extent fallen into desuetude.

Sir F. THESIGER moved as an amendment that the bill should be read a second time this day six months.

The LORD ADVOCATE contended that the abolition of the oath of abjuration was merely a logical corollary from the Catholic Emancipation Act.

Mr. NAPIER, in supporting the amendment, urged that the unavoidable result of the present bill would be to leave both the Protestant succession and the Christian religion open questions. So long as England remained a Christian State it was essential to maintain Christianity as the distinctive characteristic of the Legislature who ruled the State.

Lord J. RUSSELL said the real controversy turned upon the admissibility of a Jew to Parliament, and on this point he contended the decision should be guided by the maxim that political functions ought not to depend upon religious faith. This principle had been fully carried out in the case, first of Protestant Dissenters, and afterwards of the Roman Catholics, and could not now be repudiated with regard to the Jews.

Mr. WALPOLE reiterated and enforced the arguments, defending, on religious grounds, the maintenance of the oath of abjuration.

Lord PALMERSTON briefly intimated his hearty concurrence with the measure before the House. It was, he thought, most desirable finally to obliterate a restriction which was wholly discordant with the spirit of the times.

Mr. DISRAELI declared his intention to vote for the second reading of the bill, but should propose in Committee to substitute another formula, adapted to the present position of the country and the reigning family. In this oath, Mr. Disraeli added, he designed to retain the words, "on the true faith of a Christian;" but, at the same time, to provide a clause relieving members of the Jewish faith from the necessity of taking it.

Mr NEWDEGATE, after many expressions of impatience from hon. members, supported the amendment.

The House then divided:—For the second reading, 230; for the amendment, 105: majority in favour of the bill, 35.

The bill was then read a second time.

The Dissenters' Marriages Bill was committed *pro formâ*.

The Trial of Offences Bill was read a third time and passed.

### HOUSE OF LORDS.—THURSDAY.

ST. JAMES'S-PARK.—The Marquis of CLANRICARDE called attention to the report of a Committee of the House of Commons upon the subject of St. James's-park, and took occasion to condemn many of the proposed alterations, particularly the removal of the Duke of York's Column, which would be disrespectful to the memory of that illustrious individual, and would materially affect the value of the houses in Carlton House-terrace and other places in the neighbourhood. If any public advantage were to be gained by these alterations, which he doubted, they would be infinitesimal, while the expense of carrying them out would be enormous.—The Marquis of LANSDOWNE said the proposed alterations were of so grave a character as to demand the most serious attention of the Government before they were adopted. He could assure their Lordships that the Government had not as yet come to any determination upon the subject.—The Earl of ABERDEEN expressed his gratification at hearing that the Government had not come to any determination upon this subject.—The Earl of MALMESBURY deprecated any such alterations in St. James's-park.—The Duke of BUCCLEUCH approved of the recommendation to remove the buildings in the neighbourhood of King-street, but was opposed to almost all the recommendations in the report.

THE ANNEXATION OF OUDH.—The Marquis of CLANRICARDE asked what course was pursued by the Court of Directors of the East India Company with reference to the treaty concluded by the Governor-General of India with the King of Oude in 1837. He wished particularly to know whether the Government admitted the authenticity of that treaty?—The Duke of ARGYLL said though that treaty was ratified abroad it was never ratified at home. He disapproved any illusion upon this subject until the late Governor-General of India, Lord Dalhousie, was in his place in that House, which he expected would very soon be the case.—The Earl of ELLENBOROUGH and Lord BEAUFORT severally expressed an opinion that there was a ratification of the treaty.—After some further conversation the subject dropped.

### HOUSE OF COMMONS.—THURSDAY.

Mr. NISBETT took the oaths and his seat for Chippenham. The hon. gentleman was introduced by Mr. Sotheron and Colonel Boldero.

Mr. L. HALLY TS moved for a return of [illegible] and move an address to her Majesty, praying that henceforth public executions may be abolished, and that executions may take place within the walls of prisons

Lord PALMERSTON, in reply to Mr. Ewart, said he was quite aware that the internal regulations of Russia restricting commerce were extremely unfavourable to commercial transactions, and to give encouragement to foreigners, but Her Majesty's Government would naturally like to take any opportunity that might present itself of impressing upon the Russian Government the expediency, for their own and others, of establishing a more liberal system of commerce within the Russian dominions. He was sure that the House would feel that the present was not a convenient time to raise this question, when the Government would identify with the terms of peace. The matter should not escape the attention of her Majesty's Government.

EDUCATION.

Lord J. RUSSELL moved that the House do go into Committee for the purpose of considering the following resolutions.

1. That, in the opinion of the House, it is expedient to extend, regulate, and consolidate the grants of Parliament for the encouragement of Public Education. 2. That it is expedient to add to the present inspectors of Church schools, sub-inspectors, and to divide England and Wales into eight districts for the purposes of education. 3. That it is expedient to appoint four sub-inspectors of British, Wesleyan, and other Protestant schools not connected with the Church and also of Roman Catholic schools, according to the proportion of the number of each district. 4. That it is expedient to appoint a Committee of Council on Education, consisting of the Lord President of the Privy Council and such other persons as Her Majesty shall think fit, to report to Her Majesty in Council the number and qualifications of the inspectors and sub-inspectors, the Committee of the Privy Council should have power to form in each division school districts, consisting of single or united parishes, or parts of parishes. 5. That the sub-inspectors of schools of each division should be instructed to visit periodically all schools in receipt of any grant of public money within their district. 6. That, for the purpose of extending such schools, it is expedient to give the powers at present possessed by the Commissioners of Charitable Trusts be enlarged, and that funds now useless or injurious to the community be applied to the education of the people, for the benefit of the present time. 7. That it is expedient that, in any school district where the means of education arising from endowment, subscription, grants, and school-pence, shall be found deficient, and shall be declared to be so by certificate of the Committee of Council on Education, the ratepayers should have the power of taxing themselves for the erection and maintenance of a school or schools. 8. That, after the 1st day of January, 1858, no child under twelve years of age be employed in any factory in adequate means for the education or the poor, the quarterly sessions of the peace for the county, city, or borough, should have power to impose a school-rate. 9. That, where a school-rate has been established between the ratepayers, they should appoint the schoolmasters and mistresses, and make regulations for the management of the schools. 10. That, in every school supported in whole or in part by rates, the Bible, or such portion of Scripture as should be read daily in the school, and such other provision should be made for religious instruction as the school committee may think fit, but that no child should be compelled to receive religious instruction, or to read any book or writing, to which his or her parents or guardians shall on conscientious grounds object. 11. That employers of children and young persons between nine and fifteen years of age should be required, by regulation, to enforce the regular attendance of such children and young persons at school, and to pay for such instruction. 12. That it is expedient that every encouragement should be given, by prizes, by the institution of school fêtes, by libraries, by evening schools, and other methods, to the instruction of young persons between twelve and fifteen years of age

The noble Lord remarked that the hon. gentleman (the member for the West Riding) had given notice of an amendment to the following effect:—"That, in the opinion of this House, the erection and maintenance of schools for teaching the various forms of doctrinal religion to be supported wholly or in part by the local rates, will not be conducive to a just or satisfactory system of education by the people of this country. Since he had entered the House he had ascertained that the hon. gentleman was unable to attend, in consequence of a domestic affliction.

Lord J. RUSSELL having moved the first of those resolutions,

Mr HENLEY had come to the conclusion that it was impossible to look upon this scheme in any other light than as a proposal to take a step in this stage of the proceedings was equivalent to moving the previous question rather than proposing a direct negative upon either of the resolutions. A very dangerous principle had been laid down in the very second of the resolutions, that of enabling Parliament to inspect any private scholastic property without the consent of the owners, a course which would create a strong feeling against the educational measure, and would in the long run react against education itself. The promotion of districts, as suggested by the noble Lord, would break up the parochial system, which never had and never could do duty. The noble Lord by his present scheme would take away from Coventry, for instance, £3000 or £4000 a year amongst the poor there, and would throw those who were in the habit of receiving it upon the parish rates, and thus deprive them of the franchise, for the extension of which the noble Lord had always professed to be an earnest advocate. The next question to which he would advert was that of religious teaching. He thought the House would act very unwisely if it adopted the resolution which the noble Lord had proposed. The resolution provided that the Scriptures were to be read, and to form part of the religious instruction of the school. But how would this act upon the joint system in schools? The Church of England man would say that holy men of old had laid down certain rules as to the interpretation of the Scriptures, and to these they were determined to adhere, while the Roman Catholic and Dissenter would dispute this ground; so that at last hundreds of children must be shut out of the schools, and a secular system of education must be avoided. At present education very generally in the country parishes was in the hands of active and intelligent ladies, and these in many cases would withdraw from the work if they found themselves constantly exposed to religious squabbles. The right hon. gentleman moved as an amendment that the Chairman do leave the chair.

Mr. ADDERLEY was in favour of the first of the noble Lord's resolutions, but thought that this was not the time for introducing a compulsory system of rating for the purposes of education.

Mr. ELLICE said he would not vote against the resolutions, although he confessed he did not like a compulsory system of education.

Mr. LIDDELL thought the present system of education was as much as could be expected under the circumstances of the country in respect to religious opinions.

Mr. WARREN gave a general support to the views of the noble Lord. He declined to go into the details of the measure, which he thought it needless to discuss before they had agreed to the principle.

Mr. EWART gave a general support to the resolutions

After a few words from Lord R. CECIL and Mr. MILNES,

Mr J. GRAHAM spoke strongly against the resolutions, which he said commenced with details instead of with the principle which should govern them, and which were destitute of those safeguards which an effective legislative measure would have afforded.

Sir J. PAKINGTON gave his full assent to the general principle of the resolutions, but recommended the withdrawal of that one which would appropriate the charity funds for educational purposes.

The debate was then, on the motion of Mr. BROTHERTON, adjourned until the next day.

### HOUSE OF LORDS.—FRIDAY.

ROYAL COMMISSION.—The Royal Assent was given by Commission to the following bills, viz., Commons Inclosure, Turnpike Trusts Arrangement, Delamere Forest, Secretary to the Poor-law Commissioners (Ireland), Trial of Offences, and Out-Pensioners (Greenwich and Chelsea). The Commissioners were the Lord Chancellor, the Marquis of Breadalbane, and Lord Stanley of Alderley.

The Bishop of EXETER laid upon the table a bill upon a similar subject as that of the Church Discipline Bill relating to the punishment of clerks in holy orders who had offended against morality. The bill was read a first time

The Bishop of BANGOR took occasion to condemn the Church Discipline Bill of the Government.

The LORD CHANCELLOR laid upon the table his Divorce Bill, which was read a first time.

### HOUSE OF COMMONS.—FRIDAY.

ROCHESTER ELECTION PETITION.—Mr. INGHAM brought up the report of the Rochester Election Committee, declaring Mr. Wickham Martin to be duly elected, and that the petition against his return was frivolous and vexatious.

BRIBERY AT ELECTIONS.—Sir G. GREY (in answer to Mr. Oliveira) said that it was the intention of the Government to renew the Act 17 and 18 Vict. c. 102, relating to bribery, which Act would expire at the end of the present Session.

ROMAN CATHOLIC PRISONERS.—Mr BOWYER complained of unnecessary restrictions imposed upon ministers, and especially upon those of the Roman Catholic religion, who attend public prisons, and particularly PENTONVILLE PRISON, to give religious consolation to persons not belonging to the Established Church, and expressed a hope that more liberal arrangements might be made for the future.—Sir G. GREY said it was his desire that every facility should be afforded to Roman Catholic priests under such circumstances, and observed that he had already done as much as he could to meet the requirements of the case where just complaints had come before him.

CHAPLAINS TO THE ARMY.—Sir DE LACY EVANS called attention to the services of the chaplains of the army during the war, and asked what recognition, if any, might be hoped for in respect to those services.—Lord PALMERSTON said he could not say that chaplains of the army in the East—both of the Establishment and Roman Catholic Church. They had shrunk from no dangers either in the field or the hospital, and had performed most useful and important duties. He could assure the House that neither her Majesty's Government at large, nor Lord Panmure, was unaware of the deserts of those brave and excellent men. Some had already received appointments, and others would be employed as soon as opportunity offered.—Mr. S. HERBERT bore testimony to the valuable services rendered to the army by the chaplains. They were not with no higher expectation than £200 a year, and upon their return home many of them would find themselves altogether unprovided for. He therefore suggested to the Government the propriety of giving to them some portion of the vast Church patronage at the disposal of the Lord Chancellor. He [illegible] enforced upon the Government the expediency of [illegible] suggestion. The present pay and allowances of chaplains [illegible] were [illegible] the duties [illegible] of Portsmouth.

MORTALITY IN THE CRIMEAN ARMY.—Mr. PALK asked the Under Secretary for War whether the Military Board now sitting at Chelsea Hospital would be instructed to inquire into the excessive mortality which had taken place on the Crimea from overwork, exposure to wet and cold, improper food, and insufficient shelter?—Mr. S. PEEL said it was not the business of the Board to initiate such an inquiry, except in so far as it might arise out of the case of any officer who might go before the Board.

SUNDAY LABOUR AT GOVERNMENT DOCKYARDS.—Mr. NAPIER called attention to the compulsory employment of the workmen at the Portsmouth Dockyard given by order given by those in authority over them, the object being the completion of some gun-boats for the approaching review. Many of the men were compelled to work during their conviction, and he denounced the act of compulsion as being alike contrary to the laws of God and the expressed opinion of that House. No reply was given to those observations.

NATIONAL EDUCATION.

THE House then went into Committee upon Lord J. Russell's resolutions upon education.

Lord J. RUSSELL commenced the adjourned debate, and expressed his surprise at the character of the speech delivered on the previous evening by Sir J. Graham. The right hon. Baronet, who now advocated the voluntary system, had for years adhered to and taken part with the Committee of Privy Council. The right hon. Baronet had adverted to the great progress made by voluntary education since 1818; but he must remember that during that period Parliament had contributed £1,000,000 for educational purposes [illegible] Noble Lord then proceeded at some length to defend his resolutions, and he reiterated many of the arguments he had used when introducing the subject to that House.

---

UNOPPOSED ELECTIONS.—The election for Chippenham took place on Wednesday, and [illegible] Harry Chaloner, of Southbrome House, Devizes, was returned in the room of the late Mr. Joseph Neeld. The Attorney-General for Ireland, Mr. J. D. Fitzgerald, was elected for Ennis, on Tuesday, without opposition.

HOUSE OF LORDS, April 3.—A Committee for Privileges was held this day to consider the claim of Lord Fermoy. Lord Redesdale presided. The Lord Chancellor, the Duke of Argyll, the Earl of Derby, and a number of Lords were present. The Judges were also summoned. Serjeant Bompas, Sir Fitzroy Kelly, Mr. Peter Barke, and other learned counsel appeared for Lord Fermoy. The Right Hon. J. Napier, Q.C., was heard at the bar of the House, against the claim. The proceedings concluded by the matter resolving itself into a question of law, which was referred to the Judges, who have taken time to consider their decision.

THE naval review to be held by her Majesty at Spithead is postponed. According to present arrangements it will be held on Wednesday, April 23.

THE Lords Commissioners of the Admiralty have directed that all her Majesty's ships of war and gun-boats composing the fleet to be reviewed at Spithead on the 23rd inst. by her Majesty the Queen should be supplied with Welsh coal, not only to prevent her Majesty and the company assembled being obstructed in their view of the evolutions of the fleet by smoke, but to obviate the chances of collision.

ORDERS have been issued to Dr. Smith to take measures for the immediate reduction of the medical staff of the army. Orders have also been issued for the reduction of four companies from each regiment of the line that is being placed on a war footing

THE MISSING STEAMER "PACIFIC."—The *Tartar* and the *Desperate*, Government screw steamers, which were dispatched by the Lords of the Admiralty in search of the missing *Pacific*, put into Galway Bay on Monday evening, at six o'clock, having spent nine days in the search. They have not been able to discover any trace of the ill fated steamer.

FOUR mortar-floats, Nos. 101, 102, 104, and 105, were on Saturday last, towed down to Woolwich Arsenal-wharf to receive their ammunition, having been moored with three months' service stock.

COURT OF COMMON COUNCIL.—On Monday last a committee of the whole Court met for the purpose of considering the provisions of the bill introduced by Government for the reform of the Corporation. The discussion, which lasted several hours, was conducted with closed doors.

CORPORATION REFORM. A Committee of the whole Court of Common Council met on Monday last for the purpose of considering the provisions of the bill introduced by Government for the reform of the Corporation. The discussion, which lasted several hours, was conducted with closed doors.

## *MUSIC.*

HER MAJESTY'S THEATRE is nearly restored to its pristine splendour and beauty. The box office is open; Mr. Nugent and his staff are busy at their posts; and everything "gives note of preparation" for the approaching campaign. Respecting the engagements of performers, &c., nothing trustworthy has yet transpired—some gossiping paragraphs in the daily papers being unworthy of credit; but Mr. Lumley's announcement of the season is, we understand, on the eve of being issued.

It is now announced that the Lyceum will open, as the theatre of the ROYAL ITALIAN OPERA this season, on Tuesday next, the 15th of this month, with "Il Trovatore," cast in the same strong manner as last year. As it is necessary, of course, that the number of the orchestra be reduced so as to suit the small size of the theatre, Mr. Gye intends, besides employing all its members in alternate relays, to enable them to earn their full salaries by performing at twelve Concerts to be given during the season at the Crystal Palace, supported by all the vocal strength of the establishment. To this arrangement, it is said, some of the band demurred at first, but it has now been assented to by all the parties concerned.

Mr. Gye and Mr. Anderson have been publishing controversial letters arising out of the destruction of Covent-garden Theatre. With their personal squabbles the public have little or nothing to do; but they *have* something to do with a long address placarded by Mr. Anderson, on the walls of the Lyceum and other buildings, purporting to be a defence against the charge that he had caused the destruction of Covent-garden Theatre. In this production there is a passage which demands both notice and censure:—"With the morality of a masked ball," says Mr. Anderson, "I had nothing to do. I did that which M. Jullien, for Mr. Gye, had done before me—that which they do in Italy—that which they do in Paris." Against this doctrine we would most strongly protest. What! a manager of a theatre has nothing to do with the morality of the entertainments given by him within its walls? Nothing to do with the contaminating influence spread by the moral poison—a thing at all times worse than arsenic or prussic acid—which he vends for his own sordid profit? Theatrical managers certainly have often acted according to this unprincipled maxim, but we do not remember ever to have heard it so barefacedly propounded before. The appeal to the example of M. Jullien or Mr. Gye would be no justification, even were it founded in fact; but it is not. We do not approve of masked balls; however guardedly conducted they are liable to grave objections. But no comparison is to be made between any of Jullien's masked balls and the profligate and disgusting orgie that was polluting Covent garden Theatre while the destroying flames were about to burst forth above the heads of the revellers. Every account concurred in describing it as a scene which has been hitherto unprecedented, and which, we trust, will never be repeated in England. It really sounds something like a joke to appeal for justification to "that which they do in Italy, and which they do in Paris"!

The CONCERT OF THE AMATEUR MUSICAL SOCIETY on Monday evening was the most brilliant and successful performance they have ever given. The Hanover-square Rooms were full to overflowing, many persons being obliged to content themselves with seats in the ante room, and the crowded assemblage consisted of the most fashionable company in London. The orchestra, under the able discipline of their present conductor, Mr. Berry Lacey, are making wonderful progress. Their performance of Beethoven's first Symphony in C major would have done no discredit to our best professional bands. The selection of the music was exceedingly judicious, and executed by a per-ect band, entitled "Jephtha's Daughter," composed by Mr. Leslie, and sung for the first time, by Miss Dolby. Though, perhaps, not to the severe ordeal of being upon a subject rarely treated on Sacred, yet it bore the trial well, and did great credit to the author's genius. Much interest was excited by the vocal debut of Miss Sherrington, a young English lady, educated, we understand, at the Conservatoire of Brussels. Her voice is such as is rarely met with—a soprano of the finest quality, reaching from the depths of the contralto to the highest register of the scale. On Monday she sang in the ultra-florid style of Madame Cabel or Madame Gassier, and her execution was brilliant in the highest degree. Her reception was quite enthusiastic. Several old English madrigals and unaccompanied part songs were sung by the amateur choir of ladies and gentlemen formed by Mr. Leslie, whose performance is not in any respect inferior to the best German choral singing.

PROFESSOR STERNDALE BENNETT, of the University of Cambridge, commenced on Tuesday evening, at the Hanover square Rooms, his annual series of concerts of classical pianoforte music. These performances have been long established, and their character is well known. This concert was as elegant and refined as usual. It consisted of several fine solo and concerted pieces by Mozart, Beethoven, Weber, and Mr. Bennett himself, performed by him with the assistance of Mr. Sainton, Nicholson, Williams, Lazarus, and Carte. Several vocal pieces of a high order were sung by Madame Clara Novello. The room was crowded to the doors.

A CONCERT was given at Exeter-hall, on Wednesday evening, in aid of the funds for rebuilding Queen Charlotte's Hospital, at Lisson-grove. It was patronised by a long list of Royal and aristocratic ladies (with her Majesty at their head), and produced an ample receipt. The music was exceedingly good. The band consisted of the members of the Orchestral Union, directed by Mr. Mellon; Mr. Benedict presided at the pianoforte; and Madame Clara Novello, Madame Gassier, Miss Lascelles, Mr. Swift, Mr. Sainton, and Mr. Kinlmark were the vocal and instrumental performers.

MR. HOLMES, the eminent pianist and teacher of his instrument, gave the first of his annual series of concerts at the Hanover-square Rooms, on Wednesday morning. The programme contained an interesting selection of music, and several of Mr. Holmes's pupils—especially Miss Janet Dalton, Mr. Leonard Dalton, and Master Sale—distinguished themselves, and did honour to their instructor by their admirable performance.

MR. WALTER MACFARREN has likewise commenced a series of classical concerts. The first was given at the Bedford Rooms on Monday evening, when the whole selection from the pianoforte compositions of Handel, Beethoven, Mendelssohn, and Sterndale Bennett, as well as some excellent compositions of his own. As a pianist Mr. Macfarren is to be praised for his strength, energy, and artistic feeling; as a composer he is entitled to equally high praise. His Sonata for the piano and violin produced much effect: it is melodious, skilfully constructed, and well written for both instruments. He also played two smaller pieces, a Romance in D flat and one which were extremely graceful. He was assisted by Mr. John Macfarren in a pianoforte duet of Mendelssohn, which was most brilliantly executed. Several vocal pieces were given by Miss Dolby. There was a large and fashionable audience.

## *THE THEATRES, &c.*

ADELPHI.—A new piece, evidently derived from the French drama, "Thérèse," by MM. Bayard and Arthur de Beauplan, was produced here on Wednesday, in a condensed form by Messrs. Hazlewood and Sorrell. It is in two acts, and entitled "Edward the Black Prince." The story engaged the interest it derived from the powerful dramatic construction, and consequent melodramatic effects, of the original. Mr. Wright and Miss Laidlaw performed the two characters, and the style in carefully carried out to prevent their meeting until the last act, when a rather clever tableau is anticipated, to enable the spectator to believe that they are both on the scene together. The skill with which this is contrived constitutes a great part of the merit of dramas built on this now almost worn-out basis. Perhaps the present is the most elegant of all the pieces of the class. The two principal characters are those of equivocal parentage, the one an operatic actress, and the other an industrious sempstress of Paris. The latter, named *Lisette*, is beloved by a Yorkshire gentleman on a visit to that gay capital—*Harry Mowbray, Esq.* (Mr. Benjamin Webster). This circumstance at first alarms his friends, who seek to dissuade him from the step: but, on becoming acquainted with the object of his attachment, they are so charmed of her innocence that they are willingly converted to his opinion. But a new light arises. A Manchester man, by name *Mr. Peter Potter*, and previously impersonated by Mr. Wright, rushes in, and charges *Mr. Mowbray* with having run away with an heiress dancer, on whom he had expended a fortune, but who had left her lodgings, and on whose charming graces and mortars he had accordingly taken many vengeance. To satisfy this infuriate person *Lisette* is summoned from her private chamber, and is immediately identified by *Potter* and a *Mr. Arthur Leslie* (Mr. Selby)—a conceited dandy—as the heroine of the ballet *Mr. Mowbray* is in agony, he believes that he has been imposed upon, that *Lisette's* simplicity is only consummate acting; nevertheless, he challenges her traducer. *Potter*, meanwhile, rudely tears the bridal wreath from her brows, and the curtain falls upon an expressive and impressive tableau. The second act opens on a fashionable drawing room prepared for a bal-masqué, given by *Madame Ventedour* (Miss Wyndham), and among her guests are the *Comte* and *Comtess Kromowski*, the latter *Lisette's* double, now married to a German aristocrat (Mr. Paul Bedford). Of course, it is necessary that on this scene all parties should be brought together; and here, accordingly, we meet again with *Leslie*, *Potter*, *Lisette*, and poor *Mowbray*. The latter appears the picture of despair, and the various situations in which he partakes are most pathetically rendered by Mr. Webster. Nothing, indeed, can be finer than his acting in the greater passages. His interview with *Lisette* was distinguished by true passion that went to the heart, and lent to the dialogue an earnestness that compensated for the want of poetic force in the diction. The lover is assured, but the last trial awaits him. He finds the very footman himself—all combine in declaring *Lisette* to be only the *Countess* in masquerade, and, when the real *Countess* does appear, *Mowbray* is so exasted that he draws on her husband, and accidentally wounds the wife. The lady is withdrawn to a couch at the back of the scene, where she is concealed from view by the groups that surround her, and thus an opportunity is given for Madame Celeste to effect a change of costume, and appear at another part of the stage as *Lisette*, to the astonishment of all spectators. The mystery is then speedily cleared up, and the orange-wreath is again placed on the head of the now happy bride. The plot of this interesting drama much resembles that of the tragedy of "Valeria," in which Madame Rachel performs two similar *rôles*, but the positions are reversed. It is not the rich Empress (or Countess) whose reputation is thus saved, but the poor sempstress—the innocent member of a suspected class. The acting of Madame Celeste in both parts was of the highest excellence. Nor were the other characters indifferently supported. Mr. Wright as the excited Manchester beau was extremely rich; Mr. Bedford as the German noble, suspicious but infatuated, was ponderous and amusing; and Mr. Selby as the pleasure-seeking dandy was as lively as he was frivolous. There was also a grave personage performed by Mr. Garden, *Sir Andrew Redgrave*, *Mowbray's* guardian, in which the carriage of an old English gentleman was consistently maintained. The scenery and appointments were really brilliant, and the success of the piece was unequivocal.

MARYLEBONE.—The starring system commenced at this theatre on Monday, when Mr. Charles Matthews made his first appearance here, in his favourite pieces "Used Up" and "The Practical Man." He was warmly received, and acted with a vivacity that was well appreciated by a numerous audience.

SADLER'S WELLS.—Miss Cushman made her first appearance on Monday, in the part which she has so distinctly made her own—*Meg Merrilies*. That she embodies the author's idea has never been pretended; she has, however, substituted for it a melodramatic conception as cone startling, powerful, and pathetic. The house was respectably attended.

STANDARD.—On Tuesday the tragedy of "Antony and Cleopatra" was again revived, and performed by Miss Glyn and Mr. Marston. Both acted with their usual excellence; and the whole getting-up of the piece does credit to the enterprising manager, whose efforts for the theatrical education of the population of the East deserve public encouragement.

PARISIAN AUTOMATA. Some extraordinary mechanical figures, originally exhibited at the Paris Exposition, are now to be seen at the Egyptian Hall, Piccadilly, and are well deserving of public attention. The figures are of bronze, and the majority of them are covered with the skins of the animals they represent. The interior of these skins is occupied with machinery which, by slight pressure so as to produce the motions and noises proper to the living animal. Among the animals are a French lion, a goat, a lion playing on a banjo, a chimpanzee with a violin, a rabbit smoking, ed with a cabbage, a ram, and a sheep with two lambs. The whole combination of these animals are strictly natural, and the results are so nicely adjusted as to produce a most imitative resemblance to every noise in nature to those are two waltzers, boy and girl, and a baby that cries "mamma" and "papa." Undoubtedly the exhibition is very interesting.

## *NATIONAL SPORTS.*

THE principal racing event since our last has been the successful appeal which Skycutter, another of the young Birdcutters (who are "i' the vein" just now), and numbering about the one hundred and forty-third winner by the old Irish chestnut, made at Thirsk against the Catterick running with Matilda. It can only be accounted for by the fact of Skycutter having had nine days' more preparation, as there is not a man on the turf who runs his horses so completely on the square as Mr. Morris, and it was evident to all that Matilda was "fit," and that Basham did his utmost to win. Glenara, the dam of Peter Flat, is dead, and Kingston's subscription is full; and Silkmore, the first of the Cossacks, appeared at the Doncaster Meeting, but did not show in front. We can only add, that Sir Sterling Crauful has engaged that very deserving young jockey, George Oates, to ride for him the season and, seeing that three two-year-olds in this stud averaged considerably upwards of a thousand guineas a piece in their yearling days, he will have no ordinary responsibility in the "white and black cap." The idea which the leading sporting journal has been urging on them for some time past has at length been taken up by the Jockey Club; and they are about to recommend that 8 st. 12 lb., and not 8 st. 7 lb., should be the "raising point" in all handicaps where there are twenty subscribers and upwards. It is a sad pity that when they are legislating on a point so vitally important to senior jockeys they do not do the thing really well at once.

The Durham Meeting is fixed for Monday and Tuesday, and will show a fair amount of sport. Some of its entries are hardly what we could have wished to see, but still the Newmarket Craven Meeting list has been not a little strengthened. If we remember rightly, the Rowley-Mile Plate has been saved from the wreck of the defunct Second Spring, doubled in value, and removed to the Craven Monday; and we have heard a whisper that Verdant Green will make his maiden appearance for it. Yellow Jack, Remus Dalton, and Highway, are on the Sale Stakes on Tuesday; and, if Capuchin (7st. 5 lb.) has her Yorkshire Oaks speed still on her, she will be hardly for the Burwell Stakes. Fly by Night (9 lb. allowed) is in the column, on Wednesday, with West-Australian's mated sister, Vocation; and we should rather fancy that the latter will go for it. Rifleman and Hetman look like empty-for the Cutcrow to-day, and Hetman to-day; but as the former has just left Warrener's hands for William Day's, and has the Great Northern Handicap in view, the mare seems the more dangerous of the two. The Newmarket Handicap will depend much on the Epsom running; but Lord Alfred, 7st. 7lb. is not badly in, and well suited to the trying course. On Friday Fandango has really nothing to meet for the Post, where Oulston ought to save his stake either by arrangement, or in the race.

A correspondent, whose communication we are unable to use at length, sends us a very animated account of the recent four-day meeting at Schnmla, where the fund and stakes together amounted to about £600. The course was laid in a lovely natural amphitheatre among the hills; the two-mile course, of which 1¾ mile was straight, was marked out by a double row of flags. The English standard waved from the top of the winning chair; both betting ring and grand stand were all roped in *à la mode*, and there was champagne and pale-ale and claret and plenty. Among the principal sportors in the ring was the General in command, Watt, who backed the grays against the bays, and lost. The crowd consisted of English officers and a few ladies on horseback, and others in two or three pair horse-chaises, intermixed with the "everyvarying array" of Bashi-bozouks, Arabs, Bulgarians, and Jews, the latter of whom principally sat and enjoyed pipes and peace in front of the stand. Silk jackets and caps of every hue were donned for the occasion; and perhaps the most interesting struggle was that between twelve Bashi-bozouks. An Arnaut, with his picturesque petticoats flying in the breeze much all the running, at last by a length, with the others close up in the rank and was even than usually demonstrative when his half-sovereign prize was paid over to him. Let Englishmen go where they may they will have their cricket and their horse-racing, and they generally succeed in inoculating others with its love.

The sale of the twenty-nine Heythrop horses is fixed for Monday next at Tattersall's, and Lord Huntingdon's horses are advertised for the next week. It is hoped that Lord Alfred will become the new master of the Pytchley, and we may then see the good old days—when they were in the family before—and "Jack Knight" was their presiding genius—revived in their pristine grandeur. Although they have been short of foxes, they have had eight or nine magnificent runs, and Charles Payne's fine nerve and unerring ability which he has had his large fields to manage with little soil from the late noble master, have been as proverbial as ever. We hear that a subscription, which only needs a few additional names for a testimonial to Will Goodall, the huntsman of the Belvoir hour—who will, no doubt, like Will Long, make a speech at the "dinner meet" quite as musical and touching as his view holloa. Will Staples, Dick Burton, Philip Payne, Will Long, Will Derry, &c., are all time-honoured names among the lovers of the "noble science," but we doubt whether any of them ever had quite that dash of enthusiasm and love of the saddle which distinguishes Old Goosey's untiring successor. Mr. Lucy, as we noted some time back, has consented to take the Warwickshire hounds, having given £1900 guaranteed him, and it is said that the Worcestershire will cut off a whip for the future. The Quorn hounds were sold on Friday last, and Lord Stamford and Mr. Arkwright (the master of the Oakley) were among the purchasers. We heard that they made above £2000, and that his Lordship gave a very long price for one of the lots.

The steeplechases for the ensuing week are Northumberland (Rothbury), on Thursday; and Howden and the Hambleton Hunt, on Friday.

Robert Coombes, the well-known rower, who had to resign his laurels to his junior, Cole, on his last trial for the championship, died last week, aged forty-eight, but he has left many rowing parties both on the Thames and at the Universities, to keep him freshly remembered for many years to come. Little has been done either in yachting or boating as yet; but Cannon defeated Watkin in a most desperately-contested £60 rowing-match last Tuesday.

CROXTON-PARK RACES.—TUESDAY.

Scurry Stakes.—Ceres, 1. Twm Shon Catti, 2.
Belvoir Castle Stakes.—Tug o' War, 1. Prince of Orange, 2.
Granby Handicap.—Fact, 1. Shoreham, 2.
Two-year-old Stakes.—Saunterer, 1. Touchstone colt, 2.

WEDNESDAY.

Farmers' Handicap.—Gingleput mare, 1. The Novice, 2.
The Cup of 50 sovs.—Wantage, 1. Shoreham, 2.
Billesden Coplow Stakes.—Evington Lass, 1. Whip-poor-Will, 2.
Croxton Park Plate.—Fact, 1. Shoreham, 2.

EPSOM RACES.—THURSDAY

Railway Plate.—Jane Shore, 1. Hartley Buck, 2
Great Metropolitan.—Cambolo, 1. Wainfield, 3.
City and Suburban Handicap.—Hospitality, 1. Fisherman, 2.
Two-Year-Old Stakes.—Apathy, 1. Tinwald, 2.
Inkerman Plate.—Falcon, 1. King of Trumps, 2.

PATENT BOTTLE ENVELOPE.—This improvement consists in providing for bottles an envelope of rushes, which are neatly confined by string to the form of the bottle. It will, doubtless, prove [illegible] for packing, since it has been found to [illegible] It is said to [illegible] saves time and space in packing, prevents breakage, and saves [illegible] and labour in unpacking and storing. The rushes [illegible] are [illegible] cheap, and [illegible] The straw [illegible] straw. It may be used for cooling wines, as the bottle and envelope may be immersed in water, when the rushes will retain the moisture for some time.

The London and County Bank have announced that Messrs. Philip Farrer Blyth, J. G. Kwart, M.P., and William Lee, M.P., have been elected directors of that establishment.

## THE SIBTHORP COLLECTION.

THE Sale of this varied and pleasing Collection commenced on Wednesday. It comprises bronzes; cabinets richly inlaid—one from the Borel Collection; a goodly number of clocks of various sizes; a large clock-watch said to have belonged to the Emperor Napoleon I., ivory tankards, two or three of them exquisitely carved; groups of figures in marble and alabaster; china, of Dresden, Chelsea, Worcester, and other manufactures; Raphael and Palissy ware, Limoges enamels, terra-cottas, carvings in wood, one a frame surrounding a portrait of Charles II., very beautiful in the execution, silver tankards, Cologne ware, &c. We have selected a Group which will give some idea of the more interesting articles. In the centre is a crystal cup, fitted into a silver frame and stand. The handles are surmounted by a lamb, and the lid bears the figure of the same. At the cup is supported by dolphins, and the whole is surmounted by a figure of Neptune. On the left of this is a very handsome vase, of [illegible] colour, mounted in or moulu. The handles are formed of [illegible] children, bearing wreaths of flowers. This is one of a pair. Behind the vase is a silver stand or epergne, with a Dalmatian subject upon it in [illegible] and [illegible] arrow vessel, or jar, in front of the vase is one of a pair of very elegant enamelled and painted, in compartments, of birds and flowers, between which there is a deep blue band, just broken at the sides by a small zigzag border in gold. It is of Chelsea ware. The next object is of silver, and is supposed to have been used for condiments or salt: it is in the form of a vessel in full sail. There are figures on the poop of the vessel in the costume of James I., one or two in the act of firing; between them is probably a mermaid; the hull of the vessel is ornamented in rather crude work, with mermaid- and dolphin-like forms. The whole rests on a dolphin, and circular base. The next object is an Oriental essence-sprinkler of very elegant form. It is one of a pair, and is of silver, the work richly chased, in beautiful Arabesque pattern. The corresponding object on the left of the engraving is for the same purpose, but differently ornamented, being covered with a filigree ornament, like net-work, and wreathed with raised flowers, whose leaves are enamelled in various colours; it is an exquisite piece of work. Like its companion it is one of a pair. The small cup on the right of the centre vase is of ivory, and finely carved. The large tankard at the back is in silver, and bears figures in bold relief, raised, and chased.

## MUSEUM OF SCIENCE AND ART, KENSINGTON GORE ESTATE.

ON a portion of the Kensington Gore estate, purchased by the Royal Commissioners for the Exhibition of 1851, and adjoining the Roman Catholic Oratory, is now being constructed a large iron museum building, as preliminary to carrying out the views entertained by the Royal Commissioners for concentrating on their property the various institutions established in London to promote the interests of art and science. The present building is purposed to contain the large and valuable collections at present in Marlborough-house, belonging to the Department of Science and Art. The important trade collection presented to the Royal Commission on the close of the Great Exhibition of 1851, and which is at present deposited in Kensington Palace; the interesting and valuable Museum of Animal Produce formed by the Society of Arts in connection with the Royal Commission on the Exhibition of 1851; the Museum in connection with the Patent Office, and the Patent Museum, with others of a similar character.

It is not intended that this Museum should be merely an agreeable lounge or promenade to indulge or gratify curiosity, but to be considered rather as a National Repository, where the vast mass of important information in science and art, from the earliest period to the present time, can be examined and studied with a view to the improvement of those who may visit the collections with that object, and on this account it might very well be named a great instructional museum for the advancement of science and art.

In form the building is rectangular, and the width is divided into three equal portions or spaces. The centre or nave, which is [illegible] is open from the floor to the roof, and is one [illegible] wide, and the full width, also of 45 feet, and are returned at both the [illegible] they are 21 feet wide. Access to the galleries is obtained by two large central staircases, 14 feet wide, and four staircases at the ends of the building, 7 feet wide. The building is generally lighted from the roof, which are three in number, and segmental in form. Under the gallery additional light is obtained by windows placed every 11 feet apart, and measuring 14 feet wide by 12 feet high.

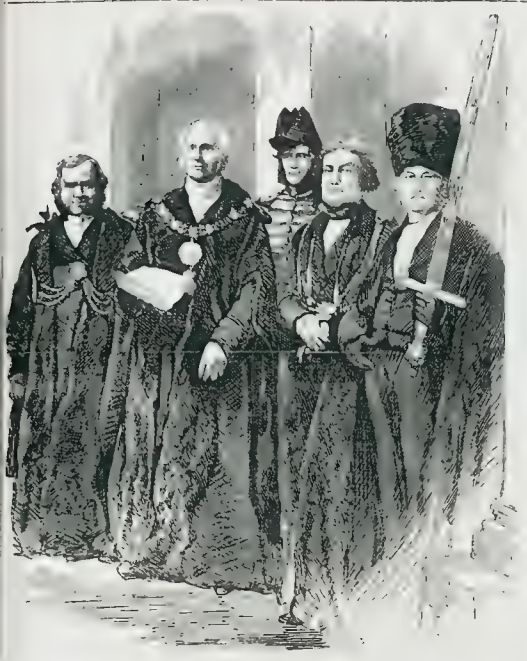
The ventilation is secured by strong moveable louvres placed under the windows, and by another series of louvres under the skylights, which are worked simultaneously by a shaft extending the entire length of the building. The building is heated by a system of hot water pipes, which diverge from the centre of the building to each end, returning again to the centre, and thence to the boilers, which are placed outside in vaulted chambers under the ground—the whole apparatus extending to about one mile and a half of four and-six inch pipe. The entrance [illegible] in the floor and galleries is nearly one acre and a half, and the area of the wall space in the galleries and the aisles, which is very considerable. It may be observed that the light in the galleries being [illegible] from the roof, they are admirably adapted for the exhibition of pictures, should it be thought necessary to occupy them for such a purpose.

The interior of the building is represented in the present engraving, and in principle is somewhat the same as that adopted in the Great Exhibition of 1851, where every part was a multiple of a number—the present number being seven. By this means every portion of the building is similar to another of its kind, which ensures an amount of accuracy and facility in construction that is not possessed by any other system, and is peculiarly valuable where the materials of the edifice are chiefly of iron and glass.

The building is constructed from designs and drawings prepared by Messrs. Charles D. Young and Co., engineers, of Great George street, Westminster, and of Edinburgh, and who are also the contractors for the work. The building is expected to be ready for occupation in July.

GROUP OF SILVER AND PORCELAIN — RARITIES FROM SOUTH KENSINGTON

MUSEUM OF SCIENCE AND ART IN COURSE OF CONSTRUCTION, ON THE KENSINGTON GORE ESTATE.—(SEE PRECEDING PAGE)



THE LORD MAYOR ANNOUNCING THE PEACE, AT THE MANSION-HOUSE.—FROM A PHOTOGRAPH BY THE LONDON STEREOSCOPIC COMPANY.

## GUNS OF PEACE.

SUNDAY NIGHT, March 30th.

Ghosts of dead soldiers in mid-battle slain;
Ghosts of dead heroes, dying, nobler far,
In long slow travail of inglorious war,
Of famine, sickness, weariness, and pain;—
All ye whose loss makes our victorious gain;—
This quiet night, thrilled with the cannon's tongue,
Do ye look down the quivering stars among,
And view our peace, our war, with like disdain?
Or, wiser grown in your celestial spheres,
Smile ye on those poor bones ye sowed as seed
For earth's peace-harvest, nor regret the deed?
Oh lift this cry with ours to heavenly ears,—
"Strike with Thy bolt the next red flag unfurled,
And make all wars to cease throughout the world!"—D.

## ANNOUNCEMENT OF THE PEACE AT THE MANSION-HOUSE.

By aid of the London Stereoscopic Company we are enabled to present our readers with a Photographic portraiture of the Group of Civic Authorities assembled upon the reading to the people the announcement of the Peace by the Lord Mayor, at the Mansion-house. His Lordship was accompanied by Sheriffs Kennedy and Rose, and attended by the Swordbearer, Macebearer, and City Marshal. Standing beneath the majestic portico of the City Palace—for the Mansion-house is, in architectural character, the most palatial edifice in the metropolis—the Lord Mayor, advancing to the balustrade, read to the people the welcome announcement which his Lordship had received from Sir George Grey of the signing of a Treaty of Peace at Paris. The Lord Mayor wears his superb collar and jewel, and the Sheriffs their chains of office; Sheriff Kennedy being on the left of his Lordship, and Sheriff Rose on his right. The Swordbearer, with his stupendous sword and cap, and the City Marshal in his handsome uniform, aid the official character of the group.

## THE LATE CATASTROPHE AT CORK.

In our Journal of last week we recorded this melancholy accident, by which nineteen lives were lost. We now engrave the locality of the catastrophe—one of those close, narrow, and filthy lanes in which it is the hard fate of poverty to dwell, and with which Cork, and especially the flat of the city, abounds. This thoroughfare runs from Duncon-street, on the Marsh, and is known by the title of Penrose's-lane, or Penrose's-square: egress from it, to the North Main-street, being obtainable through Coleman's and Angel's lanes, by which it is crossed at the east, and both of which are thickly populated by the poorer classes. In the second house of Penrose's-lane, in the front room of the upper story (the house being three stories), occupied by a cooper, named Pat Sullivan, and his wife, about forty people, of his own grade in life, had assembled, on Saturday night, 29th ult., at the wake of an infant child aged two years. The night had far advanced, when a woman, Mary Noonan, remarked that she thought she heard something creaking. To this Sullivan, who was standing, leaning by the jamb of the door, unthinkingly replied, there was not enough in the room to pull down the house, and, at that moment, stepping into the room, the flooring gave way, and he and his forty friends were precipitated with a tremendous and fearful crash to the base of the house, where they were huddled together in one indescribable mass of dead and dying. The scene was appalling. The entire flooring and ceiling of the two stories were completely gone—not a vestige of them remained in their original positions, while beneath was an immense mass of ruin, with here and there a human head, an arm, or leg protruding, and, in one or two places, human forms were to be seen in a standing or sitting posture perfectly lifeless. The result of this deplorable accident was, five dead bodies were taken to the bridewell, six dead and six severely wounded were carried to the North Infirmary, and eight dead were taken by their friends and relatives to their homes in the immediate vicinity; thus making nineteen killed and six so injured as to require the shelter and care of the North Infirmary. Of the nineteen who met their death, very few of their bodies exhibited marks of external violence, having come by their end from suffocation, the eyes, nostrils, mouths, and ears of the killed being literally stuffed with mortar-dust. The houses in Penrose's-lane are the property of Miss Patten, of Dunroche's-cross, and are apparently very old. They are let in tenements by the week; and it has been stated that a man, residing in the lane, on Saturday night informed the Mayor that a year ago he called the attention of the Corporation to the unsafe state of the very house which has fallen, and that the house was actually inspected by the proper officers, but no steps taken to render it more secure.

SCENE OF THE RECENT ACCIDENT AT CORK.

## COMMENCEMENT OF THE CENTRAL LINE OF THE SOUTH-WESTERN RAILWAY.

The first turf of the South-Western Central Line was turned on the 3rd instant, at Gillingham, under the most encouraging auspices. Notwithstanding the heavy rain, which began at an early hour and continued without the slightest intermission all day, the town of Gillingham saw a very great influx of visitors on the occasion.

The turf was turned in a field belonging to Mr. Kaines, situated at a convenient distance from the town of Gillingham. At the entrance, a substantial triumphal arch had been erected, above which floated the national colours of England, France, Sardinia, and Turkey. The ceremony of turning the first turf was performed by Miss Seymour, sister of the hon. member for Poole, the Chairman of the Company. A very elegant barrow and spade were prepared for the occasion, by Mr. Burt, C.E. The barrow is formed of walnut, the sh fts terminate in griffins' heads, and the spokes are fashioned as sheaves of corn. It bears the arms of the South-Western Company, the Salisbury and Yeovil Company, the Seymour family, of Mr. Locke, and of the contractor, and the sides are of silver lattice work. The spade, of solid silver, is beautifully engraved and ornamented, displaying the arms of the South-Western and the Salisbury and Yeovil Railway Companies on one side, and on the other an inscription stating that it was presented to the Hon. Miss Sey-

COMMENCEMENT OF THE SALISBURY AND YEOVIL RAILWAY.

mour on the occasion of turning the first turf This Miss Seymour accomplished in good style, and, having drunk a glass of champagne to the prosperity of the undertaking, the company adjourned to the pavilion, where nearly four hundred persons sat down to a first-rate *déjeuner*.

After the usual routine toasts had been given, the Chairman proposed "Success to the Salisbury and Yeovil Railway," and in doing so gave the following history of the steps which had been taken to promote that undertaking:—

It is more than twenty years since this plan of a railway was first set forth. Robert Stephenson, in 1836, it was who first pitched upon it, naturally, as the direct line to Exeter (Cheers), the capital of the West of England, as the former line was of greater national importance than it is at present. We have been beaten by the North for the last hundred years, but there is no reason why, in the next century we may not retrace our steps. Ten years passed over with the knowledge that it was the right direction to the West of England, and it was left in abeyance, not because there was any doubt of the goodness of the line, but because it was so good a line that many contended to have it. Well, in 1848 the South-Western, that spirited company, whose directors sat on my right hand, undertook to make the line, but they (no doubt for private reasons) made a bad job—they could not do it (Laughter). In '54 an independent company started to make it, because it was wanted for local purposes. Its great importance in the system of south-western railways running in both directions was perceived, and we have now got to that point of which I have the honour to be chairman, started to make that railway for local purposes. Other circumstances have occurred and our friends the South-Western Company are now pledged to continue the railway from Yeovil to Exeter (Cheers); and this great line, which is so important for local and imperial purposes, will at length be carried out (Cheers). This is a source of the greatest congratulation, for we are a district larger than any other in England that has hitherto been left without accommodation. It has got at one end of it—the Salisbury side—the excellent line with which we are connected—the main trunk line of the South-Western, which suddenly terminates there in the middle of a chalk down (laughter)—a very strange termination for such a great work. And not only that, but in 1854 we had two lines terminating at Salisbury—the Basingstoke and Salisbury Direct Line, and the line which connects Salisbury with Portsmouth and Southampton. On the other side, we have at Yeovil three railways—I believe I might say there will be—the Wilts and Somerset, running to Frome and Chippenham, and by the once popular and fashionable town of Weymouth, there is the Durston Railway running into the Bristol and Exeter; and there will be the Direct Line, which is so closely connected with ourselves, running from Yeovil to Exeter. The hiatus we are now willing to fill up—we are willing to join Salisbury, the ancient capital of Wiltshire, with the ancient town of Yeovil, which is one of the most spirited and enterprising towns in the West of England.

The barrow and spade were manufactured by Messrs. Herring, Fleet-street, upholsterers to the Corporation of London.

## *METROPOLITAN NEWS.*

DINNER AT THE MANSION-HOUSE.—The Lord Mayor entertained a large company of distinguished persons at the Mansion-house on Tuesday evening. The most noticeable feature was the presence and speech of Nathaniel Hawthorne, author of "The House of the Seven Gables," and now American Consul at Liverpool. In reply to the toast of "Prosperity to the United States of America," coupled with the name of the Consul, Mr. Hawthorne (who was received with great cordiality), after expressing his sense of the compliment which had been paid him, assured the company present that there was no American who could feel more so than he did the honour of sitting at the festive board of the chief magistrate of the great metropolis of England, and which, in the high and comprehensive sense of the term, they were bold enough to call their metropolis too (Cheers). In regard to the kind feelings they had expressed towards him in reference to his literary productions, he could only say that if he could pay but one farthing of the great debt that nation owed to the intellect of England he should be much more satisfied with himself than he had ever yet felt. In regard to the sentiments entertained in that assembly respecting his country, he should say that he was now some time since he left his native land, and it must be greatly changed in its pervading sentiments if it was not ready to respond, as it ever had done, to every friendly demonstration regarding England (Cheers). He believed there was never yet a kind word spoken or a kind action performed by an Englishman towards an American that the American was not ready to respond to by an action or a word at least as kind, if not more so

CAMBRIDGE ASYLUM FOR SOLDIERS' WIDOWS (KINGSTON, SURREY).—On Wednesday the first triennial anniversary of this charity was held at the London Tavern; his Grace the Duke of Wellington in the chair, supported by his Royal Highness Prince Edward Cambridge, Major-General Blanchard, C B, R.E.; Major-General the Hon. Sir Edward Cust, K.C.B.; Major-General Rawdon, Colonel the Hon. Augustus Liddell (Deputy Chairman), Colonel Cochrane, Lieutenant-Colonel Lindsay, M.P., Colonel Jarland, R.A; Colonel the Hon. G. F. Upton, General Sir H. Bentinck, Colonel Tyrwhitt, Major-General Russell, the Hon. Captain Murray, G. F. Fawcett, Esq., and the proprietor of the evening. "Prosperity to the Cambridge Asyum," the noble Chairman stated that there were at present twenty-two soldiers' widows within the building, and that in a fortnight there would be more. There were only thirty rooms ready, and it was proposed to build another twenty rooms, which would cost £3300. That was the sum required to complete the good work The amount of subscriptions and donations announced was about £1400.

COMMEMORATION OF THE BATTLE OF ALEXANDRIA.—The annual banquet commemorative of the battle of Alexandria was given on Wednesday evening at Freemasons'-hall, Great Queen-street: his Grace the Duke of Argyll in the chair. The friends of the Highland Society mustered in considerable force, many of the chiefs of clans were present, and the display of Highland costumes was picturesque and imposing in the extreme The hall was hung with banners inscribed with the names illustrious all in the annals of Scotland—at Campbell of Argyll, Murray, Chisholm, Sutherland, Forbes, M'Donald, Graham, M'Leod, M'Kenzie, Gordon, Cameron, Lochiel, Glengarry, Macduff, Stewart, M'Pherson, M'Nab, M'Gregor, Grant, and Robertson

WHITTINGTON CLUB. The eighth anniversary of this institution was celebrated in Freemasons' Hall, on Thursday evening last. The large and brilliant company assembled to do honour to the occasion, and proved that the interest in the success of the institution is unabated. It is now nearly eighteen months since the old clubhouse was destroyed by fire; unfortunately, the committee had no control over the rebuilding, and have had many difficulties and adverse influences to contend against; these have at length been surmounted, and the announcement that the new building would shortly be opened for the reception of the members and that the next anniversary would again be held under their own roof, was received with great applause.

HEALTH OF LONDON.—The number of deaths registered in London in the week that ended on Saturday was 1284. In the ten corresponding weeks of the years 1846-55 the average was 1146, which, if raised by a tenth part for increase of population, becomes equal to the number actually registered last week. Phthisis (or consumption) carried off a greater number of persons than any other disease: it was fatal in 152 cases, bronchitis in 135, pneumonia in 112, typhus and common fever in 61, hooping-cough in 45, scarlatina in 38, measles in 23, diarrhœa in 16, small-pox in 15. Chelsea pensioner died at the age of ; a lady, and the widow of a shoemaker at the age of 98 years. Last week the births of 943 boys and 925 girls—in all 1868 children—were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 151

THE BAND IN KENSINGTON GARDENS.—Orders have been issued by the authorities at the Horse Guards that the band of the Royal Horse Guards Blue shall play on Sunday next in Kensington Gardens from four till six, weather permitting. A band will play on each succeeding Sunday, and the time of the performance will probably vary as the season advances.

MURDER OF TWO CHILDREN BY THEIR MOTHER.—At the Central Criminal Court, on Wednesday, Mary Ann Harris, aged 23, unmarried, charged with the wilful murder of her two illegitimate children, Agnes Harris, aged 4½ years, and Emma Harris, aged 2½ years, by drowning them in the Grand Junction Canal on Friday, the 15th of February last, was found guilty, and received sentence of death.

THE ISLINGTON MURDER.—On Thursday morning, at the Central Criminal Court, Celestine Sommer, 24, married, was tried and found guilty of the wilful murder of Celestine Christmas, on the 18th of February, at Islington. Mr. Justice Crompton, in passing the usual sentence of death, told the prisoner not to entertain any hopes that her life would be saved.

THE CORPORATION REFORM BILL.—At a meeting of the Masters and Wardens of the Livery Companies of the city of London, held at the Mansion House, on Thursday, Sir Peter Laurie presiding, resolutions in opposition to the Corporation Reform Bill were unanimously agreed to.

NEW ENTRANCE TO THE REGENT'S PARK.—An official communication from the Chief Commissioner of Woods and Public Works announces that the new entrance to the Regent's Park from Charles-street, Portland Town, will be opened to the public on the 1st of May.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE official announcement of peace, added to a steady influx of the precious metals, has had considerable influence upon Consols this week. Not that any material advance has taken place in the quotations—the improvement is then being confined to one-half per cent—but, evidently, there is a much better feeling as regards the future. Indeed, the Account never, to state their terms per Cents for May is now ¾ per cent higher than for present Transfer, a proof that the leading jobbers anticipate a further upward movement in value

Our advices from Paris state that the stock of bullion in the Bank of France is rapidly on the increase, and that it will not be necessary for the directors to purchase additional supplies of gold in London. This is a most important feature at the present moment, as the new English sovereign is now actually in course of arrivals from Australia and America passing into the Bank of England. It is, however, stated that immense quantities of silver will continue to be forwarded to India and China; but our impression is that the demand will be nearly met by our imports from Mexico, and that it will be unnecessary to send gold to the Continent to purchase silver. The arrivals of gold have amounted to £460,000 from Australia, £35,000 from New York, and £20,000 from other quarters. The quantity shipped has been trifling. Sales of bar silver have been effected at 61d per ounce.

The transactions in the English Stock-market on Monday were but moderate, and prices ruled as follows:—Bank Stock, 215 to 212½, ex div.: Three per Cents Reduced, 91¾ to 92⅝, x div.; Three per Cent Consols, 92⅝ to 93, both for Money and Account; New Three per Cents, 92 to 92⅝, ex div.; Long Annuities, 1859, 16⅛; India Bonds, 5s to 10s. dis.; Console Scrip, 3⅜ prem.; Exchequer Scrip, 3⅜ prem.; Exchequer Bills (March) 2s. 5s. prem.; Ditto, June, 2s. dis. to par; Exchequer Bonds, 99¾. On Tuesday the dealings were by no means numerous:—Bank Stock was 213½; Three per Cents Reduced, 91¾; Consols, for Money, 92⅞; Ditto, for Account, 92⅝ to 92⅝; New Three per Cents, 92⅜ up to 93; India Bonds, 5s. discount; Enclings; Bills (March), 10s. to 4s. premium; Ditto, June, par to 2s. discount: Exchequer Bonds, 99¾. There was an improvement of about ¼ per cent in the quotations on Wednesday, and unusual purchases of stock were effected on account of the public:—Bank Stock, 213; Three per Cents Reduced realised 91⅞ to 92¼; Three per Cent Consols, for Transfer, 92⅝ to 93⅛; Ditto for Account, 92⅞ to 93⅛; New Three per Cents, Jun. Rossia, Four-and-a-Half per Cents, 95; Sardinian Five per Cents, 95⅞; Spanish Three per Cents, 45⅞; Ditto, New Deferred, 25¾; Ditto, Committee's Certificate of Coupon, ⅝ per cent; Turkish Six per Cents, 101¾; Turkish Four per Cents (guaranteed), 101¾ to 102; Venezuelan Four-and-a-Quarter per Cents, 30; Ditto, One-and-a-Half per Cents, Deferred, 12⅜; Dutch Two-and-a-half per Cents, 64; Dutch Four per Cents, 94¼ ex div.; Belgian Four-and-a-Half per Cents, 95¾.

There has been no new feature in the market for Joint-Stock Bank Shares; but the tendency of prices has been rather upwards. Australasia have marked 93; Bank of Egypt (for formation of shares), 4; London and Westminster, 9¼; Bank of London, 65; City, 65; English, Scottish, and Australian Chartered, 16⅛; London Chartered of Australia, 17; London and County, 34⅛; London and Paris, 7⅞; South Australia, 10⅝; Oriental, 6⅜; Ottoman Bank, 6⅞; Union of Australia, 71⅛; Western Bank of London, 28⅛.

Nearly all Miscellaneous Securities have been rather inactive. In prices, however, an improvement has taken place in Australian Agricultural, 34; Berlin Waterworks, 6⅞; Canada Company's Bonds, 143; Ditto, Government Six per Cents, 106⅞; Crystal Palace, 8⅜; Electric Telegraph, 69; English and Australian Copper Company, 75; General Screw Steam Shipping Company, 15⅝; London General Omnibus Company, 3⅛; London Docks, 99⅜; Netherlands Land, 4; Oriental Gas, 14; Ditto, New Shares, ¼ prem.; Peel River Land and Mining, 3; St. Katherine Docks, 89; South Australian Land, 33; Southampton Docks, 40; Van Diemen's Land, 16⅛.

For Railway Shares there has been a better demand, and prices generally have further improved. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aimbergate, Nottingham, and Boston, 44; Caledonian, 84; Chester and Holyhead, 16⅜; East Anglian Eastern Counties, 11; Edinburgh and Glasgow, 62; Edinburgh, Perth, and Dundee, 29½; Great Northern, 96½; Ditto, A Stock, 79½; Ditto, B Stock, 124; Great Southern and Western (Ireland), 97; Great Western, 59¾; Lancashire and Yorkshire, 88⅝; London and Blackwall, 7⅜; London and Brighton, 103⅛; London and North-Western, 101⅛; Ditto, Fifths, 19⅛; London and South-Western, 91; Manchester, Sheffield, and Lincolnshire, 47⅜; Midland, Ditto, Birmingham and Derby, 44⅜; Norfolk, 54½; North British, 35; North-Eastern (York), 68; North and South-Western Junction, 10½; Shropshire Union, 4⅝; South Down, 1⅝; South-Eastern, 72⅜; South Wales, 70½; Waterford and Kilkenny, 5⅜.

LINES LEASED AT FIXED RENTAL.—Midland Bradford Preferred Stock, 91; Northern and Eastern, 56⅜; Shrewsbury and Chester, 75.

PREFERENCE SHARES.—Aberdeen, 130; Ditto, No. 2, Seven per Cent, 119; Great Northern Five per Cent, 117⅜; Ditto, 108; Great Southern and Western (Ireland) Four per Cent, 95; London and Brighton Five per Cent, 116; Ditto. New Six per Cent, 126; Oxford, Worcester, and Wolverhampton, 98; Waterford and Kilkenny, 2⅜.

FOREIGN.—Antwerp and Rotterdam, 8⅜; Belgian Eastern Junction, 2½; Buffalo and Lake Huron, 6⅜; Dutch Rhenish, 12⅜; Eastern of France, 14⅜; East Indian Extension, 22⅜; Grand Trunk of Canada, 14⅜; Great Central of France, 20⅜; Great Indian Peninsula, 8⅜; Great Luxembourg, 17⅝; Great Western Shares, 7⅜; Great Western of Canada, 26; Ditto, New, 8⅜; Hamilton and Toronto, 25 ex div.; Madras, 16⅜; Namur and Liége, with interest, 7⅜; Northern of France, 41⅜; Royal Danish, 20⅜; Sambre and Meuse, 14⅜; Ditto, Five-and-a-Half per Cent, 9⅛; Scinde, 7.

*Friday Afternoon.*

The Consol Market is flat to-day, and prices are rather drooping. The Three per Cents for Money are 92⅞ to; and for the Account, 93⅛. The Reduced have marked 92 92⅛; and the New Three per Cents, 93. The Unfunded Debt is very inactive; and there is very little doing in either Foreign Bonds or Railway Shares.

## *THE MARKETS.*

CORN EXCHANGE (Friday). The arrivals of English wheat this week have been very moderate, and the show of samples in to-day's market was small; nevertheless, the demand for all kinds was rather inactive, at quite the currency of Monday last. Rather over 17,000 qrs of foreign wheat have come fresh to hand. That article met a dull inquiry but no actual clear go took place at Thursday's quotations. Barley, of which we had 7,000 qrs, sold steadily, at very full prices Malt sold at Monday's currency There was a moderate demand for oats, at late rates Beans and peas were steady, and quite as dear as on Monday. Flour, however, met a slow sale Over 9000 barrels of the latter article have come in.

*Arrivals this week.*—Wheat: English, 1,750 qrs; foreign, 17,050 qrs. Barley, 7,000 qrs. Oats, 300 qrs. Beans, English, [illegible] qrs; foreign, [illegible] qrs. Peas, [illegible] qrs. Flour, [illegible] sacks and [illegible] barrels.

*English Wheat.*—Essex and Kent, red new, 72s to 76s; ditto, white, 76s to 78s. Norfolk and Suffolk, red, 69s to 73s; ditto, white, 74s to 78s. Lincolnshire and Yorkshire, red, 70s to 73s; ditto, white, 74s to 78s. Northumberland and Scotch, red, 68s to 72s; ditto, white, 72s to 76s. Rye, 46s to 48s. Barley, 30s to 34s; malting ditto, 36s to 38s. Malt, ordinary, 70s to 72s; pale, 74s to 76s. Peas, grey, 38s to 40s; maple, 40s to 42s; white, 40s to 42s. Beans, ticks, 38s to 40s; harrow, 40s to 42s; pigeon, 42s to 44s. Oats, Essex and Scotch, feed, 26s to 28s; potato ditto, 28s to 30s. Foreign Wheat, free, 70s to 74s; ditto, fine, 76s to 78s; red Port, 70s to 72s; white ditto, 72s to 74s; Marianopoli, 74s to 76s; Taganrog, 68s to 70s; Egyptian, 68s to 70s; Salonica, 68s to 70s; Smyrna, 68s to 70s; Polish Odessa, 68s to 70s; Azimoor, 68s to 70s; Brabant, 70s to 72s; Petersburg, 68s to 70s; Riga, Pomeranian, and Mecklenburgh, 68s to 70s; Danish and Holstein, 68s to 70s. Rye, Dutch, 46s to 48s; Baltic, 42s to 44s per quarter. Barley, Pomeranian, Mecklenburgh, and Holstein, 30s to 32s; Danish, 30s to 32s per quarter. Oats, Dutch, 24s to 26s; Danish and Holstein, 24s to 26s; Swedish, 24s to 26s per quarter. Beans, Horse, 36s to 38s per quarter. Peas, White, 38s to 40s per quarter. Flour, American, 34s per barrel.

Imports last week into London:—Wheat, 17,050 qrs; barley, 7,000 qrs; oats, 300 qrs; beans, [illegible] qrs; peas, [illegible] qrs; flour, [illegible] sacks and [illegible] barrels.

Liverpool, English, crushing 60s to 62s. Mediterranean 61s to 63s. Informed 56s to 58s per quarter. Barley, per cwt, grinding 26s to 28s; distilling 27s to 29s. Oats, per cwt, 19s to 21s. Beans, per cwt, 30s to 32s. Peas, per bushel, English, [illegible] to [illegible]; Egyptian, [illegible] to [illegible]. Flour, per barrel, English, 31s to 34s; American, 32s to 34s. Indian corn, 31s to 32s per quarter. Wheat, per cwt, 8s to 9s. Oatmeal, 22s to 24s per cwt.

*Bread.*—The prices of wheaten bread in the metropolis are from 9½d. to 10d., of household ditto, 8d. to 9d. per 4lb. loaf.

*Imperial Weekly Averages.*—Wheat, 69s. 8d.; barley, 36s. 8d.; oats, 23s. 6d.; rye, 44s. 7d.; beans, 40s. 7d.; peas, 39s. 7d.

*The Six Weeks' Averages.*—Wheat, 66s. 0d.; barley, 36s. 11d.; oats, 23s. 7d.; rye, 40s. 3d.; beans, 40s. 1d.; peas, 39s. 10d.

*English Gross Seed Last Week.*—Wheat, 58,009; barley, 13,436; oats, 13,833; rye, 133; beans, 6554; peas, 653 quarters.

*Tea.*—Our market is very inactive, but we have no change to notice in the quotations The stock in London is [illegible] against [illegible] the age ratio [illegible] at the corresponding period in 1855. Common sound congou is selling at 8½d. to 9d. per lb.

*Sugar.*—There is less doing in the raw sugars, and, in some instances, sales have been forced at a reduction in price of 6d. per cwt. Barbadoes has realised 32s. 6d. to 41s. 6d.; grain refined Demerara, 43s. 6d. to 44s.; ditto, 45s. 6d. to 46s.; Mauritius, 34s. 6d. to 37s. 6d. For coming cargoes are firm Refined goods move off steadily, at 53s. to 56s. per cwt.

*Coffee.*—We have to report a slow sale for last description, and prices have a downward tendency. Good ord. native Ceylon, 52s. 6d. per cwt.

*Rice.*—This article—owing to heavy stock in warehouse—is very dull, at a decline of fully 6d. per cwt.

*Provisions.*—Irish butter is slow in sale, and rather lower to purchase. Foreign qualities, however, changed hands steadily, at full quotations. English butter is dull, but the best weekly Dorset is worth 120s. to 130s. per cwt. The inquiry for bacon is firm. Hams and lard as last advised.

*Tallow.*—Since our last report the transactions in this market have been confined to immediate wants. In prices, however, scarcely any change has taken place—P T C., on the spot, being quoted at 47s. per cwt. The quotation for the last three months is 48s.

*Oils.*—Linseed oil, on the spot, is heavy, at 32s. 6d. to 33s., and we have sellers for forward delivery as low as 30s. Other oils are very dull and drooping. Turpentine is heavy, at 31s 6d. to 36s for spirits, and 2s 6d to 10s for rough.

*Spirits.*—Rum is moderate sale. Proof Leewards, 2s 1d. to 2s. 3d.; 3 set Indis, 2s. to 2s. 1d per gallon The brandy market is steady, at fu l quotations. Gin, 17 under proof, 1s. 10d.; 22 ditto 2s. 4d., new spirits, 10s. 7d.; Geneva, 2s. 10d. to 3s. 8d. per gallon.

*Hay and Straw.*—Meadow hay, £4 0s. to £5 15s.; clover ditto, £4 10s. to £6 16s.; and straw, £1 4s. to £1 8s. per load.

*Wool.*—The demand for all kinds of wool continues steady, at the extreme rates realised last week. Stocks are increasing.

*Potatoes.*—The supplies are less extensive, and the demand is steady, at from 35s. to 90s. per ton.

*Hops* (Friday).—We have a fair demand for good and fine hops, at last week's quotations, but other kinds are a slow sale. The imports this week are large, viz.—308 bales from Hamburg, 75 from Ostend and 125 from Rotterdam. Mid and East Kent pockets, £3 3s. to £6 10s.; Weald of Kent, £3 0s. to £5 0s.; Sussex, £3 10s. to £4 10s. per cwt.

*Coals* (Friday).—New Tanfield (in ship), Whitsun, 18s.; Eden Main 17s 6d. Heaton, 17s.; Gosforth, 17s.; Braddyll's 18s 3d., Hetton, 17s 9d., Hough Ha.l, 17s. 6d. per ton.

*Metropolitan Cattle Market* (Friday).—To-day's market was very scantily supplied with beasts, and the demand for all breeds ruled steady, at fully Monday's quotations The supply of sheep was limited, and the mutton trade was brisk at an improvement in value of 4d per 8lb. We had a better feeling in the demand for lambs—the show of which was limited at fully Monday's currency. About 120 cows to hand from the Isle of Wight. Calves were in moderate supply and sluggish request, at unaltered quotations Pigs moved off slow at late rates. Milch cows were dull, at from £13 10s. to £19 each, including their small calves.

*Per 8lbs* to sink the offal.—Coarse and inferior beasts, 2s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large oxen, 3s. 8d. to 4s.; prime Scots, &c., 4s. 2d. to 4s.; coarse and inferior sheep, 3s. 8d. to 4s.; second quality ditto, 4s. 2d to 4s. 4d.; prime Leicester woolled sheep, 4s. 6d. to 4s. 10d.; prime Southdowns 5s. to 5s. 4d.; large coarse calves, 3s. to 4s. 10d.; prime small ditto, 4s. 4d. to large hogs, 3s. 6d. to 4s. 2d.; neat small porkers, 4s. 6d. to 4s. 10d.; lambs, 6s. to 7s., suckling calves, 22s. to 28s.; and quarter-old store pigs, 21s. to 27s. each. Total supply: beasts, 300; sows, 115; sheep and lambs, 4,981; calves, 190; pigs, 360. Foreign: beasts, 70; sheep, 33; calves 68.

*Newgate and Leadenhall.*—The trade generally ruled steady, at full prices.

For 8lbs by the carcase:—Inferior beef, 2s. 8d. to 3s. 10d.; middling ditto, 3s. 8d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 8d.; inferior mutton, 3s. 2d. to 3s. 10d.; middling ditto, 3s. 8d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 8d.; veal, 3s. 10d. to 5s. 0d.; small pork, 4s. 6d. to 5s. 0d.; and lamb 7s. to 8s.

ROBERT HERBERT.

On the 7th inst., at Eartham, near Chichester, Mrs Huskisson, widow of the late Right Hon. William Huskisson, and daughter of the late Admiral Milbanke, in the 76th year of her age

## WRECK OF THE "CAZADOR."

THE calamity, according to the report of the Captain of the vessel to the Captain-General of Marine at Valparaso, occurred on the 30th of March, at 8 p.m., when the First Lieutenant, Mr. Robert Sampson, was startled by a sudden shock received by the vessel in running on the Carzara Rocks, eighteen miles south-east from Constition. The Captain immediately gave orders to draw near the shore and land the passengers, but in vain. The hull had been opened in the bows, and the disaster was hastening to its consummation. The boats were then lowered, and every one who could hastened to the poop and embarked in the boats, and steered for the nearest shore, which did not offer a safe landing, so that the greater portion perished in attempting it The Captain left in the last boat that was lowered, which touched the water just at the vessel went down; he steered for the harbour of Constition, where he arrived at seven in the morning Later another boat came in with the purser and thirteen men.

The Captain immediately sought assistance from the Governor, in order to return to the place of the wreck and rescue those who might be on the rocks or floating on timbers, when fortunately he met Mr. José Ignacio Larrain, who collected the authorities with the consent gave orders to get ready the steamer the *Ysleno*, and arranged for lodging and food for those who had been wrecked

It was then resolved to go overland with the provisions prepared, counting also on the boats of the fishermen found on the coast near where the wreck occurred. At four p.m. the Captain reached the spot, when to his sorrow he could see no sign of the vessel. Three sailors had escaped, bound to a board, in the morning. Of the two boats which approached the beach which pieces were saved were saved by the gunsmit of the second company of No. 2 of the Line, seven soldiers, three sailors, a marine, and two women.

The Captain thus describes the route of the ill-fated vessel:—

"I left Talcahuano by order of the Intendente at half-past eleven of the 30th of March, having embarked in the company of the adjutant of the Line under Captain V. Rodriguez, a picket of the same body, twenty-three men under Second Lieutenant Alvarez de Araya, and a number of soldiers' wives, not less than 140, according to rations. Likewise there came as passengers, by consent of the Intendente, the Administrator of the Customs in Talcahuano, M. Manuel Iniguez, wife, and two young ladies, Mr. Francis Uriondo and wife, and M. V. Vazquez. Unhappily nearly all these have perished.

"The vessel left Talcahuano with a fine breeze and south wind. She came the rate of ten knots by steam and sails. At one o'clock, being out of the port, and fifteen miles from the anchorage, the west point of Tumbes was 5 deg. W., and that of Colmno to the E.N.W., from which point I laid the course N., which should have brought me directly in sight of Coronilla. The engine was put at half-speed, and, with aid of sails, made eight or nine knots per hour. When I went out again on deck (at six o'clock) I saw the coast at a distance of five or six miles. I charged the officer to watch well the compass, that the Coronilla might pass to the starboard in the course. I used to give this charge to every officer as he took the deck, as also whenever I left it myself. After this I entered my cabin, since I was to take the deck at eight o'clock, in place of midshipman Gana, who had remained at Talcahuano on my departure."

(*Continued on page 384.*)

## THE BABYLONIAN LIONS,

PRESENTED TO THE ZOOLOGICAL SOCIETY BY MR. ALDERMAN FINNIS.

ALDERMAN FINNIS has on various occasions given proof of his disposition to support the noble zoological collection in the Regent's-park by that kind of aid which can only be given by the shipowners; and we have the greater pleasure in recording the munificence in this respect because we feel confident that, among the wealthy and numerous class to which the enormous tonnage of the Port of London belongs, there must be many gentlemen who would willingly co-operate in advancing the objects of the Society, by the importation of rare and desirable animals whenever the destination of their vessels should permit.

Alderman Finnis has, we believe, for several years past been engaged in transporting the Assyrian marbles, which now enrich the British Museum, from Busrah; and on almost every voyage some new or interesting animal has been taken on board with them for the Zoological Society. In this good work the society have always had the zealous assistance of the Messrs. Lynch, through whom the valuable pair of Lions which form the subject of our present illustration, were obtained for the Alderman.

E. TANNER, Hon. Sec.

SIXTH DIVISION OF PROFITS.

**CLERICAL, MEDICAL, and GENERAL** LIFE ASSURANCE SOCIETY,
59, Great Russell-street, Bloomsbury, London
SPECIAL NOTICE.
All persons who assure on the Participating Scale before June 30th next, will be entitled to a share of the SIXTH BONUS, which will be declared in the July following.
Prospectuses may be had at the Office before June 1st next.
Assurances effected before April 1st next bear a full year's share of the Profits.
GEORGE H. PINDER, Resident Secretary.

**LA FRANCO-EGYPTIENNE FIRE INSURANCE COMPANY.** Capital £400,000 (or 16,000,000 francs). Assurances against Fire on Property of every description, at the Company's Offices, 3, Crosby-square, London, and 1, Place de la Bourse, Paris. Policies duly stamped for Foreign Countries. Agents wanted in all the principal towns of the United Kingdom. Every information may be obtained at the Offices of the Company, or of their Correspondent in London, at his Offices, 35, New Bridge-street, Blackfriars.
N.B. Once years a premium allowed on seven years' insurances.

**BRITISH ORPHAN ASYLUM, Clapham-road.**
Patron—Her Most Gracious Majesty the QUEEN.
The Directors have the pleasure to announce that the ANNUAL SERMON in aid of the above CHARITY will be preached at ST. PAUL'S CATHEDRAL, at the LONDON TAVERN, Bishopsgate-street, on The Right Hon. Sir H. Lytton Bulwer, G.C.B., has consented to preside
at Half past Five o'clock, precisely

Gentlemen willing to assist the Institution, by acting as Stewards, are earnestly solicited to send their names to the Secretary.
Donations and Subscriptions thankfully received by the Stewards; by the Bankers, Messrs. Williams, Deacon, and Co., Birchin-lane; and at the City Offices, 12, Wallbrook, by
ALD. SIR MACKENZIE, Bart.,
Chairman of the Committee.

**TO WIDOWS of DECEASED OFFICERS** of her Majesty's 2nd (QUEEN'S) REGIMENT of FOOT.—The BEWLEY TAYLOR MILITARY FUND. By the Will of Widow Bewley Taylor, late of [illegible], formerly called William Bewley Mooke, a sum of £5,000 was left to the Trustees of the Regiment, to be invested, and the investment of the sum of £4000 bequeathed by the said widow, should not be paid half-yearly to the widows of officers of the regiment as pensions attending the said Trust Fund) to such Four Widows of Deceased Officers of the 2nd or Queen's Regiment of Foot (in such regiment the testator formerly served) as the testator's trustees shall select and declare proper recipients of the same, the first payment to be made at them 1 of twelve calendar months after the testator's decease; but no person or persons made or may hereafter be made entitled to any pension or pensions under this Trust.
Widows of deceased officers of the above-mentioned regiment desirous of participating in the benefit of "The Bewley Taylor Military Fund" may address their application (stating age and present circumstances) for the consideration of the Trustees of the Testator's Will, to Sir H. D. Ware, Solicitor, 6, New-street, York.
York, 2nd April, 1856.

**CANCER HOSPITAL, LONDON and** BROMPTON.—The Committee of Management earnestly solicits pecuniary aid from the wealthy and benevolent in support of this charity. Subscriptions will be thankfully received. Information given by Mr. W. J. COCKERELL, the Secretary, 5, Waterloo-place, Pall-mall.

**METROPOLITAN FIELD BLEACHING,** WASHING, and SCOURING COMPANY (Limited), for the Purpose of Cleansing Linen used in Domestic Economy.
Capital £50,000, in 5000 Shares of £10 Each.
Lieb lity of Shareho ders limited to the amount of their Shares.
Capital £50,000, in 5000 Shares of £10 Each.
Deposit £1 10s. per Share, to be paid on Allotment.

ARCHITECT—
B. Ferrey, Esq., 7, Bedford-row.
SURVEYOR—
T. Everingham Smith, Esq., 24, Great Carter-street, Great Carter-lane.
Messrs. Doulton (
Whilst Baths and Washhouses, on the requirements of the Poor, have been successfully established in several parts of London, no information for carrying the cleansing and elevating them belonging to the superior and middle classes of the community, has been attempted in the great metropolis. In order to meet this desideratum, it is proposed to establish, on the above-mentioned plan, a plan eminently calculated to ensure not only the patronage of the public, but also to afford to the Shareholders a considerable profit on their capital.
The importance attached to this subject will be seen by referring to the Chancellor of the Exchequer's Budget Speech, in the House of Parliament in 1850, whereby it appears that the "income" received by the corporation of London alone for a period of four years from the manufacturing interest of the country, viz.—the Cotton and Linen manufacture so far as the former is concerned, Woollen manufacture, and machinery is expended in WASHING. Gathering this in the MANUFACTURE of the fabric, or of the clothes themselves. (See page 76.) It is also shown by this Report that the annual expenditure of soap alone in the metropolis for washing is per head on one-half of the rated rental of the houses, amounting to the annual sum of "£2,000,000 a year," and that in some of the first-class private families in London the washing bill amounts to £100 a year, and in one family hotel establishment to £800 a year. (See page 75.)
Its works will be erected, at first, on the most economical scale, and sufficient ly far from London to obtain pure air and unconfined space. A piece of land of about seven acres in extent will be required for the purposes, and for the extension, hereafter, of the establishment if the Directors should deem it necessary.
In addition to the income to be derived from private families, schools, and the numerous large hotels, clubs, and mercantile houses have already undertaken to employ the Company.
A minute estimate of expenses, calculated on a liberal scale, and of receipts, on a moderate scale, has been drawn up by Mr. W. Lake Gibbs, who has been employed for a number of years by the Government, and who has executed works of a similar kind in several public establishments, which have answered the purposes intended in a most satisfactory manner. The estimate, which has been carefully examined at the Company's offices, shows that, by an annual outlay of £15,015, and a Capital of £20,230 (which is the Loan Capital), a profit annual income of £16 948.
It is estimated that the outlay for ground, building, machinery, and plant will not exceed £14,000, including working expenses for the first three months.
Applications for Shares must be made in the annexed form, addressed to Francis Thomas Mackrow, Esq., 4, Hercules-passage, Threadneedle-street; or to T. Jones, Esq., the Secretary, at the offices of the Company. A payment of 5s. for every Share applied for must be made to the London and Eastern Banking Corporation, 27, Cannon-street, City, or 136, Westbourne-terrace, Hyde-park, which will be appropriated to the payment of the first deposit on all whatever number of Shares may be granted; and the surplus, if any, will be returned to the applicant, free of expense, if not allotted.

FORM OF APPLICATION FOR SHARES.
To the Directors of the Metropolitan Field Bleaching, Washing, and Scouring Company.
Gentlemen,—Having paid into the London and Eastern Banking Corporation £ — to your credit, I request you will allot me — Shares in the Metropolitan Field Bleaching, Washing, and Scouring Company; which Shares I hereby agree to accept, or any less number that may be allotted to me, and to pay the calls thereon as the appointed times, and to execute the necessary deeds of the Company when required.
Dated the ——— day ——— 1856.
I am, Gentlemen, your obedient Servant,
Name in full .....
Residence, or Place of Business .....

BABYLONIAN LIONS JUST RECEIVED AT THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

(*Continued from page* 382.)

The Lion of Assyria figures in an important position on the marbles, and the living specimens, now for the first time exhibited in Europe, will have a peculiar interest to the archæologist, as well as to the naturalist. To the latter their arrival will afford an opportunity of still further tracing the distinctions between the Asiatic lions sent to the Society from Gujerat in 1854, by the Rajah of Junaghur, and the Nubian and other African varieties which have long existed in the menagerie. They are as yet scarcely old enough to present the characteristic differences which may be expected to assimilate them most closely to the partially maned lion of India, the male being apparently about two years old and the female considerably younger.

The lions are not, however, the only addition to the magnificent series of carnivora which the marble-vessel had on freight. An exceedingly pale variety of the leopard, if it is not a distinct species, appears to inhabit the Assyrian plains; and we were exceedingly gratified to find that a fine female specimen of this beautiful feline has also been added to the collection.

WRECK OF THE CHILIAN STEAMER "CAVADOR."—(SEE PAGE 382.)

## ART REFORM.—No. IV.

### THE NATIONAL GALLERY: ITS DEFICIENCIES AND DESIDERATA.

We now proceed to a special review of the Art treasures, desiderata, and deficiencies of the National Gallery.

The school of Florence is naturally the first that attracts our attention; for with Dante we have the revival of the Epic; with Petrarch, that of the Sonnet; and with Boccaccio, the most perfect specimen of the unadorned school of Narration. These three men have never since been surpassed in their respective walks; and, in our eyes, the high art of the Italians begins with them. The strong feelings of the terrible struggles of the Guelphic period called forth the culture of the Beautiful, and the grand source of Italian art lay deeper than all the handicraft of the limners in form and colour that preceded this fascinating and majestic resurrection. With these great names are inseparably connected those of Cimabue and Giotto, Lorenzo Ghiberti, Brunelescho, and many others—in short, the *incunabula* of all the Renaissances. The fresh springs of invention saturated the soil, and out they came through various channels, giving life to the barren waste. Poetry, painting, sculpture, and architecture,—all flourished in vernal luxuriance. In the whole range of history there is scarcely a spot on which the taste and intelligence pasture more pleasantly than Florence during the two centuries that preceded the departure of Michael Angelo to Rome.

With Cimabue the reign of the pure old Byzantines ended. The manner of Giotto, called in his day the "New Manner," was the first phase of the interregnum previous to the accession of the "*maniera moderna*" of Leonardo. How willingly would we see specimens of these men as well as of Masaccio, that great painter, whose works denote the noon of the Cinque-Cento being close at hand; but we know that their works are not in the market. A Raphael or Correggio may be had within a given time—it is simply a question of money; but with these celebrated old Florentine masters it is the rarest thing imaginable to get at their productions. As for Buffalmacco, who left such a renown by his jests and his paintings, it is difficult to fall in with them, even in Italy. We are therefore under great obligations to Mr. Conyngham for the two saints' pictures of Taddeo Gaddi. We know of no valid grounds for doubting their genuineness, and they are, most certainly, interesting specimens of the new manner of Giotto. In order fully to appreciate their value, we think that a specimen or two of the real old Byzantine pictures could be procured with no great difficulty, from Italy or the Levant, and possessing sufficient merit, in order to make a sort of antechamber to our pictorial suite. We should also think a Ghirlandajo (master of Michael Angelo) not impossible to be procured, just to close the pre-Raphaelite period in Tuscany, for we count Leonardo among the moderns.

Of Michael Angelo we have two representations at second-hand: the fine "Dream of Human Life" (No. 8), painted after his design by one of his scholars; and all his genius shines forth through the Venetian colouring of Sebastian del Piombo in the "Raising of Lazarus," that great combination of human genius, which realised Tintoretto's idea of the design of Michael Angelo and the colouring of Titian. We believe that an oil painting by Michael Angelo is nowhere to be had at any price. At the same time we should like to see some design or sketch in gums in the Gallery of which we could say, "This was done by the hand of the great Michael Angelo."

The sound drawing, tender light and shade, and pleasing general tone of Andrea del Sarto is fairly represented in No. 17. So much for the Raphael and Michael Angelo period. But when we sail down the stream of time the gaps are visible. Vasari having written so charmingly in the time of Il Nostro Gran Duca Cosimo, we should like to see one of the most celebrated of all the historians of art himself painted. Cristoforo Allori, called Bronzino, has only a portrait, giving no idea of the powers of the artist who produced the "Judith," one of the pearls of the Palazzo Pitti. Carlo Dolce, who fills up a large part of the seventeenth century, and was the contemporary of Claude, Murillo, Teniers, and Rembrandt, is no great favourite of ours; but considerable tenderness of expression cannot be denied to this effeminate designer and meretricious colourist. We should, therefore, like to see one good specimen of him, which could be procured without much difficulty.

The greatest of the Umbrian pre-Raphaelites is, of course,

"THE LILY."—PAINTED BY C. BAXTER.—FROM THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.—(SEE NEXT PAGE.)

"IN THE MARSHES—MORNING."—PAINTED BY G. A. WILLIAMS.—FROM THE EXHIBITION OF THE NATIONAL INSTITUTION.—(SEE NEXT PAGE.)

Pietro Perugino; we are, therefore, thankful for even an early scrap of him; but surely we may hope that some day there may be an adequate specimen of the better productions of the master of Raphael and the rival of Francia and Leonardo; for, although Perugino may be set down as the last painter of the *mastera antica*, those who remember his grand effort in the Vatican Gallery, which nobly stands its ground even under the roof that covers the "Transfiguration" and the "Sacrament" of St. Jerome, may fairly wish to see his later oil manner as applied to History in our National Collection.

We now come to Raphael, and scarcely know where to begin or where to end; but our space is limited. We have no less than four specimens of this incomparable master. On the subject of the productions of his first and middle manner we have no occasion to say anything; but, as regards his last and greatest manner, the public is no doubt much indebted to the directors of the Foundling Hospital for permission to have the "Massacre of the Innocents" deposited in the Gallery. We would remark, however, that whatever merit it has is entirely spoiled by the large glass over it, which prevents the cartoon from being seen. A chaos of heads and hands is before the spectator, but the chief object before him is a dusky mirror of the figures and skylight of the room behind him. There need be no delicacy about its removal, as it has been painted over in oil by some unknown hand, and therefore Raphael's own touches do not meet the eye.

For specimens of the later Raphael—of the philosopher who comprehended the mysteries of existence—the poet who soared to the ideal and the technical artist whom all generations have pronounced "Great Master," we do not require, as stated in our Hampton Court article, to go abroad with money in our purse. The Cartoons, by the feeling for high art which they maintained, were the true nucleus of the National Gallery; and it was in company with the potent grandeur of Del Piombo, the poignant pathos of Francia, the tender suavity of Correggio, and the fine sentiment and noble elevation of Garofalo, that we hope to see them by transfer the chief glory of the National Gallery of the future.

Of the later Romans, Caravaggio, Sassoferrato, and Carlo Maratto, the first is fairly represented in 172—"Christ with the Disciples at Emmaus." Caravaggio was an original inventor and head of a school that seduced for a time the youthful Guido, and scattered seeds that took deep root in Spain. We are therefore glad to see a good specimen of him; but his system, which had such *furore* in his day, has not certainly maintained itself. His opaque ebony shadows are flat and poor beside the translucent fire of Giorgione and the "darkness visible" of Rembrandt; while his vulgar realism was rejected by the later Romans, and by none more than Carlo Maratto. We have no adequate specimen of this latter artist in the National Gallery; but a good Menge, as a specimen of the most faultless academic painter of the eighteenth century, is desirable.

Of the early Bolognese school we have the two gems, Nos. 179 and 180, and we can desire nothing finer, for nothing finer is to be had of this description either in Italy or out of it. The resplendent genius of Francia has stamped all the spotless purity of the life of Christ on a lifeless corpse, and given a superhuman beauty and grace to the attendant angels of the *pieta*; the one, an immortal spirit soaring above the flesh; the other, a shadow of worldly ministry; and the whole taking an irresistible hold of the spectator. A composition of this sort drives us, in spite of ourselves, beyond the bounds of the art that gave it origin, and, as we gaze in admiration, some deep vein of the pathetic beauty of a Stradella or a Bellini seems to reveal itself in still small accents while the trance prevails.

The pathos of the mother is alone slightly in excess, and a little wanting in that settled tranquillity of effect which is a grace beyond the reach of art, and constitutes one of the rare attainments of genius. Is it surprising that when Raphael sent his "St. Cecilia" to Bologna he should have asked this artist to make whatever improvements on it he thought proper? And who can wonder that the Italians of the Cinque-Cento were cold to the new correct analytical theology, when their souls were under the spell of such poetry as this?

From Francia to the Caracci is a descent as from Milton and Shakspeare to Addison, Pope, and Goldsmith; yet we are pleased to see that the Gallery abounds in good specimens of these masterly eclectics of Bologna. We have also abundant specimens of their refined and pleasing successor Guido, the greatest of all the masters of sensuous harmony and voluptuous elegance. Of Guercino, who flourished and died nearly a generation later, we have one charming easel picture—"Angels Weeping over the Dead Body of Christ," which shows his fine relief, without the opacity of Caravaggio. But Domenichino, whose greatest works take the highest rank by their delicious expression and pure design, is not represented in the plenitude of his power; and we cannot consider ourselves as overstocked in these two charming masters.

Of the ingenious, elegant, and assecreontic Albano, the contemporary of Guido, who had such an influence over Nicholas Poussin, we have no specimen. Of Lanfranco, another contemporary of Guido, and pupil of the Caracci, a considerable artist, with fine copious design and handling, although deficient in positive beauty, we have nothing. Blank also is Carlo Cignani, the last of the great eclectics of Bologna.

The little that there is of the school of Ferrara is good—Mazzolino da Ferrara, with his "Holy Family" (160), recalling the early Venetian religious *genre* of pictures; and Garofalo, with his poetical "St. Augustin" (No. 81), comprising that wide view of nature and the heavenly choir above, which in an inferior artist would be the height of the ridiculous; but how far from that is the sublime of Garofalo!

We now come to the Venetians, who, along with the Romanised Frenchmen, form the chief strength of the Gallery—a proof that in the modern English taste the perception of colour has been more vivid and earlier than that of form.

It is useless wishing for a specimen of the early *genre* painters of Venice, those Giovanni Mansuetis and Vittore Carpaccios, who were the Canalettos of the Saracenic Venice of the Quattro-Cento. They are not to be had. We must be thankful for two specimens of the Giovanni Bellino period. The one, a fine portrait of the Doge Loredano, by the hand of Giovanni himself, and the other that remarkable anonymous picture of the kneeling warrior, in some of its parts, a capital specimen of the early Venetian manner, for we must except the ungainly warrior himself. The bright equable tone, and the absence of all climax in colour, rather tell against its being a Giorgione, as at first catalogued. Cima da Conegliano, with his somewhat hard lines, had not this harmonious suavity. A very early Titian seems the most probable solution.

There is no specimen of Titian's great early riva', Pordenone; and scarcely an adequate specimen of Tintoretto, who, in his higher efforts, yields to none in colour and dramatic force. There is also, strange to say, in the Gallery no specimen of either the elder or the younger Palma—both considerable men: the former a charming and careful colourist, and the latter a full freeman of the guild of handling.

The name of Paul Veronese is very much before the public just now; and the new acquisition, the "Adoration of the Magi" (No. 268), is much discussed. We cannot go the length of the severe censures that have been passed on this picture. We must take Paul Veronese for what he is, as a pure expressionist, but the most vivid and the least mechanical of all the mnemonists, and the most gorgeous of scene-painters, whose works have dignity in their forms, incomparable bravura of enterprise, and invention, and colour, with a poetry of its own apart from all other poetries. But to look with too microscopic vision into a Paul Veronese would be as illogical as to expect scenic effect from an expressionist. No doubt the principal Magus is harsh and inharmonious; and the way which runs the picture in two is so great a mistake that we must either consider it an aboriginal error by Paul himself, or that its transparent golden quality has disappeared. But with all its faults the picture is decidedly an acquisition, and it certainly has all that lagoon-flavoured Oriental pomp and splendour by which this great colourist has rendered himself so celebrated.

If Dante was the lord of the morning of Florence, when the first resplendent beams of art burst through the murky night of mediæval anarchy, Paul Veronese is the congenial poet of the meridian brilliancy of Venice. The eager hand of trade had stretched itself over the wide East, and filled her coffers to overflowing. The Saracenic style of Venice—first fruit of her acquisitions and connections—had given way to the superb adaptations of a Palladio, a Sansovino, a Sammichele, and a Baldassare Longhena. The Cape, discovered by the impious enterprise, was not yet fulfilled by Dutch and British perseverance. The festive luxury of East and West, of antiquity and modern times, were united in this mart of nations; the cup of prosperity was filled to the brim; and the fruits of opulence and taste hung festooned and clustering around. Humility, poverty, self-discipline, were strange and unbidden guests at the art orgies of these Romans of the ocean. The song of Veronese was attuned to this magnificence of festivity. He was the bard, not of the Israel or Judah, but of the Venice that Tasso saw and Shakspeare dreamed of. Poussin and Albano had their nymphs with bruised grape, or satyrs and fauns sporting in the forest glade. Veronese was also essentially a decorative, not a devotional, artist. The sulic banquet, with palatial vista, lighted by the azure sky of the Adriatic, and gladdened by the sound of the dulcet, the sackbut, and the psaltery, becomes "The Supper in the House of Levi," or "The Marriage of Cana;" and the kneeling greyheads, with gold ointment and precious stones, while turbaned "bonny tawny Moors" stand by, becomes the "Adoration of the Magi." Such was Paul, wide as the poles asunder from Francia and Perugino, and with more of Anacreon than of David in his soul.

## "THE LILY." BY C. BAXTER.

FROM THE EXHIBITION IN SUFFOLK STREET

ONE of the sweetest pictures in the Suffolk-street Exhibition (one to which we have already alluded) is "The Lily"—a half-length of a girl of twenty from the facile and graceful pencil of Mr. Charles Baxter. It is a something between portraiture and poetry. It is, in a word, Mr. Baxter's ideal of a beautiful woman.

We could have wished that Mr. Baxter had found some other title for this representation of female loveliness than the hackneyed title of "The Lily." Our poets and romancers must have yielded him a name more appropriate and certainly less hackneyed. To our thinking (and we are fresh from a fifth perusal of "Tom Jones") Mr. Baxter's "Lily" has something of a Sophia Western look

We are sorry to observe an increasing and injurious custom among artists of commencing and completing pictures without knowing what to call them. They begin with a pretty face, a capital piece of costume, and old Gothic doorway, or a suit of polished armour, and then work the figures and accessories, trying to tell a story from so difficult a beginning. It was not this way that Hogarth and Wilkie worked, or as Leslie still works. These great artists well weighed a subject and then worked assiduously up to it. They began at the strong end. It seems impossible that a picture can have any dramatic completeness and unity of purpose that is put together in so unworkmanlike a way.

## "IN THE MARSHES." BY G. A. WILLIAMS.

FROM THE NATIONAL INSTITUTION.

MR. WILLIAMS has found the subject of the careful picture which we this week engrave in the fen country of England—in the neighbourhood, we suspect, of what was once Whittlesea Mere. He is, like Rembrandt and Constable, fond of a mill; and a very picturesque one he has given us under the appropriate name of "In the Marshes." There is a lovely air of solitude in this characteristic picture: much is told and much is indicated. The spectator steps from before the picture conscious that it has come from no ordinary hand.

The most celebrated picture of a Mill to be found among the art-treasures of England is the glorious little landscape in the Marquis of Lansdowne's collection at Bowood, known wherever art is cultivated as "Rembrandt's Mill." Mrs. Jameson has described it with her usual accuracy. On an eminence overhanging a river stands a windmill, and near it a cottage. In the foreground, on a river's bank, a woman is washing linen, and a boat with a man in it is near the shore. A woman leading a child is seen ascending over the road which leads from the summit of the hill to the river's bank. The effect is that of evening after sunset. On the left the shadowy twilight is stealing over the scene; to the right the gleam of the departing day lingers in the sky, throwing out in strong relief the massy outline of the hill, and shining on the river below. There is a calm solemn beauty in this homely scene, which is quite indescribable.

For this fine picture by Rembrandt, Lord Lansdowne gave 800 guineas. Mr. Williams does not ask, and will not receive, as much for his inferior though clever Mill.

## CUYP.

CUYP is one of the most able and prolific artists of the *genre* style of the seventeenth century; his name justly stands forth as that of a master in his calling, and the daily-increasing interest which art seems to his peculiar range of art, and the competition which it excites, are fast raising to a vente his name with increasing weight and importance. The experience of the recent great Art Exhibition in Paris tends to show that nature, as a subject for art, has unfading attractiveness; and the marvellous success of Rosa Bonheur, in a field untrodden in itself, attracts new attention to the great masters who have preceded her in the same school.

Albert Cuyp was himself the son of a painter of some merit, and an exception to the general rule against the hereditary virtue of genius—for Albert has immeasurably surpassed his father Jacob, as nature is greater than all technic prese iption. Although he received some lessons in technical matters from his parent Albert Cuyp, in truth, owed all to nature, or rather to the fine appreciation of nature with which he was gifted. His works, which are purely local in character, show that his imagination never travelled beyond the sphere of his personal daily observation; and his delight and power in painting the ever-changing effects of atmospheric effects which traversed the broad expanse of his native lowlands; now the cool dawn, with its floating mists, now the bright refulgence of the mid-day sun; now the saffron hues of closing evening; now the summer's heat, so lurid as almost to stop one's breath; and on the winter's gloom, rendered still colder by the reflection of the pale silvery moon. In all these atmospheric creations, we insist—spite the detractive ravings of a modern critic, who has written himself into some sort of note—Cuyp was unequalled in his day, and has never since been surpassed; for with him it was not so much the power and the truthfulness of the effect which he produced before us, as the delicacy with which power and truth were subdued by the soft intoning quality which he threw over the whole production, and which, whilst it heightened the charm experienced by the spectator, detracted from that feeling of astonishment which a similar effort more ostentatiously displayed would infallibly have elicited. This is the *ars celare artem*, which none but men of real genius have; and which so many thousands gaze on and admire, spellbound, without knowing why.

But though Cuyp's atmospheres were unapproachable, they did not comprise his whole merit: he devoted himself as a passion to every object in nature, and to all with almost equal success. There is scarcely a variety of domestic animal creation—cows, oxen, sheep, horses, &c.—which he has not produced with a life-like reality quite astonishing: and his landscapes, introducing grass-lands, water, trees, fruits, with various accessories, all speak eloquently of the modesty of nature.

As is too commonly the case with the great intellectual instructors of mankind, whether in art or letters, Cuyp was but poorly appreciated in his own time, and his works did not obtain anything like the prices they now command till long after his death, and then only through the influence of strangers. (He was born at Dort in 1606, and was alive in 1672. Date of death uncertain). It appears, according to Mr. Smith, in his "Life of Cuyp," that down to the year 1750 (more than half a century after the artist's death) there was no instance of any picture of Cuyp selling in Holland for more than than thirty florins, something less than £3 sterling. How different the honours and rewards now commanded by our Landseers, and Ansdells, and by our fair ally, Rosa Bonheur: Mr. Smith continues: "Soon after the period above named a gradual advance in their value took place, in consequence of the repeated demand for them by English and French dealers; and at the sale of the celebrated collection of M. Van der Linden van Slingelandt, in 1785, public opinion was unequivocally pronounced upon their merits by the payment of prices in some measure commensurate with their beauty, but which have since in many cases been quadrupled." Walpole—that fin-by, shallow wit of the last century—who disliked all speak-ments, and had no merit beyond the non-existent—once wrote to Sir Horace Mann (May 1, 1774):—"Sir G. Colbroke, a citizen and martyr to what is called *speculation*, had his pictures sold by auction last week. A 'View of Nimeguen,' by Cuyp, and which he had bought very dearly for 70 guineas, sold for 200!"

There is a very beautiful Cuyp, in his sunniest golden hue, in the National Gallery; and several of his works in the Dulwich collection. In her Majesty's private collection there are nine Cuyps; in the Bridgewater Gallery six, including the celebrated historical picture of "The Landing of Prince Maurice at Dort." The Marquis of Westminster, Lord Ashburton, Sir R. Peel, the Marquis of Lansdowne, Lord De Grey, the Marquis of Hertford, the Duke of Rutland, and Mrs. Wells, of Redleaf, are amongst the other English collectors, whose galleries boast fine specimens of this fascinating artist. Abroad—in the Louvre are several examples, amongst which two are very fine, one representing a gentleman going out to ride, a servant holding his stirrup; the other representing the return from riding. In the Gallery of the Hermitage at St. Petersburg, in the Royal collection at Dresden, and in the Esterhazy Gallery at Vienna, are also fine specimens of this master.

## ANCIENT REMAINS IN THE CRIMEA.

LIEUTENANT-COLONEL MUNRO delivered, about a fortnight since, at the Bristol Philosophical Institution, the following lecture upon the remains of the supposed ancient temple discovered near the British head-quarters in the Crimea, and engraved in the ILLUSTRATED LONDON NEWS for Dec. 8 and Jan. 19. The lecture was illustrated by drawings and by an immense variety of specimens of ancient coins, fragments of vases, amphoræ, pater.., cups, &c., found among the ruins, and which the gallant officer had brought home with him. Colonel Munro remarked that he had brought home the relics for the British Museum, and, in the belief that they would interest the inhabitants of a neighbourhood in which he had spent many happy years of his life, he wished them to be exhibited in Bristol. It was suggested that he should say a few words upon them to the literary society connected with the institution; he readily did so. He had since been requested to exhibit them in that theatre, and he was there to comply with that request. After detailing the sufferings and praising the heroism of the British army in the Crimea, the gallant lecturer explained the discovery of the remains. The men were employed in making roads, at which some 8000 soldiers were working, and, as they did not very well like the labour, it became necessary for the proper officers to keep among them. He had 800 men under him, one of whom in digging turned up a coin of Romanus; soon afterwards another was found; and then, in excavating further, they came upon a large stone, finding that it was wrought on all sides, he knew must have been of some use and importance. In pursuing his researches he traced out what he was convinced were the remains of a temple. It was an oblong walled enclosure, measuring 150 feet by 80 feet, and it had at one end a circular form. Its walls, which were 10 feet in thickness, comprised a colossean wall and an inner wrought wall. He (Colonel Munro) applied to the Commander-in-Chief as to the subject, and was told that he might have fifty men to pursue his investigation, and he accordingly chose some from his own regiment, and went to work. He soon found a piece of marble pillar, part of the base of a figure, but it was far from good; he also found a reclining figure, similar to those which were always found upon the tombs of persons who had died on the Bosphorus. It was of the rudest execution. After some days they found a well having on its walls traces of some painting, which was not sufficiently perfect to be made out. They then came to a stone having grooves in it, as if for a liquid to run off, and which he felt satisfied had been a sacrificial stone. They also found sixteen vessels, all having different capitals, and in all of which were different descriptions of coin, a few bones, and some charcoal. Upon digging down to the building he found, but only at some two feet beneath the surface, parts of a human skeleton, one of which was, doubtless, of much later date than the building. The vessels could not have held fluids, as they were most of them joined together with lead, and in every one of them he found what had supposed to be weights, but which he believed were tessera—a sort of ancient invitation card used upon visiting. One of these capitals was found ten feet below the level of the mound of earth, on which the temple have been covered with the building. He also found a peculiar stone with two holes worked out in it, and in which the victims probably placed their feet when the sacrifices were made. He also found double candlesticks, innumerable quantities of lamps, &c., which were used by the officers for carrying and storing oil, grain, &c. Those amphoræ were long vase-shaped vessels of coarse clay, p culiarly formed, having double handles; indeed, he could find nothing exactly like them in the museums at London or Paris. From their shape and form they were probably of Assyrian origin, and most likely the temple was an outlying temple from Kherson. The gallant Colonel then exhibited various specimens of pottery, glass beads, coins, &c., and proceeded to discuss the probable date of the temple, which he himself believed might have been dedicated to Diana, and whose date he ascribed, from the coins and other evidences, to from 330 to 450 B.C. He exhibited grotesque fragments of incense vessels, iron remains of spearheads, and other matters, and a charming, graceful Grecian female head in terra cotta, which Mr. Hawkins, of the British Museum, and others who had seen it, had pronounced to be one of the most beautiful specimens of ancient Grecian art in existence, if not in the world. The head, the gallant lecturer said, had been presented to Queen Victoria in the name of the British army, and he had therefore only a permissive possession of it. It was found by a soldier, whose pickaxe, happening to hitch in the mould-hole on the head, brought it up without injury. The head was bound with laurel, and was probably that of Asturie, or some deity. Colonel Munro also found a number of flints which he had found in the walls, some flint arrow and spear tops, and a number of flints. He said he had also collected a large box of bones of the sundries ruminant animals, such as sheep, kine, &c., and which were probably the remains of sacrifices. The coins found by him were admitted to be of rare value: some of them unique. They bore effigies of Minerva, Mars, Apollo, Diana, &c. Many had letters forming part of the word "Kherson," and some a griffin, the emblem of Panticapæum. The dates ranged from about 450 down to 330 B.C.; then there was a long interval, after which they ranged from 200 to about 300 A.D. On the handles of most of the vessels was the name of an officer who used to have charge of the fountains, drains, &c., which officer ceased to exist when the Greek dialect ceased to be free.

Dr. Symonds, in moving a vote of thanks to Colonel Munro, paid an eloquent tribute to those brave heroes to whom England owed so much, whatever they had shared in the bloody attempt on the fall of Sebastopol, or had displayed the highest attributes of the soldier—courage, devotion, and endurance in the trenches.

THE POPE A FAMILY MAN.—A complete and magnificently adorned set of baby clothes, with all the requisite apparatus suited to the last wants of his imperial godson or god-daughter, are now being prepared by the Pope's orders, with all possible dispatch. A set of baby linen is a customary thing for the Pope to present to the Catholic Queens or Empresses in interesting situations, and is termed the infanzia (from the old custom of swaddling infants, still observed in Italy), under which title it is nearly as often sent to the sovereigns of Christendom by his Holiness as the golden rose or the ducal hat. The last infanzia sent from Rome was quite recently to the Queen of Spain.

HONOURS TO SCIENCE AND LITERATURE.—The King of Bavaria has founded a medal, to be called "Medal of Maximilian," for eminent works of science or literature. The medals will be in gold, and bear the effigy of the King. A pecuniary addition of from 200 to 400 ducats will be attached to each. Four of them will be distributed each year for the first five years from the 28th Nov. next, the anniversary of the King's birthday. His Majesty has also founded prizes of 600 ducats for works on the history of the House of Wittelsbach, the history of Bavaria in general, or particular points of that history; another prize of 200 ducats for a tragedy, and 100 for a comedy. The historical works must be printed by the 1st of January, 1860; and the tragedy and comedy completed by the 1st of August, 1857.—*Letter from Munich.*

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*A little chink may let in much light.*—OLD PROVERB.

EXTRACTS FROM THE DIARY OF THE FIRST EARL OF EGMONT.

The diary whence the following extracts are taken is among the Add MSS. in the Library of the British Museum, and is numbered 17,720. It extends only from the 1st of Jan., 1738-39 to 6th of Feb., 1738-39. A note attached to the MS with the signature of Sir Frederic Madden, informs us who this first Earl of Egmont was:—("Sir John Perceval, created Baron Perceval of Burton, 31st April, 1715; Viscount Perceval, of (Kanturk) 1722; and, in 1733, first Earl of Egmont. He married Catherine, daughter of Sir Philip Parker Morley, *Bart.* He died 1st of May, 1748.")

Jan. 2nd, 1738-39.—Sr James Taubin and Counsellr Fesler came to dine with me. Before and at dinner ye Company discours'd of ye Ostend Company. Sr James Taubin, who had been for many years Capn of a ship in ye East India Company's service, said that if it had not been for ye avarice of some particular assistants for ye India Company, there had been none set up at Ostend, that at ye time that Gesco was forming ye Emperor found himself much pressd by the interest of 6 p. cent due for ye money lent on ye Silesia loan, and he then offerd if ye creditors would take 6 p. cent instead of 5, he would not erect that Company. Sr Gilbert Heathcote and the rest who had advanced that money, could not digest taking 6 p. cent after tasting the sweets of 8, and refused to abate, which determined ye Emperor to go on with that design, which ever since gave us so much trouble, and still continues to do, and is like to bring a Europ'n war. For the Emperor is still brought into a pacifick temper, yet Spain had a hold of ye opportunity of our variance to strike in with him, and reassume their claym on Gibraltar, and is now arming as if they intend for war as soon as their galeons with their riches in Europe and enable them.

At the time we were at the highest pitch of variance with the Emperor, which was in the regn of his late Majesty, his Majy signified in his speech to the Parliament that in the Treaty between ye Empr and King of Spain there was a secret article that the Emperor should consent to erase the *Pragmatick* here. The Empr when he heard it openly deny'd it, and sent a sharp remonstrance to Count . . . his Ambassador at our Court, with order to deliver it with his own hands to the King, but at the same time caused it to be printed, and given to the leading men of both houses of Parliament and of the City, as distrusting that the King would not acquaint his people with the contents, which in substance was that it was false that he ever agreed to any such article. The Ambassador judging that it to be acquainted the Ministry, Ld Townsend, &c., with his orders, that they would permit him to have an audience, put on a gay countenance, and told them he had something to deliver to the King that was for the service of our nation. This caused him an audience when the King read ye memorial it put him into such a passion that he laid his hand on his sword; but reason came instantly to his aid, and he only dismissed ye Ambassador with some sharp expressions. It was taken very ill that the Emperor should in this manner appeal as it were to the people against their King. But in some time the sharpness on both sides abated, and matters were so far reconciled, that last May a Treaty was concluded by which our East India Company were at liberty to take any Ostend ships they should find going to the Indies or China. In pursuance of which ye Company have added 40 men to each ship of their own and given proper directions.

We talk'd of ye King of Prussias unsteady behaviour, and of his barbarously causing an officer at the head of his regiment. The story is well known. The officer, losing all command of himself at the disgrace, drew his pistol and, pointing it at the King's breast, cry'd, "A vous, mais vous desirez Roy!" then, firing his pistol in the air, he immediately took ye other and shot himself dead on ye spot. Mr. Foster said an English Colle expresst his resentment on a like occasion much better than by killing himself. King William, in one of his passages to Holland, was attended on by this Colle and, being out of humour, cry'd ye Colonels shine. The Colle immediately fell a-kicking a seaman that was near. The King ask'd him what he meant by it. "Sr (replyed he), I kick where I dare do it," which was the highest thing that he could not have kick'd as good a man as himself. But every man knows the superlative courage of that great Prince, and that the officer only said this to procure such satisfaction for ye affront as he was capable of giving himself.

Saturday. * * * * * * *

The Italian journal of this day or Censor, prtcluded to be wrt by Lord Mohun, Esqr, &c., but published by a writer for Sr Robt. Walpole, and to be dictated by him on extraord nary occasions, contains a clear, accurate account of ye grounds of the present disagreement among ye Princes of Europe, and deserves to be kept and read more than once.

Tuesday, 7 Jan.—To-day I went to Court; the Prince ask'd after my late illness, what place I served for, and after my brother Parker. Brother Percival and Dering dined with us and Dr. Courage. In ye evening young Botman, Mrs. Scrope, and Mrs. Dunellan and Clay too came to see us. Ye Princess never to have felt so very cold a day, so great that I apprehend the Prince ye small birds dropt down dead in ourgardens at Charlton, which is true. At Court I saw Brigadier Sr Hypolite, that worthy old acquaintance of mine since my travells at Turin. He told me I was ye only one would take notice of him here of all ye English that past thro Turin while he was there, which I was sorry to hear, for he was extremely serviceable and obliging to us, and deserved a better return. He is governor of ye Citadel of Turin when besieged by ye French ye year before my arrival, and then behaved himself so as to be a favourite of ye Duke, tho a Protestant.

Thursday, 9th. * * * * * * *

The Prince was last night to see a new play of Cibber, which being damn'd ye first night, the provok'd that ye Prince should come to it, in hopes his presence would save it; but, notwithstanding, without any regard to who was there, made such a noise, hissing, talking, and cat-calling, that for ye most part not a word could be heard. The Prince went unwillingly, and was very much displeased.

*(To be continued.)*

### NOTES

A BOOK BARGAIN.—At a recent sale of the curious collection formed by the late Mr. Lynch Cotton was a small work, not, as some would suppose, from its title, a treatise on practical angling, like the far-famed "Universal Angler" of Izaak Walton, but a moralization on angling—"fishing spiritualized," as one might say. It is called "A Book of Angling or Fishing, wherein is showed, by conference with Scriptures the agreement between the Fishermen, Fishes, Fishing of both natures, Temporall and Spirituall. By Samuel Gardiner, Doctor of Divinitie. Printed for Thomas Parfoot, 1606, 12mo." This *morceau*, which is undoubtedly rare—indeed, according to the authority of the late Rev. Ordinary of Newgate, unique—fetched the record-like price of £40! At the same sale, among a host of letters, petitions, portraits, &c., of felons, convicts, and notorious criminals, was another very different character, but as exquisitely dainty, that we cannot resist recording it *verbatim*:—"113. Newgate: Autograph Letter of Lord Sidmouth, Receipt of Cheshire the *Hangman*—cuttings, &c.; also, Two HANGMAN'S ROPES, used at the executions of John Pegsworth, 1837, and James Pratt, 1839." It is to the credit of the booksellers that this precious gallimaufry, despite the attractive capitals and insinuating italics, sold only for *one shilling*; and that the buyer, amidst the applause of those assembled, flung the used HANGMAN'S ROPES behind the fire.—BIBLIOMANIAC.

PAPAL BULL AGAINST WIGS.—It is not generally known that the thunder of the Vatican has been directed against even so small a matter as the wearing of wigs by ecclesiastics. On the 30th December, 1724, Benedict XIII. published a bull of which the following is an extract:—"Statuit et mandat, ne ullus sæcerdos, aut sacris initiatus, aut etiam clericus primæ tonsuræ, comam, quo frontes surreptæ tegat, nutriat, multo minus peruccas utatur, sub pœnâ, cæteris quoties transgressionem commiserit, illico operibus et loco pius appl candorum necnon incarcerationis tuidem dierum." An incarceration of ten days for simply putting on a jassy! O Ross. O Truefitt.—H. A. K

"TORYLAND."—I beg to hand you the following copy of an advertisement in the *Daily Courant* of 7th Feb., 1728, which may perhaps prove interesting to some of your readers. Could you inform me where I could obtain a copy of the work advertised? "This day is published, a new and exact map of Toryland, with the Dangerous Rocks and Shoals of it, the Jacobite Islands lying in the same Parallel with the Red Sea, whose Latitude is 1688, and Longitude 1714. Dedicated with great Disrespect and Contempt to that Knight of the warming-pan, King of No Land, the Pretender, and all his Brainless Adherents. Price Sixpence. Sold by T. Warner, at the Black Boy, Paternoster-row.—A MAGELLYNIAN.

SUNDAY OBSERVANCE.—This day has always been subject to the extremes of observation or neglect. We find it most religiously observed, and no business to be done upon it. On the contrary, we also find markets held, with, indeed, a limitation, except for provisions, and trading and wrangling upon that day. Battles, &c., were often suspended because it was Sunday. Wearing well on that day is ancient. Bear and bull baiting, and all kinds of games, were of usual after church. In the seventeenth century the people in almost every house passed the Sunday evening in singing psalms and reading the "Book of Martyrs."—TOSHBORE.

THE RISE OF BIRMINGHAM.—A notion prevails among the inhabitants of the celebrated hardware village that the greatness of this place has been due to the operation of a law which formerly prohibited Dissenters from engaging in business (or rendered it extremely difficult for them) at a less distance than seven miles from a corporate town. It is said that this led so many Unitarians, Presbyterians, and other Nonconformists to settle on the borders of Worcestershire, Warwickshire, and Staffordshire, in the parishes of Birmingham and Aston. These places are at the distance mentioned from a corporate town, and not within about five miles from the common country a distance which could not be reduced without violating the prescribed relation to orthodox Mayors and Aldermen. We merely state this as an existing theory in the district, and should be glad to hear the opinion of more competent a disciple on the subject. The numerous Dissenters in Birmingham, and the otherwise unaccountable superiority which it has attained over Wolverhampton, Wednesbury, &c., certainly give some support to the conjecture.

### QUERIES.

"ORIGINES GUELFICÆ" OF SCHEIDIUS.—In the "Origines Guelficæ," by Scheidius, there is mention of the following individuals:—

Welfos Dux *Sygrorum, Hevetorum, Rugorum,* et *Turcobugorum* 488
Odegon. *Pervicetus Persicus* 545
Welfin Dux et *Referendarius* Dagoberti Regis. 613
Alachus Dux. *Thuringiæ*
Welfos Comes *Boumeorum*
Rotundus Comes *Lutoris Britannici* ab. 700
Bruno Abb. Calensis
Landolous Epus *Darmensis*
Episcopi &c. *Augustenses. Ebnidienses Herbipolenses*
*Ebongergenses Leodenses Constantienses Stadenses*
Princeps Augariæ

If any reader can give an explanation of, and the English equivalents for, the preceding words he will oblige—E. H. Y.

JACK O'BOTH SIDES.—Who or what was this? In the Chamberlain's accounts, in the records of the city of Worcester, about the year 1 , there is this entry:—

They (the Chamberlains) pray to be allowed that was paid for making clothes for Jack on Both Sides, viz:—

| | | | | |
|---|---|---|---|---|
| Paid for cloth | ... | ... | ... | £01 08 08 |
| Paid for linings | ... | ... | ... | 00 02 03 |
| For buttons, and hooks and eyes | ... | ... | ... | 00 01 00 |
| For making the clothes | ... | ... | ... | 00 03 00 |

With reference to this, Mr. Noake, in his "Worcester in the Olden Time," says: "Jack on Both Sides must have been, I think, an effigy or figure, dressed up for some one of the many occasions for public processioning which obtained in former times." This is what Mr. Noake *thinks* but this he thinks correctly about it is, to me, a very great question. In hopes, I suppose, to strengthen his case, he thus proceeds:—"The only allusion I can find with regard to it is in a tract by Taylor, the Water Poet, entitled 'Jack-a-Lent, his beginning and entertainment, with the mad pranks of his gentleman-usher, Shrove Tuesday, that goes before him, and his footman Hunger attending.' It is as follows:—

Of Jack-an-Apes I list not to endite;
Nor of Jack Daw my goose's quil shall write:
Of Jack of Newbury I will not repeate;
Nor Jack of Both Sides, nor of Skipjacks neate;
But of the Jack of Jacks, great Jack-a-Lent:
To write his worthy acts is my intent."

Now, though in the above extract Taylor certainly mentions Jack o' Both Sides, yet he does nothing more, and gives no clue as to who or what he was. That it was an effigy, and used on public festive occasions, is rendered less likely by what Mr. Noakes himself thus adds in conclusion:—"The only clarity of the item consists in the fact of its having been made at a period when all games, plays, and pageants were prohibited." As the matter then appears to me to be in considerable doubt, I shall be glad if any of your readers can say who or what Jack o' Both Sides was, and what his or its functions were.—VIGERS.

WIFE-SELLING.—I heartily thank Mr. Hobbs for his courteous reply on the above topic, but would still feel obliged to him, or any other of your correspondents who would briefly state the origin of that practice so painfully peculiar to England, if it be traceable to any remote period of English consuetudinary law, real or supposed; if it has any legal effect *per se* in dissolving the nuptial tie; and lastly, if such a transaction be not some way punishable, as an offence *contra bonos mores*. If not, I shall regret it, as a stain to English jurisprudence, and one, too, which I have often found tending to depreciate the British character abroad.—GEO. FAIELD.

FRATERNITY OF ST. NICHOLAS.—Can any of your correspondents give me any information concerning the "Fraternity of St. Nicholas," in London? I have just met with a part of a list of its members at the end of a fragment of an Engl sh missal. It contained among its members persons of all classes and both sexes—gentil. ladie, texores, almesmen, maydes. There is one Bishop of Durham and one Baron of the "Checker."—L. C. I.

ANOTHER FEMALE FRIEND OF POPE'S.—Much has been said lately about the correspondents and friends of Pope. The following unpublished note (one of the Homer MSS. in the British Museum) refers to a lady hitherto unmentioned by any of Pope's biographers:—"4th Sept., 1724. Sr, —According to my promise, this is to acquaint you that last night Mrs. Wensborn came to town, and having been to wait on her to-day she tells me that, having but a week to stay, and many things to do, would be glad you would send her word what day you intend her the favour of a visit, that you may be sure of finding her at home. I am, Sr, your most humble servant, J. KNIGHT."—Now, who was Mrs. Wensborn?—T.

BAKING A MAN IN AN OVEN.—Is it true that, in the reign of Queen Anne, the Rector of Broughton Hackett was tried, convicted, and executed, for *baking his shepherd's boy in an oven*? If so, where can I find an account of the transaction and the trial? Did he bake the boy *alive*? Broughton Hackett is near Worcester.—WINDSOR.

### ANSWER.

ANTIQUITY OF TOOTHPICKS.—Toothpicks were in common use in the days of Martial, who tells you that those made of a chip of mastic were the best; but, if you run short of such timber, a quill will do. See Book XIV., Epigr. 24.

DENTISCALPIUM.

*Lentiscum mihi das: at ille frondes Cupis*
*Defuerit, dentes pennæ levare potest*

In another epigram he ridicules an old fop who was in the habit of digging out his teeth in the face of company with his pocket *Lentisk*, though he had not a tooth left in his head. Book XIV., Epigr. 24.

AD ESCULANUM.

*Medio recumbis in die quadrato,*
*Cavum indifem semifractis ungendo,*
*Et ipse tonsus ore luxa lentisco.*
*Mendice, Esculane:—non habes dentes.* MILLER.

BIRTHPLACE OF OLIVER GOLDSMITH.—A correspondent in the last Paper inquires where Oliver Goldsmith was born. It was at Pallas, parish of Forney, county of Longford, 10th November, 1728. The day of the month is from the family bible, submitted to Mr. Prior by Dr. Neligan, of Athlone, during the former gentleman's tour of research for materials for the life of the poet. The figures of the year are worn away, as with those of two others of the children; but, by the recollection of his sister, confirmed by himself, it was in 1728. Of this there is no reasonable doubt, from the minuteness of Prior's search, who first made the details accurately known to us, and has given a curious account of his exploration of the vicinity. See his "Life of Goldsmith," pp. 10, 14, 15.—C. B.

OLD RHYME.—The old rhyme Jose; line mentions runs thus:—

Monday for wealth,
Tuesday for wealth,
Wednesday the best day of all;
Thursday for losses,
Friday for crosses,
Saturday no luck at all.

J. C. NORRIS

I remember, as children in the nursery, we used to repeat the following old rhyme as applied to cutting our finger nails:—

Cut them on Monday,
You cut them for health;
Cut them on Tuesday,
You cut them for wealth;
Cut them on Wednesday,
You cut them for losses,
Cut them on Thursday,
You cut them for crosses;
Cut them on Friday,
You cut them for sorrow;
Cut them on Saturday,
You'll see your beau on the morrow. SOPHIA

### TO CORRESPONDENTS.

## CHESS.

### TO CORRESPONDENTS.

W. F., Clitheroe.—Your continuation-stratagem in six moves is not adapted to our columns. Few amateurs have any taste for what are called suicidal Problems.

ÆOLUS (Vienna), Mr. Walker, E., Exeter, and others.—In Problem No. 631, White to move must be, playing P to Q 4th, as you suggest, since Black, if he clear, would make the Pawn a Queen and win a Piece.

PHASE.—The Best Defence to the *Philidor's* opening, as the Italians term it, to play P to Q B 3rd, Knight's Gambit, King's Bishop's, and Queen's Bishop's Pawns, and thus gain command of the whole centre of the board.

S. S. S., Hull.—If Mr. Staunton's Magazine is published monthly, and may be procured through Messrs. Bohn, we presume it is to be had of foreign booksellers, Covent-garden, London.

T. J., Ashton.—Nothing but practice can give you what is required. Why do you not join the Manchester Club? This city now numbers about 120 members among whom are pupils of nearly every grade. The subscription is very small, and, in addition to the advantages of good play, members enjoy access to an excellent Chess Library and News Room.

I. W., Bristol.—If the second player took the P with the Queen, White should check with his Queen at K 8th, then take the K Rt Pawn with the Bishop, and afterwards capture the King's Rook. His attack would then be irresistible.

F. G.—The error was in your own statement and it is now too late to rectify it.

CANTAB.—The Pawns only are allowed to take Pawns in passing. Superior pieces have no such privilege.

F. H.—Quite right.

E. F. B., Dublin.—The rules of the Cambridge Club may be obtained on application to A. B. Sainsworth, Esq., Cambridge.

E. W., G. F., T. T., Derby.—Quite right, apparently.

S. B. P., R. T. M., F. F.—Impracticable.

G. H. H.—Wanting in everything that constitutes a Chess Problem.

J. T. S.—Passable, in every way.

J. P., Edinburgh.—No. 1 is middling. No. 2 admits of a second solution, and is, besides, simplicity itself.

F. J. Sallery, J. C. U., Fergus.—Decidedly not, as Black would take the Pawn in its passage.

H. D.—Having sufficient members, your next step should be the appointment of an official and trustworthy secretary, and as the success of the society will mainly depend on his official, you cannot be too particular in your selection. No Chess-club, however numerous or respectable, can long stand with an incompetent secretary.

J. T. Oldham.—The variations in the Bishop's Gambit have been so exhausted by the indefatigable labours of M. Jaenisch, that it is scarcely possible to discover any move worth notice in the opening. The line of play you suggest at Move 13 is well known, but the conclusion drawn from it are very different to yours. How can White be said to have a winning game, after

BLACK.

WHITE.

White to play, and mate in three moves.

A GAME OF CHESS PLAYED WITHOUT SIGHT OF THE BOARD

In the January number of the new *La Régence*, M. St. Elme Ledue gives a lively account of an assembly of Chess amateurs at the chateau of M. le Comte de Basterot, and of an impromptu game played by M. de Rivière blindfold. "They subsequently spoke of geology, of the fine arts, of literature, &c., a topic which the host conveyed as an intelligent and highly-cultivated man. At length they talked of Chess—some one remarked that he was oblig'd to believe in the aptitude which certain persons possessed of playing without seeing the board; but that he could not understand how the thing was possible, since even in seeing the Game there was so much difficulty in playing tolerably. M. de Rivière, who was one of the party, observed that this faculty of playing blindfold was not so very rare, nor the difficulty so great as many supposed. Deschapelles asserted that it was sufficient to exercise oneself for some time at this Game to succeed in it; whereupon Philidor, Foumeri, Labourdonnais, Kieseritzky, Laroche, Harrwitz, &c. 'All that is very well,' rejoined M. Leduc, 'but you must never . . . acknowledge that this aptitude only belongs to a limited number of the human race, and that there is something wonderful in a person of amateurs who are gifted with the faculty, and who can play not only the sixty-four squares and the thirty-two pieces of the chess table, but their combinations, infinitely varied as they are at every move, and all this with the eyes of memory as surely as if they had their bodily eyes fixed upon the chess-board. For myself, whether my eyes are open or shut, I turn over and over the game, I absolutely see nothing in my memory—not a single square—not a single piece; and when I reflect upon the mental labor of the blindfold player I am alarmed at the dangers which he runs from the intense strain upon the brain.' The amateur who had by it a more convincing proof of a single square equally expressed his apprehensions of the consequences of blindfold play, when M. de Rivière said—'I can convince you that the difficulty of playing a game without looking at the chess-board is not so great as you imagine, for I, who have practised it but little, have already been able to conduct two games simultaneously, and I shall be happy to play one with you in like manner now, if you are disposed for the encounter.' The proposition was readily accepted, and a chess-board brought within it less of time. Although the answer in question, M. Y., was the strongest player in the city of Blois, M. de Rivière allowed him to take an advantage, agreed, and divest himself, as nonchalantly as if merely on a sea-side, for his colleague. M. de Rivière then sat down by the fireside, and the battle commenced.

THE GAME.

(*Philidor's defence to the Knight's opening*)

| WHITE (M. de R.) | BLACK (the Allies) | WHITE (M. de R.) | BLACK (the Allies). |
|---|---|---|---|
| 1 P to K 4th | P to K 4th | 9 Q to K 2nd | K B to K 2nd |
| 2 Kt to K B 3rd | P to Q 3rd | 10 P to Q Kt 4th | P to Q R 3rd |
| 3 P to Q 4th | Q B to K Kt 5th | 11 P takes Kt | P takes K P |
| 4 K Kt to K 2nd | K Kt to K B 3rd | 12. Q takes P | Kt to Q 2nd |
| 5 Castles | P to K R 3rd | 13 Q takes Q K P | R to Q Kt sq |
| 6. P takes K P | Kt takes K P | 14. K R to K sq (ch) | Kt to K 4th |
| 7. Q to her 3rd | Q B tks Kt (ch) | 15. R takes Kt (ch) | B takes R |
| 8. B takes B | K Kt to Q B 4th | 16. Q takes B | K to Q 2nd |

And White announced mate in two moves.

A capital variety of the final combination.

"At the termination, all the spectators, and especially the two adversaries of M. de Rivière, were loud in their expressions of admiration, and paid the victor a thousand compliments, all of which were received with a modesty not very common among Chess-players. These compliments were, nevertheless, observed; for M. de Rivière, so far from being embarrassed by the difficulty of following the game which he did not see, regularly amused himself from time to time with jokes on subjects foreign to the game, and on the projects of his opponents, on their stratagems, which he sometimes silly ridiculed—as, for example, their 12th move *Kt to Q 2nd*, by which these gentlemen thought to win the Queen's Rook, if White took the K Kt Pawn, which they appeared abandon by mistake. But the seers had not such sharp eyes as they boasted of seeing, for as their 7th move they played a piece below their range; dazzled and dismayed, do-bidden, by the novelty of such a contest, their attention was directed less to the chess-board than to their antagonist."

(*To be concluded next week.*)

## SUNDAY MORNING.

FROM "THE LUMP OF GOLD," BY CHARLES MACKAY. DRAWN BY SAMUEL READ.

Embower'd amid the Surrey Hills
The quiet village lay,
Two rows of ancient cottages
Beside the public way,
A modest church, with ivied tower,
And spire with mosses grey.

Beneath the elm's o'erarching boughs
The little children ran:
[illegible]s fleck'd the sward
[illegible]en Anne;

And then, as now, the children sang
Beneath its branches tall;
They grew, they loved, they si[illegible]
The true outlived them [illegible]
—But still the human flow'rets grew,
And still the children play[illegible]

[illegible]

'Twas Sunday morn, and Parson Vale,
[illegible]d of high and low,
With smiles for all men's happiness,
[illegible]
[illegible]rish-church
[illegible]ghters three:
[illegible]
[illegible]en—for with them went
[illegible]d Charles

"THE MID-DAY MEAL."—PAINTED BY H. B. WILLIS.—FROM THE EXHIBITION OF THE NATIONAL INSTITUTION.

## FINE ART EXHIBITIONS.

We have chosen our Exhibition Illustrations for this week from Suffolk-street and the Portland Gallery.

"The Mid-day Meal" of Mr. Brittan Willis, at the Portland Gallery, is a picture that will make Mr. Sydney Cooper look about him. The scene is an open field on the coast of Sussex, the time (of course) mid-day, the weather fine and healthy, the personages ploughboys, and the cattle such as Sussex mixed with Suffolk breed; the horses are lifelike, and the whole effect is very pleasing.

Mr. S. Read, whose poetic picture of a Country Churchyard we engrave this week, as one of the best examples of English art to be seen in the recently-opened Exhibition in Suffolk-street, has derived his inspiration from "Gray's Elegy":—

The curfew tolls the knell of parting day,
The lowing herd winds slowly o'er the lea,
The ploughman homeward plods his weary way,
And leaves the world to darkness and to me.

Now fades the glimmering landscape on the sight,
And all the air a solemn stillness holds,
Save where the beetle wheels his droning flight,
And drowsy tinklings lull the distant folds.

* * * * *

Beneath those rugged elms, that yew-tree's shade,
Where heaves the turf in many a mould'ring heap,
Each in this narrow cell for ever laid,
The rude forefathers of the hamlet sleep.

The breezy call of incense-breathing morn,
The swallow twittering from the straw-built shed,
The cock's shrill clarion, or the echoing horn,
No more shall rouse them from their lowly bed.

* * * * *

Let not Ambition mock their useful toil,
Their homely joys and destiny obscure;
Nor Grandeur hear with a disdainful smile
The short and simple annals of the poor.

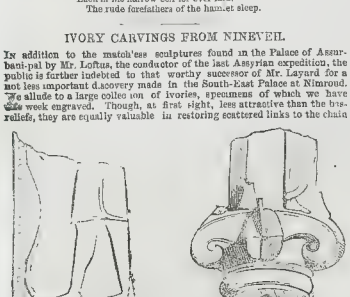
"A COUNTRY CHURCHYARD."—PAINTED BY SAMUEL READ.—FROM THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

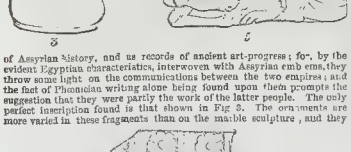
The following are the lines which the Artist has specially illustrated:—

Each in his narrow cell for ever laid.
The rude forefathers of the hamlet sleep.

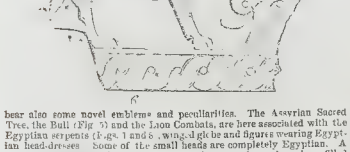
## IVORY CARVINGS FROM NINEVEH.

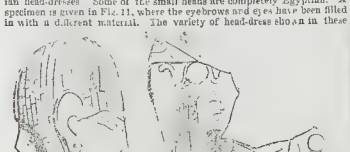
In addition to the match'less sculptures found in the Palace of Assurbani-pal by Mr. Loftus, the conductor of the last Assyrian expedition, the public is further indebted to that worthy successor of Mr. Layard for a not less important discovery made in the South-East Palace at Nimroud. To allude to a large collection of ivories, specimens of which we have this week engraved. Though, at first sight, less attractive than the bas-reliefs, they are equally valuable in restoring scattered links to the chain





of Assyrian history, and as records of ancient art-progress; for, by the evident Egyptian characteristics, interwoven with Assyrian emblems, they throw some light on the communications between the two empires; and the fact of Phœnician writing alone being found upon them prompts the suggestion that they were partly the work of the latter people. The only perfect inscription found is that shown in Fig 3. The ornaments are more varied in these fragments than on the marble sculpture, and they

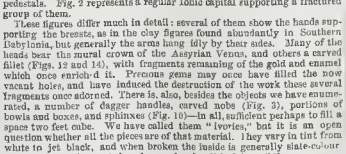




bear also some novel emblems and peculiarities. The Assyrian Sacred Tree, the Bull (Fig 5) and the Lion Combats, are here associated with the Egyptian serpents (Figs. 1 and 8, winged globe and figures wearing Egyptian head-dresses. Some of the small heads are completely Egyptian. A specimen is given in Fig. 1, where the eyebrows and eyes have been filled in with a different material. The variety of head-dress shown in these

fragments is also peculiar to them (Figs. 4, 6, 8, 10, 11, 12, 13, and 14) and bears no small title to those of the marble figures. One head (Fig. 7), appears to represent a negro. Another peculiarity of this collection is the large number of nude female figures which it contains. They are in some cases single, in others back to back, in groups of two and four, supporting on their heads a mass of floral decoration, and standing on ornamental pedestals. Fig. 2 represents a regular Ionic capital supporting a fractured group of them.

These figures differ much in detail: several of them show the hands supporting the breasts, as in the clay figures found abundantly in Southern Babylonia, but generally the arms hang idly by their sides. Many of the heads bear the mural crown of the Assyrian Venus, and others a carved fillet (Figs. 12 and 14), with fragments remaining of the gold and enamel which once enriched it. Precious gems may once have filled the now vacant holes, and have induced the destruction of the work these several fragments once adorned. There is, also, besides the objects we have enumerated, a number of dagger handles, carved nobs (Fig. 3), portions of bowls and boxes, and sphinxes (Fig. 10)—in all, sufficient perhaps to fill a space two feet cube. We have called them "ivories," but it is an open question whether all the pieces are of that material. They vary in tint from white to jet black, and when broken the inside is generally slate-colour. The material is laminated, and, carved and polished, has all the appearance of ivory. Some fragments look like wood, others bone, and a few resemble more the kind of clay of which the Turkish chibouque bowls are made. It has been suggested that the action of fire and their long deposit amidst the smouldered ruins may account for the varied colour, but that, we apprehend, would only affect the surface. We still think, therefore, that on minuter examination they will be found of different materials.



It is equally if not more difficult to determine accurately the object they originally formed. It may have been some article of furniture; and by turning to a former engraving (Nov. 3, 1855), where the King and Queen are represented, it will be perceived that the sofa, chair, and table there delineated are highly enriched, and might have borne ornaments as elaborate as these fragments. The number of nude figures and images of the Assyrian Venus found amongst them suggests the idea that they formed a shrine to that deity. Of one thing we are certain, they were made to fit together, because nearly all the fragments for instance, Fig. 11—have holes bored in them for pegs, others have grooves on the undersides, and slicks were found which fitted them perfectly. They have been so contrived either to facilitate their transport from one palace to another, or to give a little play to the junctions when the framework which they covered was subjected to the shrinkage inevitable in so hot and dry a climate. It may assist those who would study the subject to state that they were all found in one—the *Semeneef*—room of the Palace, precisely resembling that in, we believe, the South-West Palace at Nimroud, where Mr. Layard previously discovered a somewhat similar collection. The inquiry they open is the relation between the people of Assyria and those of Phœnicia and Egypt, and we must remember that there are unmistakable traces of Egyptian art in the ruins of Persepolis, still farther eastward; and also the mode of decoration employed on the objects which furnished those Assyrian palace temples, the walls of which were lined by the marble bas-reliefs now familiar to most of us.

## RURAL RIDES.

### SALE OF SIR CHARLES KNIGHTLEY'S HERD OF SHORTHORNS.

The Sale of Sir Charles Knightley's herd of Shorthorns took place at his seat, Fawsley Park, on the 3rd instant, and excited more interest than any event of the same character since that of Earl Dudley's. The herd was bred from some of the best blood in England. It had recently been crossed with a judicious purchase, the "Duke of Cambridge bull," from Mr. Tanqueray's sale; and the Baronet himself, from his position among the landed aristocracy and peculiar line of opinions, gave just that sort of piquancy to the transaction that common people try to obtain from ingenious advertisements. The result was an extraordinary attendance, in spite of a rainy day, and the absence of all information as to the time the auction was to commence, or the railway trains by which Weedon could be reached. It is believed that nearly 3000 persons were present at the sale, at which seventy-eight lots realised 9052 guineas, or an average of 80 guineas per head. The top price was reached by the Duke of Cambridge—83 years old—purchased by the Rev. F. Cator, at 330 guineas. This bull cost Sir Charles, at Mr. Tanqueray's sale, £280 guineas. On that occasion, however, 300 guineas were bid for him just after the hammer fell, Bocquet, under two years old, was bought by Mr. Sheppherd for 200 guineas. The dearest lot, perhaps, was a calf by the Duke, six weeks old, and decidedly delicate, which fetched 41 guineas. The prices, although good, were not equal to those obtained at Earl Dudley's, where the Duke, the sire of the Duke of Cambridge, was knocked down to an American competitor at 1000 guineas.

Fawsley Park lies about four miles from Weedon station. Beside the neighbours who flocked there—on wheels, on horseback, and on foot—the rail brought full trains from every point of the compass to which the many branches of the London and North-Western Railway extend. But scores were disappointed, in consequence of the advertisements naming neither the time at which the sale would take place, nor the trains by which Weedon could be reached; indeed, in common with several others, we were indebted to the special attention of the railway officials for the means of getting on from Blisworth to Weedon.

It is curious enough that Sir Charles Knightley, who has never been a friend to the extension of even common roads towards his estate, and has always been one of the sturdiest opponents of railroads should, at the close of his agricultural career, be so much indebted for a triumphant winding up of his accounts to the detested locomotives. The attendance quite outran the calculations of the innkeepers in the way of conveyances—vans, omnibus, flies, dog-carts, and yellow postchaises of ancient date were called into requisition; but many were obliged to trudge through mud as sticky as mortar, under a pelting shower. According to the custom of such sales, a large pavilion had been prepared, and stored with a cold luncheon; but the army of invaders quite defeated the liberal calculations of the commissariat, and by one o'clock the tables which a few hours previously had groaned under a bountiful supply of solid boiled and roast, were reduced to bare bones and crumbs—crusts there were none. But this was an inevitable misfortune which no one could have foreseen. The sale took place in a yard surrounded by waggons full of the anxious or the curious, topped with a sea of umbrellas; but there had been so little foresight in the choice of the place and arrangement of the seats that it was almost impossible for those who arrived after the first rush to either see the cattle or hear the auctioneer. One eminent Lincolnshire breeder and a purchaser to the extent of three hundred guineas was indebted to a seat on a ladder planted against an outhouse for the chance of securing the lots on which he had set his mind.

Outside the favoured circle of the waggon-seated, a busy crowd, umbrellaed, galoshed, and gaitered, wandered and held consultations in the mud, and from time to time sought shelter in the sheds, where, ticketed on each rump, deep in clean straw, stood the mild, plump, silky skinned stock, the sires and dames of future horned nobility, chewing the cud with the placid self-possession of pure aristocracy. The peer and the grazier equalised by enthusiasm in common pursuit exchanged opinions.

Breeders of all ranks and many countries, English, Scotch, Irish, French, American, and Australian, were commingled. Among the busiest was the Marquis of Tweeddale, Governor of Madras, inventor of one of the earliest hide-making machines, an experiment in steam cultivation, and lately before the agricultural world as the practiser of the extraordinary deep cultivation known as the Yester system. The Marquis, in his earlier foxhunting days, in Lincolnshire, often galloped his hack to a cattle fair, before meeting the hounds at Coversede, and the tastes of his youth appear not to have forsaken him. Lord Hill was there too, whose name so often appears at the Christmas Fat Shows as the success ul exhibitor of the Herefords; and Lord Southampton, one of the many instances of masters of foxhounds who are also good judges of the points of well-bred stock. From Cambridgeshire came Jonas Webb, of Southdown celebrity: if some one could put the constitution into the shorthorn that he has impressed on the Southdowns, it would be a wonderful improvement. From Notts came Mr. Sanday, so often a shorthorn prizeman from Lincolnshire, a member of the famous Wold farmers; and William Torr, of Aylsby, from Suffolk, whose pure Leicester sheep and shorthorns are equally well known; Barthropp, renowned for cart-horses, and a crowd of other names famous in the records of Midland stock-breeding and agriculture. Monsieur de Lion de Trehonnais, one of the proprietors and editors of the *Journal d'Agriculture Pratique*, who was on a visit to Fawsley Park, worthily represented French breeders; and there were many other foreign celebrities lost in the damp crowd. Indeed had the day been fine this would have been one of the most numerous and interesting assemblies of first-class agriculturists ever gathered together. Sir Charles Knightley defied the weather, and looked the character of the worthy Baronet to perfection; upright and active in spite of his three score and fifteen years, slight in figure, hawknosed, with the healthy, fresh complexion and cheery expression to be expected from a life spent in out-door sports and pursuits, and as often as possible in the saddle; it was very pleasant to hear him warmly expatiating to his friends on the special merits of each cow or calf, bull or heifer, of his own breeding for half-a-dozen bovine generations. It is curious to note that Sir Charles Knightley, who has steadily opposed every kind of change—social, mechanical, and political—who stuck to his road hack long after his neighbours had taken to post-horses or the mail coach, and posted by road when his neighbours were whirling along by rail—who supported the Old Smithfield cattle nuisance against the Islington model market; and who, among a series of other perfectly consistent exhibitions of prejudice, last distinguished himself at a Northampton agricultural meeting, by expressing his contempt for guano and chemical manures, should have taken a first-class place as an agricultural reformer and supporter of the greatest radical of the bovine race the shorthorn. When Sir Charles Knightley was born (in 1781), we believe we are quite safe in saying that the shorthorn was unknown as a distinct breed in the Northamptonshire pastures, and Northampton was then further from York than it is now from Ma sailes. The thick-skinned, slow-fattening, long-horned Cravens were the favoured county breed, and the weight of the hide was always taken into consideration in valuing a beast—the thicker the better. In 1810 the first public sale of shorthorns took place, when the herd bred by the founder of the race, Charles Colings, was sold after his death at prices equal to anything that have since been attained. For instance, the celebrated bull Comet brought 1000 guineas; the cow Countess, nine years old, 400 guineas; and a calf Lucilla (by Comet), under a year, 106 guineas—prices which have scarcely been equalled since until the sale of Earl Dacie's stock.

We should be curious to learn at what date Sir Charles Knightley overcame his prejudices against everything foreign, and began his useful labours in substituting the fast-fattening shorthorn for the original Northamptonshire breeds of his youth. At any rate, by making an exception to his anti-reforming tendencies in the matter of stock, he has done a service which could scarcely have been rendered by any one of less influence and fortune. After a long course of years, during which he has possessed himself of strains of very pure blood, he has by this last sale dispersed the best animals among a class of practical men who are likely to make them generally useful.

All the stock sold, except three or four, had been bred by the Baronet, and bred, apparently, so finely, that beef had almost superseded milk. Harmonious in symmetry and mellow in touch, cows and heifers alike were for the most part singularly deficient in that shape of udder that promises well for the dairy. It seemed as if a wet-nurse, in the shape of a coarser-bred cow, would be required to bring up the calves of several of the highly-bred, nobly-descended heifers. But the Duke of Cambridge, who comes of a more milking stock, was, according to the gossip of the sale, purchased specially to supply this deficiency.

At one period, about a quarter of a century after the Charles Colings sale, a reaction was brought about by the want of milk in certain strains of shorthorns, and prices were very much depressed. The late Earl Spencer's stock, towards the time they were dispersed, began to show signs of want of constitution. This deficiency has, no doubt, been increased by the high style of feeding which is deemed essential to produce the fashionable cube of flesh and fat without a point or wrinkle. We heard at Fawsley that the consumption of oilcake (a foreign importation, by-the-by) for the shorthorn stock was considerably over a ton a week. It is a pity that some one of influence has not the courage to put a stop to the stuffing process, which no breeder for profit practises until the time comes "for making stock up for sale."

The herd at Fawsley were, however, not nearly so fat as some we have seen at the agricultural shows. As for the farm buildings, nothing could be more primitive: no money had been wasted on ornament. They excited intense amusement among the Norfolk, Lincoln, and Leicester men, accustomed to the neatness, solidity, and convenience of the farm buildings erected by their great and improving landlords.

It is very fortunate that in this country the breeding of pure stock is a favourite and fashionable pursuit among our landed aristocracy; for there can be little doubt that, although one of the most fascinating, it is one of the least profitable of rural occupations; and that those who breed specially for profit are able to obtain picked animals of pure blood, the quality they require for a judicial cross at the sale of herds like Sir Charles Knightley's at infinitely less cost than if they had to breed them.

According to all appearances, for many years to come we may expect considerable purchases of our purest stock from the continent of Europe, from Canada, Australia, and the United States; America and Australia for their own meat markets; France and Germany, to supply our markets as well as their own. The stockowners of America and Australia form companies or partnerships to import the best animals; the chief foreign purchasers are the Government agents; but, although a temporary effect may be thus produced, so far all foreign breeding establishments have been found wanting in that stability of purpose and individual energy which is alone to be found among our hereditary landed aristocracy and the great farmers who thrive under them. The "States-man" who has created a first-class breeding farm has no means of perpetuating its existence—it often dies with him. There is as yet no class in the United States exclusively devoted to the improvement of the land and the cultivation of the pure breeds, on which quality of meat so intimately depends.

We, more fortunate, unite the activity of commerce with the solidity of hereditary agriculture, and while the reforming mercantile spirit improves our laws and extends our railroads, the conservative agricultural spirit breeds beef at a cost of 2s. 6d. an ox, that we may eat it at 7d. a lb.

## TO CORRESPONDENTS.

J. F. ENED.—Reason; Seine et Oise; J. T. Orcott. W. W. Stafford, Limerick. N. S.—We have not space.

A SUBSCRIBER writes: "In the report of Mr. G. F. Ansell's Lecture on Alkahest (in the ILLUSTRATED LONDON NEWS of March 29, page 332), it is stated that the jet of gas showed that the small mouse seized oxygen with avidity from what it could not feed, setting free the hydrogen and carbon in a fresh compound." Query—Is the latter statement correct? Has Mr. Ansell succeeded in decomposing carbonic acid? Professor Gregory, in a recent work, has stated that the most powerful chemical agencies have hitherto failed to decompose this gas, and that its decomposition has as yet been effected only by living plants under the influence of solar light.—E. G." The reply is as follows:—If Professor Gregory has stated that carbonic acid gas cannot be decomposed, except by the agency of a living plant under the influence of solar light, he has evidently missed his readers, as may be proved by the following experiment. Fill a vessel with dry carbonic acid gas, and pass into it some boiling potassium, a metallic deflagrating spoon; in an instant the potassium will take fire, burning most brilliantly. Allow the combustion to be complete, and the spoon to cool, then dip it into distilled water, and the charcoal will be deposited, and by washing it carefully, it will remain perfectly pure; then dry it and ignite it in pure oxygen, and from it reproduce the carbonic acid which was decomposed. Sodium answers equally well with potassium. This is the most simple method of performing the experiment; but there are many other means, which I shall be most happy to show the inquirer, if he will call upon me at the Panopticon any day or hour that will suit his convenience, although I do not for a moment wish to be viewed otherwise than as repeating an experiment long known to chemists.—G. F. ANSELL.

A READER.—The average price of the Three per Cent Consols in March, 1838, was 91¼; of the New Three-and-a-Quarter per Cents, 100.

BELL and DALDY, 186, Fleet-street

In a few days will be issued to subscribers, the First Part of

ANNALS of BRITISH LEGISLATION. Edited by Professor LEONE LEVI, F.S.A. In one of the most important Parliamentary Sessions on record, with measures of vital importance to the Empire, and with a Ministry whose every act is canvassed and criticised, it is obvious that a work which will place before the public, in a condensed form, the facts and reasoning upon which the Bills, Returns, Reports, and Debates of each Session are founded, will be of great value. The Editor of the Work will have the assistance of several gentlemen connected with the Legislature, and will endeavour to render the Work as complete as possible. Arrangements will be made with Mess. Hansard, Mess. Eyre and Spottiswoode, and other Publishers, for the insertion of Bills, Reports, &c., at a reduced price. The Work will be published in Parts, at intervals of about Three Months, and will be completed in Four Parts. Subscribers' names are received by Messrs. Longman and Co., Paternoster-row; Messrs. Smith, Elder, and Co., Cornhill; Messrs. Hall, Virtue, and Co., Paternoster-row; Messrs. Bell and Daldy, Fleet-street; Messrs. Simpkin, Marshall, and Co., Stationers'-hall-court; Messrs. Trübner and Co., Paternoster-row; Messrs. Whittaker and Co., Ave Maria-lane; Messrs. Ward and Lock, Fleet-street; and all Booksellers and Railway Stations.

A Finance, Commerce, Agricultural, Political, Literary, and Social Journal, published every Saturday, price 4d., stamped 5d.

"NO SUNDAY REST."—PAINTED BY CUFF. (SEE PAGE )

## "THE PARISH BEADLE," BY SIR DAVID WILKIE.

THIS fine picture—an excellent example of Wilkie's second style—was painted by Wilkie in the year 1823 for the late Lord Colborne, by whom it was bequeathed to the National Gallery. It is on panel, and measures two feet high by three feet wide. The price paid to the painter was three hundred and fifty guineas. Mr. Gambart or Mr. Agnew would to-morrow give (on speculation) twelve hundred guineas for it.

This bequest of Lord Colborne is an accession of moment to the National Gallery. Before this was obtained the Gallery had no good specimen of this great master in his second style. Wilkie had three styles. Of the first, "The Blind Fiddler," in the National Gallery, and "The Chelsea Pensioner," at Apsley House, are the most characteristic and valuable examples. Of his second style, "The Highland Whisky-Still," in the possession of the representatives of the late Sir Willoughby Gordon, "The Rabbit on the Wall," in Mr. Dobree's collection, and the picture we engrave, are excellent specimens. Of his third and last style, the "Columbus" and the "John Knox Preaching" are justly considered the best examples. Wilkie's third style is fairly represented by a picture in the Vernon Collection.

To tell the story of "The Parish Beadle" would be to insult the understanding of the commonest person. Two stories, however, may be told in connection with it.

When Fuseli saw "The Parish Beadle" at the Royal Academy Exhibition, he exclaimed: "Vell, vat dis? Is dis de new vay de Gueriens style?" and grinned horribly. The picture is rather black in colour.

The other story relates to the progress of the picture. Wilkie, it is well known, was unwilling to use his pencil on a Sunday—obeying the last injunction of Dr. Johnson to Sir Joshua Reynolds. On a part of this picture, however, he did work on a Sunday, and that portion was the monkey. His excuse was characteristic, and even jocular. He borrowed the monkey (it is a very fine one) from the museum at Exeter 'Change. "You see," he observed, "this gentleman is a public character, and can only be spared from his public duties on a Sunday."

Let us add that there is a very fine line engraving from "The Parish Beadle" by Abraham Raimbach, the admirable engraver of "The Rent Day" and other important works of Sir David Wilkie.

"THE PARISH BEADLE."—PAINTED BY SIR DAVID WILKIE, R.A.—FROM THE NATIONAL GALLERY.

Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, APRIL 12, 1856

## THE MAYNOOTH DEBATE.

A NEW war has commenced—a war infinitely more bitter, more damaging, and more deplorable than the war with Russia, which has just been brought to a premature, and perhaps unsatisfactory, conclusion. Mr. Spooner, a theological zealot, backed unfortunately by a large party in the House of Commons, has declared open war against the religion of six millions of his fellow-subjects in Ireland; has prevailed upon a temporary majority of the House to insult that faith and its priesthood; and to undo, in so far as a decision of one branch of the Legislature can undo it, the beneficent work of the last six years in a country that only needs repose from theological strife to learn how to prosper. The Government vainly opposed Mr. Spooner's motion for the disendowment of Maynooth; and has suffered the disgrace of defeat upon a question on the decision of which it ought to have staked its existence. Of course we cannot imagine anything so preposterous and so mischievous as that the House should ultimately pass the bill which Mr. Spooner has received permission to introduce; but that it should so far have encouraged the theological rancour of those who care nothing for justice, nothing for peace, nothing for charity, nothing for the consciences of those who differ from them, provided all these be placed in the balance against their own religious convictions, is a matter no less of scandal than of regret. Worse, far worse, than foreign war is the civil warfare of Religion. Ireland—that might be, and was rapidly becoming, a source of strength will become once more a source of weakness to Great Britain, if means be not promptly taken to repudiate the motion of Mr. Spooner to which, in an evil hour, the House of Commons has lent its countenance. What foreign potentate in the world, whatever his armies or his fleets, has it in his power to loosen the allegiance of six millions of British subjects? Not one. But what all the coalitions of Europe and America would be powerless to effect may be effected by religious hate, if its progress be not checked by that Assembly which, through inadvertence rather than from determination, has allowed it to achieve this temporary, but most unfortunate, triumph.

The question of the endowment of Maynooth must not be treated as a theological one. The House of Commons has nothing to do with theology, and is in no sense or way a theological body, or competent to discuss theological subjects. Part of its members are Protestant, considerable numbers are Roman Catholic, and many belong to sections of Protestantism which would, if they had the power, be as ready to destroy the Church of England as the Church of Rome. While the House keeps clear of religion, respects the consciences of those who differ from it, and comports itself as a purely secular body, charged with the making of temporal laws for a mighty nation, which has abolished all religious disabilities affecting Christians, and every disability but one affecting Jews, it conforms to the spirit no less than to the letter of the Constitution under which it is elected. But when it affixes, or attempts to affix, a stigma upon, and to break a solemn compact entered into with, millions of people who have the same right to be Roman Catholics that any member of the House of Commons has to be Protestant, it not only attempts to violate the Constitution, but does so in a manner the most pernicious. If Roman Catholicism were as powerful in Parliament as Mr. Spooner was on Tuesday night, Roman Catholicism might decree that Mr. Spooner was a nuisance that ought to be abated; that he was not a fit person to be intrusted with the electoral franchise or with a seat in the House of Commons; or, going still further, it might decree that he should be immured for life in a dungeon, or publicly branded as a dangerous heretic and enemy of the true faith. How would Mr. Spooner and his friends like that? Would they not lustily cry out against the persecution? Have the divine words never fructified in the

BLUE DIVISION "BRUNSWICK," CAPTAIN VILLIERS — WHITE DIVISION "COLOSSUS," CAPTAIN KEPPEL — RED DIVISION "ALGIERS," CAPTAIN CODRINGTON — LIGHT DIVISION "SANSPAREIL," CAPTAIN KEY

THE APPROACHING NAVAL REVIEW.—H.M. DIVISIONAL SHIPS OF THE GUN-BOAT FLOTILLA, AT MOORINGS OFF RYDE.—(SEE NEXT PAGE.)

minds of such persons, that, "with what measure ye mete, it shall be meted to you again"? It should be sufficient to them to be at peace with their own consciences, without troubling themselves about the consciences of others, who have the same right to their belief, and to their civil and religious liberties, that they have.

Certainly it may be wrong to pay for the education of Roman Catholic priests out of the public money. We will not take it upon ourselves to assert that it is right, or that if no one had ever thought of endowing Maynooth we should have been very grateful to the person who first brought forward the proposition. But it is as clear as noon, or clearer, that, if it be wrong to pay a small sum of the public money for the education of the poor priests of six millions of Irishmen, it is equally wrong, if not far more so, to pay large sums for the support of a Church in the same country which is not the Church of the people, and which scarcely numbers one million of adherents. If the grant to Maynooth be rescinded the doom of the Protestant Church in Ireland will be sealed. Mr. Spooner, perhaps, does not see the connection between the two, but there are many millions of persons in England who do, and who desire nothing better than to cut Religion adrift from all connection with the State, and to leave the Protestant Church in Ireland to stand or fall by the voluntary offerings of its own congregations. Voluntaryism has achieved one great triumph this Session, in the defeat of Lord John Russell's Educational Bill; but voluntaryism in the matter of Maynooth would be the first, and no inconsiderable, step to something far more serious the downfall of the Protestant Church of Ireland. How long the Protestant Church of England would maintain its State connection after such an event in the neighbouring country is not our present purpose to discuss; for we believe there is sufficient good sense and true patriotism in the present House of Commons to undo Mr. Spooner's work, and to consign his bil to the limbo of all other Parliamentary crudities, absurdities, and mistakes—the waste-paper basket of the House. We wish it were as easy to undo the moral effect of his victory upon the minds of the Irish people. When the State wants money, or soldiers, it never asks, or cares, whether the taxpayer or the hero be a Protestant or a Roman Catholic; and it is rather too bad that, ere the peace be well declared, which the money and the valour of all classes and sections of the people have won, theological bigotry should let out the waters of strife in a new direction, and insult a third part of the empire.

We do not hold the Government blameless in this matter. It had no business to be defeated. It was its duty to triumph over Mr. Spooner. But, now that it has been caught sleeping, it is more than ever its duty to be on the alert, and to give a final quietus to the unhappy agitation which it has allowed to assume such unlooked-for proportions. It is the duty of the Government to speak boldly out, and to stake its existence, or that of the present House of Commons, on the stability of the solemn contract made in 1845 by Sir Robert Peel. The question of Maynooth is not a religious one, though it may suit the purpose of Mr. Spooner and his friends to treat it as such. It is a question of national policy and good faith. The country that has just spent a hundred millions sterling, and shed the blood of thousands of its bravest sons, in order that Turkey should be admitted into the European system, is not the country, one would think, to reject from its own political system one-third o its loyal and well-disposed subjects, because it suits the prejudice of another portion of its subjects to treat the Roman Catholic faith as heresy and error. Could we believe that the House would sanction any further proceedings in the matter, or that the Ministry would not immediately end the scandal by a display of its authority, we should rejoice at the day which should end both the Parliament and the Ministry, and replace both by a Legislature and an Executive more in accordance with justice and with decency.

## H.M. DIVISIONAL SHIPS OF THE GUN-BOAT FLOTILLA OFF RYDE.

THE flotilla of gun-boats to which the ships in our Illustration belong consists of four divisions—each division numbering about fifty boats—and respectively named the red, white, blue, and light divisions: the three first divisions have their masts, masthead, &c., painted the colours of the division to which they belong, and the light division is distinguished from the others by having the mast-heads painted with black and white bands. All the boats are high pressure, and, when under steam, present a most extraordinary appearance: all the divisional ships are noble screw-vessels. The *Alpherd*, red division ship, is of 91 guns, the *Cokesure*, white division, 81 guns, the *Brunswick*, blue division, 81 guns, and the light division ship *Sarsparell*, 71 guns.

CLIFFORD'S NEW METHOD OF LOWERING SHIPS' BOATS AT SEA.—In the ILLUSTRATED LONDON NEWS of March 1 we drew attention to this important invention, and gave the very strong report in its favour of Captain Schomberg, R.N., the Emigration Officer of Liverpool, as made to her Majesty's Emigration Commissioners in Park-street, after experiments made by him for four days successively, at their instructions, from Messrs. Baines' splendid ship, the *Commodore Perry*, in the Mersey. In consequence of the favourable result of further trials at sea, at his suggestion, under Captain Westbrook, R.N., the Commissioners have now made its adoption compulsory in all vessels chartered by them for the conveyance of emigrants abroad. The determina ion the Commissioners have shown in the matter cannot be too highly applauded; as it was not till after repeated trials at London, Liverpool, Southampton, and Plymouth, all conducing to the same satisfactory results, that they caused its use in two boats carried by every ship they hire, to form a clause in their "charterparty" as it now stands with the shipowner. It is to be hoped that the same course will be taken with respect to transport that obtains to emigrant ships. Surely our brave officers and soldiers returning to their native shores after their suffer gs and privations deserve equal care and consideration with the emigrant and the parish pauper. The sad fate of the hundreds lost on board the *Birkenhead* and *Europa* are still fresh in our memories, and the official report at the time stated that "all might have been saved had time permitted for launching the boats." God forbid we should be found hereafter to be prophets, but it shall not deter us from giving a warning whilst there is time, and with this view we would ask the transport service to follow the praiseworthy and humane example of her Majesty's Emigration Commissioners.

MISSING FRIENDS IN AUSTRALIA.—In the advertising columns of most of the Australian papers a prominent place is given to notices of "missing friends," of whom there appears to be an immense number in that region. In this country, also, there is an active agency at work with a view to assist those who wish to obtain intelligence of missing friends and relatives, or to send information to them. A broadsheet is published once a month by Mr. Curtis, of Finsbury-street, consisting of an alphabetical list of persons who have gone to Australia and New Zealand and have not been heard of for some time. In many cases some reason is given, such as "money has been left" why information is required. These lists are forwarded monthly to the Australasian colonies, where they will, no doubt, be read with as much interest by many a wanderer as any of our newspapers.

## FOREIGN AND COLONIAL NEWS.

### CLOSE OF THE PARIS CONGRESS.

The *Moniteur* of Thursday announces that the Congress of Paris terminated its labours on Wednesday, at the Hotel of the Minister of Foreign Affairs. After the signing of the treaty, it is stated, the Plenipotentiaries had still to occupy themselves with different questions of a nature to consolidate and complete the work of peace. The ratifications will be exchanged at the end of the month. Immediately after the promulgation of the general treaty the protocols will be published, and will make known the labours of the Congress in their detail.

A despatch from Paris, April 16, in the *Morning Post*, says:—

The sittings of the Congress terminated to-day. The members were occupied with questions of detail in reference to—

1. The free navigation of the Danube.
2. The interior *régime* of the Principalities, and the arrangement of the frontiers.
3. The Situation of the Christians in Turkey.

For these purposes three Commissions are appointed:—

1. A Commission, named by all the Powers represented at the Congress, on the subject of the Danube.
2. A Commission named by all the Powers except Piedmont, on the Frontier question.
3. A Commission, named by all the Powers, with the addition of delegates from the Divan, to consider the position of the Christians

A telegraphic despatch from Vienna says: "One of the most important conditions in the Treaty of Peace is that the forts on the Circassian coast of the Black Sea are not to be rebuilt. In short, the *status quo* on the coasts of the Black Sea is to be maintained."

### EVACUATION OF THE CRIMEA.

The *Indus*, which left Constantinople, arrived at Marseilles on Thursday with letters from the Crimea to the 5th inst. The Sultan was pre ent at the grand review of the English troops. The Pacha of Varna has been arrested. Asli Pacha has been appointed to hear to London the Order of Medjidie conferred by the Sultan on Prince Albert. The Anglo Persian difference is not yet settled. The Turkish Ambassador at Teheran has demanded his recall. The Hatchumayoun has been received joyfully in Syria, at Rhodes. There have been disorders at Koniah, and great excitement in Armenia. Kinburn and Eupatoria are to be first evacuated. The British siege artillery is beginning to be embarked.

### INSURRECTION IN TURKEY.

A telegraphic despatch announces that an insurrection has broken out at Belgradchick, in Bulgaria, near the Servian frontier. A Bulgarian, formerly an officer in the Russian service, professes an intention to expel the Turks in the name of Russia. He is at the head of two or three hundred men.

### THREATENING ASPECT OF AFFAIRS IN ITALY.

Letters from Central Italy say that the excitement to learn the decision of the Congress on Italian affairs is most intense there; and that, should the judgment be adverse to all their hopes, the disappointment of the people will be proportionately bitter, and, in despair of ever obtaining justice by such means, they are extremely likely to follow the counsels of the wildest Republican leaders, who are now, as always, active and ready to take advantage of any circumstance to exasperate the multitude against the Moderate party, even though in so doing they play the game of Austria and Rome.

The conduct of General Cremsville at Parma is universally condemned. Not content with administering military law with all the force of despotic power and summary punishments, he now tramples on every vestige of independence belonging to the Farnesan Government. Arrests *on suspicion* have lately been made on a large scale. Of those arrested many are kept in confinement, and few liberated, and one night last week thirty persons, who had not even undergone an examination, were taken from the gaol at Parma, and sent off in carriages under escort to Mantua. The excuse for this arbitrary proceeding is that the political prisoners are *suspects*, and therefore dangerous to society, on which plea an Austrian General ventures to capture the citizens of a neighbouring State, and transport them to an Austrian fortress! General Cremsville is about to take military possession of other points of the Parma territory—viz., the fortified places of Bardi and Compiono, and the open town of Pontremoli, all towards the western and the south-western frontier, where no crime or disturbance has given the slightest colour to an apology for such occupation.

### THE INSURRECTION AT VALENCIA.

The Madrid journals of the 9th and 10th inst. contain details of the insurrection at Valencia on the 6th of April. In the morning of that day, whilst the municipality was proceeding to draw for the conscription, a numerous body of insurgents rushed in, crying, "Down with the authorities! No conscription!" and, amidst threats of death to the members of the municipality, proceeded to break the urns. The Alcalde, who attempted to restore order, was fired at by the insurgents. The insurgents were headed by firemen and national guards, but were for the most part labourers from the railway. After expelling the Mayor and his colleagues from the building, the insurgents proceeded to the Plaza San Francisco. The Captain-General, hearing of what had taken place, published a bando; but, as it produced no effect, he marched against the insurgents at the head of a column of 300 infantry, 50 cavalry, and 4 pieces of artillery. The insurgents, who were in the balconies and windows, received him with a sharp fire, which caused him some loss, and he fired his cannon against them; but the insurgents resisted desperately, and bands of them spread over the city and attacked several guardhouses. After three hours' combat, in which the cavalry took part, the insurgents were dislodged from the houses, and were compelled to retreat. The number of killed and wounded on both sides was about forty; and it is now said that amongst the slain were six soldiers and a Lieutenant.

A Barcelona paper, the *Propreso*, says that the insurgents erected a barricade in the Calle de Carniceres, and that 300 of them defended it with such energy that it was not carried without "great loss," both amongst them and the troops. It says also that their rallying cry was "Viva Espartero! Vive liberty!" General Villalonga, the Captain-General of the city and province, published, on the 7th, an address to the National Guard, exhorting them to co-operate with the troops in preserving order. On the 8th a Military Commission was instituted, and 150 insurgents captured with arms in their hands had been taken before it. The greater part were sent to the fort of Murviedo; the others were detained to be otherwise dealt with. Troops arrived in the city from Barcelona on the 9th, and others had been dispatched from Madrid. The last telegraphic accounts published in the *Gazette* announced that tranquillity continued; but that groups, displaying considerable agitation, persisted in remaining in the streets.

The *Epoca* says that the movement of Valencia had ramifications at Murcia, Carthagena, and Barcelona.

### AMERICA.

By the arrival of the *Persia* steam-ship at Liverpool, on the 12th inst., we have news from New York to the 2nd inst.

The news from Nicaragua is of a highly interesting character. Costa Rica had declared war against General Walker, in reply, had issued a proclamation stating that the Democratic party of Nicaragua had invited him to espouse their cause, and that he had endeavoured to carry out the principles of the Revolution of 1854; that the Legitimist party had resisted all efforts at reconciliation, and there was no resource but war. General Walker, with 500 men, had crossed the lake to Virgin Bay. The Government of Costa Rica had issued an address calling on the people of Central America to destroy the North American invaders. The *New York Daily Times* considers Walker's position to be one of much peril, from which, however, he will probably recover himself.

The Presidential election to all appearance, will hinge upon the Kansas question. Mr. Fillmore's nomination seems to meet with general repudiation in all the free States. His strength is confined to the slave States, and in none of those can he stand against the Kansas Democrats. The South generally goes with the Democratic party, and is sure to do so now, since that party has committed itself irrevocably to the cause of slavery propagandism. The Know-Nothings, from the history of confederation the lines are drawn definitively between slave and free states. It is known that the Know-Nothings, who repudiate Mr. Fillmore, are to meet in a convention in New York June 12th, and it is generally believed and understood that they will put up Colonel Charles James Frémont, of California, for the Presidency; and that his nomination will be confirmed four days later by the free state convention in Philadelphia.

The steam-ship *Illinois* had arrived from Aspinwall, with the semi-monthly Californian mails and about one million and a quarter in treasure. The Indians were continuing their depredations in the northern section of the state. On Rogue river about 300 of them had made an attack upon the settlers and some United States' soldiers, who defended themselves as best they could; but, after fighting nearly a whole day, they were overpowered, and an indiscriminate slaughter of men, women, and children took place. Rumours of a new filibustering expedition, to be directed against the Isthmus of Tehuantepec, were afloat in San Francisco. During the fortnight an active business has been done in staple articles, but money continued tight, which caused some considerable running about among the Hongkong on steamer day.

Dates from Mexico to the 18th ult. state that the insurgents at Puebla were confined to the cathedral of San Augustin, and were suffering from want of provisions. An outbreak had taken place at Guadalajara, in which some two hundred persons were engaged, but it was supposed it would be promptly suppressed. Late letters from Lower California announce the discovery of new and very rich gold and silver mines, some of the products of which had already reached La Paez.

### THE OVERLAND MAIL.

Letters and papers in anticipation of the Overland Mail have been received. The dates are—Calcutta, March 10; Bombay, March 19. Lord Canning reached Calcutta on the 29th of February, and was immediately sworn in Governor-General. The Santhal insurrection has closed; 14,000 Santhals have sought and found work on the railway passing by their hills. Peace and prosperity universally prevail. Everything continues quiet in the kingdom of Oude. The troops have rendered their services to us to a man. A portion of them for a short time hesitated, under the apprehension that they might be compelled to shave: on being assured that the bushiest of beards were no objection, they enrolled themselves at once. The villagers seem to experience equal astonishment and delight at receiving prompt and punctual payment for everything required from them for the public service, and at being treated to give or to withhold whatever they please. Nothing has been heard within the last month in reference to the proceedings at Herat, or threatened hostilities with Persia.

## OBITUARY OF EMINENT PERSONS.

### EARL COWPER.

GEORGE AUGUSTUS FREDERICK COWPER, sixth Earl Cowper, Viscount Fordwich, Baron Cowper, of Wingfield, Kent, and Lord Lieutenant of that county, a Baronet, and a Count of the Holy Roman Empire, died suddenly at Madgiton on the 15th inst. The Earl was the eldest son of Peter Leopold Louis Francis, the fifth Peer, by his wife, Amelia, daughter of Penston, first Viscount Melbourne, which lady married, secondly, in 1839, the present Viscount Palmerston. The Earl was born the 26th June, 1806; and succeeded, as sixth Peer, at the death of his father, the 21st June, 1837. He formerly was in the Horse Guards, and represented Canterbury in the House of Commons prior to inheriting the peerage. He was in 1834, for a very short time, an Under Secretary of State. He was in politics a Whig. He married, the 7th October, 1833, Anne Florence, eldest daughter and coheiress of Thomas Philip, present Earl De Grey, by whom he leaves issue two sons and three daughters. He is succeeded by his elder son, Francis Thomas De Grey, now the seventh Earl, who was born the 11th of June, 1834. The Cowpers are an old Kentish family. The first Earl was Lord Chancellor. His only brother, Spencer, who was tried and acquitted of murder, afterwards became a Judge of the Court of Common Pleas, and was grandfather of Cowper, the poet.

### THE RIGHT HON. GEORGE LIONEL DAWSON DAMER, OF CAME HOUSE, DORETSHIRE.

THIS gentleman, whose patronymic was Dawson only, and who assumed the surname of Damer, at the death of his aunt, Lady Caroline Damer, was the third son of John Dawson, first Earl of Portarlington, by his wife, Caroline, daughter of John, third Earl of Bute. He was born the 29th Oct., 1788, and early in life entered the British Army, where he attained the rank of Colonel, and served at Waterloo. He was made a C.B. in 1816. He sat in Parliament, from 1835 to 1847, for the borough of Portarlington, and, from 1847 to 1852, for the borough of Dorchester. He steadily supported the political measures of the late Sir Robert Peel. He filled the office of Comptroller of the Queen's Household from 1841 to 1845, and was made a Privy Councillor in 1841. The right hon. gentleman married, the 30th of August, 1826, Mary Georgiana Emma, second daughter of Hugh Seymour, by whom (who died the 30th of October, 1848) he has had issue one son and four daughters; two of whom are married, viz., the Viscountess Ebrington and Mrs. Frances Sutton. Mr. Dawson-Damer died on the 14th inst. at 23, Wilton-crescent. His only son and successor, Lionel Seymour William, an officer in the Scots Fusilier Guards, is married to Harriet Lydia, second daughter of Major-General Lord Rokeby.

WILLS AND CHARITABLE BEQUESTS.—The will of Sir Henry J. J. Hunloke, Bart., of Wingerworth Hall, was sworn under £10,000 personalty; Sir James Eglington Anderson, M.D., of Harley-street, £16,000; Benjamin Marsden, Esq., of Regents'-park, formerly wine-merchant, £200,000; Charles Hampden Turner, Esq., of Rooks'-nest, Surrey, £175,000; John Harvey, Esq., formerly of the Inner Temple, £30,000; Turower R. Herring, Aldermanbury-street and Finchley, £70,000; Brereton Gobbins, of Smethwick, Stafford, glass-manufacturer, £25,000; Richard Shuter, formerly of St. Martin's-court, trimming-manufacturer, £25,000; the Rev. Henry Du Cane, of the Grange, Witham, Essex, £40,000; the Rev. Solomon J. Stone, M.A., late of Bermuda, £6000, within the city of Canterbury; Mrs. Rebecca Standen, of Brighton, £14,000, and has bequeathed to the Sussex County Hospital £300. Miss Mary Hayley has given £500 to the schools and visiting societies in the Harrow-road, in connection with the Lock Hospital, £100; Sailors' Home, £100; City Mission, £100; Church Pastoral Aid Society, £100; and to the Society for the Propagation of the Gospel in Foreign Parts, £100.

FIRST ENGLISH BALL IN THE CRIMEA.—Last night (March 31), soon morning at eight, and terminating at two, a capital dance was given on board H.M.S. *Bruiser*, lying in Balaclava Harbour, to commemorate the wedding-day of the Captain and his wife, Mr. and Mrs. Comyn. It likewise so happens that Mr. Comyn was married on his birthday. During the last week great difference of opinion had been flying about as to whether an "evening party" could have been got up on account of the scarcity of ladies, and the distances on horseback that these few would have to come, in addition to which the weather was by no means warm, and during the day snow fell. The *Bruiser* is a companion screw-steamer to the *Abundance*, both lying at the head of the harbour; and both being Commissariat vessels, the former crushed the wheat, and the latter baked the flour, whence they can turn out 13,000 lb. of bread daily, or 6000 3lb. loaves. Amongst the company present at this dance, which numbered about eighty, I noticed Lady Frederick Fitzroy, Mrs. White, Mr., Mrs., and Miss Drake, Mr. and Mrs. Rice, Major De Molleyns, Captain Martin, Mr. and Mrs. Marzetti, Captain and Mrs. Handyside, &c., &c. The 82nd band was in attendance. At twelve o'clock the company sat down to a first-rate supper on the upper deck, which was most beautifully arranged for the purpose. After the health of the Queen had been given, with all the honours, that of the Emperor, Empress, and the Imperial heir followed, and was duly responded to by Captain Drake, 97th Regiment, the Commissary-General in Chief, Mr. Dyake, C.B., proposed Mr. and Mrs. Comyn's health in a most happy speech.—*From a Private Correspondent.*

FRENCH CUP.—It is currently reported that a gold cup, value £50, with another £50 given by Marshal Pelissier, is to be contested for by the English army shortly, over a steeplechase course. The cup, some say, is to be formed out of a Russian shell, mounted in silver.—*From a Private Correspondent.*

HOUSE OF LORDS, 8TH APRIL.—COMMITTEE OF PRIVILEGES.—The House sat this day to consider the claim of Lord Fermoy. Sir F. Thesiger, Sir Fitzroy Kelly, Mr Peter Burke, and other learned counsel, appeared for his Lordship. Mr. Napier, Q.C., pursuant to an order of the House, was heard against the claim. The Judges were summoned. Among the Lords present were the Duke of Argyll, the Earl of Derby, Lord Lyndhurst, Lord Campbell, and Lord St. Leonards. The question, after argument, resolved itself into a point of law, which was referred to the Judges, who took time to consider.

STATE DINNER TO THE PLENIPOTENTIARIES.—On Saturday evening the Emperor gave a banquet to the members of the Congress in the Hall of Marshals at the Tuileries. All the members of the Congress had been invited, together with the Foreign Ministers, the Cardinals, the Ministers of the Emperor, the Marshals, the Presidents of the great bodies, the high officers of the Crown, the Ambassador of France in London, the Governor of the Invalides, the Grand Chancellor of the Legion of Honour, the Grand Referendary of the Senate, the senators, deputies, high functionaries of the State, and the chief civil and military officers of the Emperor's household. The Emperor had on his right the Excellency Lord Clarendon, and on his left his Excellency Count Buol. His Imperial Highness Prince Napoleon sat facing the Emperor. He had on his right his Excellency Count Orloff, and on his left his Highness Ali Pacha. Towards the end of the dinner his Imperial Majesty pronounced with a firm and emphatic voice the following words:—"I propose a toast to the union so happily re-established between the Sovereigns. May it be lasting; and it will be so if it reposes always on right and justice, and on the true and legitimate interests of the peoples." These words were received with unanimous cries of "Long live the Emperor!" After the banquet the Emperor passed into the saloon before the Hall of the Throne, and the assembly remained until ten o'clock. During the banquet the band of the Guides and the chorus of the Conservatory performed alternately some pieces of instrumental and vocal music.—*Moniteur.*

The band of the Blues performed in Kensington Gardens on Sunday last for the first time this season, and an immense concourse of people of all ranks assembled.

## STATISTICAL ABSTRACT FOR THE YEAR 1855.

THERE is no official document more interesting and instructive than the Statistical Abstract of the United Kingdom. It is an annual register of trade and commerce; a microcosm of mercantile and social life. The Abstract is now in the third year of its existence, ranging from 1841 to 1855, both included, and is improved by the addition of two tables showing the real value of the imports, and of the foreign commodities exported. It is a living panorama of industry. Under separate heads it shows the past and present state of revenue and expenditure, and the condition of our National Debt; the amount of our imports, exports, and transhipments, specifying the nature and extent of our transactions with every country on the globe; the progress made in building and registering our sailing and steam vessels; the employment of our shipping both in the home and foreign trade; the prices and sales of corn in all the towns where the averages are computed; the amount of gold, silver, and copper moneys coined at the Royal Mint; the condition of the savings-banks and of the Bank of England; the state of pauperism and of emigration. Such are the contents of this most useful publication—valuable to living statesmen, invaluable to future historians, as an authentic work of reference. Compiled from year to year, it offers to the student of finance sure data and terms of comparison, by which he may arrive at a sound judgment on the progress and decline of the home and foreign trade.

We learn from this document that, in 1841, the revenue paid into the Exchequer amounted to 48,084,339*l.*, while the expenditure reached only 47,787,769*l.*, the deficiency being 296,570*l.* In the two last years of war, 1854 and 1855, the revenue, expenditure, and deficiency have been much greater. In 1854 the revenue amounted to 56,322,509*l.*, and the expenditure to 60,081,568*l.*, while the deficiency reached to 3,209,059*l.* In 1855 the revenue was increased to 63,364,605*l.*, and the expenditure to 84,505,788*l.*, while the deficiency swelled to the large sum of 21,141,183*l.* In both years the deficiency was provided for by loans and Exchequer Bills and Bonds.

The fluctuations in many of the prime sources of revenue from the extreme points compared—that is, from 1841 to 1855, both included—are worthy of notice. In 1841 the Customs yielded 21,898,811*l.*, but in 1855 declined to 20,987,752*l.* In the same periods the Excise increased from 13,678,836*l.* to 16,389,486*l.* The variation in the Stamps was trifling, but shows a decline. In the Post-office the increase has been enormous. In 1841 that department only yielded 455,000*l.*; but, in 1855, 1,137,220*l.* As would be expected, the great source of revenue has been the Property-tax. It did not exist in 1841. In 1842 it only gave 571,055*l.*, but had not then come into full play for a whole year. In 1843 it yielded 5,249,261*l.*, but in 1855 it poured into the Treasury 13,718,185*l.*, a trifle more than the Excise in 1841. As the Property-tax, in some form or other, is likely to be permanent, it may be well to exhibit its sustaining power. In 1841, when not levied, the revenue amounted to 48,084,339*l.*; in 1855 it amounted to 63,364,605*l.*; difference in excess, 15,274,246*l.*, to which the Property-tax contributes 13,718,185*l.*; so that, independently of it, all the other sources of revenue together only return an increase to the Exchequer of 1,561,061*l.*, comparing the years 1841 and 1855—an incontrovertible proof that the working classes, compared with the propertied classes, have relatively made but a trifling advance in their command over the good things of this life.

It is disheartening to perceive that our National Debt, so far from having undergone any diminution in the periods compared has slightly increased. In 1841 the figures give us 790,874,608*l.*; in 1855, 793,375,199*l.*

The real value of imports (as distinguished from the old and deceptive scale of official values established in 1694, and which was nothing more than a measure of quantity) was not ascertained before 1854, in which year they amounted to 152,591,613*l.*; and in 1855 to 143,850,505*l.*—a decline of 8,741,008*l.*, which may be regarded as temporary—the result of the war.

The quantities of raw cotton imported into the United Kingdom from various countries from 1841 to 1855 show a steady advance in our manufacturing system. In 1841 it amounted to 487,992,355 lb.; in 1855, to 891,752,002 lb. In wool (sheep, lamb, and alpaca) the increase has been in the same periods from 56,170,974 lb. to 99,300,446 lb. The total declared values of British and Irish produce exported from the United Kingdom figured in 1841 at 51,545,116*l.*; and in 1854, to 97,184,726*l.* Of this aggregate of exports foreign countries took 63,832,528*l.*; and British possessions, 33,852,198*l.* In British possessions, Australia proved our best market, taking goods to the value of 11,931,352*l.*; whilst the East Indies took 10,025,969*l.* On this point two comments may be made: that any delay in steam postal communication to such a customer as Australia is most unwise; and that, as the sparse population of Australia buys more from us than the teeming population of the East Indies, the fair inference is that the resources of the latter country are most negligently developed. The exports of 1855 are slightly less than those of 1854, yielding only 95,669,380*l.* The difference may be fairly put to the account of war; and it is a matter of congratulation that the decline is so insignificant.

Table 21 gives a return of the total tonnage of British and foreign vessels respectively, entered and cleared with cargoes and in ballast at ports in the United Kingdom; and shows the vast expansion of maritime commerce. In 1841 the total amounted to 9,418,547 tons; in 1855 it had doubled, being 18,489,470 tons.

The return of sailing vessels and steamers built and registered is interesting. Of the former we built fewer in 1855 than in 1841; but the tonnage was much larger. Thus, in 1841, we constructed 1063 ships, measuring 148,215 tons; in 1855, 865 ships, measuring 242,182 tons. In 1841 we built forty-eight steamers, measuring 11,363 tons; in 1855, 233 steamers, measuring 81,018 tons. In 1855 we had afloat, employed in the home and foreign trade, 17,828 ships—sailing vessels and steamers included, but river steamers excluded—measuring 3,990,170 tons, manned by 168,537 sailors, exclusive of masters. It may be well here to observe that, in reference to our mercantile marine, the home trade signifies on the coasts of the United Kingdom, or to ports between the limits of the river Elbe and Brest, while the foreign trade includes all ports beyond those limits.

The *Gazette* prices of wheat in 1854 and 1855 were, respectively, 72s. 5d. and 74s. 8d. In 1855 the quantity of British wheat sold in the principal market-towns in England and Wales was 5,255,874 quarters; of barley, 2,608,852 quarters; of oats, 816,688. There is no corresponding return for Scotland or Ireland.

The gold coined at the Mint for the last four years may be thus tabulated:—

| | | | | |
|---|---|---|---|---|
| 1852 | ... | .. | .. | £4,742,270 |
| 1853 | ... | .. | .. | 11,902,101 |
| 1854 | ... | .. | .. | 4,152,193 |
| 1855 | ... | .. | .. | 9,008,663 |

The population of England and Wales, estimated for the middle of the year, and including army and navy, and merchant seamen at home, was estimated in 1841 at 15,929,000; and in 1855 at 18,786,000. The Registration Act for Scotland only came into operation on the 1st January, 1855, and the population in that year is put down at 3,004,290.

The year 1849 is the first year for which the actual number of paupers receiving relief on a given day can be returned in the several unions and parishes under Boards of Guardians in England and Wales. According to the last Census, that of 1851, the population of those unions and parishes was 16,250,861. In 1849 the total number of indoor and out-door paupers was 934,419; and in 1855, 877,767. This is exclusive of vagrants.

In Ireland the diminution is remarkable. The account is made up to the first week in January of each year. In 1849 the numbers were 620,747; in 1855, they only amounted to 86,819; and on the last of January of the present year the list fell to 73,088.

In Scotland the pauper returns are made up to 14th May in each year. In 1849 the numbers were 82,357; in 1855, 79,887.

Emigration was greatest in 1852, including 368,764 persons; in 1855 it fell to 176,807 persons.

## *COUNTRY NEWS.*

### METEOROLOGICAL OBSERVATIONS AT THE HIGHFIELD HOUSE OBSERVATORY, NEAR NOTTINGHAM.

*The range of temperature during the week* was 26.

*The Weather*.—On the 9th, fine; 10th, rainy; 11th, fine—from 4 p.m. rainy; 12th, fine from 9 a.m., and for the remainder of the week.

*The direction of the wind* was—on 9th W.S.W., became S.W. at 2½h. a.m., S.S.W. at 9h. a.m. S.W. at noon, W.S.W. at 4h. p.m., W. at 6h. p.m., in which quarter it remained until 9h. 40m. a.m. on 10th, when it changed through the N. to E., passing at 4½h. p.m., back through N. to S.W., becoming W. at 8½h. p.m.; W.S.W. at 5½h. a.m. on 11th, S.W. at 7½h. a.m. W.N.W. at 2½h. p.m., N. at 4½h. p.m., N.E. at 10½h. p.m.; S. at 2½h. a.m. on 13th, S.S.W. at 6½h. a.m., W. at noon, W.N.W. at 6 p.m., S.W. at 10½h. p.m., S.S.W. at 9½h. a.m., W.S.W. at 4½h. p.m., S.W. at 7½h. p.m., N.N.W. at 2½h. a.m. on 15th, S.W. at 6½h. a.m., S.S.W. at 10½h. a.m., S.W. at 2½h. p.m., W. by S. at 11 p.m., W.N.W. at 8 p.m., N.W. at 8½ p.m., N.N.W. at 9½ p.m., N. at 2½ a.m., N.N.E. at 11½ p.m., N. at 1½ a.m. on 14th, N.N.E. at 2½ a.m., N.E. at 3½ a.m., N.N.E. at 6½ p.m., N.E. by N. at 10½ p.m.; N.E. at 9 a.m. on 16th, N.E. by E. at 10½ a.m., and N.E. by N. at 2 p.m. A gale was blowing from 3 p.m. on 14th; the greatest pressure being 5½ lb. on square foot at 12½ p.m. on 15th, the maintaining minimum pressure never being less than 1½ lb. from 2½ p.m. till 4½ p.m. on 15th

12th. Blackbirds nest with young ones. 14th, Jargonelle pear came into bloom.

E. J. LOWE.

RESTORATION OF BRAINTREE CHURCH.—At length there appears to be some prospect, owing to the untiring exertions of the Rev. J. D Browne, the Vicar, that this fine old edifice, which has been rapidly going to ruin, will be restored and considerably enlarged, to meet the wants of a rapidly-increasing congregation. The present structure of the parish church of Braintree was erected in the reign of Edward III., and is a remarkable fine specimen of the ecclesiastical architecture of that remote period. To save this noble fabric from total destruction, and render it once more a fitting temple for the service of the Almighty, large funds are requisite. It is impossible to raise in the parish anything like the sum required, and no alternative is left but to appeal to the Christian sympathy and liberality of all who feel an interest in the spread of pure and evangelical doctrines, and the celebration of God's holy service and ordinances. There is, we understand, a deficiency of nearly two thousand pounds, and the work cannot be carried on unless the public at large will respond to the earnest and pressing appeal of the Vicar and church wardens, and rescue the fine old edifice from total ruin. Our readers are aware that Braintree was the scene of the memorable contests for church-rates, and here the battle was fought, and for nearly twenty years the Braintree case has been before the public, and the litigation that has ensued in consequence will not soon be forgotten. The Rev. J. D. Browne, who has been Vicar only about four years, has been anxious to conciliate all parties, and is desirous of seeing the church restored by voluntary contributions, and he makes his present appeal with much confidence to the public, to aid him in a great, good, and glorious work.

MEETING OF WOMEN AT LEICESTER.—A meeting of women was held in the Townhall, Leicester, on Monday night, to consider the laws relative to the protection of women. The handbills convening it stated that no men would be admitted, "excepting, of course, gentlemen of the press." At seven o'clock about 200 had assembled. The majority were females of middle age, of the operative class, but in general respectably attired. A Mrs. Woodford was voted to the chair, and the principal speaker was a Mrs. Wigfield, who made some really clever speeches. The injustice of the present laws, by which a woman is deprived of all control over her own earnings and offspring, was vehemently denounced, and it was unanimously resolved to support the motion of Sir Erskine Perry for a revision of the marriage laws. A petition to the House of Commons, praying that it might be adopted, was unanimously agreed to, and the proceedings, which were conducted with great order and propriety, terminated soon after nine o'clock, by the singing of the National Anthem. It was agreed, with one dissentient, not to support Mr. Dillwyn's measure for introducing flogging as a punishment for wife-beaters.

THE SHEPHERD BOY'S WAY IN THE WORLD.—The following advertisement appears in the *Times* of Saturday:—"The President and Committee of the Kirkby Londesdale Mechanics' and Literary Institution have safely received the truly valuable gift of books, coins, shells, &c., to the above institution by "One who was an illiterate Shepherd's Boy, who drove coal-carts through the town of Kirkby Lonsdale now more than sixty years ago, and beg he will accept their most grateful thanks."

A HERD OF RABID DEER.—Rabies, or hydrophobia, we regret to say, has shown itself to such a serious extent in Stainborough Park, near Barnsley, as to excite the alarm of the inhabitants of that locality, and to attract the attention of medical men. The disease first began to show itself on a small scale in the latter part of the last or early in the present year, immediately after a mad dog is said to have been running in the locality, and which is supposed to have communicated the contagion. Nearly 100 deer have already fallen victims to its effects. While in a state of disease these otherwise innocent and playful animals foam at the mouth, worry each other like dogs, and tear off each other's hair and flesh; and, when placed in a state of confinement, bite at whatever comes within their reach.

MURDER OF MRS. KELLY.—The jury having returned a verdict of "Wilful Murder" against two persons unknown, it was not thought expedient to examine many witnesses. The police have found in some of the houses on the lands of Mrs. Kelly articles supposed to have been worn by the murderers for disguise: they consider that they have the means of further discoveries. The magistrates are now receiving information in private. There are five persons in custody.—Mr Stevens and four tenants. The Lord Lieutenant of Ireland has caused a reward of £100 to be offered for such information as may, within six months, lead to the arrest of the assassins.

CONVICTION OF TWO OF THE MURDERERS OF MISS HINDS.—James Murphy, and Thomas Dunn, implicated in the most atrocious murder of Miss Hinds, were last week found guilty. The evidence was clear and brought the fact home to the miscreants beyond all shadow of doubt. One of the worst features in the case is the fact that the circumstance of the murder was known to all the peasantry in the neighbourhood, and not a hand was raised to protect a kind-hearted woman. The Lord Chief Justice, in his charge, thus describes what occurred:—"It appears, according to the allegation, and of that there can be no doubt, that upon the estate of this lady, Miss Charlotte Hinds, whose murder forms the principal subject matter of inquiry, a wide conspiracy was formed amongst the tenants of her property, the result of which was, that she was murdered almost in the noonday, in the presence of two or three persons, and that the persons, whoever they were, who perpetrated that offence, were so secure, as they thought, that no concealment of any kind was used; that they attacked her in the open day, that they waited away after the commission of the offence, and that persons were waiting to convey them across the river."

HUMBOLDT'S FELLOW-TRAVELLER.—Great interest was created at the last sitting of the Geographical Society of Paris by the reading of a letter from M. de Bonpland to one of the members. The Nestor of French travellers and naturalists announces in it his intention to return to Paris and to hire lodgings in the Rue du Mont Thabor—only, however, in order to deliver to the Museum his collections and manuscripts, and then to return for ever to his plantations in Uruguay. M. de Bonpland is now 83 years of age.

## NOTES OF THE WEEK.

THE week has not been productive of many topics of interest—public, social, or domestic. We all seem to be in an expectant attitude. There are several matters approaching of various importance, and each entitled in its turn to occupy the world's attention; but in the meantime we are sadly dull. There is the treaty, with all its ramifications; there is the grand naval review, arranged in order that, now the war is over, our sailors may see something like fighting; there is the rejoicing, which might have been less palpable but that it is to be adroitly mixed up with the birthday of our beloved Sovereign, and if we cannot cry "Victory" we can heartily cry "Victoria;" there is the expected presence of a young Prince upon an interesting errand, and thousands are securing, in a spirit of honest affection and not of servility, the new and pleasant portraiture of the young lady chiefly concerned in his visit; there is the old Opera to reopen with the Cardinal's niece; there is the Academy Exhibition, "expected to be rather good," as the exhibition always is until the first Monday in May, and then it is always about the worst one recollects; and, finally, there is the Rugeley case, which can come on now that an act of Parliament has been obtained to hand it over to its natural tribunal. So that, as has been said, there is plenty before us, and in the mean time we must be content with such "small deer" as can be secured

The illumination question is one of private discussion, and imaginative glass-blowers are announcing that they have millions of coloured lamps on hand. As there are to be national fireworks, on a scale that has not been attempted since the days of the Temple of Concord, of which our fathers still speak, the domestic illuminations will be eclipsed in the public eye, and might as well be dispensed with. But inasmuch as the more respectable parts of London are always left by the police authorities at the mercy of the rabble whenever there is a chance of a disturbance, the safety of windows will probably be increased by some kind of lighting up. People who are not enthusiastic about the peace will also be glad to do honour to their Queen's birthday, and on the whole there will doubtless be a good show. It seems that there are to be two displays of fireworks, and we certainly think that the West-end is not entitled to both, and that Victoria-park, or some such site, ought to be the scene of one of the fiery fêtes. We cannot too early caution all people to prepare precautionary measures for the protection of their property upon the occasions in question; they may be quite sure that the dangerous classes, and the kind of gentlemen who met the other evening at St. Martin's-hall, are considering the celebration "in another interest;" and nobody need expect that servants will be Spartan sentinels on those nights. We shall hear of plenty of robberies, let what care be taken that may.

Mr. Spooner's victory over Maynooth should content him, and, as a practical man, he should push it no further. The abolition of the payment to the College would be a mistake of the worst character; and, though legislative Protestantism may not have scrupled to record its dislike of Popery, it will not go the length of committing a blunder in statesmanship. The Irish priests have, however, done much to increase the majorities against Maynooth, and the reaction in Ireland itself, where the respectable Catholics have thrown, in succession, three boroughs into the hands of the Conservatives rather than return the priests' tools, speaks for itself. The truth is that, if Government is to deal with the education of a priesthood at all, it ought to do so on a broad principle and a large scale, and so manage that, in Ireland for instance, the priests shall not be like those of Jeroboam, the son of Nebat, "of the lowest of the people." It is playing with the subject to act as we have hitherto done.

It was supposed that Lord Wensleydale had been advised to claim his seat in the House of Lords, and that he would do so when the House met after Easter, but this determination, if made, was set aside. It is now rumoured that the difficulty is to be in some measure evaded by the creation of several law peers for life, who are to form a kind of court of assistance to the Lords, and that this is not to be opposed by the constitutional hostility to the hereditary chamber. In the mean time Lord John Russell is recommended, by some advisers, to take his seat in the upper chamber, on the ground that all the services that can be expected from him has been rendered; and a Spanish journalist makes a still pleasanter provision for the English Premier, announcing that he has bought a lovely estate on the banks of the Guadalquiver, by whose waters the "affiant Lord" intends to wile away, in repose, the last years of a stormy life The chateau thus devoted to Lord Palmerston's comfort is, we need hardly say, one of the castles which the proverb specially allots to the country so chosen for him.

Several fires of magnitude have marked the week; but that which attracted most observation was the burning of the railway station at Tunbridge, about the hour when the great body of excursionists to Hampton Court and elsewhere were returning to their holiday. Some of the trains actually arrived at the scene of conflagration; but, luckily, no accident occurred, and the remainder were signalled not to pass the preceding station, the worst casualty being the addition of a considerable journey to the weary walk of the humbler East-enders. The cause of the conflagration is said to be an escape of gas. The station was very inconvenient and unsightly; and there is no particular reason to regret that a better-looking edifice must now be reared in its stead. The energy with which the Company's officials went to work to remove the ruins, and to restore the "metals," which had been fused, so as to prevent inconvenience to the public, deserves special mention.

COMPLETION OF THE SOUTH WALES RAILWAY, AND EXTENSION OF THE LINE TO MILFORD HAVEN.—The trunk line of the South Wales Railway from Haverfordwest, through Johnston, to Neyland, was formally opened for traffic on Tuesday morning. Neyland is situated on the Milford Haven estuary, opposite Pembroke Haven, immediately opposite the large royal building arsenal at Pembroke, four miles from the little town of Milford, and about eight from Haverfordwest. It is the terminus of the South Wales Railway, which, joining the Great Western line at Gloucester, now forms a direct railway communication between the metropolis and our western shores. No public demonstration was made upon the occasion, the station present erected at Neyland being merely temporary, and unadapted for any purposes of festivity or display. Milford Haven undoubtedly possesses immense natural advantages, and therefore the existence of commodious proper wharfs and docks to secure for it the position of one of the most important export ports in the kingdom. It is easy of access for the largest vessel in any state of the tide; it is almost landlocked, and has secure anchorage for the fleet of an empire. It will prove extremely economical and convenient for the coaling of ocean steamers, and will no doubt export large quantities of the Pembrokeshire anthracite coal, now held in high estimation. Vessels have already shipped to Australia iron which had been brought hither by the railway from the Welsh mining districts; and it is anticipated from its being twenty-four hours nearer America than Liverpool, free from heavy dues, and now in direct communication with the great mercantile districts, that this magnificent but long-neglected haven will speedily attain the commercial importance which its natural advantages seem to demand for it.

DESTRUCTION OF PIRATE JUNKS IN CHINA.—HER MAJESTY'S steamer *Barracouta*, Captain Fortescue, arrived here on Wednesday afternoon from Ningpo, which she left on Tuesday last. On her passage she encountered two large West-coast pirate junks, which she chased and ran ashore on the Volcanoes, when their crews landed and escaped among those rocky islets, Captain Fortescue deeming it not worth while to land his men in quest of the pirates. He sank the two large junks and some smaller ones, carrying six to eight guns each. The men on board are said to have been gaily dressed in blue silk, and any quantity of red turbans was discovered on board. Just prior to their being sighted they had captured a large trading junk, laden with rice, &c., and plundered it. The *Confucius* steamer took part in the attack, and rendered efficient aid in destroying the five junks. The steamer has brought up eleven men to Shanghai, taken out of another pirate junk off the Chusan group, who have been handed over to the Chinese authorities.—*North China Herald, Jan. 26.*

DEAD LETTERS IN AMERICA.—The total number of uncalled for (or "dead") letters that have accumulated in the post-offices of the United States during the current year is put down at five millions and a quarter, of which 48,000 come from Cologne, 26,000 from England, 7400 from Canada, and 4000 from Bremen. All these letters had been duly advertised in the most widely-circulated American journals, and yet their owners could not be found.

## DESTRUCTION OF THE VAUXHALL RAILWAY STATION BY FIRE.

At a quarter-past eight o'clock last Sunday evening the ordinary business of the Vauxhall Railway Station was proceeding, and passengers were in the act of booking themselves for the suburban down-trains, when a sudden alarm of fire arose, and the same instant it was discovered that a small ante-room adjoining the booking-office, and used by the clerk in charge, was in flames. In a very few moments the fire had extended to the booking-office itself; and so remarkably rapid was its progress that the officials present, so far from being able to stay its ravages, were compelled to make a hasty retreat. The flames were first perceived by Mr. Inspector Parker, one of the officials at the Waterloo-road terminus, who, having been sent to see a gentleman at the Vauxhall station, was in the act of ascending the staircase on the down line, when he noticed that the fire was burning on the paper and canvas wall leading to the offices of Messrs. Maudslay. An immediate alarm of fire was raised, and every one went to the assistance of those previously on the platform, but without being able to do the least good, inasmuch as the fire travelled with the rapidity of electricity, seizing upon the whole of the offices, then extending to the ticket dépôts, and finally seizing upon the roof of the station; and, burning both upwards and downwards, it assumed such a formidable aspect as to convince every one that the entire station was doomed to be wholly destroyed, and it was questionable whether any of the buildings that adjoined the station could escape.

A Twickenham train passed through after the fire broke out, and was followed by a Windsor train, which actually stopped to set down passengers while the station was in flames, the rapidity of the fire having prevented the officials from signalling all trains to stop. Mr. Godson, traffic manager at Nine Elms, was fortunately on the spot when the fire occurred, and under his direction the most active measures were taken for the prevention of accident. Messengers were dispatched to the Waterloo terminus to stop the departure of all down-trains, and the up-trains were turned off into the Nine Elms station.

The moment the plugs of the Lambeth, Vauxhall, and Southwark Companies' mains were drawn, a sufficient supply of water was obtained to set the engines of Price's candleworks and Messrs. Burnett and Hodges' distillery to work, as well as that of the West of England office, and many of the London Brigade. The station, however, standing upon the top of the line, and being built of wood, and the wind blowing stiffly off the River Thames, the conflagration continued to extend, and at length attacked the houses on the south side of the property. By eleven o'clock sundry portions of the timber roof gave way, and fell with a great crash—portions being hurled into the middle of the permanent way, and other parts falling at the feet of the firemen, whose most strenuous labours made no impression upon the flames. The men, however, stood to their posts; and by the hour of midnight all danger of any further extension of mischief was over. At that period the whole of the station, booking-offices, warehouses, &c., was reduced to ruins, not even the wooden wall of the company remaining.

The moment that the news was received at the Waterloo terminus, Mr. Crombie (the secretary), Mr. Young (the superintendent of the terminus), Mr. Hodson and several other officials, hastened to the scene to give the necessary instructions as to what was best to be done to prevent accidents; and we are glad to say that by so doing not a single person was injured. The mail-bags were taken by one of Mr. Barwick's vans and deposited at the Nine Elms station, and left the place in sufficient time to be delivered in the country at the usual hour on Monday.

Of course nothing could pass up or down the line between Waterloo and Vauxhall on Sunday night; but, owing to the permanent way not being damaged by the fire to any extent, the line was sufficiently cleared and repaired during the night to allow the trains to run as usual next day.

It would be difficult to give any idea of the inconvenience occasioned at the London terminus on Sunday night. Every cab, omnibus, and other vehicle on the platform and the stands in the open streets was taken away; the public-houses, instead of being overcrowded, were deserted; and business for a time totally suspended.

Our Artist states the best point of view to have been from opposite Colt's pistol manufactory. Looking over the river the fire had a fine effect. Crowds flocked to some high paling at this point, where our Artist took his Sketch.

The engine from Price's Patent Candle Company's Factory took up its position under one of the arches on which the Vauxhall-bridge station rests, and played upon the houses at the back, which but for this timely aid must inevitably have come to the ground. As it was, the upper windows were burned out, and other considerable damage done.

THE BURNING OF THE VAUXHALL RAILWAY STATION, SEEN FROM BATTERSEA-BRIDGE.

## LAUNCHES AT MESSRS. MARE'S, BLACKWALL.

On Saturday week five vessels were launched at one tide from the extensive yards of Messrs. Mare and Co., of Blackwall. The vessels were the *Genova*, built for the Genoese Transatlantic Company; the *Havre*, constructed for the South-Western Railway Company; and three mortar-boats, forming a portion of a contract of twenty built for the Government. The three iron mortar-boats were first launched; and almost immediately afterwards the *Havre*, an iron paddle-steamer, built on lines that may be expected to make her the fastest packet in the Channel, and one of the most elegant and beautiful models afloat.

The greatest amount of interest was, however, centred in the launch of the *Genova*. This splendid iron screw-steamer is the third of a fleet built for a company established at Genoa, for the purpose of carrying on a direct steam communication between North and South America and Sardinia. This company has recently been formed under the most favourable auspices. The whole of its capital has been subscribed in Sardinia. Victor Emmanuel, the King of Sardinia, has, from the first, taken a warm interest in the proceedings of the company, and is one of the largest shareholders in it.

## LAUNCHES AT GREENWICH.

On the afternoon of Monday the 7th inst. the ceremony of launching the *Victor Emmanuel* from the shipyard of the Victoria Foundry Company, Greenwich, was performed in the presence of a vast number of spectators. Miss Airy, eldest daughter of Professor Airy, undertook the task of

THE FIRE AT THE VAUXHALL RAILWAY STATION, SEEN FROM MILLBANK.

LAUNCH OF THE "VICTOR EMMANUEL" AND THE "FIDGET," AT GREENWICH.

naming the vessel. The principal dimensions of the vessel, which is built of iron, are—Length between perpendiculars, 160 feet, ditto over all, 185 feet; breadth of beam, 27 feet, depth of hold, 16 feet. Her draught of water is 12 feet. The tonnage is about 600 tons old measurement. She has a splendid saloon for the use of passengers, and is adapted for carrying 1000 tons of measurement goods. She is fitted with an auxiliary screw steam-propeller. Her engines are of 90-horse power. Her name was suggested by the recent visit of the King of Sardinia to this country. Her Majesty's gun-boat *Fidget*, one of the two vessels which the above company are under contract to build for Government, was launched a few minutes after the *Victor Emmanuel*. This is the first gun-boat built at Greenwich. The dimensions of the *Fidget* are—Length between perpendiculars, 100 feet; breadth, 21 feet 10 inches; depth, 6 feet 6 inches. Her draught of water is 4 feet; and the tonnage, 212 tons.

## PRESENTATION OF A SWORD AND AN ADDRESS TO MAJOR HIBBERT, AT MACCLESFIELD.

On Wednesday week the town of Macclesfield was the scene of some very interesting proceedings, in association with the war, by the presentation to Major Hugh Robert Hibbert, 7th Fusiliers, of a sword and an address agreed to by the Town-council. A great variety of flags was displayed

PRESENTATION OF A SWORD TO MAJOR HIBBERT, AT MACCLESFIELD.

upon the occasion; triumphal arches were erected; and it would have been difficult for the inhabitants of Macclesfield to devise a more splendid display. Major Hibbert and his friends, on their way from Birtles Hall, were met at the boundary of the borough by a procession; amongst those present being the Lord Lieutenant of the county, the Marquis of Westminster, the Right Rev. the Lord Bishop of Chester, Lieut.-Gen. Sir Harry Smith, Gen. Dixon, Lieut. Col. Shipley, Col Skipwith, Capt. Goodh, R.N., Lieut.-Col. Boldrich, Major Tipping, Col. Brooke Taylor, Capt. Egerton, R.N.; Major Shirley, E. C. Egerton, Esq., M.P.; Rev. J. G. Granville, Mr. W. D. Bromley, Mr. Mrs., and the Misses Hibbert, the Rev. Reginald Hibbert, and several members of the families of Hibbert and Cholmondeley. The band of the 20th Regiment, from Manchester, was present; as were also the band and a troop of the Cheshire Yeomanry Cavalry. The presentation took place in the Macclesfield Sunday School, the Mayor presiding. The address was first presented, followed by the sword, the Mayor remarking that the subscription for its purchase was raised in two days. The sword is described in the *Macclesfield Courier* as "a splendid specimen of the cutler's art." The blade is richly embossed, and bears on one side an inscription of the principal engagements in which Major Hibbert has been engaged, each in a scroll, diagonally:—Bulgaria—the Alma—Sortie, 26th Oct., 1854—Inkerman—the Trenches—Redan, 18th June—Redan, 8th September—Sebastopol. Its arms and crest also embossed. On the other side of the blade appears the borough arms, and the inscription:—

Presented to Major HIBBERT, 7th Royal Fusiliers, by the Town of Macclesfield, in acknowledgment and admiration of his heroic and gallant services to his Queen and country in the Crimean War, 1856.

It also bears the Royal arms, and is richly decorated with gold. There are two scabbards—one for field days, the other for full dress. The former is of silver gilt, richly mounted, and in raised scrolls displays the Major's arms and crest, with military trophies; and the arms of the borough of Macclesfield, with various classic designs, beautifully wrought in gold. The dress scabbard has blue velvet for its ground, on which similar designs in silver, richly gilt, are mounted, with the addition of a variety of precious stones, inlaid in the "lockets" and "chape." A handsome mahogany case is added, on which a silver shield is inlaid, bearing the arms of the donors and recipient, with an inscription that it is presented to Major Hibbert from the town of Macclesfield. In the evening there was a banquet at the Townhall, a display of fireworks, &c.

Major Hibbert left England with the Royal Fusiliers in April, 1854, and was in Bulgaria with his regiment till the embarkation for the Crimea. The Fusiliers led the storming column at the battle of the Alma—how gallantly need not now be told. Major Hibbert was painfully, though not severely, wounded by almost the last shot fired on that occasion—a ball striking his ankle, and lodging in the heel of his boot. Notwithstanding the recommendation that he should go on board ship, he preferred remaining with his regiment; and, though lame and suffering, he made the very severe march to Balaclava which followed the battle. He received his company shortly afterwards. He was engaged in the repulse of the great sortie by Sir De Lacy Evans, on the 26th October; was also at Inkerman; and at the storming of the Redan on the 18th June. On all these occasions he was distinguished for gallantry and coolness. During the severity of the winter, and in the exhausting duties of the siege, Major Hibbert bore a most conspicuous part. As the Marquis of Westminster observed at the public dinner given at Macclesfield, he had been upwards of ninety nights in the trenches. On the 3rd September he received a wound of considerable severity whilst in command of the advanced sap before Sebastopol; and for his gallantry on this occasion was promoted to the rank of Brevet Major, with special notice from the Commander-in-Chief. Major Hibbert was again engaged in the assault on the 8th September, and, besides two slight wounds, also received a dangerous compound fracture of the skull, which compelled his return to England. With the exception of the Paymaster, he left not one single officer doing duty with the Fusiliers who had left England with that regiment.

## *CHURCH, UNIVERSITIES, &c.*

CONVOCATION OF THE CLERGY.—A meeting of the prelates and clergy of the province of Canterbury was held on Tuesday morning. The prelates composing the Upper House assembled at Queen Anne's Bounty Office, Dean's-yard. The Archbishop of Canterbury presided; and there were also present the Bishops of Winchester, Exeter, Oxford, St. Asaph, Lichfield, Llandaff, Chichester, Worcester, and St. David's. The Prolocutor of the Lower House (the Dean of Ely) appeared, and presented a report from the Lower House, on the subject of clerical discipline. The Bishop of Exeter doubted the propriety of taking the matter into consideration at the present time, when there was a bill to that effect before Parliament. The Bishop of Oxford suggested that the report should be referred back to the Lower House for re-consideration, and that that portion of it which related to the final Court of Appeal should be deferred. The Bishop of Lichfield presented a petition signed by a large number of clergymen and laymen, praying that measures might be taken for the restoration of Wesleyan Methodists to the Church of England, by means of the admission of their ministers to episcopal ordination. In moving that this petition do lie upon the table he begged to express his sympathy with those who had signed it. The Bishop of Worcester inquired whether the petition had been signed by Wesleyans? The Bishop of Lichfield said it had not, but by clergymen and laymen of the Church of England. The Bishop of Exeter: Is it from your diocese? The Bishop of Lichfield: Oh no, it was committed to me by the Rev Ernest Hawkins (the secretary of the Propagation Society). The Bishop of St. David's said the petition contained matters said against the Bishops of the Church which made him think it would be contrary to the dignity of that house to receive it. The Bishop of Exeter contended that the followers of John Wesley were guilty of the sin of schism, and that Convocation should be extremely cautious how they invited such persons to join them without due inquiry.—Several of the Bishops expressed similar opinions, and it was at last agreed, though not without some opposition, that the petition should lie on the table. An address signed by several members of the Lower House was brought up, congratulating their Lordships on the recent happy peace, and upon the proposed erection of an English church at Constantinople. The Bishop of St. David's and the Bishop of Exeter thought that until it was known what were the terms of peace it would not be possible to proceed with this matter. The new church at Constantinople might be of advantage in bringing about a communication with the Eastern Church, but they did not think the present was the period at which it could be most hopefully advanced. After the reception of some petitions their Lordships adjourned at two o'clock until Tuesday.—The Lower House assembled in the Jerusalem Chamber: Dr. Peacock, Dean of Ely, chairman, as Prolocutor. A considerable time was taken up in calling over the names and reading over the minutes of the previous sessions. A very large number of *gravamina* were presented by several members, the reading of which occupied some hours.

CONSECRATION OF THE BISHOP OF CARLISLE.—On Sunday morning last the Hon. and Rev. Dr. Henry Montagu Villiers, of Christ Church, Oxford, late Rector of St. George's, Bloomsbury, was consecrated to the Bishopric of Carlisle. The ceremony took place in the Chapel Royal, Whitehall, which was crowded in every part, many of the nobility being present. The morning service was read by the Rev. J. H. Hewlett, the sermon was preached by the Rev. Robert Burkesteed, Rector of St. Giles in the Fields. The Archbishop of York afterwards went to the altar, where Dr. Villiers, vested in a rochet, was presented to him by two Suffragan Bishops. The Queen's mandate having been read, and the Bishop elect having read the oath touching the acknowledgment of the Queen's supremacy, he was admitted into the Episcopate by the imposition of hands. Dr. Villiers will not be entitled to a seat in the House of Lords until a vacancy arises in a See, other than Canterbury, York, London, Durham, or Winchester.

A CONTEST AT OXFORD.—The election of a professor, as a member of the hebdomadal council, in the room of Professor Wilson, whose term of office as Professor of Moral Philosophy had expired, was the occasion of a struggle on Tuesday last between the two parties in Oxford University designated High Church and Low Church. Dr. Jacobson, Regius Professor of Divinity, was the candidate for the former, and Dr. Macbride, Principal of Magdalen Hall, Lord Almoner's reader in Arabic, was the candidate of the latter. The poll commenced at two o'clock, and was continued with unabated vigour until three, the time appointed for its closing. Nearly all the heads of houses and resident professors recorded their votes. So well balanced were the parties that each was alternately at the head of the poll, from its opening to its close. At three o'clock the proctors broke up the votes, the numbers being—for Dr. Jacobson, 71; Dr. Macbride, 69.

A HANDSOME SERVICE OF PLATE has just been presented to the Rev. C. D. Holland, M.A., Vicar of Burgh, in Lincolnshire, by his friends and parishioners, on his removal to Mumham, near Chichester, "as a testimonial of their high appreciation of his great worth during his residence at Burgh."

APPOINTMENTS.—*Rectories:* The Rev. F. S. Surtees, to Sprotborough, near Doncaster; Rev. T. Walters to Ystradgunlais, near Swansea; Rev. W. R. Collett to Hethersett, near Wymondham; Rev. D. Jones to Brechva, Carmarthenshire. *Vicarages:* The Rev. O. Luard to Aunsby, near Folkingham; Rev. J. Rowland to Abergwili, near Carmarthen; Rev. J. Power to Litlington, near Cambridge. *Incumbances:* The Rev. T. Hassall to Shelford, near Cambridge; Rev. O. K. Prescot to St. John's Church, Dukinfield.

### CALENDAR FOR THE WEEK.

SUNDAY, April 20.—4th Sunday after Easter. Spanish Armada, 1588.
MONDAY, 21.—Reginald Heber born, 1783.
TUESDAY, 22.—Fielding born, 1707.
WEDNESDAY, 23.—St. George's Day. Shakespeare died, 1616.
THURSDAY, 24.—Bastille in Paris completed, 1359.
FRIDAY, 25.—St. Mark's Day. Cromwell born, 1590.
SATURDAY, 26.—Plague of London, 1665

THE GRAND NAVAL REVIEW AT SPITHEAD ON WEDNESDAY NEXT.

ON SATURDAY, APRIL 26, WILL BE PUBLISHED
A SUPERB
DOUBLE NUMBER
OF
THE ILLUSTRATED LONDON NEWS,
CONTAINING
THREE SHEETS,
OR 144 COLUMNS, OF
SPLENDID ENGRAVINGS AND LETTERPRESS.

Among the Artists specially engaged for the illustration of the above important and imposing Demonstration of the Naval Power and Supremacy of Great Britain are Mr. E. Duncan, Mr. O. W. Brierly, Mr. J. W. Carmichael, Mr. Knell, Mr. E. Weedon, Mr. G. H. Andrews, Mr. B. Leitch, Mr. S. Read, Mr. Landells, &c.

The Illustrations will also include a FOUR-PAGE PICTURE MAP OF THE BALTIC; a LARGE VIEW OF SEBASTOPOL; and upwards of THIRTY ENGRAVINGS of the Events of the Week.

Price of the DOUBLE NUMBER (Three Sheets), 10d.; Stamped, 1s.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, APRIL 19, 1856.*

At the conclusion of a war so costly as the war against Russia has proved, the people will look, not unnaturally, for some reduction of taxation. We are afraid, however, that the wish is not likely to be immediately gratified, and that the Income and Property Tax—essentially in its nature a war tax, but one which was imposed in the days of peace—will remain for many years yet to come an incubus upon the tax-paying community. Mr. Muntz, who is a well-meaning but not always a sound politician and financier, brought forward a motion last week in the abstract justice of which most persons will agree, and in which a very large number of persons would agree, whether it were just or unjust, practicable or impracticable. It was to the effect that in the opinion of the House of Commons an *equitable adjustment* of the Income and Property Tax was essential to the interests of the country, particularly as regarded the rates of payment upon industrial and professional incomes, compared with those derived from fixed property. But, when Mr. Muntz proceeded to explain what he meant by an "equitable adjustment" of the tax, he was forced into the admission "that in his opinion the injustice of such a tax could *never* be removed." And such we believe to be the real state of the case; or, if not so, we can most unhesitatingly assert that no plan has ever yet been proposed, either in or out of Parliament, of which the effect would be to render the tax other than vexatious and inquisitorial, or other than hard and oppressive in its bearing upon the professional classes, as compared with those more favoured persons who do not live by the labour of their brains or of their strong right arms, but by rents, or the interest of accumulated capital. If there be such a plan in existence, neither Mr. Muntz nor any of those gentlemen who voted with him did the Government or the country the favour to bring it forward. They had nothing to propose by way of remedy—nothing even to suggest. The burthen of their complaint was that they did not like the tax, a state of feeling, or of conviction, in which they have by no means the monopoly. Mr. Muntz is too sensible a man to propose, in the present state of the national exchequer, and of our prospects both at home and abroad, to dock from the balance-sheet of the country so large an item as that afforded by the Property and Income Tax. The money must be had, or the national credit cannot be maintained; and, until the wisdom of some "heaven-born" financier can discover a substitute for the obnoxious impost, we fear that John Bull must go on paying it, and grumbling at it according to his custom. The debate abundantly proved that it is not simply the professional classes who pay on their real or supposed incomes who complain; but that the landowner and the fundholder consider themselves quite as much aggrieved, and cry out as vigorously against it. Mr. Muntz, whose motion seems to have been originally intended to give expression to the disgust or discontent of the professional classes assessed under the too notorious schedule D, was, at the close of the discussion which he had provoked, so deeply impressed with the wrongs inflicted on those unhappy wights who pay under schedules A, B, and C, that he declared his lugubrious conviction "that all classes were robbed alike, and that the landowners had a claim for redress as well as professional men and traders." Although this admission knocked the very teeth—or, rather, the very heart—out of his resolution, he persisted in pressing it to a division, and, as a necessary consequence, he was defeated by a large majority. How could it be otherwise? He declared that to be irremediable for which he sought a remedy; he put forward a claim for one class which he abandoned in favour of a claim for all classes; and he asked the House to condemn a tax which he did not seek to abolish, and for which he could not find a substitute, even if he had been inclined; and the House, acting for once on the impulse of common sense, refused to entertain the question. Perhaps some other member more able and more influential than Mr. Muntz will discover a remedy for the evils incidental to the Property and Income Tax, which he and other gentlemen deplore; but, in the mean time, we cannot but think however much we may dislike the tax, that it must continue till the "collective wisdom" of Parliament shall discover one that is more agreeable and more just, without at the same time being less productive.

Since writing the above our attention has been drawn to the columns of several provincial journals which animadvert on the conduct of those members who voted against Mr. Muntz's motion. Among others who have been called to account is the honourable member for Boston, who seems to have incurred the ire of the *Lincolnshire Herald*, the Tory journal of that town, for recording his vote against the vague proposal of the Liberal member for Birmingham. Mr. Ingram is reproached for not having acted on this occasion up to the promise and the spirit of his electioneering addresses and speeches; and three passages are quoted in support of the charge. The first is from the honourable member's address, in which he says:—

> I am also in favour of an equitable reconsideration of our whole system of taxation, in order that the revenues necessary to the support of the State and of the public credit may not be drawn from those unable to bear the burden.
>
> The second is from a speech at the Woolpack Inn, in which he stated:—
>
> He proclaimed himself to be a friend of popular education—of a further reform in the Commons' House of Parliament—of a reconsideration of the property-tax—of an equitable readjustment of our financial system, &c.

The third is from a report in the ILLUSTRATED LONDON NEWS, in which he is represented as declaring himself

> in favour of a revision of taxation, by which every man should bear his just burden, according to his position in society.

We cannot discover that in voting against Mr. Muntz's motion the honourable member for Boston has falsified his pledge in any shape or degree. Mr. Muntz brought forward no plan for "an equitable readjustment of our WHOLE system of taxation," but simply expressed a desire to remedy an evil, which he afterwards declared he could not remedy. Until Mr. Muntz, or some one else, proposes a reconsideration of the Property and Income Tax, with a view either to its total repeal or to its reimposition in a new form, supposed to be less onerous and less unfair—we do not see how any member of the House can be accused of breach of faith for registering his vote against an abstract and purposeless motion. The fact is that men like Mr. Muntz—no doubt with the best intentions in the world—consume a great deal too much of the public time with speeches and statements which can have no other result than speechification, or what in Parliamentary circles is designated by the vile phrase "ventilation" of a subject. Mr. Muntz has "ventilated" the Property-tax; and there is an end for the present. When the question is next brought forward, either as a part of the whole subject of taxation, or on its own merits, with a view either to the permanency or to the abolition by the House of that form of taxation, we do not doubt that honourable members will see their way clear to a satisfactory deliverance. But to ask the Legislature to remedy that which is declared to be irremediable, and at the same time to stick at recommending its abolition, is to ask too much of reasonable man, whether they are in or out of Parliament.

In some of the Continental countries there is a particular department of the Government called the statistical bureau, or something of the kind, charged with collecting, arranging, and publishing all the State accounts. In our country each department of the Government collects and publishes its own accounts. The Treasury informs us of the condition of our finances; the Board of Trade gives us monthly an account of our commerce; the Admiralty tells us all that we know officially of our Navy, and the Horse Guards of our Army; and we rely on the Home-office to make us acquainted with all matters of police, crime, and generally of every branch of civil government. If the figures which constitute the only authentic history of the national offences be less pleasing than those which describe the progress of national wealth and prosperity, they are of equal importance, and unless they be supplied we can only have a very limited and imperfect account of our national concerns, more worthy of a "cooking" railway board than a Government.

Of late, in consequence of the partial suspension of transportation, the Parliament, the Judges, and the Press have all asked with some alarm what we are to do with our convicts; and the public has been taught to believe that the number is increasing, making new and severe punishments necessary to give security to life and property. Under such circumstances, the Home-office, it might be expected, would be careful and quick to supply official information, either, as the case may be, to excite vigilance, or lessen apprehensions. A little more than a month ago, however, the "tables of criminal offenders" committed for trial, or bailed, &c., in England and Wales, and the result of the proceedings for the year 1845, compiled from the criminal registers kept in the Home-office, were presented to both Houses of Parliament; so that the Home-office requires fourteen months to prepare and publish the records transmitted to it by the clerks of the peace for the different counties. These tables describe the nature of the offences and the counties in which they were committed, the sex of

the offenders, and the punishments inflicted on them; but are silent as to their ages, and do not distinguish whether they are adult or juvenile. Moreover, these tables are strictly limited to persons committed for trial at assizes and sessions—about one-fourth part only of all who are imprisoned—and take no notice whatever of the other three-fourths, who are sentenced by summary conviction. Both from the greater number, however, and from magistrates acting less under the public eye in police courts and at petty sessions than at assizes, summary convictions are precisely that part of our penal jurisprudence on which we most require correct information. On the average of the twelve years ended 1852 the annual number of summary convictions in England and Wales was 74,347, or 1 to every 231 persons of the whole population. With the persons committed for trial they make an average of upwards of 100,000 persons annually shut up in gaol, which is nothing less than a great national calamity, however brought on, and a frightful national reproach. To keep the public in the dark on such a subject is sure to force it astray. If statesmen are bound to instruct as well as coerce the people, as is now generally admitted, they can commit no greater offence than to withhold the valuable information which they alone can supply.

The Home-office has the summary convictions as well as the committals to the assizes under its direction, and certain Prison Inspectors are bound, by the Act of 5 and 6 Will. IV., cap. 38, to make reports to the Home-office, which in turn is bound to lay them before Parliament. Separate reports, too, of the inspectors of the different gaols have been continually published; but it is not more than three weeks ago that the report by Mr. J. Williams, Inspector of Prisons, on the General Statistics of Crime, 1850, was published. In this report there is much minute information concerning criminals. It includes an account of the age, instruction, sex, &c., &c., of all persons committed for trial at assizes and sessions, of all persons summarily convicted and how disposed of. Without such information the public can form no conception of the enormous mass of misery inflicted on the community by our penal jurisprudence, with a view to improve it. We, at least, were surprised to learn from the report that in one year (1849) there were in our prisons 139,327 persons. Why was this important knowledge withheld from the public till the year 1856? Five long years have Mr. Williams and the Home-office delayed it. That it might have been published much earlier is proved by the accounts of 1850 having been almost immediately afterwards followed by the accounts for 1851 and 1852; which required, one only four years, and the other only three years, to prepare them; and to have delayed till 1866 the publication of the official tables of the general statistics of criminals for the year 1850 appears to us wholly inexcusable. Why Mr. Liddell, who gave notice of his intention to ask the Home Secretary on Tuesday the cause of this most unseemly, if not unwarrantable, delay, did not put the question, we are not informed; but we presume that, either by him or some other hon. member, an explanation will be wrung from the Home-office.

Whatever excuse may be made for the subordinates, none can be made for the several Home Secretaries who have permitted this work so long to be delayed. When chiefs are skilful and diligent their subordinates are rarely negligent. It is not perhaps the duty of Mr. Williams to study the criminal registers of the Home-office, or the returns of the Registrar-General, who is another of its subordinates; but it is the duty of the Secretary of State for the Home Department to place these subordinates in communication with each other, and not allow them to publish by his authority and under his name contradictory or discrepant statements of the same facts. In the "Criminal Tables" first referred to, and in the "Reports of the Prison Inspectors," there is equally "an account of the number of persons committed for trial or bailed at the assizes and sessions," and an "account of the number of prisoners tried at assizes and sessions in every year." But in the Tables and the Reports, though the facts described are substantially the same, the numbers are in every year different. They are two different versions of the same public story told by the same Home Secretary; one or the other is unnecessary; to publish two causes great additional trouble and expense, while both being without any explanation of the points of difference create only perplexity and confusion. Why cannot the Home-office make one return of the persons committed for trial suffice, and avoid misleading and contradictory repetitions?

The Prison Inspectors, too, very properly accompany their returns of the number of persons committed and summarily convicted, &c., with an estimated amount of the population for every year; and the Registrar-General also publishes, in his quarterly and annual returns of births, deaths, and marriages, an estimated amount of the population in every year. Both are published by the authority of the Home-office, and both should be the same. But the estimated amount of population for every year in the two is essentially different. The Home Secretary, by the prison inspectors, asserts that the population of England and Wales was, in 1852 for example, 18,165,867; and by the Registrar-General the same Home Secretary informs the public it was 18,206,000. Which assertion of the Home Secretary is the public to believe? He is a great reformer, our Home Secretary; he is raising a hornet's nest about his ears by his measure to reform the Corporation of London; and his efforts in this direction would be more successful if nobody could point to Whitehall and call on him to reform his own office. It obviously wants a guiding head to direct the subordinates to work together on some common plan, and to work diligently, so as to supply the public speedily with clear, simple, and well-digested information. To take five years to prepare a prison report, and then to publish discrepancies and contradictions is to be more disgracefully behind this runaway age than any boor who will persist in sending his wheat to market in his own cart by the common road instead of consigning it to the rail.

Fire Insurance.—Our readers are aware that the subject of the Fire Insurance Duties has not escaped us, in reference to the probable loss of them to the revenue; and the more we see or hear of the question the more we see that the end must be a great reduction or a total abolition of them; for the Chancellor can only in the mean time save a portion of the amount by his bill at the cost of business to the British insurance companies—a loss which is now going on, as can be proved. Is Sir Cornewall Lewis aware that French policies are now delivered in England as parcels, to be signed for, and their coat paid as "carriage," in a delivery-book? This is only one of many subterfuges that will be found to obtain for foreign companies a share of British fire insurances; and well did Mr. Wm. Brown (M.P. for South Lancashire) and Mr. James Kennedy (the General Manager of the Lancashire Insurance Office, on the occasion of this Company's influential deputation to the Chancellor) call attention to the large amount of marine assurance done abroad ever since the military conduct of the Government at the close of the war in 1814 and 1815, in reducing the Marine Insurance Duty, gave an opening and a footing to foreign competition for a share of that valuable British business. The second reading of this Fire Insurance Bill has been twice or thrice fixed, but deferred, owing to motions of Supply; and we have seen, from the money articles of the *Times*, that our active men of business of Manchester, Liverpool, and Glasgow, do not intend to let it pass in silence.

## *METROPOLITAN NEWS.*

Hotel and Tavern Keepers' Provident Institution.—The seventeenth anniversary of this excellent institution was celebrated on Tuesday evening by a public dinner, at the Freemasons' Tavern, Great Queen-street. Herbert Ingram, Esq., M.P., presided. The company having partaken of an excellent dinner, provided in the best style of this far-famed hotel, the usual loyal toasts were disposed of. The Chairman, in proposing the toast of the evening, "Prosperity to the Hotel and Tavern Keepers' Provident Institution for the Relief of Necessitous and Aged Members," observed that the object of the association was to provide, in a time of prosperity, what funds might be required, for helpless members in a time of adversity. He thought that this was a most praiseworthy object, and therefore he had great pleasure in acceding to the request made to him to preside on that occasion (Hear). He believed that his presence on the part of the hotel and tavern keepers, and the existence of this institution, were marks of the advancing civilisation of the age. What was the state of this country a few centuries ago? Why, then travellers could find no place to obtain refreshments except in monasteries, and they were not always to be relied on, for the monks did not treat King John very well in Lincolnshire. It had been said that London could not exist without morning papers, but he considered that hotels were a greater necessity, and concluded by wishing prosperity to the institution. The toast having been duly acknowledged, Mr. S. E. Tapster, hon. secretary, presented the report of the committee, from which it appeared that the receipts of the year just ended, amounted to £669 12s. 4d. The institution at the present time consists of 198 members, viz., 149 life members, 50 annual members, besides six widows of deceased members not included in the return, who are on the funds. It continues to receive support from about twenty-seven annual honorary members, and numerous donors. The committee state that they have been enabled during the last year to fund the sum of £108 8s. 4d., after paying all expenses, making the funded capital £3700 3s. 6d.; although the institution suffered last year, as most other institutions have done, from the increased taxation in consequence of the war. The report having been approved of, Mr. Wm. J. O'Connell proposed the health of the Chairman, which toast was very warmly received. Mr. Ingram having briefly responded, several complimentary toasts were proposed, and a considerable sum subscribed towards the funds of the institution.

Benevolent Institution for the Relief of Aged and Infirm Journeymen Tailors.—The anniversary festival of this institution was celebrated at the London Tavern on Wednesday evening; Viscount Ingestre in the chair. The company, upwards of 300 in number, consisted for the most part of subscribers to the charity, and followers of the trade for whose benefit it was established. The Chairman proposed, in the usual form, the toast of the evening, "Prosperity to the Institution," &c., and impressed upon the company the necessity of doing all in their power to promote the interests of the charity. A donation of £10 10s. from his Lordship was followed by many other subscriptions, amounting to £300. This, the Chairman announced, was £200 more than was collected at the last anniversary, and he congratulated the company upon such a result.

The Reform Bill for the City of London.—A Common Hall of the city of London was held in the Guildhall on Tuesday afternoon, to consider the London Corporation Reform Bill. The attendance was very scanty. The Lord Mayor presided. Mr. James Laurence moved a resolution affirming that the measure was destructive to the interests of the City, and pledging the Common Hall to give it their most determined opposition. Sir John Fin.ey seconded the resolution. Mr. C. Reed moved an amendment stating that the bill was wise and moderate, and pledging the Common Hall to do its best to secure its passing. Mr Hale man seconded the motion. The amendment was ultimately withdrawn, and the original resolution carried by a large majority. A petition to Parliament was afterwards adopted against the bill and a resolution declaring that the livery were fully alive to the desirableness of reforming all abuses, and would gladly accept any proper scheme for that purpose.

Meeting of Metropolitan Cab Proprietors.—A general meeting of the London Hackney carriage Proprietors was held at the Coach and Horses Tavern, Wardour-street, Westminster, on the 15th instant, for the purpose of considering the very many objections existing against stage carriages. The meeting was well attended. From the statements made by the speakers it appeared that the new Fancy Conveyance Company had caused a check to the cab trade, and therefore the cab proprietors had drawn up a plan, to which they had obtained the sanction of the authorities, for starting 100 one-horse stage carriages, to ply at the same fares as the cabriolets, not less than twenty on each road.

Royal London Opthalmic Hospital, Moorfields.—The annual general meeting of the governors was held at the hospital on Tuesday, the 15th inst.; Mr. Labouchere, the treasurer, in the chair. It appeared from the report that the number of admissions during the past year was 9974; and that the number of out-patients was 21,106; being from the 1st of January to the 25th of March, 1856, was 2196; being an increase of 514 over the corresponding quarter of last year. From the cash account it appeared that the ordinary annual income was less than the expenditure by upwards of £50.

Preparations for the Commemoration of Peace.—On Thursday the erection of the building for the forthcoming display of fireworks, in commemoration of the conclusion of peace, was completed in Hyde-park and the Green-park. In Hyde-park the site selected is the high ground near the magazine guard house, the front of the building facing towards Park-lane; in the Green park the building has been placed contiguous to the site of the old reservoir, fronting to Buckingham Palace. A considerable space of ground has also been inclosed to keep the public out of danger. Upwards of 500,000 pieces of fireworks will be displayed in each park. There will also be balloon ascents.

A Female Jack Sheppard.—On Wednesday afternoon, shortly before five o'clock, a female effected her escape from the custody of the gaoler of the Southwark Police Court in a most mysterious manner. The name of this daring female is Mary Ann Leonard, *alias* Poll Gardiner, a woman about thirty years of age, and connected with a gang of housebreakers and omnibus thieves in and about the metropolis. She was tried at the Surrey Sessions on the 20th of August for pocket-picking, and sentenced to six years' penal servitude. While in Horsemonger-lane gaol she made her escape in disguise, last February, and evaded the vigilance of the authorities until Monday evening last, when she was apprehended in Liverpool, having taken her passage in a vessel that was to sail for New York next morning. She was locked up with other females by Downe, the gaoler, in one of the cells at the rear of the Southwark Police Court. On Wednesday afternoon, while the prisoners were conversing with some friends in the gaoler's room, the gaoler was suddenly called into the court, and on his return, after an absence of a moment or two, he was surprised to find that she had made her escape through the court, and got safely off.

Trial of Palmer.—At the Court of Queen's Bench, on Wednesday last, the Attorney-General moved for a rule under the law which had just passed the Legislature that the indictments and informations charging the prisoner with wilful murder should be removed, and the prisoner brought up from Stafford and that he be tried at the next session of the Central Criminal Court. The rule was granted. Mr. Grey, on the part of the prisoner, applied for a rule calling on the solicitors for the prosecution to furnish copies of the analytical report of Dr. Taylor so far as regarded the tests made by him for the discovery of antimony and strychnine in the stomachs of the persons alleged to have been poisoned by the prisoner. The Court, after some consideration, refused the rule on the ground that on the cross-examination of Dr. Taylor the information sought for might be obtained.

Assassination in Rupert-street.—One of the most daring acts of assassination ever perpetrated in this country occurred on Thursday evening, at an Italian and French restaurant, kept by Louis Stucchi, at 45, Rupert-street, Haymarket. Several Italians had been spending the evening together, and one of them named Foschini, in a quarrel, according to one account, drew a poniard and stabbed a fellow-countryman, Ruoli. The latter made his escape into the street, and was taken to Charing-cross Hospital. Foschini then attacked Rouelli, the waiter, and two other Italians named Rudio and Chiesa. The waiter was so dangerously wounded that he was not expected to survive. The assassin made his escape in the midst of the confusion.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

Artists assure us that we are to have a first-rate Royal Academy Exhibition, and yet we are to have nothing from Mulready, Maclise, Cope, Creswick, and Egg. Can this be so? From what we have seen ourselves there is a fair promise of a good Exhibition. Stanfield has sent an abandoned hulk (he calls it "The Abandoned"), the perfect picture of desolation, solitude, and neglect. Roberts will exhibit "Christmas-day in St. Peter's, at Rome," marvellous for the mastery of its architecture, its space, its pomp, its breadth, and picturesque truth. It is the picture (some will suspect erroneously) of an earnest convert from Presbytery to Popery. We shall watch the face of Cardinal Wiseman at the private view, and expect to see the great painter, hat in hand, before the modern Wolsey. Frith contributes a delightful picture in his best manner—a little girl's birthday dinner. Ward has paid a second visit to France during the time of Louis XVI., and has outdone his former doings. Millais is again a marvel—prolific, varied, inventive, and a perfect master of colour. Ned Cooke more than confirms his well-earned reputation, and divides our admiration between Venice and Amsterdam. Frank Stone will be found to have lost no one particle of his old power of pleasing. Mr. Solomon has made rapid strides into the Academy ranks; Miss Solomon, Miss Osborne, and Mies Mutrie more than maintain the reputation in art of the fairer sex. But Phillip—Phillip of Spain—it is he who will sink all who are hung near him for character and colour. He has been to Spain, and drank deeply of Murillo and Velasquez to good purpose.

The Calcrafts or hangers of the Royal Academy this year are Messrs. Cope, Dyce, and Cousins. This is the first time that an engraver has been admitted to the troublesome honour of arranging pictures for the Academy Exhibition. Some bad jokes respecting Mr. Cousins's present employment are uttered in artistic circles. Mr. Cousins is a mezzotinto engraver; and he will now, it is said, evince for the first time in his life his sense of the value of the *line* manner. To be "on the line" is the ambition of every artist. The joke is none of the best even with this explanation. We give it as we heard it.

The papers have lately been full of controversial letters. Thus we have had General Hall *v.* General Cavendish; Mr. Abraham Hayward *v.* Mr. John Wilson Croker; Mr. Gye *v.* Mr. Surman; Resurgam *v.* the Senior Churchwarden of St. Margaret's, Westminster; Mr. Stanley *v.* the Bishop of Bangor; and now we have Mr. Harcourt Vernon *v.* Mr. Lance and Velasquez. There is a show of smart hitting in some of the letters, with more than a sprinkling of bad composition in the Bishop's correspondence.

The Sibthorp Collection under Christie's hammer will bring, so knowing ones confidently state, at least ten thousand pounds. Some one the other day called Mr. Christie "the inevitable and inexorable Christie".—

> The pomp of china and the pride of plate,
> And all that Sibthorp or that Bernal bought,

await alike the inevitable hammer of the inexorable Christie. Whatever we collect is ultimately scattered by Christie and Manson, or Sotheby and Wilkinson.

We learn with pleasure that Messrs. Whittaker and Co., the proprietors of Mr. Collier's well-known and highly-esteemed edition of "Shakspeare," published in 1843, in eight volumes octavo, have just concluded an agreement with Mr. Collier for a revised and cheap reprint of it, in six octavo volumes. Mr. Collier's edition is especially valuable for the fulness and accuracy of its collations with the early quartos.

The Rogers Catalogue is out, and a very tempting catalogue it is. The executors have made the most of what they have. We read of "the sweepings of Pope's study," which Martha Blount gave gratuitously to one person and Lord Bolingbroke and Marchmont to another. Here we have the "sweepings of Rogers' study" transferred to an auction room, and catalogued for sale. "The sweepings of Pope's study" would open the purse-strings of many a rich collector.

Many additions of moment have been made during the past year to the British Museum, by purchase, presentation, and bequest. To the Print Room has been added (by bequest of Mr. Chambers Hall) a celebrated study by Raphael, for the "Entombment of Christ," consisting of nine figures, the picture of which is in the Borghese Palace. The works of Hollar have been enlarged to eighteen volumes. Sir Frederic Madden has added the original MS. of Scott's "Kenilworth" to the treasures under his care. Mr. Hawkins has materially enriched the British Collection of Antiquities. Let us enumerate a few articles of value added to this branch of the Museum. The presents, it will be seen, are very numerous:—

A very fine Greenstone Celt, found near Pendle, Lancashire, presented by Ralph Holden, Esq.

A Stone Hammer-head, found on Swanton Moor, Derbyshire, presented by Evelyn P. Shirley, Esq., M.P.

A Stone Bead, locally known as a Pixy's Grandstone, found near Liskeard, Cornwall, presented by H. Pollard, Esq.

A collection of Bronze Celts, Broken Metal, and remains of Castings, found near Croydon, Surrey, presented by Lewis Loyd, Esq.

Three Bronze Celts, found near Gouldhurst, Kent, presented by Stringer Stringer, Esq.

A Bronze Celt-Mould, found in South Wiltshire.

An Iron Celt, at present considered unique, with remains of its original handle, found in North Wales, presented by Frederick R. West, Esq., M.P.

A collection of enamelled Horse-Trappings of the latest Celtic period, found, at Westhall, in Norfolk

Silver Ingots (some inscribed) and Ornaments of the Roman Period, found with coins of various Emperors from Constans to Eugenius, at Coleraine, in Ireland.

Two Porcelain Beads, found in Scotland, probably of Egyptian manufacture and of the Roman period, presented by Sir James Ramsay, Bart.

A Roman Tile, stamped with the name of the XX. Legion, found at Chester, presented by the Rev. W. Massie.

A Saxon Brooch, found at Mentmore, Buckinghamshire, presented by Frederick Ouvry, Esq.

A Saxon Sword and other Weapons, found on the site of the battle of Ashdown, in Berkshire, presented by Earl Craven.

A Saxon Gold Ring inlaid with niello, found near Peterborough.

A Gold Hawk's-ring, found at Biggleswade, bearing the name of the King of England, from the Bernal Collection.

An ancient Gaelic Brooch, which appears to have belonged to the family of M'Lean of Lochbuy, from the Bernal Collection.

The Garter Plate of Sir William Parr, Marquis of Northampton, and brother to Queen Katherine Parr, which was removed from his stall at Windsor, on his attainder in 1547.

Several Encaustic Tiles, presented by Sir Henry Ellis, K.H., and Mrs. Stackhouse Acton.

That noble Monteith, or silver punch-bowl, of the Queen Anne era, to which we directed attention as one of the treasures of the Sibthorp Collection, brought £67 12s. 6d. Silver is sold by the ounce. Need we add that the gallant Colonel gave a much smaller sum for it; and yet the "figure" is not high.

The possessor of one of the finest collections in this country of autograph letters—Mr. Henry Belward Ray—is just dead. He bought in the old days of Glynn in Pall-mall, and bought with liberality and judgment. The fate of his collection has not reached us: the "inevitable" hammer, no doubt.

There is a great and important move at Manchester for the exhibition in that city in 1857 of the art treasures of the United Kingdom. We shall have something to say next week in favour of the project. At present any statement of particulars is premature. The Manchester people are thoroughly in earnest in the matter.

Oak Destroyed by Lightning.—On Monday, the 7th inst., during a storm, a fine oak was struck by lightning in Helmingham Park, Suffolk, the seat of John Tollemache, Esq., M.P. The tree was shattered and entirely prostrated, and its limbs were scattered by the lightning over a large space of ground.

THE CRIMEAN INQUIRY.—EXAMINATION OF THE EARL OF LUCAN.

## MONSTER MORTAR.

THIS gigantic mortar was cast at the works of Messrs. George Forrester and Co., Vauxhall Foundry, Liverpool. The rough casting weighed about thirty tons; having had a head cast on it the same length as the finished mortar. The metal is entirely of charcoal iron, from the Acadian Company's mines, near Nova Scotia. It is a very pure and strong metal, showing in analysis very little, if any, sulphur; and giving a transverse bearing power of over ten tons per square inch bar, with bearings three feet apart.

The shells to be fired from this mortar weigh, uncharged, rather more than 5 cwt. each; and it is expected that with a full charge, or about 40 lb. weight of powder, the range will exceed 7000 yards. The average range of the present 13-inch sea-service mortars is 4200 yards with 20 lb. weight of powder, and the shell under 2 cwt. The diameter of this monster mortar is 18 inches in the bore, by 5 feet 8½ in. length of chamber, its outside dimensions being 5 ft. 9 in. diameter by 7 ft. 6 in. long. The finished weight is 14½ tons.

The introduction of the above metal into gunnery is calculated to give a wholesome impetus to the manufacture of English iron for similar purposes; as we believe metal in every respect suitable for very large ordnance to be still a desideratum.

RUSSIAN COMMERCE IN 1854.—The official returns of the foreign commerce of Russia in 1854 have just been published, from which it appears that the approximate value of the merchandise exported from Russia in 1854 amounted to 68,337,631 silver roubles, and that of the imports into that country to 70,358,668 silver roubles, making together a commercial movement of 138,696,349 roubles, or 542,785,866 f.; showing, as compared with 1852, which was considered as an average year, a falling off of 307,000,000. Among the merchandise exported, wheat stands for the sum of 15,953,482 silver roubles (nearly 62,000,000 francs); wood for 2,809,187 roubles; flax, hemp, and linseed, form the other principal articles of export. Among the merchandise imported, cotton stands for 3,375,464 silver and spirits for 6,577,196 roubles, &c.—*Letter from St. Petersburg.*

MR. DEANE, THE DIVER.—A Sebastopol Correspondent writes:—"The Russians say that the shot of the Allies sometimes struck their boats full of men crossing from the north side, and sunk them, and they take pride in relating the horrors of the siege. Some of them will never be known. Mr. Deane, the diver, has, however, brought others to light. Close by the ruins of Fort Paul, whence the bridge started to the north side, he discovered at the bottom of the harbour a battery of field-artillery, horses, men, and all, entangled in the harness, and whether skeletons just hanging together in the network of leather. He has fished up five field-pieces and two howitzers. They are filled with mud, but they can soon be made fit for Woolwich. The wood of the carriages has been utterly destroyed by the teredo navalis, or whatever it is which lives on such hard fare. On the skeleton of one of the horses there were the bones of a driver, held together by the rags of his uniform and with his foot still in the stirrup!"

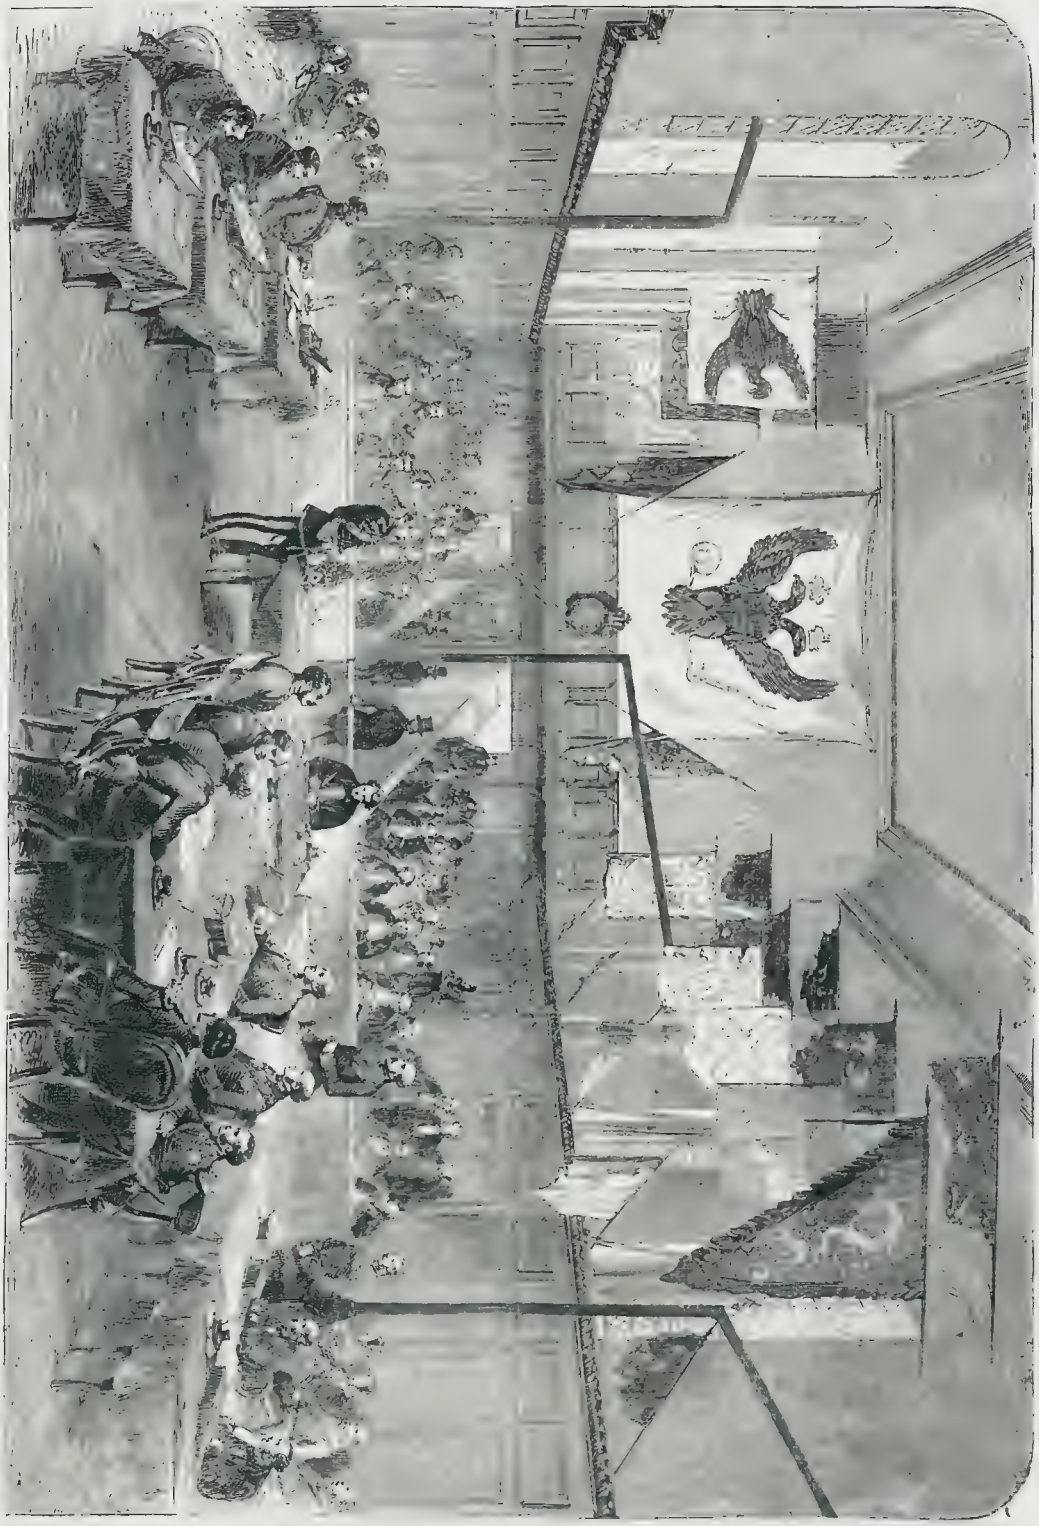
## THE MILITARY INQUIRY AT CHELSEA HOSPITAL.

THE inquiry into the conduct of the officers referred to in the Report presented by Colonel Tulloch and Sir John M'Neil was commenced at Chelsea Hospital, on the 3rd inst., before the Board of general officers, composed of Sir Alexander Woodford (President), Lord Beauchamp, General Rowan, Sir John Bell, General Peel, M.P., General Knollys, and General Sir George Berkeley. The large hall has been admirably arranged for the convenience of all who have business to transact; while for the public ample accommodation is provided on ascending stages, occupying fully three parts of the hall.

At half-past eleven o'clock the general officers composing the Board entered the hall. They were all in full regimentals. The Judge Advocate (the Right Hon. C. P. Villiers, M.P.) read the Royal warrant constituting the Commission, and explained the nature of the change made in the Board since its original formation—namely—Sir Alexander Woodford, in the room of Lord Seaton, who was originally appointed President, and Sir George Berkeley, in the room of Sir Thomas M'Mahon. The Judge-Advocate said that since the opening of the Royal warrant a communication had been sent by Lord Panmure to the Commander-in-Chief, informing him of the appointment of the Commission, and requesting that he would make arrangements for its being conducted with due care and solemnity. The President asked the Judge-Advocate whether he could inform the Court of the names of the officers whose conduct had been animadverted upon in the Crimean Commissioners' Report, and who wished to attend for the purpose of laying evidence before the Board. The Judge-Advocate said that, after receiving the warrant, he made application to the Commander-in-Chief as to the names of such officers as had been animadverted upon in the Report of the Commissioners, and who, in consequence, had demanded a full inquiry, and he had received from the Horse Guards the names of four officers, namely—the Earl of Lucan, the Earl of Cardigan, Sir Richard Airey, the Quartermaster General, and Colonel Gordon, the Deputy Quartermaster-General.

At the request of the Board the Judge-Advocate read a statement in reference to the manner in which the inquiry would be conducted:—1. The proceedings would be conducted as nearly as possible in accordance with the practice of military courts of inquiry. 2. Evidence might be given in the form of written statements, or by oral examination. 3. The Board would not be empowered to examine witnesses upon oath. 4. Every military witness would be informed that he might decline to make any statement that might have the effect of subjecting him to a court-martial; but that, after that caution, any statement he made might be taken down and used against him. 5. The cases of the persons having a right to appear before the Board would be taken separately. The Judge-Advocate: Will the Board consider what matter should be brought before them in the shape of documentary evidence? It was arranged that copies of all papers laid before Parliament, and bearing upon the matter should be submitted to the Board. The Judge-Advocate said that all papers bearing upon the inquiry that might be sent to his office should be produced. Sir G. Berkeley inquired whether any summonses had been issued? The Judge-Advocate replied that there had not, because none could be issued except under the direction of the Board. The officers whose conduct had been animadverted upon had had no official intimation of the day of meeting, and would only become officially acquainted with it under the summonses which would be issued by the Board. Sir G. Berkeley: Are all the officers in town? The Judge-Advocate did not know; but he thought that by Monday (the 7th inst.) there would be time for every person interested to be summoned. The Board, after some deliberation, decided that Lord Lucan's case should be first taken, and that summonses should be issued to him, and to such witnesses as he might desire to call; and added, that it would be well for the officers whose conduct was to be inquired into to hold their witnesses in readiness. The Judge-Advocate said that, as the cases would be taken in the order of military rank, Lord

LARGE MORTAR, CAST AT THE VAUXHALL FOUNDRY, LIVERPOOL.



SITTING OF THE CHIMAN BOARD OF INQUIRY, IN THE HALL OF CHELSEA HOSPITAL

Cardigan's would follow immediately upon Lord Lucan's; then would come Sir R. Airey's; and lastly, Colonel Gordon's. Did he understand the Board that no summonses should be issued to any other officers than those who had applied?—The Board decided that no other summonses should be issued until there were fresh applications from persons who supposed they had a right to appear before the Board. The Judge-Advocate inquired whether it was the wish of the Board that, as a matter of courtesy, some notification should be made to the Commissioners (Sir John M'Neill and Colonel Tulloch) that their report was to be called into question during the course of the present inquiry? He did not know where the Commissioners were to be found, but he supposed there would be no difficulty in ascertaining at the Horse Guards. The Board decided that a notification should be sent to the Commissioners. It was arranged that the Board at its rising should adjourn until eleven o'clock on Monday, the 7th inst., and that the ordinary times of sitting each day should be from eleven o'clock a.m., until four o'clock p.m.

During the last fortnight the Board has met on Monday, Wednesday, and Friday each week. The attendance of the public has generally been pretty large, including a considerable number of ladies, who seem deeply interested in the inquiry into the causes of the frightful loss of life in the winter of 1854-5.

## *IMPERIAL PARLIAMENT.*

### HOUSE OF LORDS.—MONDAY.

TORTURE IN INDIA.—The Earl of ALBEMARLE adverted once more to the system of torture in India, and moved certain resolutions denouncing the system employed for the collection of the revenue. The resolutions were supported by extracts from the report of the commissioners appointed to inquire into the subject.—The Duke of ARGYLL joined in condemning the practice, and spoke of it as having been inherited by the East India Company from the original rulers of the country. It had always been declared to be illegal and had never been sanctioned by the European servants of the Company. Measures were now in course of adoption for the final prohibition of torture in any shape or for any purpose. The noble Duke suggested that these facts should be incorporated in the resolutions, and, with that addition, he had no objection to them.—The Marquis of Clanricarde, the Earl of Ellenborough, Lord Montcagle, and other noble Lords having spoken, the resolutions, as amended, were agreed to.

### HOUSE OF COMMONS.—MONDAY.

Mr. TOTTENHAM took the oaths and his seat for New Ross.

RAILS.—Mr. WHITESIDE mentioned the terms of his motion on the subject of RAILS, to the effect that he attributed the capitulation of that town to the want of foresight and energy on the part of her Majesty's Government.

THE ENLISTMENT QUESTION.—Lord PALMERSTON, in answer to Mr. Baillie, expressed his belief that early next week the correspondence with the United States on the enlistment question would be issued.

CENTRAL AMERICA.—Lord PALMERSTON in answer to Sir R. Lyt ton, said he was very sorry the papers relating to Central America had not been presented already. They were now in print and had only to be revised, so that he expected to be able to lay them before the House in the course of the week.—Mr. BAILLIE said, after the statement of the noble Lord, he felt it his duty to postpone his motion.

RAILWAY AND CANAL TRAFFIC.—Mr. LOWE, in answer to Mr. Humphrey Brown, stated that the Government did not intend to bring in any bill for the better regulation of railway and canal traffic, or for the better prevention of accidents on railways.

The House then went into a Committee of Supply on the Civil Service Estimates.

BISHOP OF NEW ZEALAND.—Sir J. PAKINGTON brought under the notice the claim of the Bishop of New Zealand (Dr. Selwyn) to have his salary of £000 paid by the Imperial Legislature. Sir John argued that the discontinuance of that vote in the Estimates amounted to a breach of national faith; and expressed a hope that Mr. Labouchere, if disinclined to propose the vote to Parliament, would endeavour to induce the Colonial Legislature to take the Bishop's case into consideration.—Lord J. MANNERS expressed similar views.—Mr. LABOUCHERE and Lord PALMERSTON replied that there was no breach of faith, the original understanding on the part of the Government being entirely dependent upon the willingness of the House of Commons to continue the vote. After the lapse of some years, the House was disinclined to go on paying the salary, believing that the colony ought to be relieved from the Colonial Legislature.—After some remarks by Mr. WILLIAMS to reduce the salaries of the Governor and Council of Western Australia was lost by 9 to 7.

THE CONSULAR SYSTEM.—Mr. WISE urged the necessity of reforming the consular system, and expressed a decided preference for the commitment in that service of persons who had been specially trained for the discharge of the duties.—Mr. LAYARD concurred in the general concurrence in that view; and mentioned that the Foreign Secretary had issued circulars calling for information on the subject of consular duties. The information so obtained would be submitted to a Select Committee to be appointed next Session.

### HOUSE OF LORDS.—TUESDAY.

The House sat for only half an hour, and transacted no business of public interest.

### HOUSE OF COMMONS.—TUESDAY.

Mr. F. PEEL stated that the Foreign Legion now in British pay would be disbanded with the least possible delay; that the officers and men would receive all the pay and other advantages offered at the period of their enlistment, but were not entitled to pension or half-pay; and that the Crimean medals sent by the Emperor Napoleon would be distributed according to the French plan—namely, ten to every thousand men. General Codrington having been requested to select the particular regiments who might have rendered themselves most worthy of this special decoration.

#### MAYNOOTH COLLEGE.

Mr SPOONER pointed to notice, moved a resolution to the effect that the House should resolve itself into Committee, "for the purpose of considering the Acts for the endowment of the College of Maynooth, with a view to the withdrawal of any grants made thereto out of the Consolidated Fund, due regard being had to vested interests." In support of this resolution the hon. member reiterated at great length the arguments upon which he founded the assumption that the Catholic religion was false, dangerous, and unscriptural; and then proceeded to exhort the House to refuse any longer to afford a State support and legal recognition to a creed so heretical and damnable.

After a few words from Mr. M'CANN,

Mr. A. BLACKBURNE moved an amendment that the inquiry suggested into the Maynooth Acts should be extended into the whole subject of religious grants for every denomination of Christians in Ireland. In point of numbers, he remarked, the members of the Established Church consisted only 13 per cent of the Irish population, the other consisting per cent of Presbyterians and Dissenters. Public money in the proportion of £700,000 per annum for the Church of the minority, to little more than £38,000 apportioned among the members of the other sects, the Roman Catholics included.

Lord CASTLEROSSE contended that the Maynooth grant was secured by the terms of the Union, and could not be disturbed without a breach of imperial faith.

Lord BERNARD denied the existence of the will and compact, and declared that the principles inculcated at Maynooth had fostered disloyalty.

Mr. FAGAN thought the moment when peace was concluded between hostile nations was peculiarly inapposite for an attempt to stir up the embers of strife between Protestant and Catholic. The majority in favour of the motion would be solely produced by an unnatural combination between the partisans of a Protestant establishment and the advocates of the voluntary principle.

Mr. WILKINSON could not consent to withhold the State support of Maynooth College so long as the Established Church in Ireland retained its ecclesiastical property.

Mr. KENNEDY pointed out the inevitable result to which the discontinuance of the Maynooth grant would inevitably lead. The great majority of the Roman Catholic clergy in Ireland must thenceforth be educated abroad.

Mr. DE VERE believed that any invasion of the rights of Maynooth would be the prelude to an interminable agitation among the Irish Roman Catholics.

Mr. DRUMMOND, without expressing the slightest approval of Maynooth as an educational establishment, contended that, if that establishment were assailed, every ecclesiastical endowment in Ireland would in its turn be subverted.

The motion was opposed by Mr. MEAGHER and Mr. DEASY, who vindicated in detail the social system and the political principles which grew up under the influences of Roman Catholicism.

Mr. ROEBUCK reminded the House that Maynooth had been established by an essentially Protestant Minister, with the view of surrounding the pupils who were being educated for the priesthood in Ireland with better influences than they were likely to find in foreign seminaries. The same reasons which had originally prompted Mr. Pitt to grant an endowment to that institution still existed to forbid its discontinuance. From the very different circumstances attending the rebellion of 1798 and the outbreak of 1848 it was apparent that the Catholic priests, as well as the population of Ireland, had undergone a vast improvement during the interval, and had become enlisted on the side of loyalty and order. This improvement he believed to be fairly attributable to the teaching afforded at Maynooth.

Mr. REID having briefly opposed the motion,

Lord PALMERSTON expressed his regret both that the subject had been again introduced in that House, and that it had been discussed in a mere spirit of polemical controversy, for the question was entitled to be treated in its political aspect; and in this point of view he contended that the Maynooth endowment was guaranteed by a solemn compact with the Irish people, while the purposes for which that institution had been supported for the past fifty years by the Imperial Government were satisfactorily accomplished. In the existing loyalty and advancing prosperity of Ireland he found a proof that wholesome influences prevailed in that country, among which Maynooth was entitled to a high place. Whatever objections might be raised respecting the details of education in the College—a question into which he would not enter—it was in his opinion a matter of much higher importance to provide that the rising generation of the priesthood in Ireland should at all events be brought up as Irishmen.

Mr. SPOONER having briefly replied,

The House divided upon the amendment proposed by Mr. BLACK, which was negatived by a majority of 285 to 81—*Ib.*

Upon a second division on the main question there appeared:—For Mr. Spooner's resolution, 141; Against, 138—26.

The House thereupon resolved itself into Committee, Mr. NEWDEGATE taking the chair.

Mr. SPOONER moved for leave to bring in a Bill to Repeal the Maynooth Endowment.

Mr. HUTCHINS moved that the Chairman should report progress, which was negatived on a division by a majority of 154 to 132—*Ib.*

The motion for reporting progress was renewed by Mr. D'CONNELL, but withdrawn after a few words from Mr. J. M'Gregor and Lord Palmerston.

The House then divided, for the fourth time, on the question that leave be given to bring in the Bill. Ayes, 159; Noes, 142—17.

The House having resumed, leave was given to bring in the Bill.

On the motion of Mr. STAFFORD, a Select Committee was appointed to inquire into the administration of the medical department of the Army.

Leave was given to Mr. Horsman to introduce a bill to explain and amend the laws relating to lunatic asylums in Ireland.

### HOUSE OF COMMONS.—WEDNESDAY.

The Justices of Peace Qualification Bill was considered in Committee, and several clauses passed.

#### MINISTERS' MONEY (IRELAND) BILL.

On the motion for the second reading of the Ministers' Money (Ireland) Bill, Mr. HAMILTON moved an amendment, that the bill should be read a second time that day six months.

After a discussion (in which Mr. Meagher, Mr. A. Black, Mr. Miall, and Lord Bernard took part),

The SECRETARY FOR IRELAND explained the position in which the question now stood. A measure on the subject had been passed two years since, for which he invited a fair and deliberate trial. Should that Act prove inexpedient or dangerous, the Government, he declared, would undertake to introduce some comprehensive bill of reform in a future session.

The bill was opposed by Mr. Napier.

Mr. FITZGERALD vindicated the course pursued by the Government with respect to the measure.

Mr. WHITESIDE supported the amendment.

Mr. MAGUIRE and Mr. Serjeant O'BRIEN defended the bill.

Lord J. RUSSELL condemned the indecisive policy of the Cabinet. For the present, however, he consented to vote against the measure now before the House, trusting before long to find some bill introduced for the total abrogation of what he considered an unjust and vexatious impost.

On a division there appeared—For the second reading, 121; for the amendment, 202—81. The bill is consequently lost.

The Reformatory Schools (Ireland) Bill was read a second time.

The Exchequer Bills (£21,183,700) Bill was read a third time and passed.

### HOUSE OF LORDS.—THURSDAY.

The Board of Works Bill, and the Board of Works (Ireland) Bill were severally read a second time.

The Earl of HARROWBY, in reply to the Bishop of Oxford, said it was not his intention to proceed any further with his Education Bill in the present Session.

TROOPS, &c., TO BE SENT.—Lord PANMURE, in reply to the Earl of Elgin, said it was not the intention of the Government to withdraw any of the forces ordered to be sent out to the French North American provinces to replace the regiments and the corps that had been withdrawn from the Canadas during the progress of the war in the Crimea; but it was most unfounded to suppose that those forces were for the purposes of oppression.

### HOUSE OF COMMONS.—THURSDAY.

In consequence of there being only thirty-six members present at four o'clock, the House stood adjourned until Friday.

### HOUSE OF LORDS.—FRIDAY.

The Marquis of SALISBURY moved for certain returns in reference to the ticket-of-leave system, which he strongly condemned.—The Duke of ARGYLL said it was his duty to defend the system as far as he could. A few isolated cases, in which it had not proved quite successful. He laid on the table a report by Colonel Jebb on the operation of the system which he thought would show that, upon the whole, it had worked satisfactorily.

Earl STANHOPE called attention to the subject of secondary punishments generally, and urged upon the Government the propriety of giving some further assistance to the reformatory school system. He also suggested Moreton Bay as a desirable place for a new convict establishment.—Earl GRANVILLE said that the subject of reformatory schools was under the consideration of the Government. As to Moreton Bay as a convict establishment, he did not think that such an arrangement would be received with approbation by the Australian colonists.—After some further discussion the subject dropped.

The Charitable Uses Bill, and the Exchequer Bills (£21,183,700) Bill, were severally read a second time. The Public Works Bill, and the Public Works (Ireland) Bill, were passed through Committee.

### HOUSE OF COMMONS.—FRIDAY.

The CHANCELLOR of the EXCHEQUER, in reply to Mr. Disraeli in reference to public business next week, said that, in the event of the Estimates not being disposed of to-night, it was intended to go on with them on Monday. But if the Estimates were concluded to-night, Government proposed to take the Counties and Boroughs Police Bill on Monday. The right hon. gentleman then gave notice that he should move on Monday that the House at its rising should adjourn until Thursday following.

FALL OF RARS.—The CHANCELLOR of the EXCHEQUER, in reply to Mr. Disraeli, said that the Government were willing to devote Monday week to the consideration of the fall of Kars. If the business extended to Monday, the Police Bill would be taken on Friday next.

NEW PUBLIC OFFICES.—Sir B. HALL gave notice that on the 28th inst., he would move the appointment of a Select Committee to consider the best means of providing accommodation for the various public departments in the neighbourhood of Downing-street, and to report thereupon to the House.

THE GREAT NAVAL REVIEW.—Col. DUNNE asked why the members of the House of Commons were not allowed to take their wives on board the vessels provided for them by the Admiralty on the review as well as the members of the House of Lords.—Mr. LINDSAY inquired whether the vessel provided (the *Perseverance*) was the one which had capsized last year (Laughter).—Mr. CARDWELL said that [illegible] country, and what was now to be done with it [illegible] was true that gun-boats had been prepared for the purpose of the review.—Admiral WALCOTT also desired to know why the members of the House should be separated from their wives on that great occasion (Laughter).—Sir C. WOOD said that the ships had been prepared in the event of a continuance of the war which was now happily at an end. The members could not take their wives on board the vessels set apart for them in consequence of the want of space. No gun-boats had been built for the purposes of the review.

CELEBRATION OF PEACE.—The CHANCELLOR of the EXCHEQUER, in reply to Mr. Dundas, said that the large scaffolds now erecting in Hyde-park and the Green-park were for the celebration of a fête for the conclusion of peace.

ST. JAMES'S-PARK.—Sir BENJAMIN HALL, in reply to Mr. L. Davies, described the various plans proposed to the Select Committee for opening a public road through St. James's-park, and said that the Government had decided not to remove the Duke of York's Column at present, but to open a road from Buckingham-gate to St. James's-street, by the German Chapel, and to throw a foot bridge over the ornamental water: for which purpose he should shortly move an estimate.

INDIAN REVENUES.—Sir E. PERRY, on the motion for going into Committee of Supply, called attention to the annually increasing deficit of the public revenues in India, which, he contended, unless checked, would be productive of serious inconvenience to India and the public service generally.

---

The Customs officers at Malaga have captured an English smuggling schooner off that port, worth, with her cargo, 50,000 piastres. They have also seized a large quantity of smuggled goods in a steamer from the Levant.

## *THE COURT.*

The brilliant list of Court festivities which has been announced for the week augurs well for the gaiety of the approaching season. The Queen's birthday will be celebrated on the 29th of May, when a Chapter will be held at Windsor Castle, at which the Knights of the several orders present are commanded to wear their collars. The following Court entertainments have been announced by authority:—April 25, Juvenile Ball at Buckingham Palace. April 29, her Majesty's second Drawingroom. April 30, her Majesty's first State Concert. May 7, her Majesty's Levee. May 8, her Majesty's first State Ball. May 13, her Majesty's Birthday Ball. May 20, her Majesty's second State Concert. June 17, her Majesty's second State Ball.

The Queen held a levee on Tuesday, at St. James's Palace. There was a very numerous attendance, chiefly of military officers. The Duke of Norfolk had an audience, and delivered to her Majesty the ensigns of the Order of the Garter worn by his late father. Her Majesty's costume on this occasion was much admired. It consisted of a train of pink satin, covered with English lace, and trimmed with bows of pink and white satin. The petticoat was of white satin, covered with English lace, and trimmed with bouillonnés of white satin. On her head the Queen wore a diamond circlet. After the Levee her Majesty took a drive in an open carriage and four, accompanied by the Princess Royal and Princess Alice. The Prince Consort rode on horseback. In the evening the Queen and Prince Albert honoured the Opera with their presence. On the same day the Princess Royal and the Princess Alice visited Westminster Abbey; the Princesses Helena and Louisa and Prince Arthur went to the Zoological Gardens, and the Prince of Wales and Prince Alfred honoured Messrs. Day's lithographic establishment, in Gate-street, with a visit.

On Thursday the Queen and the Prince, with the Princess Royal, took a drive in an open landau and four. In the evening her Majesty and his Royal Highness visited the Adelphi Theatre.

Yesterday (Friday) the Queen and the Prince Consort paid a visit to the Camp at Aldershott, where a review of the troops took place. Her Majesty and her Royal Highness were to pass the night in the Royal Pavilion erected on the site of Cæsar's Camp, and return to London this afternoon.

THE QUEEN'S VISIT TO THE WOUNDED SOLDIERS AT CHATHAM.—Her Majesty the Queen and his Royal Highness Prince Albert, with the Princess Royal, attended by the Countess of Desart, Colonel the Hon. C. B. Phipps, Lord Adolphus Fitzclarence, and Colonel Seymour, left Buckingham Palace at two p.m. on Wednesday, and proceeded to the Bricklayers' Arms station, and thence by the North Kent Railway to Strood, where her Majesty was met by the Commandant of Chatham garrison, Colonel Eden, Colonel Savage, Colonel Sandham, Colonel Phillips, Major Gordon, and a number of other officers, both naval and military. Her Majesty having alighted, the Royal suite proceeded, followed by a numerous party of officers on horseback in full uniform, to the Supplemental Hospital, Brompton, up the Military-road, and over the drawbridge. On entering the barracks at Brompton the Royal party were met by a guard of honour, composed of the Royal Sappers and Miners, with their splendid brass band playing the National Anthem, the guard presenting arms on the gate having alighted, her Majesty was conducted to the opposite side of the barracks, where the convalescent invalids, from the Invalid Depôt, were arranged, with cards in their hands bearing the names, regiment, and the nature of their wounds, when and where received, also age and length of service, for her Majesty's inspection. The Queen passed down [illegible] length of the lines (above 200 men), and [illegible] each card, and upon several occasions very feelingly addressed those who had lost limbs. The next part of her Majesty's visit was to the sick and wounds in the wards of the hospital (there being 262 in the various wards). The Royal inspection terminated a few minutes before five o'clock, it having occupied about an hour and a quarter. Her Majesty appeared to express her pleasure at the attention shown the troops by the medical officers of the establishment, and the excellent manner in which every department is conducted. The Queen was again loudly and enthusiastically greeted on leaving the [illegible].

Her Royal Highness the Duchess of Kent and his Serene Highness Prince Ernest of Leiningen went to Kew on Monday, and visited their Royal Highnesses the Duchess of Cambridge and the Princess Mary.

We understand the Earl of Clarendon has definitively fixed his departure from Paris for London for this day (Saturday).

---

AN HEIRESS AT THE DRAWINGROOM.—There were two débuts at the Drawingroom last week that made a considerable sensation—one, the Prince Royal, who will in future regularly attend her Majesty's Drawingrooms; and another, the richest heiress, if rumour is to be believed, who has been presented at Court for several seasons, and whose fortune would, not to say it offers from a sovereign prince, but from a dozen Royal Princesses. I hear that every moustache in St. James's Palace assumed its most killing curl yesterday when the Hon. Miss Jones Loyd, the charming daughter of Lord Overstone, passed. One Duke, three Marquises, and a score of Earls have already announced their intention to lay formal siege to the heart of the young lady; and if the coveted high rank, and an alliance with an ancient lineage, the puzzle will be, not to find a nobleman with these qualifications, but to choose among the throng of suitors.—*London Correspondent of the Manchester Guardian.*

Castle Donington Church was the other day struck by lightning, which did much damage to the spire and to the body and interior fittings of the church.

## MUSIC.

HER MAJESTY'S THEATRE.—We are glad to announce that the rumour which has been for some time current respecting the engagement of Mdlle. Piccolomini is entirely correct. Not only has Mr. Lumley positively secured the services of this extraordinary new singer, whose performances have created so much *furore* throughout Italy, but he has made favourable arrangements with two other *prime donne*—Mdme. Albertini and Mdme. Alboni. The season will commence on 6th May, with an opera to introduce Mdme. Alboni. Some time in the following week Mdlle. Piccolomini will appear in Verdi's "Traviata" (new to this country), and shortly afterwards the "Trovatore" will be produced on a scale of great splendour, with Albertini as *Leonora*, and Alboni as *Azucena*. Of the merits of the latter lady it is scarcely necessary to speak; one of the most magnificent contraltos of the age she is sure to be received with enthusiasm. Of the former we will merely say that, though by name, education, accomplishments, and celebrity, an Italian, she is by birth an English lady. In addition to these, a young artiste, Madle. Finoli—gifted with charming voice, and great personal attractions, but as yet unknown to fame—has been engaged; as well as Mdlle. Giuditta Rizza and several other stars. The tenors will be Signor Siviani, who performed *John of Leyden*, in the "Prophète," for forty nights at the Pergola (Florence); Signor Baucardé, whose plaintive voice has already been heard at Her Majesty's Theatre; and Signor Calzolari, who has recently returned from St. Petersburg with fresh laurels and a still more beautiful voice than that with which a few years ago he delighted the English public. Signor Benevantani, one of whose great parts is *Don Giovanni*, has been engaged as principal baritone; and Signors Vairo and Zucconi as bass and buffo.

The attractions of the ballet are to include the "Corsaire," in which the exquisite Rosati will appear. Engagements have also been effected with two sparkling Italian and French *danseuses*, Mdlles. Boschetti and Lisireux, together with Mdlle. Rosa and a young Russian dancer of remarkable grace and beauty named Katinka.

With such a staff of great singers and dancers Mr. Lumley will, we hope, succeed in restoring the fortunes of his house. We have much to believe that, before long, the public will be enlightened by the announcement of further and equally brilliant engagements, but we are unwilling to give currency to reports that have not as yet an actual foundation in fact.

THE PHILHARMONIC SOCIETY began its forty-third season on Monday last, under highly-favourable auspices. Several of its recent arrangements, and especially the appointment of a man so much esteemed and respected as Professor Sterndale Bennett as conductor of the concerts, have met with general approval, as has been shown by the amounts of the subscription, which has not, we understand, been exceeded in any former year. This is the more evidently traceable to the nomination of Mr. Bennett, as the unpopular choice of Herr Wagner had a disastrous effect on last year's subscription. The reduction of the number of concerts from eight to six has likewise been a judicious and beneficial measure. The programme of Monday's concert was as follows:

PART I.

| | |
|---|---|
| Symphonie in C minor (dedicated to the Philharmonic Society) .. .. | Mendelssohn. |
| Recitative and aria—"Dove sono" ("Nozze di Figaro") .. .. | Mozart. |
| Concerto in E flat, pianoforte, Madame Clara Schumann .. .. | Beethoven. |
| Overture ("Don Carlos") .. .. .. .. .. | Macfarren. |

PART II.

| | |
|---|---|
| Sinfonia in A, No. 7 .. .. .. .. .. .. | Beethoven. |
| Recitative and aria ("Il Giuramento") .. .. .. .. | Mercadante |
| Solo, Pianoforte (Variations Sérieuses), Madame Schumann .. .. | Mendelssohn. |
| Ove tare ("Freischutz") .. .. .. .. .. .. | Weber |

To every musician this bill of fare will speak for itself, and every one will agree that a choicer banquet could not have been presented. The society, it will be seen, has followed its usual course of disregarding the idle cry of "novelty." It has always given novelty when it has found novelty worthy of being given. Novelty accompanied with excellence is a recommendation to which the Philharmonic Society has never been deaf. Witness its production of all the works of the great masters: the symphonies and overtures of Beethoven, Weber, Spohr, and Mendelssohn—which have been given to the world during the period of its society's existence. Let the world see a new Beethoven, a new Spohr, or a new Mendelssohn, and then if the society fail in its duty to produce his works it will really deserve to be blamed. The performance of the piece in the programme was excellent. Mr. Bennett displayed a new delicacy to the Philharmonic Society has never been [illegible]. Witness its production of all the works of the great masters: the symphonies and overtures of Beethoven, Weber, Spohr, and Mendelssohn—which have been given to the world during the period of its society's existence. Let the world see a new Beethoven, a new Spohr, or a new Mendelssohn, and then if the society fail in its duty to produce his works it will really deserve to be blamed. The performance of the piece in the programme was excellent. Mr. Bennett displayed a new delicacy to the Philharmonic Society has never been [illegible]. He conducted the orchestra with perfect firmness and self-possession; and (as might have been expected) his readings were uniformly the result of knowledge, taste, and judgment. We never heard the two masterpieces of Beethoven and Mendelssohn more beautifully played, and never saw them more warmly appreciated by the audience. Madame Clara Schumann, who appeared in England for the first time, supported her world-wide reputation. She possesses every quality of a great performer—energy and vigour, combined with the most delicate softness, refinement, and delicacy: her volume of tone is immense, but it never degenerates into noise, and is as soft and mellow as her softest *pianissimo*. Her reception was enthusiastic, and she must have felt it to be gratifying. Madame Clara Novello, now more than ever the favourite of the English public, was the only vocalist on this occasion. This season she is singing with greater power and beauty than ever; and in many of the highest qualities of her art there is no singer in Europe—not even the Nightingale herself—who is her superior.

THE ORATORIO of the CREATION was performed by the Belfast Classical Harmonist Society, in the Victoria Hall, on Wednesday evening, April 9th, being the first time it has been produced by a society in the north of Ireland. The soloists were Mrs. Sunderland, Mr. Benson, of London; Mr. Rogers and Mr. Wood, of Armagh; with Mr. Turle, organist of Armagh Cathedral, accompanying on the society's organ—a fine instrument, built by Robson, of London. The chorus consisted of about 80 voices; the orchestra, partly composed of members of the local instrumental society (the Amateurs), was very effective, consisting of about 30 performers. The audience was large and fashionable, and highly appreciated the efforts of the society in producing, for the first time in Belfast, a complete oratorio.

A NEW ORATORIO, entitled "Jephtha and his Daughter," by Herr Reinthaler, of Cologne, was produced by Mr. Hullah, at St. Martin's hall, on Wednesday evening. It was most favourably received by a crowded audience; and it deserved its success, for there are many grand and beautiful parts both in the airs and choruses. The performance, too, was exceedingly good. The principal solo parts were sung by Madame Clara Novello, Miss Palmer, and Mr. Thomas; and Mr. Hullah's choristers, as usual, were steady and efficient.

MR. AND MRS. HOWARD PAUL have been giving their comic entertainment, "Patch Work," in Liverpool, with very great success. They appear in Leeds the latter part of this month.

ITALIAN OPERA AT THE SURREY THEATRE.—A company is about to be formed for the production of Italian operas at the Surrey Theatre, the present managers—Messrs. Shepherd and Creswick—having, it is said, entered into arrangements with Madame Caradori, Madame Rudersdorff, Madame Gassler, Madame Lorini, Madame Sedlatzek, Mr. Gautier, Herr Reichart, Signor Lorini, Signor Baraldi, Mr. Swift, &c., and other distinguished artists.

## THE THEATRES, &c.

PRINCESS'.—On Thursday "Henry VIII." was performed for the 150th night at this theatre. This run, extraordinary as it is, has been fully justified by the manner in which the tragedy was placed upon the stage. As a spectacle the production has never been equalled, and as a performance seldom excelled. The next illustrative revival is announced for the benefit of Mr. and Mrs. C. Kean on Monday week—"A Winter's Tale," and we look forward to Mrs. C. Kean's impersonation of *Hermione* with the greatest interest.

HAYMARKET.—A new farce, called the "Postman's Knock," somewhat rudely constructed for the apparent purpose of introducing the song so named, has been produced at this theatre. The song itself is well sung by Mr. W. Farren; and the piece, aided by his talent, and that of Miss Lavine and Miss Schoot, who also sing a ballad or two each, has been favourably received.

STANDARD.—Shakspeare still continues in the ascendant. A well-illustrated performance of "A Winter's Tale" has been added to those of "Antony and Cleopatra" and "King John." The company has been greatly improved; and the audience manifest more and more sympathy with the high poetry of our elder drama. There are those who still affect to wonder at this great fact, and to think that rude melodrama or domestic tragedy would better adapt itself to the tastes and aptitudes of a mixed popular audience. Even in literature this is not the case. To an imaginative Byron, for instance, Crabbe appeared "England's sternest poet, and her best;" but, as Margaret Fuller has truly observed, to the poor and humble, whom he has described so feelingly and correctly, he is nothing of the sort. He may be valuable to them, as to the upper classes, as an interpreter, and still more as an advocate; but he is not "agreeable as a household friend." They have no special relish for verses either in print or on the stage. They want, as the female writer above named observes, "something romantic, something which takes them out of their sphere; and high-sounding words, such as they are not in the habit of using, have peculiar charms for them." The grandiloquent heroics of *Marc Antony* and *Leontes*, of *Cleopatra* and *Hermione*, have especial charms for such auditors. Though not always intelligible, these grand phrases are always influential. The hearer is spellbound by the rhythm and the music of the verse; if he cannot always catch the sense, he is secure of the sound. In this way a perception of pleasure is gained, and a touch of refinement communicated, by which even the "savage breast" is soothed and the rudest minds are harmonised. Miss Glyn, in her various assumptions, prefers the purely classic in her style, and aims at a statuesque repose which to the unreflecting might appear hazardous with an East-end audience. It is, however, not so; for by them it is accepted as the most natural mode of utterance. This actress, too, has the great merit of *speaking*, not declaiming, the dialogue; and thus stands in contrast with the ordinary stage heroine. And to this no small part of her extraordinary success is owing.

## NATIONAL SPORTS.

NEWMARKET commenced its meetings on Monday for the season, with a gloomy sky and a blank attendance. The Craven Stakes was far below what it was wont to be, but a good race was given against Fisherman, cleverly by a head; and the finish between Anemone and Armiger, on the Riddlesworth (which at one time seemed mortgaged to Lord Jersey and the Cobweb colts), was equally close. Saucebox essayed to give Lawn 40 lb. for his year in a £50 plate, over the 1¼-mile Clermont course, but the "puce and white" failed against such fearful odds. Mr. Parr was equally unlucky with Apathy on Tuesday, who went down before an unknown colt of Mr. Stephenson's; and Furioso, who was certainly the best-looking of the stock at the Royal sale of 1854, showed no temper, and won the Sale Stakes, and a 100-to-1 place at the Derby betting. Sarabland, who has long been considered the greatest rogue among the Yorkshire horses, ran the A. F. course with more nerve than usual; and, though it seemed any odds on Cannobie as they came down the hill from the Bushes, he headed him half-way up the cords, and beat that great Derby favourite cleverly. Cannobie is, however, by no means disgraced, as he only received 9 lb. for his two years, and the distance was hardly long enough for him: he, moreover, triumphed on paper, as a cross was proved against Sarabland after a long investigation, and the judge's decision reversed. Walmer had the day to himself on Wednesday, as he beat Victoria very easily for the Column, and got a 100 sovs. sweepstakes as well against the Clarissa colt, whose owner knew his fate by its third place in the Column, just before. The present was the first appearance of West Australian's sister, who had to supply the place of Fly-by-Night. This much-talked-of colt is said to have got a strain in the back sinews which reduces him to walking exercise and 25 to 1 for the Derby. Countless *comards* about the favourites are now in full circulation. The John Day party, it is averred, are really glad that Cannobie has arisen to meet Wentworth, as they did not wish to see their giraffe iron in alone, "with his ears pricked." Porto Rico has had—to judge from the support he receives—a capital trial for the Two Thousand Guineas; and Yellow Jack an equally satisfactory one with Omer Pacha; but there were people found who could relieve the tedium of a dull Craven Meeting by speculations as to whether Mr. Padwick had really sold this colt and Coroner in one lot for twelve thousand guineas! So runs the world away.

The Curragh Stands open on Tuesday for a four days' meeting, but the list is, to our Anglian eyes, sadly meagre. Tuesday and Wednesday promise us a fair Spring Meeting at York. Nougat, Matilda, Willie Craufurd, Red White and Blue, Magsilver, Saunterer, and Skycutter, are all in the half-a-mile Zetland Stakes, which will most probably fall to the lot of Madame Clicquot, who has been tried very highly, both in public and private. The Spring St. Leger has no such array; and, if Jilly is in form, she and Fisherman and Heir of Lynne will be the principal competitors. Riffleman, 8st. 10lb.; Fandango, 8st. 5lb.; Sading, 7st. 13lb.; and Freddy, 8st. 3lb., are among the names on the Wednesday's list—so thorough is his military knowledge—that we are not surprised to find a strong position, nor exhibited a blunder in the appointments of the race that his pictures will bear the critical inspection of Generals is a fact that claims his credit as an artist. Still these claims may be good, but the truth is, Horace Vernet has been too warmly praised and too severely condemned. Neither his admirers nor his detractors speak the truth regarding him. His drawing is masterly; he [illegible] his proportions. Lines are too blue; his drapery [illegible] his foregrounds are grouped and [illegible] his general feeling that are inimitable. Both his claims and his defects are admirably illustrated in the picture which has lately completed, and which we have engraved. Let the reader observe, for instance, the splendid drawing exhibited in the centre group, and principally in the officer and horse starting back at the approach of a cannon-ball. If, again, he would notice some evidence of the peculiarities with which Vernet seizes upon the characteristics of various classes of men, let him study the group in the left-hand corner of the picture. Here he will find a Zouave and a Highlander, both wounded, and trudging away from the fight, evidently savage that they are disabled. The Zouave vividly weaves a trophy of his prowess towards Prince Napoleon (the central figure); while the sedate Highlander simply gives the military salute. The heads of these two soldiers are perfect studies. The Highlander is direct from the Highlands, the Zouave a most evident traveller from Algeria. Then again, how admirable is the group in the right hand corner of the picture conceived and executed! The poor fellow bathing his horse's leg is one of the choicer specimens of Vernet's skill. Nearly all the central figures are portraits. The battle is seen from afar; although the hill which gives just within a few paces of the Prince is meant to indicate that the assembled officers are actually under fire. The portrait of the Prince is an admirable likeness. Then there are General Thomas, wounded and sustained by his Aide-de-Camp; Colonel Desaurets, first Aide-de-Camp to the Prince; the Duke d'Aumale; and David, Aide-de-Camp, and grandson of the well-known painter—all admirably grouped. There are also indications of de St. Arnaud's Staff, and of the attacks led by Bosquet and Canrobert. In the central distance of the picture is a group of wounded Russians, most happily introduced; and, in the low ground, the river Alma is seen winding along. On the height's beyond, half-obscured by dense columns, are the Russians. Here, amid the trees in the half-distance, and in the general landscape, we may find the painter's weakness. Nature to him has not the charm with which she appears to the professed landscape painter. Vernet paints trees, and sky, and fields, because these make up the frames for groups of fighting men. He loves fields, not freckled with buttercups, but strewn with dead and dying men. And where he loves he describes with the pencil of an accomplished master.

The picture, of which the engraving lies before us, was painted originally for Prince Napoleon, who figures in the very centre of it. The modesty of this is beyond all grace—especially after the world very generally passed upon the Prince's Crimean experiences. The first Napoleon has been painted in the centre of many battle-pieces; therefore has his nephew wisely argued—"Since I have been under fire, why should not I be taken in an heroic attitude?" The world, however, will be inclined to forgive the Imperial vanity, seeing that it has produced an admirable composition. There is a story in connection with this picture, furthermore, which gives it peculiar interest.

It appears that during the progress of the Prince's commission the Paris Universal Exhibition authorities gave in their decisions on the merits of the competing artists and commercial men. The Prince, as President of the Imperial Commission, was responsible for those decisions. Well, the Grand Cross of the Legion of Honour was given to M. Ingres, an artist whom Vernet regards, of course, as a very poor creature indeed. The battle-painter was so mortified that this honour should have been given to a rival, that he declined to let the Prince have the picture. He then wrote a letter to Prince Jerome, reminding him that when he was King of Westphalia, he bought his (Vernet's) first work. He now begged that his Imperial Highness would accept the painting of the Battle of the Alma as a token of the artist's gratitude. Prince Jerome accepted the gift; and the picture is now in the Prince's apartments in the Palais Royal. Marshal Bosquet, who saw it a short time ago, has declared that it is an exact representation of the battle. We have, then, a picture of this memorable battle from a French point of view. Hardly a British soldier is seen (our attack having been to that effect of the position), save a wounded Highlander and a dead General! Now there should be a companion work, taken from the British position, by Landseer. But perhaps the finest modern subject for the animal painter is the famous charge of the Light Cavalry led by Lord Cardigan!

WEDNESDAY.

Handicap Plate of £50.—Woodcock, 1. Arioste, 2.
Column Stakes.—Walmer, 1. Victoria, 2.
Match; £100.—Catalpa filly, 1. Palm, 2.
Craven Handicap Plate.—New Brighton, 1. Pretty Boy, 2.
Sweepstakes of 100 sovs each.—Walmer, 1. Clarissa colt, 2.

THURSDAY.

Claret Stakes.—Riffleman, 1. St. Hubert, 2
Newmarket Handicap.—The Earl, 1. Diego, 2.
Asko Produce Stakes.—Tyrine, 1. Walmer, 2.
Sweepstakes of 100 sovs.—Dead heat with Pitapat and Theodora.
Handicap Plate of £50.—Chiko, 1. Furiosa, 2.
Sweepstakes of 50 sovs.—Blue Mantle, 1. Hobe, 2.
Subscription Plate.—Maid of the Mill, 1. Shelah, 2.
Sweepstakes of 100 sovs.—Pitapat walked over.
Sweepstakes of 10 sovs.—Rudston, 1. Rattler, 2.
Match.—Palm beat Hardwick.

FRIDAY.

Queen's Guineas.—Saucebox, 1. Sir R. Treachard, 2.
£50 Handicap Plate.—Olympus, 1. Czar, 2
Post Stakes.—Fandango, 1. Sarabland, 2
Sweepstakes of 100 sovs.—Pretty Boy, 1. Duke of Lancaster, 2.
Sweepstakes.—Findon, 1. Lunelle, 2.

A good joke is told of the Hon. Rufus Choate, a popular American orator and lawyer. He had been invited by a committee of some public institution to lecture before it; but, from his reply, the committee were unable to decipher whether he had accepted the invitation or not!

The Turkish Divan has come to a decision to permit the entry of Russian merchant ships into the Bosphorus.

At the Wesleyan Sunday School, Blyth, on Sunday last, a sermon in rhyme was delivered by a Mr. W. Andrew.

## THE BATTLE OF THE ALMA.—BY HORACE VERNET.

EVERY person who has been to Paris, even for a few days only, is familiar with the works of Horace Vernet. They cover acres of wall space at Versailles; and engraved, they fill up the shop-fronts of printsellers. They excite the most enthusiastic admiration, and the most profound disgust. To one connoisseur these remarkable works represent all that is great and good in modern art, while to another they aptly illustrate the artistic degeneration of the times. Endless jokes and fervid eulogy, adoration and scorn, have by turns been the portion of the best-known living painter. It is difficult to bear success. It is no easy lesson, given world-wide popularity, to learn how to wear the wreath. Some plant it firmly upon their heads, and, thrusting their thumbs into the arm-holes of their waistcoats, bid their brethren be good enough to remark the really magnificent effect. Some prop the wreath awry upon their brow, and go forth that the world may laugh at their buffoonery. Some, again, with affected modesty, drop the wreath in the nearest corner, and vow that it is by far too brilliant for their heads. These latter are generally the vainest of men. Still, it is possible to be both vain and swaggering; and it is by no means clear that the dashing Horace Vernet might not be put forward as an instance of this fact. He is said to be the most completely-decorated man in France. He might have been seen last autumn, at the Hôtel de Ville ball given to the Queen, literally covered with stars. He was a little firmament in himself, with a complete milky way of silver and diamonds stretching across his bosom. The modest spectator of this starry splendour could not refrain from asking himself whether the wearer might not have left at least a dozen of his planets at home. And then it seemed natural, after all, that Horace Vernet should wear them.

His pictures discover the man. He is the lover of show—the adorer of uniforms. He paints colours like touch itself. He catches the tints he loves in the glare of an Eastern noon. He hates shades of all kinds;—all to him is positive and palpable. It is true that he is master of the school he has created. Charming is the bold grace of his drawing. And, then, how faithfully he seizes upon the individuality of every man he has noticed! You may remark a thousand soldiers in his pictures, all alike as regards costume, but all different in form and face. He is wonderfully various in composition, and a master of military life. In private life he enjoys the reputation of being one of the best [illegible] in France. And then he fences, as any reader who has examined the [illegible] of this atelier knows. He is loved in the army, for he has the [illegible] of a lively temper. And then, it is said, the [illegible] situated—so thoroughly is his military knowledge—that he never put a battalion in a wrong position, nor exhibited a blunder in the appointments of the [illegible]. That his pictures will bear the critical inspection of Generals is a fact that claims his credit as an artist. Still these claims may be good, but the truth is, Horace Vernet has been too warmly praised and too severely condemned. Neither his admirers nor his detractors speak the truth regarding him. His drawing is masterly; he [illegible] his proportions. Lines are too blue; his drapery [illegible] his foregrounds are grouped and [illegible] his general feeling that are inimitable. Both his claims and his defects are admirably illustrated in the picture which has lately completed, and which we have engraved. Let the reader observe, for instance, the splendid drawing exhibited in the centre group, and principally in the officer and horse starting back at the approach of a cannon-ball. If, again, he would notice some evidence of the peculiarities with which Vernet seizes upon the characteristics of various classes of men, let him study the group in the left-hand corner of the picture. Here he will find a Zouave and a Highlander, both wounded, and trudging away from the fight, evidently savage that they are disabled. The Zouave vividly weaves a trophy of his prowess towards Prince Napoleon (the central figure); while the sedate Highlander simply gives the military salute. The heads of these two soldiers are perfect studies. The Highlander is direct from the Highlands, the Zouave a most evident traveller from Algeria. Then again, how admirable is the group in the right hand corner of the picture conceived and executed! The poor fellow bathing his horse's leg is one of the choicer specimens of Vernet's skill. Nearly all the central figures are portraits. The battle is seen from afar; although the hill which gives just within a few paces of the Prince is meant to indicate that the assembled officers are actually under fire. The portrait of the Prince is an admirable likeness. Then there are General Thomas, wounded and sustained by his Aide-de-Camp; Colonel Desaurets, first Aide-de-Camp to the Prince; the Duke d'Aumale; and David, Aide-de-Camp, and grandson of the well-known painter—all admirably grouped. There are also indications of de St. Arnaud's Staff, and of the attacks led by Bosquet and Canrobert. In the central distance of the picture is a group of wounded Russians, most happily introduced; and, in the low ground, the river Alma is seen winding along. On the height's beyond, half-obscured by dense columns, are the Russians. Here, amid the trees in the half-distance, and in the general landscape, we may find the painter's weakness. Nature to him has not the charm with which she appears to the professed landscape painter. Vernet paints trees, and sky, and fields, because these make up the frames for groups of fighting men. He loves fields, not freckled with buttercups, but strewn with dead and dying men. And where he loves he describes with the pencil of an accomplished master.

The picture, of which the engraving lies before us, was painted originally for Prince Napoleon, who figures in the very centre of it. The modesty of this is beyond all grace—especially after the world very generally passed upon the Prince's Crimean experiences. The first Napoleon has been painted in the centre of many battle-pieces; therefore has his nephew wisely argued—"Since I have been under fire, why should not I be taken in an heroic attitude?" The world, however, will be inclined to forgive the Imperial vanity, seeing that it has produced an admirable composition. There is a story in connection with this picture, furthermore, which gives it peculiar interest.

It appears that during the progress of the Prince's commission the Paris Universal Exhibition authorities gave in their decisions on the merits of the competing artists and commercial men. The Prince, as President of the Imperial Commission, was responsible for those decisions. Well, the Grand Cross of the Legion of Honour was given to M. Ingres, an artist whom Vernet regards, of course, as a very poor creature indeed. The battle-painter was so mortified that this honour should have been given to a rival, that he declined to let the Prince have the picture. He then wrote a letter to Prince Jerome, reminding him that when he was King of Westphalia, he bought his (Vernet's) first work. Hardly a British soldier is seen (our attack having been to that effect of the position), save a wounded Highlander and a dead General! Now there should be a companion work, taken from the British position, by Landseer. But perhaps the finest modern subject for the animal painter is the famous charge of the Light Cavalry led by Lord Cardigan!

THE BATTLE OF THE ALMA.—PAINTED BY HORACE VERNET.—(SEE PREVIOUS PAGE.)

## GENERAL CANNON.

On Saturday last the quiet little town of Market Lavington, near Devizes, was enlivened by a communication made by the Rev. M. W. Mayow, the respected Vicar of the parish, that General Cannon, who has taken an active share in the European conflict, and has so faithfully followed the fortunes of that eminent Commander of the Turkish army, Omer Pacha, was about to pay his Lavington friends a visit on his return from the seat of war. This feeling was augmented on its becoming known that the gallant officer had given the rev. gentleman instructions to provide a liberal supply of bread to be distributed to the poor. It was at once

LIEUTENANT-GENERAL CANNON (BEHRAM PACHA).—FROM A PHOTOGRAPH BY CLAUDET.

determined (as well as the shortness of the notice would allow) to give him a hearty welcome. At three o'clock in the afternoon the Lavington brass band, accompanied by several of the tradesmen on horseback, headed by the venerable churchwarden, Mr. Thomas Stobbert, and a large number of inhabitants, proceeded on the Erchfont road to escort the gallant hero into the town. After a short interval the carriage was seen descending the Eastcott hill, when the band broke forth in welcome strains "Cheer, boys, cheer!" Mr. Stobbert then rode forward and welcomed the gallant General to his once happy home, after the toils of his hard campaign; and trusted the peace which had been concluded might be as lasting as he hoped it would prove to be honourable to all.

The gallant officer replied in an address of soldier-like simplicity. He spoke of the hardships through which a soldier had to pass. He himself had often gone with two biscuits a day, but he thanked Divine Providence having preserved his life, and allowed him again to see the happy faces around him. The horses were removed from the carriage, and a party of Wiltshire labourers drew him in triumph, upwards of a mile, and through the streets, amidst hearty acclamations. On reaching the Vicarage where the gallant General was to be entertained, the respected Incumbent, with his family, was in waiting to receive him. The gallant General thanked the assembled throng for their kind expression of feeling and sympathy. He then placed in the hands of Mr. Stobbert the sum of £10 (exclusively of the bread he previously ordered) to be distributed. Cheers followed this announcement, and the same evening the labouring men were supplied with beer, and all retired in good order.

Next day the bread was distributed to all who chose to apply for it, and was most thankfully received. The remaining sum was given to the aged women of the parish.

Lieut.-General Cannon is the second surviving son of the late Rev. D. Cannon, D.D. At an early age he entered the service of the Hon. East India Company; and in 1834 he served in the campaign against the Rajah of Coorg. In 1835 he joined the British Legion of Spain under General Evans, where he commanded the 9th and 10th Regiments, and took part in the several campaigns and actions, and was severely wounded in the storming of the lines of St. Sebastian, on May 5, 1836. On the expiration of the service Col Cannon returned to his duty in India; but, his health failing, he retired on half-pay in 1847. On the breaking out of the war between Russia and Turkey, in 1853, Col. Cannon, with a few friends, proceeded to Turkey, and, with the authority of the British Government, accepted service in the Ottoman army, the Sultan conferring upon him the rank of Major-General, under the title of Behram Pacha. He was placed in command of a division of the army, and whilst the Russians were laying siege to Silistria, he was sent off by Omer Pacha from Schumla, with 8000 men, to harass and distract the besegers; and, at the distance of sixty or seventy miles from supports, Gen. Cannon remained in front of the whole Russian army until intelligence reached him that the garrison was in despair. The General, who had made his way so far, without tents or baggage, in forced march threw himself (without receiving orders) into the fortress, and with his fresh troops occupied the celebrated work called Arab Tabia and Yianli, where he found the gallant Captains Butler and Nasmyth, by their daring example, doing good service. He next took energetic measures for the defence of the fortress. On June 12 General Cannon entered Silistria; four days afterwards the investing army raised the siege, and in ten days all had retired. Omer Pacha listening to thank General Cannon and his officers for these essential services. On July 7, 1854, the Turks crossed the Danube near Giurgevo, in the face of the Russian army, and, with the assistance of General Cannon and a few British officers, signally defeated the enemy, who soon after fled precipitately from the Principalities. General Cannon commanded the first division of the Ottoman troops embarked for the Crimea last winter to occupy Eupatoria, which place was much strengthened under his able directions; thus testing the true value of British officers with Turkish troops. General Cannon has received for his services in Spain the Commandership of the Order of Charles III. and St. Ferdinand, and two medals; and from the Sultan the Order of the Medjidie and two gold medals, and Omer Pacha, in a despatch to Lord Stratford de Redcliffe, testifies to General Cannon's services in contributing "greatly to exalt the honour of the Ottoman arms."

NEW CHURCH OF ST. SAVIOUR, WARWICK-ROAD, PADDINGTON.—THE CHANCEL.

## NEW CHURCH OF ST. SAVIOUR, WARWICK-ROAD.

This edifice, which was consecrated on Saturday last, is a very handsome addition to the church accommodation for the extensive parish of Paddington; or, rather, that portion known as "the estate of the Bishop of London," and intersected by Bloxfield road. The church is a large structure, built in what may be termed the adapted Gothic style. Discarding the village church model, which has been followed unsuccessfully in several large London churches, the architect has dispensed with side aisles, clerestory, columns, &c., and formed a hall or auditorium, with handsome open-timber roof and windows, the tracery of which is Second Pointed or Decorated, slightly inclining to flamboyant. Galleries surround the nave, and the organ stands in the tower, which opens into the church. The chancel is, more correctly, according to the ancient model; the roof, of wood, is painted azure, and powdered with gold stars, the beams being illuminated with flowing design. The east and side windows are good specimens of the skill of Messrs. Gibbs, of the New-road.

The stained and painted glass is in compartments, comprising a series of subjects from the New Testament, with symbols, monograms, &c. There are two small windows on the north side—one bearing a figure of St. John, and the other Mary; two smaller windows light the south side, and have coats of arms within them. The reredos, by Mr. Farmer, is of Caen stone, richly carved, having columns of serpentine marble. In the centre, over the altar-table, is painted the Vesica, with the sacred monogram I.H.S., surrounded by imitation encaustic tiles, after the style of Minton's; on each side of this are scrolls, bearing texts: the background the same as the Vesica. On either side of these are the Credence Tables, on a gold ground. This completes the reredos. The altar is completed by two compartments on each side, bearing scrolls with texts from Scripture, and surrounded by tiles like the others; the front of the altar is also inlaid with tiles. The pulpit is a handsome piece of work, richly carved in oak, having a base of stone resting on dwarf columns of serpentine marble at

COMMENCEMENT OF THE RESERVOIR, IN THE VALLEY OF VEHAR, ISLAND OF SALSETTE.

the corners, close to the junction of the wood with the stone, are small figures of the latter material. The pulpit, reredos, and font (which, by the way, somewhat assimilates the pulpit), have been executed by Farmer, of the Westminster-bridge-road.

Great credit is due to the architect, Mr. Thomas Little, of Northumberland-street, for the manner in which he has succeeded in uniting pleasing forms and correct details with what is really useful in a parish church, capable of containing 1700 persons. By far the greater part of the cost of the edifice has been defrayed by the incumbent and his private friends. The Bishop of London, with his accustomed munificence, subscribed £500; while the parish of Paddington voted £2000, in consideration of 500 seats being free for the use of the poor. The east window is the gift of H. W. Schneider, Esq., Sussex gardens, Hyde-park. The incumbent is the Rev. T. Marsland Hopkins, M.A., of St. Peter's College, Cambridge, and formerly Curate of St. James's, Paddington.

The church was consecrated on Saturday last, April 12, by the Lord Bishop of Oxford. The prayers were read by the Incumbent, and a sermon preached by the Bishop, who took for his text Acts iv., v. 31.

## COMMENCEMENT OF THE VEHAR WATERWORKS, BOMBAY.

THE town and island of Bombay, the population of which is estimated at about half a million, are so badly supplied with water that, when the annual rains are deficient in quantity, the place is subjected to all the horrors of drought. There are no rivers or lakes in the neighbourhood, and the wells are but an indifferent source, both in the quantity and quality of the water which they yield. The chief means of supply are the tanks and reservoirs, which are dependent chiefly on the surface drainage, with all its impurities. Hence all the year round a water-famine are frequently impending over this thickly-populated city and its suburbs. The last monsoon was an unusually scanty one—the fall of rain having been only about fifty inches, about twenty-five below the average. The result is that, at the date of this communication, though the inhabitants were husbanding their fast-failing stock like distressed mariners on a windless ocean, they had before them the certainty that in two months more, at least, they would be without water.

To remedy this wretched state of affairs, as regards the future, it has been resolved to form a vast reservoir in the island of Salsette, now joined to that of Bombay by the railway viaduct. The valley of Vehar embosomed in hills, is to be converted into a lake by means of embankments at its debouchure; and the water thus collected is to be conveyed in a Bombay, a distance of some fifteen miles, through iron pipes.

The first public act of Lord Canning in the country whose affairs he has been appointed to administer, was the formal commencement of this great and important work, by "raising the first turf" on the site of one of the proposed embankments. This ceremony took place on Thursday, the 31st January, at half-past five in the evening. A special train conveyed a part of the company as near to the scene as the railway could carry them; and an excursion train landed a much larger body, including some hundreds of natives, at this point: thence, in carriages, on horseback, and on foot, the people found their way over the yet inter-vening space.

The scene of operations (says the *Bombay Gazette*) was very picturesque. It was on the site of one of the future embankments, between two wooded hills at the entrance of the valley which is to form the bed of the proposed lake. The ground-plan of the dams had been cleared and distinctly marked, and the elevations were indicated by cords stretched across from hill to hill. The company was thus presented with a very complete idea of the works designed to convert a vale of nine square miles area into a sheet of water embosomed in romantic hills.

Tents had been pitched for the reception of the company, and into these it thronged on the arrival of Lord and Lady Canning, Lord Elphinstone, and their party, from Kemery. The Governor then opened the proceedings with a short speech, expressive of the satisfaction that existed for the formation of the proposed reservoir, and disposed of some of the objections to it. Lord Canning then addressed the assemblage, declaring the satisfaction which he felt in having the opportunity of assisting on such an occasion, and he trust that he would be enabled to carry forward those great designs for the improvement of India which have been formed and initiated by his illustrious predecessor. It may be worthy of remembrance hereafter that the first public address of Viscount Canning, Governor-General of India, in India, was delivered under a tent in a picturesque valley of the thinly-peopled island of Salsette.

After this the company left the tent, and Lord Canning with a veritable spade turned the first turf of the Vehar works, depositing the same in a vessel beforehand. The completion of this achievement was greeted with three hearty cheers from the congregated Britons, with various supplementary acclamations devoted to the success of the Vehar Waterworks, &c.

All was now over, and the company found its way back to the railway, and thence, without accident, we believe, by the different trains into Bombay, where the specials arrived at about a quarter to eight.

The Vehar Lake, when completed and full, will afford one of the most beautiful scenes that can be witnessed in India remarkable for the beauty of its scenery. With an area of close on nine square miles, its shores for a circuit of upwards of sixteen will be surrounded by hill, varying in elevation from five hundred to twelve hundred and fifty feet, of singular picturesqueness and beauty, terminating occasionally in abrupt precipices, pierced with gloomy dells, scarred with rugged ravines; and everywhere covered with rich stores of varied vegetation the tall palmyra, the spreading banyan, the giant teak, the bushy mango, with jungle interwoven and creepers over every form and hue. The beholder is struck with astonishment when he is told that the villages with which the valley is sprinkled will at no great distance of time be forty feet under water, and that when the lake is full the loftiest palm-trees, if suffered to remain where they are, will scarcely show their tops above its surf.

We understand that among the replies received by the Horticultural Society, in answer to its appeal for assistance in enabling it to maintain its Garden, there is a most noble offer of assistance from Mr. H. Belmore, of Travemunde, from which the following are extracts:—"I have anxiously attended to all that has been published regarding the question of relinquishing the garden of the Horticultural Society. Being a foreigner, and no Fellow of the Society, I am perfectly aware that I am as little entitled to meddle with English affairs as the poet in Shakspeare's "Julius Cæsar" with the grudge of the Generals, and that I may perhaps risk a similar treatment. Nevertheless, the lively interest I take in everything concerning horticulture, and the thorough conviction that there is no institution in Europe the discontinuation of which would be in a higher degree deplorable for all friends of gardening than the London Horticultural Society, in its full and unabated efficiency, are too strong in me not to give them way, and make me hold to offer £100 on the same terms as the first five other subscribers of funds to be collected for the conservation of the Chiswick Horticultural Gardens. I know very well that £100 is a trifling sum in England; but I am no man of large pecuniary means; and I think a good will does not fail to find a good place."

SACRED HARMONIC SOCIETY.—Mr. Costa's "Eli" will be again performed at Exeter-hall, on the 25th inst., with the following powerful cast:—Madame Caro Novello, Mr. Sims Reeves, Herr Formes, and Madame Viardot Garcia, who will arrive from Paris, to sustain the character of *Samuel* as at Birmingham.

THE FRENCH AT HOME IN THE CRIMEA.—The French have constructed an enormous *salle à danser* in the Balaclava valley, between the Fedioukine heights and Canrobert's Hill. It is in a convenient situation to be approached, near the Woronzoff road as it turns to ascend towards the position of the Sardinian encampments and Kamara. The opening ball is to take place to-night, and invitations have been issued to all the English ladies and English officers in the Crimea. The attendance of English ladies cannot be very numerous, but the officers will no doubt muster in numbers rather strong for an evening party anywhere. It is understood that in the first instance it was contemplated the ball would not take place until peace had been declared, when the invitations would have been limited to certain numbers of the allies, and Russian officers would have been invited to meet Russians who were to be spoken to on the subject at the commencement of the armistice said that on such an occasion ladies would certainly come from Bagtcheserai and Simpheropol. The English furnished the timber and planks for the construction of the building, the French have provided all other requisites. The ball is announced to be in honour of the infant Imperial Prince, son of Napoleon the Third. The invitations are issued in the names of the officers of the Corps de Reserve of the French army.—*Letter from the Camp, April 1.*

At the Liverpool Police Court last week Captain Berwick, of the *Harcourt*, was fined £20, for carelessly keeping the log-book in respect to the crew's wages, and other matters.

The great event in Jamaica lately has been the opening of the Industrial Palace and Museum, on the 10th ult. It was closed again temporarily on the 16th, after attracting thousands of visitors, and was to open again on the 24th, for the public.

A curious scientific discovery has been made in Ceará, a northern portion of Brazil; namely, an immense number of petrified fish, in a valley formed by a gorge in the Araripe mountains

## *NAVAL AND MILITARY INTELLIGENCE.*

THE mortar-ship *Seahorse*, 12, one of the old frigates fitted with a screw, has made a successful trial outside Plymouth Sound. Her engines, by Penn and Son, on the high-pressure principle, are of 300-horse power. She attained a speed over nine knots, making 112 revolutions with 60 lb. of steam.

So far as may be gleaned at present, in the absence of an official programme, the following movements of the fleet will take place at the review on the 23rd instant:—The fleet at Spithead will have been formed in two columns, flanked by the light steamers and screw gun-boats. The Queen is expected to arrive at eleven o'clock on that day, and return to town at five p.m. A general salute will be fired from the ships and batteries. Her Majesty, in the Royal yacht, will pass through the fleet, and take the lead towards the Nab Light vessel, where the fleet will pass the Royal yacht in two columns, and then return in the same order; after which several divisions of screw gun-boats will attack the screw floating batteries and a few liners, commanded for the occasion. The day will be wound up by a simultaneous attack of the gun-boats on Southsea Castle and along the beach. The garrison will repel the attack of the gun-boats.

The English fleet, composed of the frigates *Imperieuse, Euryalus, Pylades, Amphion*, and the corvettes *Falcon, Harriet, Cuckoo*, and *Firefly*, has passed the Belt on its return to England. There is not now a single English vessel in the Baltic.

As the laying of the foundation-stone of the Wellington College, by her Majesty, on Saturday, the 3rd of May, the whole of the troops then encamped at Aldershot, the Grenadier and two battalions of the field artillery, under the command of his Royal Highness the Duke of Cambridge, will take part in the ceremony. The pavilion erected for the Queen at the Chobham Camp will be used upon this occasion.

THE Guards may be expected in London from the Crimea in the middle of May. A telegraphic message has been sent desiring them to hold themselves in readiness for embarkation immediately. They will leave Balaclava about the 26th of the present month, and their probable entry into the metropolis may be expected about the 17th May, when a grand reception will be given them.

THE officers of the various regiments quartered at Aldershot have subscribed and established a theatre near the Camp. The scenery, which is sixteen feet in height, has been painted by the principal scene-painter to Drury-lane Theatre. The male characters will be taken by officers and soldiers at the Camp, and the female by professionals, whose services have been secured. The first performance will take place on Tuesday next.

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE last return of the Bank of England having shown a decrease of nearly £400,000 in the stock of bullion—it being reduced to £10,5?,?0?—the *Bank* party has operated with considerable effect this week, and the dealings in consols for money have been limited. The Stock Market [illegible]

[illegible] The Turkish [illegible] Bankers [illegible] have of late been disbursed by our Government in the purchase of arms, ammunition, &c., for Turkey. As the transactions are completed, the balance here is not required; consequently, the sums placed to the credit of the Turkish Government have to be remitted to Constantinople. We believe that about £800,000 in gold has been sent away for that purpose, and that about £1,000,000—which will close the account—has yet to be shipped; hence an immediate increase in the supply of bullion in the Bank cannot be anticipated. These remarks show pretty clearly the reasons which have induced the Directors of the Bank of England to adhere to their present rates of discount.

There has been an active demand for money, at high rates; and we learn that some of the leading discount-houses have given 5½ per cent for large sums on "call." In the Stock Exchange the current rate has been 5 per cent; and in Lombard-street, the best bills have not been done under 5½ to 6½ per cent. Large supplies of gold are known to be on passage from Australia; and it is asserted—seeing that the balance of trade with the United States is still considerably in our favour—that we shall receive heavy remittances from America for some time. The imports this week have amounted to £24,000 from Belgium, £116,000 from the United States, £340,000 from Australia, and about £23,000 from other quarters. Large parcels of silver have been sold for shipment to India and China, though at a decline of ¼d. per ounce for dollars, the last price paid being 60d.

National Stocks were rather flat on Monday, and prices had a downward tendency. On Tuesday the Three per Cents for Money were done at 93½ to 93; Ditto, for the Account, 93½ ⅜. The Reduced were 92 to 91½; the New Threes, 92½; Consols, 93 to 92½; Bank Stock was 213½ to 213½; Long Annuities, 1860, marked 2?⅛; Ditto, 1885, 19?; India Stock, 229; Exchequer Bills (March), 4s. pm.; Ditto, June, 1s. dis.; Exchequer Bonds, both series, 98½. On Thursday the following quotations were realised:—Bank Stock, 213 2?½, 214; Three per Cents Reduced, 91? ⅛ ¼; Three per Cents Consols, Three per Cents, 92? to 92? ⅛; New Three per Cents, 114; Long Annuities, 1860, 19⅛; Ditto, 1885, 19 15-16; Consols for Account, 92½ ⅜; Exchequer Bills 4s. pm. to 4s. dis.; Exchequer Bonds, 98½ ⅜. The transactions on the following day were not to any extensive, yet prices showed a disposition to advance:—The Three per Cents Reduced were 91? ⅜ ½; Consols for Money, 92? up to 93; Ditto for Account, 93½ ⅜; New Three per Cents, 93? ⅜; Long Annuities, 1860, 3?; Ditto, 1885, 17; India Stock, 228; Exchequer Bills, 4s. to 4s. prem.; Exchequer Bonds, 98? ½. Most public Securities were firm on Thursday, and prices were higher:—The Three per Cent Money were 93 to 93? ⅜; and for the Account, 93? ⅜. The New Three per Cents realised 93? ⅜; and the Reduced, 91?92. Bank Stock, 213½ to 213?; 1 dis Stock, 230. The June Exchequer Bills were done at 1s. discount. Exchequer Bills being 3s. to par. It was asserted in the Exchange that, in the event of the Government coming forward for a new loan, it will not be in Consols.

The position of the Bank of France, as regards its stock of the precious metals, is rapidly improving; and the following statement shows the aggregate results of the last return compared with the previous month:—

| | | | |
|---|---|---|---|
| Coin and Bullion | £16,?29,?26; | Increase | £?,155,409 |
| Bills discounted | 11,?1?,?5?; | Increase | 1,?1?,?5? |
| Notes in circulation | 24,?[illegible]?,?00; | decrease | 1,?000 |
| Treasury Deposits | [illegible]?,?00; | Increase | 2,?50 |
| Private Deposits | 8,?[illegible]?,?0; | Increase | 1,?,?00 |
| Advances on French Government securities | [illegible],?00; | Decrease | ?,?00 |
| Advances on Railway Securities | 1,?37,?00; | Increase | 103,?00 |

The declines in most Foreign Bonds have been limited; yet, on the whole, prices have ruled firm. We have had transactions in Brandian Five per Cents at 105¾ ex div; Ditto, New, 1843, 100; Buenos Ayres, 61; Chilian Three per Cents, 85?; Ditto, Six per Cents, 104 ex div.; Granada One-and-a-Half per Cents, New Active, 22; Mexican Three per Cents, 23; Peruvian Four-and-a-Half per Cents, 78; Russian Four-and-a-Half per Cents, 94½; Ditto, Small, 93?; Spanish New Deferred, 24½; Ditto, Three per Cents, 45¾; Turkish Six per Cents, 98½ ex div.; Dutch Four per Cents (guaranteed), 101½; Ditto, Two-and-a-Half per Cents, 59; Ditto, New Four-and-a-Half per Cents, 99; Ditto, New Consolidated, 104½; Ditto, Provisional Land Warrant, 6?; Sardinian Five per Cents, 95?; French Four-and-a-Half per Cents, Jan. 96; Ditto, Three per Cents, 72?; Austrialia Five per Cents, 86; Danish Five per Cents, 101?.

Joint-Stock Bank Shares have been rather heavy, as follows:—Australasia, 92 ex div.; Bank of London, 57½; Bank of North America, 29; Colonial Bank of London, 24?; London and Paris, 7?; Provincial of England, 7?¾; New South Wales, 41; Ottoman Bank, 9?; Union of Australia, 71; Ditto, New, 2?; Western Bank of Scotland, 26?.

All Miscellaneous Securities have continued dull. Australian Agricultural have marked 9?; Canada Company's Bonds, 14?; Ditto, Government Six per Cents, 110?; Crystal Palace, 2?; English and Australian Copper Smelting Company, 1?; London Docks, 99?; Mexican and South American, 6; Netherlands Land, 1?; North of Europe Steam, 18?; Peninsular and Oriental Steam, 99?; Van Diemen's Land, 1?.

A few transactions have taken place in Ashton and Oldham Canal Shares, at 145; Derby, 84; Oxford, 104; Regent's, 14?; Stafford and Worcester, 420; Trent and Mersey, 3?0; Warwick and Birmingham, 2?0; Wilts and Berks, 85?; Kent, 30; in Hungerford-bridge Shares, at 8; Waterloo, New Six per Cents, 26; and Vauxhall, 30?.

Mining shares have commanded very little attention. Imperial Brazil have realised 2?; Cobre Copper, 6?; Rhymney Iron, New, 3?; United Mexican, 4.

Railway Shares have changed hands slowly. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aimbergate, Nottingham, and Boston, 4?; Chester and Holyhead, 18; Eastern Counties, 10; East Lancashire, 2?; Great Northern, 95; Ditto, A Stock, 80; Ditto, B Stock, 126; Great Western, 64?; Lancashire and Yorkshire, 89?; London and North-Western, 101?; London and South-Western, 90?; Lowther, Tilbury, and Southend (Barking), 14?; Manchester, Sheffield, and Lincolnshire, 29½; Midland, [illegible]; North British, 35?; North-Eastern—Berwick, 79. Ditto, [illegible]; Ditto, G. N. E. Purchase, 14?; Royal Canal, 2?; Scottish Central, 10?; Scottish Midland Junction, 4?; Shrewsbury and Chester, 9; Shrewsbury and Hereford, 7?; Wilts and Somerset, [illegible].

PREFERENCE SHARES.—Manchester, Sheffield, and Lincolnshire, 117?; Norfolk, 84; Oxford, Worcester, and Wolverhampton, 8?; South Devon, 14?; Eastern Counties, 4?; Antwerp and Rotterdam, 5?; Bombay, Baroda, and Central India, 6; Buffalo and Lake Huron, 7?; Dutch Rhenish, 12?; Eastern of France, 43; Grand Trunk of Canada, A issue, 15?; Great Central of France, [illegible]; Luxembourg Shares, 6?; Great Western of Canada, 28?; Ditto, [illegible]; Ditto, 9, ex div.; Madras, 16?, ex new; Northern of France, 43?; Paris and Lyons, 69?; Royal Danish, 30?; Sambre and Meuse, 14?; Western and North Western of France, 28?, ex div.

*Friday Evening.*

Very little change has taken place in the value of Consols to-day, and the business doing in all securities is limited. The Three per Cents for Money are 93 to 93?, and for the Account, 93? ⅜. The Reduced Threes are 91? 9?, and the New Three per Cents, 93? ⅜. Foreign Bonds and Railway Shares are very flat.

## *THE MARKETS.*

CORN EXCHANGE (Friday).—To-day's market was very moderately supplied with all kinds of wheat, of home produce; nevertheless the demand for that grain ruled very inactive at Monday's decline in the quotations. The general quality of the samples was good. Fore-gn wheat—the imports of which amount to 67?0 quarters—moved off heavily, and the quotations were almost nominal. We had a good demand for both English and foreign barley, at very full prices. Malt ruled steady, at late rates. The show of oats was large, and the oat trade was very dull, at barely previous rates. Beans, peas, and flour moved off heavily, at the late decline in value.

*Arrivals this Week.*—English, wheat 29?? barley, 1450; malt, 7?30; oats, 172 flour, 1150 Irish barley 160, oats, 7070 Foreign wheat 6?30, barley, 2?50, oats, 21,810; flour, 190 sacks.

*English.*—Wheat, Essex and Kent, red, 5?s. to 60s.; ditto, white, 62s. to 73s.; Norfolk and Suffolk, red, 56s to 60s.; rye, 42s. to 46s., grinding barley, 33s. to 36s.; distilling ditto, 35s. to 38s.; malting, ditto, 46s. to 48s.; Lincoln and Norfolk malt, 75s. to 76s.; brown ditto, 65s to 68s.; Kingston and Ware, 78s. to 79s.; Chevalier, 78s. to 79s.; Hertford and Devon, 76s. to 77s.; potato oats, 28s. to 30s.; Youghal and Cork black, 19s. to 21s.; ditto, white, 23s. to 25s.; tick beans, 34s. to 37s.; grey peas, 36s.; maple, 34s to 35s.; white, 34s to 36s.; oatmeal, 40s. to 42s.; flour, per quarter, Town-made flour, 45s. to 50s.; Suffolk, 42s to 43s.; Stockton and Yorkshire, 47s. to 52s.

*Foreign.*—Wheat, American flour 27s to 29s. per bar.

*Seeds.*—Linseed is still drooping in price, with a heavy demand. All agricultural seeds, as well as cakes, are dull.

Linseed, 2 englished crushing, 60s. to 62s.; Mediterranean, 57s. [illegible] rapeseed, 54s. to 56s. per [illegible]; Coriander, 23s. to 27s. per cwt.; Brown mustard seed, 11s. to 22s.; white, 9s. to 11s.; tares, 7s. 6d. to 8s. 9d. per bushel. English rapeseed, 50s to 54s. per quarter. Linseed cakes, English, £12 10s. to £13; ditto, foreign, £12 0s. to £12 10s.; rape cakes, £6 10s. to £7 0s. per ton.

*Bread.*—The prices of wheaten bread in the metropolis are from 9½d. to 10d. of household and 8d. to 8½d. of seconds.

*Imperial Weekly Averages.*—Wheat, 68s. 7d.; barley, 32s. 6d.; oats, 23s. 8d.; rye, 42s. 6d.; beans, 37s. 2d.; peas, 36s. 7d.

*The Six Weeks Averages.*—Wheat, 68s. 10d.; barley, 37s. 6d.; oats, 23s. 7d.; rye, 44s. 6d.; beans, 37s. 6d.; peas, 36s. 7d.

*English Grain Sold last Week.*—Wheat, 98,?72; barley, 50,?55; oats, 19,951; rye, [illegible]; beans, 6,?6?; peas, 7?? quarters.

*Seeds.*—Linseed is still drooping in price, with a heavy demand. All agricultural seeds, as well as cakes, are dull.

Linseed, 2 englished crushing, 60s. to 62s.; Mediterranean, 57s. [illegible] rapeseed, 54s. to 56s. per [illegible]; Coriander, 23s. to 27s. per cwt.; Brown mustard seed, 11s. to 22s.; white, 9s. to 11s.; tares, 7s. 6d. to 8s. 9d. per bushel. English rapeseed, 50s to 54s. per quarter. Linseed cakes, English, £12 10s. to £13; ditto, foreign, £12 0s. to £12 10s.; rape cakes, £6 10s. to £7 0s. per ton.

*Bread.*—The prices of wheaten bread in the metropolis are from 9½d. to 10d. of household and 8d. to 8½d. of seconds.

*Imperial Weekly Averages.*—Wheat, 68s. 7d.; barley, 32s. 6d.; oats, 23s. 8d.; rye, 42s. 6d.; beans, 37s. 2d.; peas, 36s. 7d.

*The Six Weeks Averages.*—Wheat, 68s. 10d.; barley, 37s. 6d.; oats, 23s. 7d.; rye, 44s. 6d.; beans, 37s. 6d.; peas, 36s. 7d.

*English Grain Sold last Week.*—Wheat, 98,?72; barley, 50,?55; oats, 19,951; rye, [illegible]; beans, 6,?6?; peas, 7?? quarters.

SUGAR.—We have to report a steady demand for raw qualities, at a decline in quotations of from 6d to 9s per cwt. West India have had a sale of 3?? hhds. at 44s. 6d.; Mauritius, 37s. 6d. to 40s.; Bengal, 39s to 40s.; and Bahahs, 38s. per cwt. Refined goods are slow in sale, at [illegible].

COFFEE.—In the absence of sensitive, yet very little change has taken place in the quotations. Good ordinary Ceylon has sold at 44s. per cwt. The stock is rather on the increase.

RICE.—Common qualities of Bengal are in fair request for export; but, for home consumption, very little is doing, at last week's quotations.

PROVISIONS.—The butters are in moderate request at about stationary prices, but fine-flavoured qualities are difficult to purchase. Bacon is in good request at 1s to 2s per cwt. more money. Hams are firm, but other kinds of provisions command very little attention.

TALLOW.—Very little business is doing in raw material, and the late improvement in value is not supported. P.Y.C., on the spot, 47s. 6d to 47s 9d. down to 47s.

OILS.—Linseed oil is dull, at 30s. 6d. to 31s per cwt. on the spot. Palm [illegible] at 4?s. 6d. to 43s. 6d.; cocoa-nut, 4?s. to 43s.; rape, 39s. to 40s. per cwt.

SPIRITS.—We have only a moderate demand for [illegible] new Proof Demerara, 2s. 2d. to 2s. 3d per gallon. No change in the value of brandy; but malt spirit has advanced 3d. per gallon.

HOPS (Friday).—The trade is a [illegible] moderate demand for most kinds of hops, and prices generally are well supported. To-week's imports of foreign are 74 bales from Hamburg, and 19 from Rotterdam. Mid and East Kent, 90s. to 120s.; Weald of Kent, 85s to 95s; Sussex, 85s to 90s. per cwt.

COALS (Friday).—Caerforth, 16s.; Hilda, 15s. 6d.; Riddell, 16s.; Eden Main, 17s.; Bell, 16s.; Belmont, 16s.; Hartley, 15s. 6d.; Holywell, 15s. 6d.; Stewart's, 15s. 6d.; Cowpen, 15s. 6d. per ton.

*Metropolitan Cattle Market* (Friday).—To-day's market was well supplied with most kinds of beasts, yet the demand for them ruled steady at Monday's improvement in the quotations. The show of sheep was moderate, and the supply of calves was tolerably full, at full prices. We had a very dull market for lambs, at a decline in value of 1d. per 8 lbs.—the top price being 6s per 8 lbs. From the Isle of Wight only 80 came to hand. Calves were in short supply and very moderate request, at Monday's currency. In pigs scarcely any transactions took place. Milch cows were heavy, at from £13 3s. to £19 3s each, including their small calf.

Per 8 lbs. to sink the offal:—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s. 10d.; prime large oxen, 4s. 0d. to 4s. 4d.; prime Scots, &c., 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 4s. 2d. to 4s. 4d.; second quality ditto, 4s. 6d. to 4s. 8d.; prime coarse-woolled sheep, 4s. 8d. to 4s. 10d.; prime Southdowns, 5s. 0d to 5s. 4d.; large coarse calves, 4s. 2d to 4s. 6d.; prime small ditto, 5s. 2d. to 5s. 6d.; large hogs, 3s. 6d. to 3s. 8d.; neat small porkers, 4s. 4d. to 4s. 6d.; lambs, 5s. 0d. to 5s. 6d.; suckling calves, 27s. to 28s.; and quarter old store pigs, 2 to 3?s. each. Total supply beasts, 4?6?; cows, 126; sheep and lambs, 11?; pigs, 300. Foreign beasts, 6?; calves, 49.

*Newgate and Leadenhall* (Friday).—We had a fair demand for each kind of meat, as follows:—

Per 8 lbs. by the carcase:—Inferior beef, 3s. 8d. to 4s. 0d.; middling [illegible] 3s. 6d. to 3s. 8d.; large pork 3s. 8d. to 4s. 0d.; middling ditto, 3s. 4d. to 3s. 6d.; inferior ditto, 3s. 0d. to 3s. 2d.; prime veal, 4s. 0d. to 4s. 4d.; prime ditto, 4s. 6d. to 4s. 8d.; prime small ditto, 5s. 0d. to 5s. 4d.; small pork, 4s. 6d. to 4s. 8d.; inferior ditto, 4s. 2d. to 4s. 6d.

ROBERT HERBERT.
